press and people. There is, indeed, a curious contrast between that attitude and the position of Mr. Marconi's own half-fatherland, Great Britain. The surly, glum demeanor of the technical press there is not without counterpart in the position of some leaders in electrical science. For example, in his really superb and suggestive address before the English Institution of Electrical Engineers, President Swinburne says: 'We can get but few telegraph papers now. This is not because telegraphy is dead; it is because most of its problems are solved, so there is little to discuss.' We rub our eyes; or, at least, we beg Mr. Swinburne to wake up and rub his. Surely this utterance is not worthy of so keen and alert an intellect, when the great aerial spaces of the world are being spanned by streams of wireless telegraph messages, that must in short order affect profoundly the whole telegraphic industry! The probability is, not that the English mind is hampered and prejudiced by its cable investments, but that it believes Germany is entitled to the credit of it all, as a practical new art, instead of the plucky, steadfast, keen-witted Anglo-Italian, who now receives thanks for his work from the Congress of the United States.

"The greater lies before. Mr. Marconi has done much, but even as we write he is discussing the conquest of wider spans of ocean, and training the ether to quiver to a longer thrill from his 'thunder-stations.' A year ago it was St. John to Polcarn, and now it is Cape Breton and Cape Cod, the stride increasing hundreds of miles at a time; and yet only four kilowatts are needed for the jump, which we fancy compares very well with the efficiency of land telegraph and telephone lines as power transmission circuits. Just where all this is going to end we don't know. Tesla said ten years ago that power in big blocks could be loaded onto the ether for safe delivery elsewhere in express packages; and as we watch the work of Marconi, Pupin, and Hewitt, the far-thoughted prophecy comes once more to mind. In the mean time, projects are afoot for wireless routes between England and her southward dependencies and colonies; between Italy and the Argentine republic; and we expect to see them plotted out in the ether like steamship lanes in the great seas. But first of all, getting down to business, we are yearning to use the Anglo-American aerial line at ten cents a word; and Mr. Marconi can not hurry up too much to please the whole impatient Yankee public in providing it. When all is said and done, we might as well rest right now on Hertz's fundamental work, philosophically considered, unless commercial service can be established. But, unless all indications are wrong, we shall soon have it."

OPPOSITION TO THE METRIC SYSTEM.

THE proposed adoption by the general Government of the metric system is being vehemently opposed, as we have already noted in these columns, by a number of the more conservative engineers. The American Society of Mechanical Engineers, at a recent meeting, even passed condemnatory resolutions, altho much more severe ones were tabled. This action of the society brings it under the ban of *The Electrical World and Engineer*, which pours out upon it the vials of editorial wrath, asserting that it has made itself "an object of international merriment" to the "pained astonishment of the scientific public." This paper further says:

"Father Time and the fool-killer will rescue it [the society] at no distant date, and the intemperate vituperation indulged in by the old fogies serves in part as its own corrective. . . . There may be, and are, reasonable differences of opinion as to the wisdom of an immediate and violent change in our system of weights and measures, which, by the way, nobody has seriously proposed; but we certainly did not suppose that five engineers could be found who would go upon record in such extraordinary language and as believing that the so-called English system would ever be universally adopted.

"English system indeed! There is no such thing nor has there been within the memory of man. It would take more space than we have in our editorial columns to catalog and describe the weird and irreconcilable systems which have been in use in English shops. We very much doubt whether any member of the American Society of Mechanical Engineers could ever name them offhand, much less explain their relations. It seems as if half the prosperous manufacturers in England had devised independent systems of gages, admirably supplemented by popular units handed down from medieval times. Of these the barleycorn is about the only one which has not been retained in use to our knowledge, tho we should not be in the least surprised to find that it still survives in some form or other. The chief argument advanced by the seventeenth-century section of the A. S. M. E. seems to have been the occasional survival of similar curios among nations using the metric system for the purposes of everyday life. Now unquestionably there are some such anachronisms like the Paris line and the German zoll (Heaven knows which one), but they have no more significance than the use of the double negative among English illiterates. As well abolish the metric system for one as English grammar for the other. Particular trades preserve their metrological jargon as particular communities adhere to their dialects; but neither fact has the slightest general significance save to attest the persistence of bad habits. So far from any form of English measures making headway in the world's work, every succeeding year finds the metric system making steady progress in commerce and industry. Continental manufacturers sometimes build to English measures for the export trade, just as they make beads of particu-

for sizes and colors for barter in Central Africa, merely as a concession to the idiosyncrasies of savages.

"This whole rumpus proves the wilful and deplorable ignorance of the rule-of-thumb contingent as to the real provisions of the metric bill now before Congress. It is tacitly assumed that its effect will be to change violently by legal enactment all the measuring equipment of the shops of the country; and on this assumption the aforesaid back numbers found a mighty grievance. Now it is undoubtedly the purpose of the bill to encourage the introduction of a simple international system of weights and measures, but its actual direct effect will be merely to set a good example by the use of the metric system in the transactions of the Government. Any superannuated fanatic who so desires is at perfect liberty to continue his antiquated methods just as long as he wishes. Nobody cares how his shop rules are graduated. He can have them divided to thirteenths of an inch or seventy-ninths of a foot if he likes, with no one to hinder. But if he deals with Uncle Sam, he will be expected to conform to civilized units so far as the results are concerned. This, however, is not, perhaps, the place where the shoe pinches. It takes very little forethought to see that a system used for all official business, and conforming to common international practise, will very rapdily work its way into general use, and when that time comes the gentleman who deals in barleycorns will be, with respect to domestic trade, just where he is now with respect to a large class of foreign trade, seriously at a disadvantage with his more progressive competitors. If he really believed that the metric system would not come into wellnigh universal employment, a law such as is proposed would give him no pangs but the gentleman who deals in barleycorns sees the beginning of the end, and squirms. We believe that the best interests of science, the mechanical arts and commerce will be served by the immediate passage of the proposed measure, that it will be passed in spite of the frenzied ravings of the small group of hidebound fanatics who oppose it, and that the result will be the success of the similar movement in England and her colonies, and the reduction of the so-called 'English' system to a position of merely archeological importance. Let the yard, foot, and pound be stored with the cubit and span in a Pantheon of departed units, and then be forgotten, except as relics."

The Self-Drugging Habit.—Perhaps the greatest foe to the health of the present generation is the pernicious habit of self-drugging, so we are warned by Dr. T. L. Stedman in *Everybody's Magazine*. Of the nerve tonics, blood-purifiers, sleep-producers, and laxatives that are consumed by the gallon and hundredweight, he speaks in terms of distinct condemnation. Says Dr. Stedman:

"The primary effect of any of these poisonous mixtures is seemingly good; the nervous fidgets, the 'tired feeling,' the insomnia, or the constipation is promptly relieved by the first few doses. Naturally, when the symptoms return, as they are bound to do, the sufferer turns again to the bottle or the pill-box. Again he gets relief, and again he is driven back to his drug, taking larger and larger doses as the habit is forming, until at last the fetters are forged and a new 'drug fiend' is created. It is cheaper than calling in a doctor, and is less trouble than systematic exercise; but how many could be saved from this bondage, and how many slaves could be freed by rational physical culture, only the physician who knows the prevalence of this evil can guess. The nervous, the sleepless, and the neurasthenic are of all persons the last who should seek relief from drugs or from alcohol. Their very disease predisposes them to drug addiction, and once having experienced the lethe which drugs may bring, only the most heroic exhibition of will power—which, alas! they have not—can save them from thraldom. And yet these shattered nerves are calling only for rich red blood, for pure air, good food, and the healthful stimulus, without reaction, of the bath. The rest-cure for some, active exercise for others will bring the reality of health which drugging can only for a brief moment simulate.

"Dyspepsia and constipation, when due to lack of muscular tone in the walls of the stomach and intestines or to deficient secretion of the digestive juices or to a sluggish liver, are often miraculously relieved by properly directed physical exercises. The overfat also are good subjects for 'reduction cures' by dieting and exercise, and so are the gouty and those suffering in other ways from what is called rightly or wrongly the 'uric-acid diathesis.'"

The Hygiene of Shaving-Soap.—That the lather with which the shaver covers his face is valuable as an antiseptic, apart from its other uses, is asserted by a writer in *The Lancet*, who says:

"The use of soap lather prior to shaving the beard is regarded merely as a means of facilitating the troublesome operation. Soap is said to extract the oily matters from the hair and thus to render it brittle, so that the blade of the razor saws through it easily, for after all shaving is a delicate sawing process. With sensitive skins of course a soap of good quality and preferably free from alkaline excess is desirable. On the other hand, it might be thought that an excess of alkali would prepare the beard more readily than a pure soap or superfatted soap. The corrosive effect of alkali, however, leaves no doubt as to which description of soap should be used. Soap probably plays a more important rôle than that of a saponifier of the natural oil of the hair. In spite of the fact that those who use the razor frequently cut themselves, yet it is rarely that anything more serious than a cut follows, the slight wound generally healing quickly, and the risk of septicemia arising in this way would seem to be almost *nil*. In the majority of cases, therefore, it is clear that the razor blade must be bacteriologically clean—*i.e.*, free from septic matter—which may be attributed to the fact that probably it is dipped into hot or sterilized water before use, or else that the soap lather is antiseptic. The latter explanation seems the more probable of the two. The amount of soap rubbed on the skin is considerable if the shaving is to be in any degree comfortable, and soap has considerable antiseptic power, a six-per-cent. solution being sufficient to destroy the typhoid bacillus."

Magnetic Storms and Solar Spots.—Sun-spots have often been held responsible for disturbances of the earth's magnetism, and it has been considered by some investigators that the relation between them is one of cause and effect. According to the latest writer on the subject, Mr. Cortie, in *The Astrophysical Journal*, it is rather the relation between two effects of the same cause. Instead of tabulating values for extended periods, this writer has compared statistics for only three years (1899–1901); but their comparison has led him to the conclusion above stated. Says a reviewer in the *Revue Scientifique* (January 24):

"For example, the author thus analyzes the facts that appeared during the first six months of the past year. The sole spot of any size that crossed the solar disk during this period was observed between March 5 and March 13; it was not accompanied by any notable magnetic perturbation. From the 13th till the 19th, the visible disk was completely free from spots, and the faculæ observed were of slight importance and feeble intensity, altho a comparatively large magnetic disturbance took place on April 10. Mr. Cortie concludes that possibly solar spots are one of the instrumental causes of magnetic storms, but they are not the only one; and it is much more probable that the two phenomena are in correlation as two effects—often independent—of one common cause."—*Translation made for* THE LITERARY DIGEST.

SCIENCE BREVITIES.

"ONE of the most interesting things which has appeared of late in the domain of electrochemistry," says *The Engineering Magazine*, "is the fact that it has been found advisable to form a commercial organization for the express purpose of conducting a continuous campaign of scientific research. Thus there has been organized at Niagara Falls a company whose object is not to manufacture anything in particular, but to conduct experimental researches upon a large scale with a view of developing methods and processes in electrochemistry for disposal to operating companies or other purchasers. Already the work of members of the company has developed such results as the method of producing artificial corundum by the fusion of bauxite, and also the process of fixation of atmospheric nitrogen and the production of nitric acid and artifical nitrates, both of which processes are in commercial operation by undertakers, to whom they have been disposed."

THE RELIGIOUS WORLD.

THE "HISTORIC CHRIST."

THE person and history of Christ have in modern theological thought assumed a new importance. Since modern Biblical critics have striven to put a new face upon the Scriptures, the old Protestant principle that the Bible is the last court of appeal in all matters of faith and life, which was the famous "Formal Principle of the Reformation," has been discarded by them. The "juridic" authority of the Scriptures, which means that their *ipse dixit* is absolutely and finally decisive, is no longer recognized in "advanced" theology; but the "Historic Christ," which means the Christ of three synoptic gospels as reconstructed according to the canons of modern criticism, is made the basis of Christian faith. In the words of a prominent representative of this school: "We proceed from this standpoint, that our evangelical faith has its last foundations in the historic Jesus Christ."

This fact explains the vast literature which the life of Christ has called forth in recent years, all of it devoted to the one object of determining exactly what the historic Christ is. In the *Christliche Welt* (Leipsic, Nos. 49 and 50) is found an instructive review of the recent works of this subject, notably those of Weiss, Holtzmann, Wendt, Schweitzer, Schmiedel, Otto, and others; and the writer, who himself is a friend of this school of thought, chiefly on the basis of Holtzmann, furnishes this summary of the inner development of the historic Christ:

Jesus is aroused from an every-day existence by John the Baptist. In being baptized in the Jordan, he experiences a new creative act of God which arouses in him a new and elevated self-consciousness; the temptation which was involved in this new consciousness he escapes by remaining completely silent in reference to his Messiah-consciousness. Even his miracles are not wrought in the interests of his Messianic mission, but they are merely acts of mercy. In this way he aims to work his way into the hearts of the people; and, in order to enlarge his activity, he sends out his disciples with their message. The great prayer of thanksgiving which he speaks when at the height of his activity furnishes evidence of the fact that he was then tempted to put forth his claims. Life did not offer to him what he expected. But over against this an inner greatness makes itself felt; he experiences in reality the will of God, in reference to which he is now to reach a clear understanding. In the possession of a blessed and already present certainty and in confidence that his life was being led by God, his actions and words breathe childlike courage and quiet firmness. He flees, but not without a new mission; he takes a small congregation with him, whom he purposes to initiate more deeply into the mysteries of the Gospel. As soon as he feels that this education has been completed, he again appears on Jewish soil, in order to try again and again to win the hearts of his people. Each and every time he finds himself disappointed. In view of this fact, there was danger that he himself might lose his confidence in himself as the Messiah and reach the conclusion that it was self-deception. He tries to find in the faith of his disciples a strengthening of his own faith, as is evidenced by the scene and confession of Peter in Cæsarea Philippi. Really strengthened by this trial, he thereupon undertakes his last work, namely, his journeying to Jerusalem, in order to die there, for a death in Galilee would be fatal to his mission. To the last he is filled with the desire to accomplish a great purpose. In his last days, he experiences as never before the importance of his own person. With a clear eye he enters upon death; he has concentrated his thoughts more and more upon his death, and accordingly has assigned a deeper and deeper significance to this death. In his last struggle he with joy and strength submits to the will of God.

In this way there is found in the historic Christ a man with a superhuman consciousness, who nevertheless retains a wonderful simplicity and clearness of judgment. He was a man who went an altogether different way from that which he had originally purposed, and a man who in implicit confidence in God goes his way quietly and fulfils his mission in the way that he had been directed. He is a man who had before him the most blessed and glorious eternity, and who nevertheless finds his peace and joy in the present possession of his God.

There is a substantial agreement among the recent German writers on the life of Christ in this portrait, tho in details there is a difference of opinions. Thus Schmiedel is of the conviction that Jesus did not enter upon his work with a consciousness and a conviction that he was the Messiah, but that he went to Galilee merely to continue the work of John the Baptist there. But later, when he saw the phenomenal success of his work, and especially when he saw how God performed miracles through him, did he gradually reach the conclusion that he was the Messiah of the Lord. Later on, two new thoughts were born in the mind of Jesus, namely, that the Gospel was intended for the heathen also, and, secondly, that the way to glory for him lay through his death. In this way his death became an integral part of his mission.

According to Schweitzer, Jesus with his inner life is confined entirely to this earth, where the kingdom of God is to be established. His preaching circles around the ideas of the kingdom, of repentance, and of the judgment.—*Translation made for* THE LITERARY DIGEST.

RELIGIOUS PROBLEMS IN THE PHILIPPINES.

THE long-expected papal bull on the Philippines was made public several weeks ago, but it seems to have attracted very little attention outside of the Roman Catholic press. This fact is doubtless due to what Mr. W. J. D. Croke, the Rome correspondent of the Milwaukee *Catholic Citizen*, terms "the vagueness of its dispositions." It arrives at no definite conclusions regarding the vexed question of the friars, beyond recommending that the existing priests remain in charge of their parishes until their places can be filled by native priests. The Pope urges the native clergy to take no part in politics or secular affairs, and enjoins loyalty to the American Government in the islands. His attitude, indeed, toward the new *régime* is one of actual cordiality, if we may judge from this passage:

"The fortune of war which changed the civil government of the country has involved changes in the spiritual government also. For with the cessation of Spanish rule the right of patronage of the Spanish kings has also ceased, and the church has come into greater liberty, with the just partition of its rights from those of the civil government."

In Roman Catholic circles persistent efforts are still being made to vindicate the character of the Philippine friars. Archbishop Chapelle, the predecessor of Mgr. Guidi as apostolic delegate to the Philippines, recently declared in an interview in Rome: "I for my part can state from a full knowledge that during the three years and a half in which the friars have been so assailed no one of them has ever been taken in any act of opposition to the Government or in any act opposed to public order in general, yet they have lived all this time in the fiercest light of scrutiny; while on the other hand not by any means a few of those who are praised to their disparagement have been found wanting." And the "Philippine Catholic Center," which is said to be the strongest and most representative body of Roman Catholic laymen in the islands, has issued a letter whose temper may be judged from the following extract:

"The Spanish religious, who have been the object of so much persecution, evangelized our country, taught us the arts of agriculture, industry, and commerce; they inspired in us the love of the liberal arts; they gave us an exquisite social and moral education, and sent us forward in the path of true progress and civilization in a quiet, gentle manner. The whole world is witness to the fact that in three centuries we have passed from a

state of savagery to one of civilization, which is the cause of envy in the breasts of our Malay neighbors."

A most interesting glimpse of the religious situation in the Philippines as it appears through Protestant eyes is afforded by the first report sent home by the Rev. Dr. Charles H. Brent, the missionary bishop of the Protestant Episcopal Church. He writes (in the New York *Churchman*):

"My brief experience here has already confirmed anew my belief in the Incarnation as the sole means of understanding, serving, and unifying human life and interests. In Christ Jesus there is neither Jew nor Greek, bond nor free, male nor female, white nor black; all are one, or may be made one, in him. The little brown brother is *man*, and consequently can be ultimately understood as really, tho not as rapidly, as those whose faces are of a different color, and whose history has more brilliantly illumined pages than his. The common instincts, the common hopes, the common manhood, find their interpretation in the Man Christ Jesus.

"In the past, stress has been laid too exclusively on the differences between Western and Oriental character until men have become unnatural and artificial in their regard and treatment of one another. The American people in their simple, commonsense methods of government and education in the Philippine islands have done this at least—they have not exaggerated secondary and unimportant differences, but have laid hold of that which is common in the East and West alike—the primary instincts of manhood which cry aloud for knowledge and freedom. We who represent the high calling of Christian missionary endeavor have as a solid rock beneath our feet the likenesses between man and man, whatever his creed and race; these likenesses exceed in number and excel in degree the unlikenesses which obtain. It is with profound conviction, which each new day in the Orient makes more profound, that our little band of missionaries sets its hand to its task with hopeful eye and unanxious countenance. We are bound to win, and it is impossible for threatening forces to turn the river of progress in its course. One day the East will be welded to the West in that divine unity which scorns the pallid, nerveless beauty of uniformity; and all who try to interpret life in and through the Man Christ Jesus will hasten that happy day."

Proceeding to a consideration of the new church schism in the Philippines, which has already been noticed in our pages, Bishop Brent says:

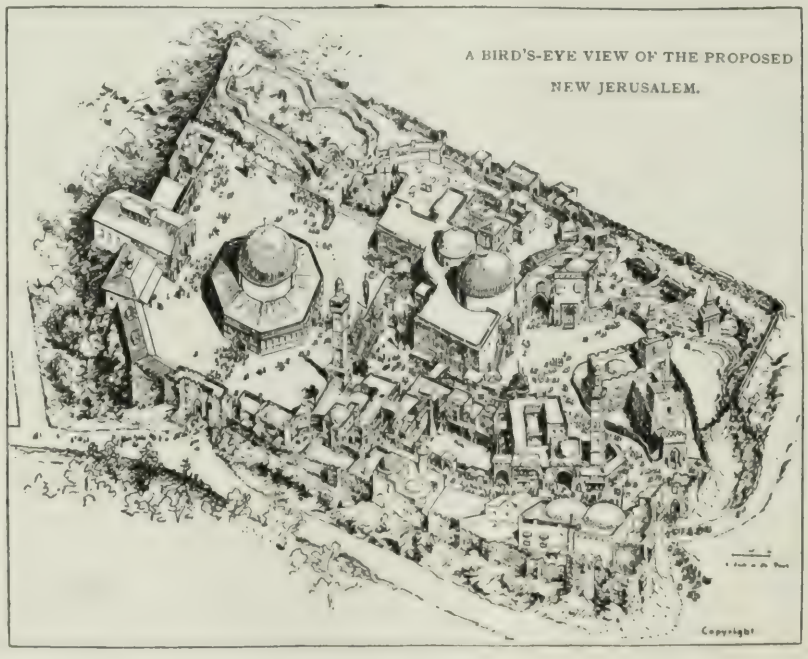
"Numbers of Filipinos in Manila and elsewhere appear to be religiously restless: just what the cause is I do not know. Aglipay, an ex-insurrecto priest, has reared the banner of an independent Filipino church and attracted a large following. He repudiates the term Protestant as not applying to him, altho he has adopted a course that can be described by no other name. He told me that his protest was not against Catholicity, but against the tyranny of the Spanish friar. But his claims have grown with the days, and now he is challenging Guidi and the papacy. . . . . .

"History reminds us that in past ages religious restlessness usually found its earlier expression under the shelter of, or in close connection with, political agitation. It may be that history is but repeating itself, and that tho the present fermentation may, and probably will, assume no permanent form, it will become the starting-point of a demand for a religious freedom that will not blanch before papal anathemas or be deterred by threats of ecclesiastical discipline. Uniformity in religion among the Filipinos is a thing of yesterday. Had the Vatican used its opportunity spiritually instead of politically, and handled with greater boldness the friar problem, these things would not have been, for the pretext, if not the grounds, for a protest would in large measure have been removed. 'If thou hadst known, even thou, the things that belong unto thy peace: but now are they hid from thine eyes.'"

Bishop Brent declares that the different Protestant churches in Manila are doing much earnest work in cooperation. "Our relations with them," he says, "are cordial and brotherly, even tho no formal unity binds us together. . . . It is my purpose to lock arms with their interests, and to share with them my own with as broad a Catholicity as I can command."

THE CITY OF JERUSALEM AT THE ST. LOUIS FAIR.

A REPRODUCTION of the city of Jerusalem promises to be one of the most striking features of the St. Louis World's Fair of 1904. The reproduced ctiy, which will stand upon a tract of ten acres located in the heart of the Fair, is being planned by Mr. Alexander Konta, a Hungarian gentleman well acquainted with Oriental life. Associated with him is a board of directors, composed of men prominently connected with St. Louis commercial enterprises, and an advisory board which includes seventy of the leading clergymen of St. Louis. The details of this ambitious plan are given as follows in a statement published by the "Jerusalem Exhibit Company":



A BIRD'S-EYE VIEW OF THE PROPOSED NEW JERUSALEM.

The reproduced Holy City will stand upon an eminence overlooking the entire World's Fair. It will be enclosed by a wall, which will be a facsimile of that which encloses the sacred city to-day, and whose gates will be reproduced in exact form and size. Within these walls will be reproduced all the sacred places and buildings, including the Mosque of Omar, which stands upon the site of the ancient Temple; the Viâ Dolorosa, along which Christ walked on his way to Calvary; the Church of the Holy Sepulchre, which stands upon the reputed spot where the body of Christ was buried; the Wailing Place of the Jews, the only remnant of the wall of the ancient Temple; the Ecce Homo Arch, where it is said Pilate stood when he said "Behold the Man"; the Tower of David, the Pool of Hezekiah, and other places of sacred interest. Outside the wall eastward, there will be the Valley of Kedron, Garden of Gethsemane, and the Mount of Olives. All in all, it will form a picture unparalleled in the history of expositions.

But in addition to the reproduction of buildings and places, there will be the reproduction of all the most interesting features of present-day life of Jerusalem without its objectionable features. About 500 natives of the present-day city, carefully selected from its cosmopolitan population, representing all its different ranks and nationalities, will be imported for the peo-

pling of the World's Fair city. Then, too, there will be the installation of all the industrial features of Jerusalem as they exist to-day. There will be the shops and bazars, the gold smith and the silversmith, the weaver and embroiderer of silk, and the workers on olive wood and mother-of-pearl. In addition, the entire festival life of the Holy City will be reproduced, and each day will witness some new procession enacted by those who figure in these same processions in that city to-day. Thus the World's Fair new Jerusalem life will be as real as that of the ancient city itself.

The "presiding genius" in the reproduction of the Holy City will be, we are told, Madame Mamreof von Finkelstein Mountford, a Jewish lady well known for her lectures on Oriental life, who will give daily dramatic representations of Bible scenes during the time of the Fair. The chief architect enlisted is Mr. Paul Palmer, of Leipsic, who has been in Jerusalem for several months past securing necessary data.

The St. Louis *Christian Advocate* (Meth. Episc.) is an enthusiastic backer of the plans outlined for a "new Jerusalem." "This great and most valuable educational feature of our World's Fair," it says, "will intensely interest not only Jews, Christians, and Mohammedans, but every educated person from all the pagan and heathen lands."

THEOLOGY AND SOCIAL CONSCIOUSNESS.

ONE of the "advanced" thinkers in theology and Christian sociology who has been forging steadily to the front in recent years is Prof. Henry Churchill King, who was elected last year to the presidency of Oberlin College, made vacant by the death of Dr. John H. Barrows. Dr. King attracted the attention, and to some extent the criticism, of the theological world, by the publication of his "Reconstruction in Theology," which appeared about two years ago. More recently he has cast into book form and given to the public a somewhat notable work on "Theology and the Social Consciousness," in which he seems to have made a distinctly original contribution to theological literature. The matter of the book excited comment when delivered in lecture form before the Harvard Summer School of Theology for 1901. As the title indicates, the book is a study of the relations that may be discerned between theology and the "social consciousness." The rationale and validity of the treatment rest upon the author's exposition of this seemingly indefinite thing, the "social consciousness." His general definition is as follows:

"The simplest and probably the most accurate single expression we can give to the social consciousness is to say that it is a growing sense of the real brotherhood of man. But fine elements seem plainly involved in this, and may be profitably separated in our thought, if that is to be clear and definite: a deepening sense (1) of the likeness or like-mindedness of men, (2) of their mutual influence, (3) of the value and sacredness of the person, (4) of mutual obligation, and (5) of love."

Dr. King refuses to ground the social consciousness in the mere physical fact of race connection, and holds that "theology has no occasion to continue its earlier excessive and quite fundamental emphasis upon this physical unity." Whether there was one pair of ancestors or were ten thousand, the present like-mindedness of men is not affected by any given view of human origins. It is pointed out that the facts of heredity do not account for our social similarity. The ultimate explanation of the social consciousness Dr. King affirms to be a distinctly theological one. The like-mindedness of men is only a fundamental common likeness to their Creator. All sociology, to be rational, must ground in the Christian doctrine that all men in the most fundamental sense are children of God.

There is no attempt to disguise the fact that the prevalence of this conception of the social consciousness would make havoc with the old doctrine of election. On this point Dr. King says:

"This conviction of the like-mindedness of men means that there can be no prime favorites with God. It can hardly help affecting the thought of election. . . . The divine method of election must be in harmony with Christ's fundamental principle of his kingdom, and with the developing social consciousness: 'Whosoever shall be first among you shall be servant of all.'"

It would not be surprising if Dr. King's eschatology should be criticized as a form of Universalism. He carries the idea of the sacredness of personality to its last logical extreme, not denying that a free personality may have the abstract power forever to resist God; but he leaves wide open the door of hope to men who in the old orthodoxy are irretrievably lost by saying: "So neither can the possibility—perhaps one might even say the practical probability—be denied, that God in His infinite love and patience and wisdom may finally win them all out of their resistance. And the eternal hope is at least open."

This rather provocative book naturally interests the thinkers of the Congregational denomination to which Dr. King belongs. It is not so very long since the death of Dr. H. M. Dexter, who for years maintained the strict orthodoxy of *The Congregationalist* (Boston). That paper, however, gives to this rather radical book the following praise:

HENRY CHURCHILL KING, D.D.
President of Oberlin College.

"The strength of Professor King's eminently sane and helpful book is not in brilliant and suggestive sentences, but in its clear unfolding of an elemental truth, and the fearless and vigorous application of that truth to religious thinking. One can not read it carefully without realizing that his thinking has been cleared of much mistiness, and that he has a deepened conception of a truth of superlative importance to which he has but to be steadily loyal to find a rational interpretation of his spiritual experience, and a safe guide amid the mazes of theological speculation."

The Chicago *Advance* (Congregational) calls in question Dr. King's accordance with the Congregational symbols of faith, and styles some portions of his treatment "vague and uncertain." *The Advance* says:

"In specific doctrines this book is in harmony with the former one on 'The Reconstruction of Theology.' For example, the subjective view of the atonement is presented and defended, which can hardly be made to harmonize with the language of the creed of 1883 where it says, 'whose sacrifice of Himself for the sins of the world declares the righteousness of God, and is the sole and sufficient ground of forgiveness and reconciliation with Him.' Is this a specimen of the 'old language about the atonement' which Professor King finds 'as offensive to his moral sense as any man well can?'"

Unity (Chicago) comments as follows on the book:

"Like all followers of Ritschl, Professor King shows his distaste for metaphysical speculation. He compounds with the miraculous by supposing that it may be an expression of the personal will of God. But he sees clearly that any Trinity made up of three 'persons' is a tritheism. At times he seems to base religion in the universal consciousness of man. But again he

finds its ultimate expression only in the mind of Jesus Christ. The weakest point in the book as an expression of the effect upon theology of the social consciousness is in its making Jesus transcendent and unique. Our impression is that the author writes more from the force of inherited feeling than from a critical apprehension of Jesus as he was. He leaves out of the account as well manifestations of religion and of the social consciousness that are hardly less significant than those which he includes. But since this partial blindness, more than anything else, is what constitutes modern orthodoxy, it is perhaps ungracious to complain.

"The spirit of the book is wholly admirable. Since it is written chiefly to help men and churches that the author knows and loves to put a larger meaning into their theology, its aim will be better achieved than if the old idols were taken down more abruptly. Moreover, the book is a valid and true setting forth of the essential social and ethical character of Christianity, as against the metaphysical and falsely mystical interpretations of it that have so long prevailed."

DEFEAT OF LEGISLATION AGAINST CHRISTIAN SCIENCE.

A BILL was recently introduced in the New Hampshire legislature for the purpose of prohibiting the healing of physical ailments by Christian Scientists. The measure provided that "it shall be unlawful in New Hampshire to practise Christian Science, faith-cure, mind-healing, or other like agencies in curing disease": and it imposed a penalty of $50 for the first offense, $100 for the second. If any one still further persevered in violating the law, he was to be sent to jail. In case of death due to or hastened by failure to call a regular physician, the healer should be deemed guilty of manslaughter.

This drastic measure was defeated in the House of Representatives by a vote of 70 to 194, and the general verdict seems to be that it deserved this fate. The Concord *Daily Patriot* declares:

"The founder of Christian Science, Rev. Mary Baker G. Eddy, makes her home in Concord; she has done and is doing much for Concord, in everything looking to the upbuilding of the city and its interests: she has been willing to contribute in every way that good citizenship can demand or expect.

"The people of Concord who believe with her are not proselytizing; they are not urging others to accept the things that they believe and practise; their mission clearly is to do what good they can for their fellow men; they are all good citizens, peace-loving and law-abiding.

"If there is a healer among them, he is not advertising nor proclaiming his powers of combating sickness; he is not urging others to accept him as their physician; he goes when he is called, and only when he is called, and surely American men and American women are endowed with sufficient appreciation and intelligence to be permitted to select such physical healers as their judgment or desires may advise or suggest. . . . . .

"This paper is not advocating the cause nor proclaiming the virtues of Christian Science, any more than of any other religion. It bespeaks for all, at the hands of our lawmakers, liberal and just treatment; the Constitution of the United States, and the constitution of every State of the Union, recognizes the right of the individual to worship God after the dictates of his heart and conscience, and any effort on the part of religious bigots to interfere with this clearly defined right is palpably wrong; wrong in theory, wrong in law, and wrong in fact.

"If the believers in the Roman Catholic Church were being discriminated against, or a proposition looking to discrimination were proposed in the legislature, we would say 'Don't do it.' If such a bill were directed against Congregationalists, Methodists, Baptists, Unitarians, Adventists, Wesleyans, or Episcopalians we would say, 'Don't do it,' and when the members of the legislature should refuse to recognize such arbitrary measures, we with thousands would say, as we now say, 'Thank you.'"

The Chicago *Standard* (Baptist) comments:

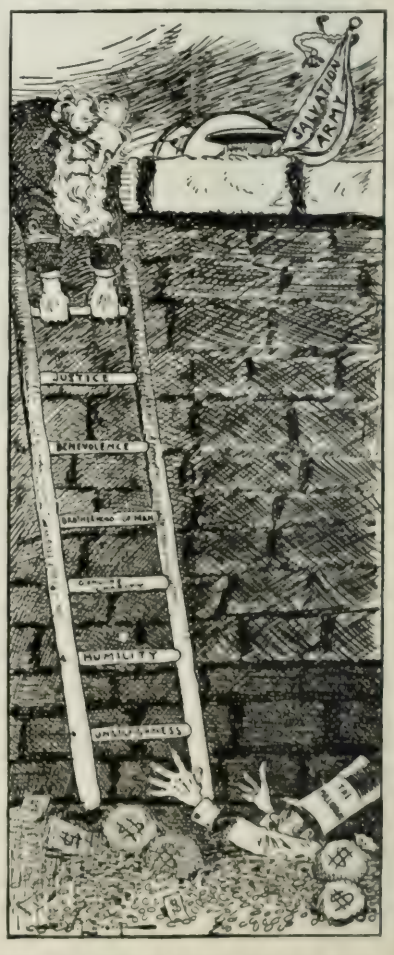
"One more attempt to protect human life from fanaticism has failed. Legislatures and courts are so apprehensive—and properly so, we think—lest they should interfere with questions of personal religious belief or personal liberty that it will be difficult to control these healing cults by law. We are not prepared to say just how a statute could be framed that would guard religious freedom and avoid creating a monopoly for the regular medical profession to an extent which the present state of medical science hardly warrants. Even the Supreme Court of the United States has recently reversed a lower court on a question similar to this. The Post-Office Department excluded from the mails the advertising matter of a Missouri concern which dealt in 'absent treatment' of a 'magnetic' character, on the ground that the business was evidently fraudulent. The Supreme Court held that opinions might differ as to the value of such alleged remedies for disease, and that upon the question of fact the Post-Master-General was not competent to pass. The general purport of this decision, however, bears not so much on the question of healing concerns as on the recent policy of the Post-Office Department in making arbitrary rulings as to the classification and the exclusion of mail matter beyond the discretion which appears to be contemplated by the law. The courts and public opinion are converging upon the necessity of a revision of the postal regulations in the interests of consistency as well as of economy."

RELIGIOUS NOTES.

A "Hugh Price Hughes" Memorial Church is being erected at Godalming, near London, in permanent commemoration of Mr. Hughes's life-long service of Methodism.

EARL CROMER, the British agent in Egypt, has paid a striking tribute to American missionary work in the Sudan. During the course of a speech at Khartoum a few days ago, he said: "Let me testify to the special pleasure afforded me by a visit to the admirably conducted establishment of the American missionaries on the Sobat River, and to that of the Austrian missionaries on the White Nile. One is a Catholic institution and the other Protestant, but I know no distinction between such efforts among the pagans, and they shall receive encouragement and assistance."

GENERAL WILLIAM BOOTH, the founder and Commander-in-Chief of the Salvation Army, was signally honored during his stay in Washington last week. The veteran General and his party were the guests of Senator Hanna, who arranged a dinner at the Arlington Hotel attended by members of the Cabinet and of both houses of Congress. On Thursday, General Booth was entertained at a luncheon given by the President in the White House. On Friday, he was invited to deliver the invocation at the opening of the day's session of the Senate. In a newspaper interview Senator Hanna expressed himself in regard to the work of the Salvation Army as follows: "I have been in touch with the movement of which General Booth is the head for many years, and I am in full sympathy with it. I have observed the good results in my own city, where I have been in close contact with the efforts and consequent results, and I have also noted the outcome of the work of the Salvation Army throughout the country. It is a noble work, being conducted conscientiously and faithfully by a devoted band. I am glad to cooperate with them in every way, and I am glad to pay the tribute of my esteem and consideration to the man who is at the head of the movement."



GENERAL BOOTH HAS DECLARED HIS INTENTION OF "GOING AFTER THE MILLIONAIRES."
— *The Cleveland Leader.*

FOREIGN TOPICS.

ENGLISH DISTRUST OF EDWARD VII.

WHEN a little over two years ago Edward VII. succeeded his illustrious mother on the throne of England, he proclaimed his intention of being "a constitutional monarch in every sense of the word." But an uneasy suspicion, vague at first but ever growing more precise, has seized the British mind that the King is not keeping within the limits prescribed for him by the unwritten constitution of his country. He is accused of usurping or of attempting to usurp functions which rightly pertain only to the responsible ministers of the crown. The tone of British comment upon this suspected development of the King's character indicates that the blood of the race which dealt with Charles I. still flows in the veins of the average Englishman. In other words, it is being intimated in the London press that if Edward VII. has really undertaken to interfere with the ministry and to decide the policy of Great Britain after the fashion of the German Emperor, there will ensue consequences of a serious kind. *The Spectator* (London), it is true, scouts the idea that the King has done or wants to do anything of the kind. However, *The Daily News* (London) insists that Edward VII. forced the German alliance—so far as Venezuela is concerned—upon a reluctant ministry, and it points out that this proceeding of His Majesty's was a most serious step to take. *The Outlook* (London) solemnly warns the King against his course, which is pronounced revolutionary and dangerous. This paper attributes the King's usurpation of ministerial functions—if there was any such usurpation, and it says there was—to the weakness of Premier Balfour. To quote the exact words of our contemporary:

"Our Prime Minister is Mr. Balfour, and Mr. Balfour is young to the office. And we can imagine that if some kingly desire had to be declared impolitic and impossible, more experience and austerity than Mr. Balfour possesses as yet would be necessary to utter the requisite interdict. As things have gone, a most glaring divergence of sentiment between the British Government and the British people has been revealed to the world. However little such a contradiction may matter as between the German Government and the German people, in this country it must, if persisted in, make the Government impossible. The British people rule in Britain. The German people do not rule in Germany."

The explanation of Edward VII.'s sudden taste for absolutism, proceeds this London paper, is to be found in the fact that the German Emperor is his nephew. The uncle is dazzled, and he has been misled into cajoling the ministry, which in its turn has betrayed the people:

"What answer would the ordinary Englishman give if asked why his Government so misrepresented him? Not to employ any phrases about the matter, he would and does say, plump and plain, that the reason is to be found in the relationship of King and Kaiser; that also is the answer of members of Parliament and those whose business it is to seek an explanation of so strange a ministerial procedure. A Government containing Mr. Chamberlain, the Mr. Chamberlain who replied to Count von Bülow with brusque and unaccommodating brevity, could not want for a convinced interpreter of the plain sentiment of the British people, a sentiment of self-reliant national dignity needing no help from Germany in the work we have to do in the world. But Mr. Chamberlain is not Prime Minister."

The situation is certainly unusual, for it is generations since a British ruler has been accused of attempting what George III. failed so signally in achieving. The Paris *Temps* says it is "interesting and novel" to find English criticism directed against the throne. "For the first time in long years the throne is publicly accused, censured, impugned":

"Sagacious observers have remarked that Edward VII. feels disposed to govern. His friendly relations with William II. are understood, as well as the disagreeable comparison the British monarch must have made between what is permitted him by the constitution of his country and what is permitted his young nephew, the German Emperor, in world-politics. . . . The least that can be said at present is that the personal policy of the King of England coincides with the policy of his ministry, and both coincide with the policy of Germany, while the British nation is inclined to a policy quite the reverse."—*Translation made for* THE LITERARY DIGEST.

THE OUTLOOK IN MEXICO.

WHOEVER says Diaz nowadays says Mexico; but the name of Señor Limantour is gradually becoming equally identified with the stability of the land once ruled by Montezuma. Señor Limantour is minister of finance in the Diaz cabinet, and so well has he wrought during his long career in the public service that he is regarded as a pillar of the republic. Public opinion seems to have picked him out as the inevitable successor of President Diaz when that illustrious constructive statesman leaves the stage of which he has so successfully held the center. This being the situation, there was a decided sensation in political circles when the *Protesta* (Mexico) began a series of violent attacks upon Señor Limantour. His policy and aims were presented in a sensational, not to say defamatory, light. What added to the sensation that ensued was a vague intimation that General Reyes, minister of war, had something to do, more or less indirectly, with the articles in the *Protesta*. General Reyes is said to aspire to the Presidency in succession to Diaz, the army supporting this candidacy. The commercial interests are on the side of Señor Limantour. Rumors of disagreements between the two cabinet ministers have agitated the Mexican capital lately, and matters have come to a head through the resignation of General Reyes. This resignation was accepted by President Diaz. The episode is considered the best possible evidence of the strength of Señor Limantour's position, according to the *Prensa* (Buenos Ayres), which follows Mexican affairs with discriminating interest:

"Had harmonious relations continued to subsist between these two individuals [Limantour and Reyes], the election of Señor Limantour to the Presidency would nave been certain, while General Reyes would himself have succeeded Señor Limantour. But the complications that have thus recently arisen between them completely change the political situation in the country. Formidable groups are preparing to contest the next presidential election."

Mexican newspapers generally refrain from comment on the affair, altho they give space to documents in the controversy. Well-informed opinion outside of Mexico relies upon the statesmanship of President Diaz to tide this crisis over in spite of his advanced years. *The South American Journal* (London), the British investors' organ, considers Mexican affairs in this optimistic strain:

"President Diaz is now very generally recognized in England and in other European countries as, in point of fact, one of the greatest of living statesmen, who has the invaluable faculty of bringing to his counsels, to cooperate with him in his noble work of national restoration and aggrandizement, men of exceptional administrative ability, elevated conceptions of public duty, high personal character, and remarkable devotion to the service of their country. Speaking of President Diaz, his policy throughout his career has been justly described as 'one of enlightened liberalism.' He has fostered the introduction of foreign capital, and done everything in his power to make it productive and secure; and, above all, his proceedings have invariably been marked for their transparent honor and good faith. As a result Mexico is to-day a prosperous and progressive republic, enjoying the confidence of Europe and America, with a great future before it."

Aged as is President Diaz, neither General Reyes nor Señor

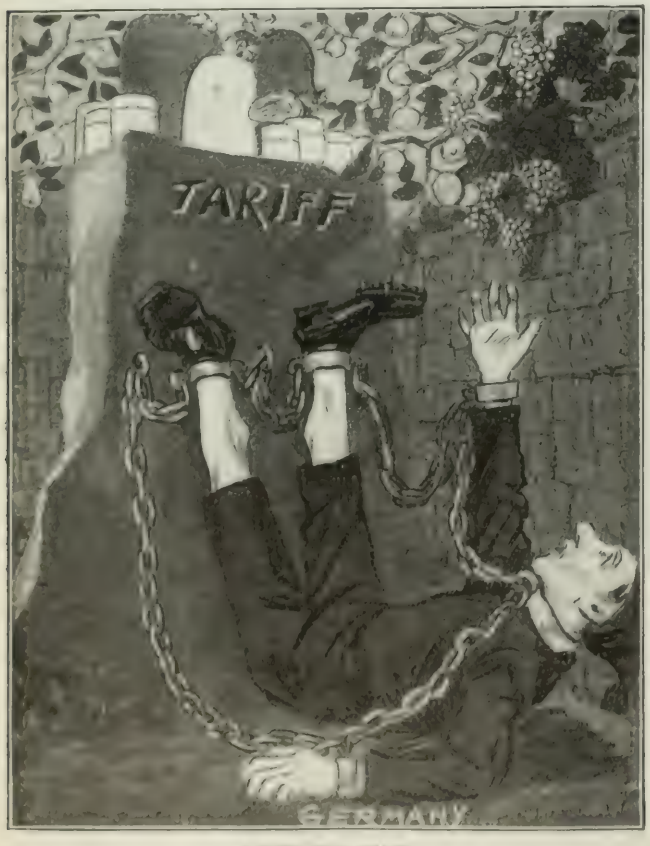
Limantour will find waiting for dead men's shoes an exciting pastime, if we may depend upon this observation from the London *Times*:

"General Diaz is now seventy-three years of age, but he is hale and hearty and vigorous in mind and body. There is no reason to think that the ambitious politicians who look for peace and power on the demise of the present chief magistrate are likely to have their desires gratified at any very early date. For his lifetime Porfirio Diaz in all human probability will continue to be dictator of Mexico. That his administration has been preeminently beneficial for the republic is clearly demonstrated by a comparison with the general conditions now and twenty-five years ago."—*Translation made for* THE LITERARY DIGEST.

STRENGTH OF POLITICAL CLERICALISM IN GERMANY.

AT the last general election in Germany, the Center or Roman Catholic party polled 1,455,100 votes, and it is represented in the Reichstag by 102 members. Thus it is stronger in the Reichstag than the Social-Democratic party, but it is much weaker at the polls. Under-representation of the town population places the Socialists at a great disadvantage in comparison with the Roman Catholic Center. "Ultramontanism lifts its head more proudly than ever in Germany, and in truth it has excellent reason to do so," declares the democratic *Frankfurter Zeitung*, which warns the nation against Clerical purposes in these words:

"Reactionary Clericalism actually rules throughout Germany to a serious extent. It is the solemn duty of every free and up-



A GIFT OF A CHAIN.

Germany got a chain too—not a Hohenzollern, but a hohenzoll [high tariff] one. —*Ulk* (Berlin).

right mind to oppose Clericalism in public life in the most energetic fashion, unless Germany is to sink into the condition of a medieval state at the dictation of a bigoted hierarchy."

The prospect is a gloomy one, however, in the opinion of the German daily. "Ecclesiastically and politically Ultramontanism has gone from one success to another in Germany. Favoring circumstances promise it still richer harvests if the great peril to our intellectual and political development which this involves be not perceived in its full significance, and if it fail to

CLERICAL SUCCESS IN GERMANY.

ROMAN JESUIT COMMANDER (to subordinate): "Strassburg is ours: we rule the German Reichstag, we are bringing the Inquisitions to bear against German scholars—why, I feel younger, five hundred years younger." —*Ulk* (Berlin).

lead to a combination of all those elements, without distinction of party, that are unwilling to have our people lose such measure of freedom of opinion and conscience as they now enjoy.

"We are free to confess that not one of our political parties seems to us so dangerous as the representatives of political Catholicism, the Center party. During the past few years it has been made clearer than ever that the ecclesiastical power, with its far-reaching authority, goes hand-in-hand with this political group in the development of its policy. Consequently the struggle against this reactionary influence is a duty imposed upon every progressive statesman. In the discharge of this duty he is not to be swerved aside by any consideration of a non-political nature unless he be content to act contrary to honor and conscience. We are satisfied to allow the church whatever belongs to the church. Should it, however, advance pretensions beyond the purely churchly limit of religious liberty it thrusts itself into the political domain and must take the consequences. It is an admitted delusion of the Roman Catholic element in our population to regard as the sign of a new 'Kulturkampf' any opposition to the ecclesiastico-political demands of the Center party. Justice must and ever will be done to the Roman Catholic Church, but the non-Catholic portion of our population has the same right too."

The "Center is trumps," observes the *Vossische Zeitung* (Berlin) in a review of the political situation, "and is destined to remain so." There is now a thorough understanding between the German Government and the Center, and this understanding seems to be growing more cordial. The organ of the Vatican, the *Osservatore Romano* (Rome), observes that anti-Clericalism is growing aggressive. "Whenever Mephistopheles is afraid that Faust may escape, him he grows agitated and furious and makes the earth tremble on its pivot. But Faust, fortified by divine promises, does not engage Mephistopheles in battle. Instead, he offers a passive resistance and dies serenely." The Vatican organ declares, too, that "we have reached a stage where the world seems divided into two groups, the Clericals in one and the anti-Clericals in another. . . . Anti-Clericalism is the principle of evil that puts itself in opposition to the principle of good.

It is inspired, guided, maintained by the hatred that hell cherishes for heaven." Another statement of the opposition between Clericalism and anti-Clericalism, embodying a quite different point of view, is made by the French senator Georges Clemenceau in an article in *The National Review* (London). This writer says:

"On the one side you have a Theocracy; on the other an independent civil authority. These are the opposing powers in the long secular struggle. . . . It will not be seriously disputed that the Roman Catholic Church claims the right like every Theocracy to provide mankind both with the laws of heaven and with the laws of earth, the heavenly and the earthly code being united by the iron bands of an irresistible logic."—*Translations made for* THE LITERARY DIGEST.

ARISTOCRACY IN AUSTRALIA.

A LOUD cry has made itself heard at the antipodes to the effect that Australia is in danger of becoming aristocratic. The point is made that the new federal Government is developing a class of officials who thiuk they are "above the people." Labor papers give animated expression to this dread. So, too, altho in a less drastic fashion, do radical sheets like the Sydney *Bulletin*. If "advanced" Australian opinion is well informed, a sort of tacit conspiracy exists to make the Commonwealth Government an aristocracy. This notion is based upon utterances in papers like *The Argus* (Melbourne), an alleged "organ of privilege." This great daily recently observed in connection with the still unchosen Commonwealth capital:

"For the next few years there must be doubt about the governor-generalship. We may take it as certain that the position of the governor-general of the Commonwealth will be inferior to that of the governor-general of the Dominion of Canada, inasmuch as the decision seems to be final that we are to pay less in salary and allowances combined in Australia than in Canada, and expenses are fifty per cent. higher in this than in the other country. But, apart from the salary, the great factor in the sum is likely to be the federal apital. If we are to have a bush capital, and the governor-general is to be immured in some run-up lodge in some mosquito-haunted solitude, he and his family shut out from all social pleasures and advantages, the attractions of the post to an ordinary English household will certainly be reduced to a minimum. With properly maintained residences at Melbourne and Sydney the case would be different."

This sort of thing impresses the labor leaders as downright Byzantine lick-spittling. But the Australian daily goes even further and urges that the governor-general be something more than a figurehead. Otherwise the demagogs may have things all their own way:

"The governor of a great autonomous dependency may at any moment be called upon to display courage, knowledge, and ability. He is the reserve force of the constitution. Apart altogether from routine matters and from important decisions as to dissolutions, it is his mission to keep ministers within legal bounds. With the whole power of the executive in their possession, ministers could easily play the part of despots—especially in the absence of Parliament—and the provision against this peril is that their acts are those of the 'governor in council.' The signature of the governor has to be obtained—and, if there is impropriety, it can be refused. When ministers are described as advisers of the crown, that is a courtesy; when the governor is spoken of as a check on ministers, to keep them within the law, that is a fact. The reserve power may never be publicly exercised, but it may be exercised for all that; and in any case the constitution would be in constant danger from angry or reckless politicians intent upon turning office to party or personal account if it were not there. An efficient officer of state who will make the phrase 'governor in council' a reality is a necessity with us. And the early permanent settlement of all the troubles connected with the position of the governor-general of Australia will be for the benefit of all concerned."

INFLUENCE OF MACHIAVELLI OVER WILLIAM II.

ANY one who would thoroughly understand the policy of William II. as a statesman has but to read the writings of Machiavelli, the past-master of craft, who has been made so unenviably famous by the glowing periods of Macaulay. Such is the conclusion of more than one journalistic authority abroad, and journalistic authorities abroad have been studying William II. attentively of late. He was reared in the Machiavellian school, we are told again and again, and when it is remembered that the average work of reference gives Machiavelli a dubious reputation, notwithstanding Mr. John Morley's recent efforts to put in a good word for the subtle Florentine, the gravity of the accusation becomes apparent. Here, for instance, is what the London *Spectator* thinks about it:

"When the Kaiser was young and most impressionable he came under the influence of the new state Machiavellism of

A SOVEREIGN WITH CONFIDENCE.
He puts Leo XIII. and Martin Luther in the same boat.
—*Fischietto* (Turin).

Prince Bismarck. While he learned that it was his prime duty to serve his country, he unfortunately learned also that in serving one's country the ordinary rules of conduct did not apply, and that great statesmen must in great affairs practise the statecraft which the subtle Italian laid down some four hundred years ago. The Emperor may have taken his love of Germany from his father, the Emperor Frederick, but he learned his principles of state policy in the dangerous school of Bismarck. And he learned his lesson in that school with a thoroughness and tenacity not otherwise discernible in his character. Hence we find in the German Emperor a most curious and unique combination. The quick, versatile, somewhat irresponsible character wanting in depth and judgment is in him shot through with Bismarckian statecraft—a quality which should go by right with a type of mind very different from that which we should naturally associate with the Emperor. The policy and cunning of the Bismarckian school are incongruously engrafted on the eager, mercurial qualities which are in essentials their opposites. The result can not but be perplexing and anomalous. And yet from the point of view of other nations the mixture is a very dangerous one."

It requires a strong type of intellect to adhere with success to the precepts of Machiavelli, whose teachings are above the capacity of average mortals. Hence it becomes important to arrive at correct conclusions regarding the capacities of William II. The conclusions of *The Spectator* are these:

"The Kaiser, we take it, is not a man of any exceptional in-

tellectual gifts. He is, of course, by no means devoid of brain power; but the type to which he belongs is rather that of the versatile and quick-witted than that of the clear and profound intelligences. He is a clever man, no doubt, and possesses immense mental energy; but his mind is apt to move along the surface of things and to find pleasure in detail rather than in essentials. His is not the mind which takes a firm grasp of one or two great principles and follows them to the end. His mind is packed with samples of almost everything that is to be known, but his store is soon exhausted. In fact, the Emperor is intellectually rather like a successful newspaper. He can always surprise the world by being able to produce a fairly sensible opinion upon almost any conceivable subject, and, what is more, can always show a considerable amount of expert knowledge thereon. Again, like the ideal journalist, he is without prejudices. New things and new ideas do not frighten him, or annoy him, or even perplex him, but attract him. His mind is adaptable to the last degree, and there is nothing approaching that petrification of the spirit which too often clings to the men of the older civilizations. But tho this versatile, eager, active, stimulating spirit has many good sides, it is often joined with a want of judgment both as regards men and things. The slow men do not always judge rightly, or the quick men always wrongly; but with exceptional quickness and versatility too often goes a want of appreciation of the essential conditions of a problem. The mind is too full of ideas or too easily moved by the rapidly shifting pageant of events, is too much in a ferment of eager interest, to receive those deeper impressions on which the mind acts or by which it is restrained instinctively. This seems to be exactly the case with the German Emperor. He is one of the quick men who have but little real strength of judgment."

"We should not like to think that there was anything Machiavellian behind the bombardment which has all but produced an explosion too powerful to be resisted by a government resting on popular opinion," comments the London *News* upon a recent incident in South American waters. But newspapers of a democratic tendency in Germany are handling the topic in a way which the press laws render delicate. The *Frankfurter Zeitung* alludes to the "latent peril" in foreign affairs of "a more or less personal rule and an impulsive temperament" when they happen to unite in the same Emperor. The whole article is, in short, an attack upon the diplomacy of William II., who is told that he inspires distrust:

"It was not a lucky hand that ruled our Boer policy. And how stands it with the United States? We see here how little princely visits amount to nowadays. Prince Henry was cheered, but now the cannonade at Maracaibo, which remains unexplained, suffices to arouse an explosive aversion for Germany in America. We take trouble to make friends everywhere. We want too many friends. . . . So nobody is our real friend and we inspire mistrust everywhere. We are looked upon, thirty years after Sedan, as interlopers still, with all the characteristics of intruders. Wherever in the world anything is going on, there we want to be."

The editorial "we" in this instance is pronounced the most palpable of euphemisms for William II. himself, and the *Vossische Zeitung* (Berlin) chimes in with the statement that the gift of a statue of Frederick the Great to the United States was "a blunder." The French papers are pretty generally agreed that William II. is actuated just now by "an ulterior motive" in his foreign policy. The *Gaulois* (Paris) points out that his imperial Majesty is well aware of the distrust inspired by his recent diplomacy, but he makes allowance for it in the interest of his hidden purpose.—*Translations made for* THE LITERARY DIGEST.

POINTS OF VIEW.

GERMAN PRESS LAW. An article attacking the Polish policy of the Berlin Government recently appeared in the *Preussische Jahrbücher* (Berlin). The editor, Professor Delbrück, the distinguished scholar, was in consequence fined and he paid the penalty to escape going to prison.

CRETE AND GREECE. If credence may be given a statement "from a well-informed diplomatic source," vouched for by the *Allgemeine Correspondenz* (Vienna), the Cretan problem will be solved this spring by the annexation of the island to Greece. "It is Russia who proposes and supports the idea."

THE YOUNG CZECHS.—Importance is attached to the attack upon the policy of the young Czech party that lately appeared in the *Narodny Listy* (Prague). That paper was not strictly a young Czech organ, altho it had lent a certain support to the party. It objects to the notion of abandoning obstructive tactics in the Austrian Reichsrath and opposes all conciliation with the Germans on the Bohemian language question.

THE WILD CAT.
Germany, England and Venezuela.
—*Jugend* (Munich).

GERMANY AND GREAT BRITAIN IN VENEZUELA.
WILLIAM (to John Bull): "We'll get nothing out of this fellow. Shall we attack the chap yonder?"
JOHN BULL: "Yes—if there is a chance of doing any better."

20th Century Scientific Marvel

UNCLE SAM ADOPTS The Language-Phone Idea

The Middies at Annapolis Will Be Taught French by the Use of Graphophones

A "SPECIAL DISPATCH" printed on the front page of the New York *Times*, February 10, reads as follows:

MACHINES TEACH LANGUAGES

Students of the Naval Academy Learn from the Phonograph

Special to the New York Times

ANNAPOLIS, MD., Feb. 9.—The study of French, which for a while was abandoned at the Naval Academy, has been restored to almost its former place in the course. Instruction in French was stopped when it was ordered that the date of graduation of all the classes be brought forward. This order has now been changed, and only one class will now graduate sooner than usual. This will give more time to carry out the regular course.

Another reason is that *the teaching of languages has been greatly facilitated by the use of the phonograph* It is found that the students acquire the correct pronunciation by this method better than in any other way.

No further argument is needed. A principle recognized and accepted by the Naval Academy is beyond argument a pronounced success.

And the best point of all is that *you need not go to college* to use this newly-applied principle. The Language-Phone teaches you in your own home, at any hour you have time; and at no additional expense besides the purchase of the books and the instrument. And they can now be bought at about half the original price, and on easy monthly payments.

SPEAK, READ, WRITE

FRENCH GERMAN SPANISH

By means of this wonderful invention you may learn to speak, read, and write German, French or Spanish, with the living voice of the great teachers to guide you, in the incredibly short time of six weeks. It is better than class-room instruction—better than a private tutor. It is the ideal way.

The Greatest Linguist of the Day will Personally Instruct You by the

LANGUAGE-PHONE METHOD

AND THE

Celebrated Rosenthal Commonsense Method of Practical Linguistry AT YOUR OWN HOME

DR. RICHARD S. ROSENTHAL, the world-renowned linguist, whom BISMARCK called the foremost teacher of his age, after long and careful experimenting has been successful in perfecting a wonderful system through which the living voices of cultured native professors of the respective languages, under the personal direction of the most celebrated linguist of the age, are brought to your ears in your home without loss or defect, every accent and intonation being reproduced with the utmost purity and nicety.

BETTER THAN A LIVING TEACHER

You control the machine yourself, making it talk fast or slow as you wish, repeating the same words and sentences over and over again for your benefit. While you listen, with one hand on the listening device, the other holds the open text-book wherein you read the exact words the machine is pronouncing and you see just how they are spelt. As the words are enunciated, your tongue repeats them until the proper accent and pronunciation are acquired—thus eye, ear, tongue and brain are all *learning simultaneously*—no waiting for a professor, or having a professor wait for you; no "tied to time" arrangement, but an ideal, ever ready, ever patient teacher that *absolutely guarantees perfect conversational fluency* in French, German or Spanish. It instructs one or a dozen, old or young, once or a hundred times, whenever, wherever convenient to you. Even in a room where others are reading or studying, you can listen to the voice of your professor without disturbing those around you.

Sent for Only $5 Down

the balance in easy payments of only

$5 a Month

INDORSED BY 876,000 WHO HAVE USED IT

You will learn unconsciously, as it were, never having any effort of memorizing. You will learn to talk accurately, exactly as a native, because the machine *cannot make a mistake*, and you will acquire the language so quickly as to astonish yourself.

College professors all over this and other countries, and the press generally, have indorsed this perfect and natural system of teaching languages. The method has received the indorsement of 876,000 teachers and pupils. *The machine is so simple* that any child can operate it. Run by clock-work mechanism, durable and free from complicated devices, it is a constant source of pleasure and instruction to old and young alike.

Exercises prepared by pupils may also be sent for examination and correction (free of charge)

Reduced Price and easy payment offer to Literary Digest Readers **Including** Free New Speaking and Pronouncing Manual

We offer this marvel to LITERARY DIGEST readers for **only $45; regular price, $75;** and on the easy payment plan, within reach of all.

CURRENT POETRY.

Till We Meet Again.

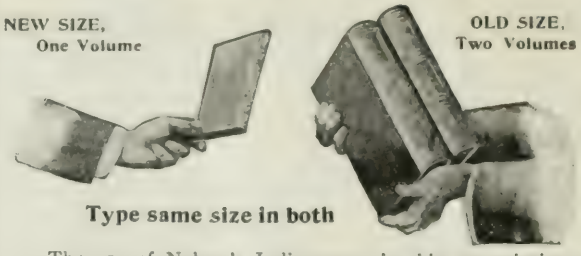
By CAROLINE DUER.

Altho my feet may never walk your ways,
No other eyes will follow you so far;
No voice rise readier to ring your praise,
Till the swift coming of those future days
When the world knows you for the man you are.

You must go on and I must stay behind.
We may not fare together, you and I.
But, tho the path to Fame be steep and blind,

It is worth your while to see that
Cabot's Shingle Stains
are specified for your shingles, and that no substitute is used. No other stains are as good, as analysis shows. Ours are Creosote and the standard shingle stains, made of the best pigments, the best linseed oil, and Creosote, "the best wood preserver the market." (Trade mark.)
SAMUEL CABOT, 61 Kilby Street, Boston, Mass.
Agents at all the Cabot Points.

Small Great Books.



Dickens
Thackeray
Scott

The use of Nelson's India paper, the thinnest printing paper in the world, makes it possible to condense 950 pages into a single volume no thicker than a magazine. The size is only 4¼ x 6¾ inches, and fits the pocket. Each novel is complete in a single volume.

The type is as large and easily read as that you are now reading. The

NEW CENTURY LIBRARY

editions of these great works are the neatest, most convenient and readable ever published, and make choice library sets.

DICKENS, 17 Vols; THACKERAY, 14 Vols.; SCOTT, 25 Vols. Handsomely bound in the following styles: Cloth, gilt top, $1.00 a volume; Leather Limp, gilt top, $1.25 a volume; Leather Boards, gilt edges, $1.50 a volume. Also sets in cases in special fine bindings.

Selected Works of the Best Authors, Complete in Single Volumes

OTHER WORKS WILL FOLLOW.

BUNYAN. The Pilgrim's Progress, The Holy War and Grace Abounding. Cloth, $1.00; Venetian Morocco Limp, $1.50.

TENNYSON. The Poetical Works (1830-1850) of Alfred Lord Tennyson. Cloth, $1.00; Leather Limp, $1 50.

CARLYLE. The French Revolution. Cloth, gilt top, $1.00; Leather Limp, gilt edges, $1.50.

BURNS. The Poems and Songs of Robert Burns. Cloth, gilt top, $1.25; Leather Limp, gilt edges, $1 75.

ADVENTURES OF DON QUIXOTE. Cervantes. Translated from Spanish. Cloth, $1.00; Leather Limp, $1.50.

LAST DAYS OF POMPEII. By Lord Lytton. Cloth, $1.00; Leather Limp, $1.50.

TOM BURKE OF "OURS." By Charles Lever. Cloth, $1.00; Leather Limp, $1.50.

Walk, strong and steadfastly, before mankind.
Because my heart must follow till you die.

Steadfast and strongly, scorning mean success
Lenient to others—to yourself severe.
If you must fall, fall not in sobleness.
God knows all other failure I could bless
That sent you back to find your welcome here.

In February *Scribner's Magazine*

Poems.

By MASON CARNES.

[From "The Argonauts of Immortality," by Mason Carnes (Brentano's) the following poems are selected :]

PROGRESS.

The sea rolls forward on the beach and then
Rolls back, rolls on, rolls back, again, again,
In multitudinous movement, ceaseless roar.

So endlessly we billow toward our shore
And cover up the future with the past,
Dashing against the infinite no more.
And then receding, hissing and aghast.

FRIENDSHIP.

At times the soul is caged, however strong,
And racks itself with pride or sense of wrong.
Straight from another's heart a gentle word
Loosens the soul, which like a morning bird
Upsoars and pours its gratitude in song.

ETERNITY.

With dim and misty sight we grope and cling,
While myriad suns beat on our blindfold eyes,
We totter through illusion and surprise.
Through joy and sorrow to the eternal thing.

When we have suffered death and known its sting,
How shall we love the life that never dies?
In moveless measure, void of human sighs,
The soundless song of praise how shall we sing?

In lands that know not fighting, scheming, roaming,
Nor idleness nor work, how shall we rest?
How shall we quiver when our eyes can see,
We who are used to beauty in the gloaming?
How shall we pity where all men are blest?
How shall we love where all that is must be?

LA BELLE DAME SANS MERCI.

The thought that burns a sculptor to the bone
In perfect marble finds eternal peace.
Oh, would my love could mold your heart of stone,
Could sink in calm serenity unknown,
And live there beautiful till all things cease.

The Cost.

By CHARLOTTE BECKER.

To-day is only won from yesterday;
The flower must lose its sweet to dower the bee;
The breeze is gathered in the great wind's way;
The river bears its largess to the sea.

And we must pay for laughter with our tears;
Mint coin of sorrow for each cherished breath
Of happiness; buy knowledge with the years;
And give our lives to know the peace of death!

PERSONALS.

De Wet and Sargent.—When the English publisher of General De Wet's book, "Three Years' War," was planning its various features, says *The Saturday Evening Post*, he hit upon the idea of a portrait by John S. Sargent.

Obviously it is not an easy matter to secure the services of a man so sought after as Mr. Sargent, but after more or less diplomacy the matter was arranged. Mr. Sargent presumably receives from $10,000 upward for his regular portraits, and the publisher felt that he had embarked upon a large enterprise. The unconquered De Wet was informed of the arrangement. He failed to be impressed, but at the appointed time accompanied the publisher to the renowned painter's studio. Everything was in readiness. De Wet was asked to pose, but he showed a reluctance which was finally explained when he blurted out, "What am I to be paid for this?" The publisher's horror may be imagined. That any one should ask to be paid for having his portrait painted by Sargent was an impossible idea. Nevertheless, the sturdy warrior took the matter seriously, and it is hinted that he won in this skirmish, as he usually did in the field, but affidavits are lacking.

Divine Right.—The New York *Times* tells this story of George F. Baer:

One evening during the strike the president of the Reading Railroad was homeward bound in a street-car, when a fellow passenger who had a little clearing and a lot of woodland up on the mountain began to expound his theory that as coal was one of nature's gifts, the public had a right to help itself to anthracite.

Mr. Baer listened patiently to the harangue, and said quietly:

"That's a good idea, Mr. ——. I am short of wood, and I'll just send a man up to your place to cut a few cords for me. Trees are nature's gifts, you know."

The Peculiarities of Russian.—A. H. Savage Landor, in his latest book of travel, "Across Coveted Lands," relates an amusing rail-way incident that occurred in Russia, while he was *en route* to Persia:

Unable to get at my towels packed in my registered baggage, and ignorant of the Russian language, I inquired of a polyglot fellow passenger what was the Russian word for towel, so that I could ask the guard for one. "*Palatiensi*," said he, and I repeated, "Palatiensi, palatiensi, palatiensi," so as to impress the word well upon my memory. Having enjoyed a good wash and a shampoo, and dripping all over with water, I rang for the guard, and sure enough, when the man came, I could not recollect the word. At last it dawned upon me that it was "*Palatinski*," and "*Palatinski*" I asked of the guard. To my surprise the guard smiled graciously, and putting on a modest air, replied: "*Palatinski niet, paruski* (I do not speak Latin, I speak only Russian)," and the more I repeated "palatinski," putting the inflection now on one syllable, then on the other, to make him understand, the more flattered the man seemed to be, and modestly gave the same answer. This was incomprehensible to me, until my polyglot fellow passenger came to my assistance. "Do you know what you are asking the guard?" he said, in convulsions of laughter. "Yes, I am asking for a *palatinski*—a towel." "No, you are

The Equitable Life.

The most important item in the statement of any financial institution is its surplus. The Forty-third Statement of the Equitable Life Assurance Society which appears to-day, gives a prominent place to the item, marking its preeminence among kindred institutions, which causes it to be known as "The Strongest in the World." The surplus $25,127,496.77 is held in excess of liabilities. The accumulations of assets are now $450,305,587.72.

The new assurance issued was $281,249,944 and the total amount outstanding is now $1,292,446,595. The premium income amounted to $53,932,423.44, and the total income received was $69,007,012.25.

Policyholders of the Equitable may rest assured that under a continuance of the same methods and management the future of the Society promises to be as progressive as its past.

"Here is sound, practical philosophy and lofty patriotism."
Boston Journal.

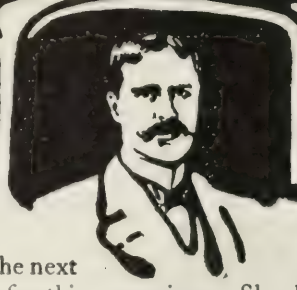
STORIES OF AMERICAN LIFE

By OWEN WISTER



SKOOKUM SMITH AND FRISCO BALDY is the title of the next story in the series that Mr. Wister is now writing for this magazine. Skookum and Frisco are friends of The Virginian, and are the heroes of some surprising adventures.

By WILL PAYNE

TALES OF BLUE RIDGE: Six independent stories, which follow the rising fortunes of a printer's devil, and show how success and fame were won in the early days of the West.

By GEORGE ADE

TALES OF A COUNTRY TOWN: Only a humorist like George Ade could find a village boasting six characters with histories as plausible, and yet as absurdly funny, as those told in this series.

By EMERSON HOUGH

THE LAW AT HEART'S DESIRE: Tells how Justice first got a foothold in a little mining town and how her champion, Dan Anderson, secured the acquittal of his friend Curly, at whose door was laid the sudden death of a pig.

By F. Hopkinson Smith

Another popular contributor to the magazine is Mr. F. Hopkinson Smith. His next tale, entitled A POINT OF HONOR, is a clever, humorous story, which centres around a French duel over an absurd misunderstanding.

THE SATURDAY EVENING POST

Is a Superbly Illustrated Weekly Magazine.

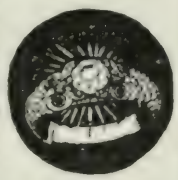
Half a million copies sold every week. Everybody is reading it. The regular subscription price is $2.00 a year. In clubs of 4 or more, $1.25 each. All newsdealers have it at 5 cents the copy.

The Curtis Publishing Company
Philadelphia, Pa.

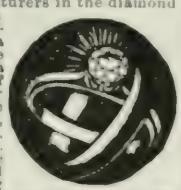
Loftis trusts you for a Diamond

HOW LOFTIS DOES THIS: All that any reader of this advertisement has to do to secure a diamond ring, brooch, watch, locket, stud, cuff buttons, etc., is to **write today** for our **illustrated catalogue**, showing **thousands of beautiful pieces**, and answering every question about our goods, prices and terms. You simply make a selection from this superb and complete catalogue of such article as appeals to your fancy or taste, and we will send it to you by express, all charges prepaid. If the goods are satisfactory, and exactly as represented you then pay one-fifth of the purchase price, and agree to pay us the balance in eight equal monthly installments. We also send you our **Guarantee Certificate** as to the value and quality of the article purchased, and agree that it may be exchanged for any other article in our stock, or credited on a larger purchase, at any time within one year at the full purchase price. In this way you have both the pleasure and prestige of wearing a beautiful diamond while you are paying for it. There is no delay, disappointment, publicity, security or interest.

THE LOFTIS HOUSE is the largest diamond credit business in the world, and has an honorable record of almost fifty years. It is responsible beyond question, and refers to any bank. For examples ask your own local banker for our standing, and he will turn to the books of any of the leading Commercial Agencies, and then tell you that no house stands higher in credit, promptness, or has a better reputation for reliability and absolutely honest statements than Loftis Bros. & Co.—established in 1858.



LOFTIS' PRICES AND CASH OFFER: It should be remembered that our prices for diamonds are very much lower than the spot cash prices of your local jeweler. It is only because we are the largest importers and manufacturers in the diamond and jewelry trade that our prices are so much the lowest. LOFTIS makes a cash customer a discount of 8 per cent. We give our cash customers a Bill of Sale, with the option of returning their purchase at any time within one year, when we will refund the entire sum paid, less ten per cent. If you select, for example, a $50.00 diamond, you can wear it for a whole year and then return it to us and get $45.00 in cash; thus having the pleasure of wearing a beautiful diamond for **less than 10c a week!**



LOFTIS ASKS: that **in writing to-day for our beautifully illustrated catalogue** you will be sure to address your request to the **proper department** mentioned below, as this will insure the utmost promptness from the Manager. You need not hesitate for an instant to take advantage of LOFTIS' offer, for it is only because of the mutual confidence between LOFTIS BROS. & CO. and their thousands of satisfied customers, in all parts of the United States, that the largest business of its kind in the world has been steadily and honestly built up and maintained, and is the reason LOFTIS trusts **you** with a diamond.

not I," and he positively went into hysterics. "*Palliatus!*" means 'Do you speak Latin?' How can you expect a Russian railway guard to speak Latin? Look how incensed the poor man is at being mistaken for a Latin scholar! Ask him for a *parapluie*, and he will run for a towel." The man did run on the magic word being pronounced, and duly returned with a nice, clean *palliasse*, which, however, was little use to me, for I had by this time got dry by the natural processes of dripping evaporation.

Mr. Hewitt's Wit.—The late Abram S. Hewitt was once a guest of the late Recorder Smyth and Senator Evarts, both of New York. The Recorder was poking fun at the Senator, says the New York *Times*, and, "adjusting his glasses, read from a newspaper clipping what purported to be a sentence from a recent speech made by the Senator, which was reality wholly fictitious—as the Recorder knew quite well." A long and hearty laugh followed its conclusion:

As soon as the laughter had subsided, Mr. Hewitt suddenly leaned across the table, and looking rather sternly into the smiling face of the Recorder, said, in a well-assumed tone of reproach:

"That certainly is a remarkable sentence, your honor, but criticism of it does not come well from you if to-day's newspapers are to be believed, for they contain a sentence of much greater length which is attributed to you."

"Why—why—how is it that, Mr. Hewitt?" inquired the Recorder with considerable confusion.

"Because," said Mr. Hewitt, with the utmost gravity, and that grim smile which always accompanied his best sayings, "you are there quoted as uttering a sentence that was to last through the whole life of the prisoner."

MORE OR LESS PUNGENT.

The Answer.—POETICAL AND PEDANTIC YOUNG LADY (walking in the wood with elderly and learned professor): "Oh, Mr. Bookworn, look at that magnificent oak! Let us stop one minute. I must tell him how the sight of such beautiful trees raises keen emotions in my soul; because, you know, I'm sure they can hear us and enjoy a compliment as well as you do. You superb oak, what would you say if you could talk?"

"I believe I can be his interpreter, dear Miss Hopkins. He would most likely say, 'Beg your pardon, miss, I'm a beech.'"—*Tit-Bits.*

At Wellesley.—"Up at Wellesley you can't call on a girl after nine-thirty."

"Gee! They must be a lot of curfew belles."—*Harvard Lampoon.*

His Provision.—"Oh, doctor! I'm so glad you've come. My little girl has such a——"

"Now don't tell me what she has, Nellie, 'cos I'm the Doctor, an' I've got to try an' guess."—*Brooklyn Life.*

A Good Reason.—JONES: "Why do they call that Pullman porter Doctor?"

SMITH: "Why, because he has attended so many berths."—*Cornell Widow.*

How They Spend Their Time.—SHE: "How's the motor-car getting on, Sir Charles?"

HE: "Well, fact is, I've seen very little of it. You see, I've only had it three months, and when it isn't in hospital, I am!"—*London Punch.*

Accounted For.—MOTHER: "Johnny, how is

SECOND DITTO: "The Influence of Creased Trousers on the Decadence of Prayer."

A CLERGYMAN told from his text
How Samson was barbered and vexed;
And told it so true
That a man in a pew
Got rattled, and shouted out, "Next!"

His Idea of It.—SUNDAY-SCHOOL TEACHER: "Reginald, can you repeat the shortest commandment? It has but four words."

REGINALD: "Keep off the grass!"

A Trifle Confused.—THE LAWYER: "And what fault have you to find with the agent you are now employing?"

THE CLIENT: "I can't make out whether he is managing *my* property for *him* or *his* property for *me*."—*Brooklyn Life.*

Why Rome Was Burned.—Nero had ordered the burning of Rome.

"It was my only hope," he apologized to those around him; "my wife was going to clean house."

In the joy of his heart he played his violin, thus turning against him many who would otherwise have forgiven him.—*New York Tribune.*

Something that Might Have Been Expressed Differently.—MRS BROWN (being helped out of a brook by the gallant Captain, who has also succeeded in catching her horse): "Oh, Captain Robinson, thank you so much!"

GALLANT BUT SOMEWHAT FLURRIED CAPTAIN: "Not at all—don't mention it." (Wishing to add something excessively polite and appropriate.) "Only hope I may soon have another opportunity of doing the same again for you."—*London Punch.*

Nuggets From Georgia.—De rainy day is a time fer a man ter stay home en thank God de bill collector can't git out.

Folks what all time callin' fer fire in dis worl' will be de very ones what'll do de loudes' hollerin' fer ice hereafter.

W'en de cow kicks de milk over, stidder beatin' de cow, de wise man turns her out ter graze, en

"Macey" SECTIONAL BOOKCASE {Patented—Other Patents Pending}

Is the ONLY bookcase having absolutely "Non-Binding, SELF-Disappearing" doors.

It combines in the highest degree convenience, imposing appearance, economy of space, protection to books, strength, simplicity, all at small expense.

ON APPROVAL.—There is never any risk in buying genuine "Macey" goods—we ship every article "On Approval," subject to return at our expense if not found at our **factory price** 40 to 100 per cent. greater value than is obtainable anywhere at retail.

GOLD MEDALS—HIGHEST AWARDS

For superiority of design, material, construction, workmanship, finish and perfect operation of "Non-binding, Self-receding doors," i.e. "Macey" Sectional Bookcase received the Gold Medal—the highest award at both the Pan-American and Charleston Expositions.

CAUTION Do not be misled by the deceiving advertisements of **imitators.** No other sectional bookcase has a **self-receding door** that is **absolutely non-binding** and **automatic**—the basic patents completely covering these features are owned by this company exclusively, and no other bookcase can embrace the same valuable features. In the law suit concerning which a competitor has maliciously advertised "Warning to the Public" the United States Circuit Court rendered **a sweeping decision in our favor.**

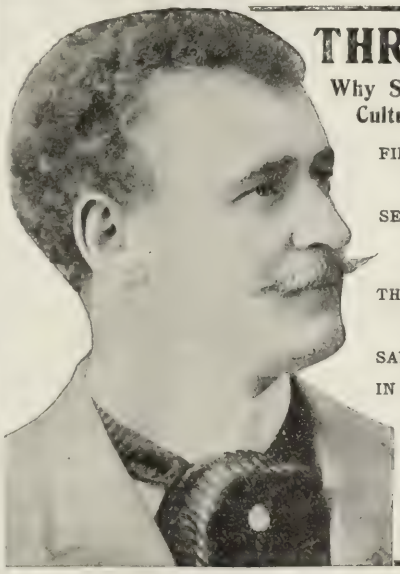
NOTE—See our other advertisement in this magazine.



THREE GREAT REASONS

Why SANDOW'S Mail System of Teaching Physical Culture Has Attained Such Marvelous Success:

FIRST—SANDOW'S method is superior to and more practical than all others; in fact, it is the only method that will give immediate relief to constipation, indigestion, or disordered nerves, to women as well as men.

SECOND—SANDOW'S charges are within the reach of all, and much below what others demand. Free of all charge Sandow gives to every subscriber to his magazine, at $1.00 PER YEAR, a trial course. This trial course is complete in itself, and will give you definite results.

THIRD—In each of SANDOW'S Courses of Exercises (trial course included) you receive an absolute individual prescription made out for you and you alone, just as your physician would prescribe for your medicinal treatment.

SANDOW'S MAGAZINE will contain throughout the year an original series of Anatomical Charts in Colors.

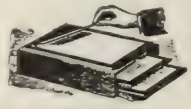
IN ADDITION to my Correspondence School, I formally opened my first American private college in Boston last month.

Terms on application.

SEND $1.00 for the magazine, and SANDOW will immediately send you a blank for recording your physical requirements for the trial course.

EUGEN SANDOW, BOSTON, MASS.

ONE HUNDRED



copies of a letter, piece of music, drawing, or any writing can be made on a **Lawton Simplex Printer.** No washing. No wetting of paper. Send for circulars and samples of work. Agents wanted.

Lincoln's birthday is generally observed in several States.

February 13.—The British, German, and Italian protocols providing for settlement of the Venezuelan controversy are signed at Washington.

The Best Thing on Wheels

The pioneer Runabout easily maintains its lead in Automobile supremacy by the simple fact that improvements in construction originate in the Oldsmobile. Imitators follow. The working parts are as simple and practical as experience can devise, strength is assured by the very highest grade material, and mechanical skill makes them true to a hair.

Price $650.00

Starts at will from the seat, instantly and readily controlled. Easy to understand and operate. *Nothing to watch but the road.* Selling Agents in all principal cities. Write for information and illustrated book to Dept. H

Olds Motor Works, Detroit, Mich.

CREE-DICKSON Sections $1 without doors. With doors $1.75 to $7.25

SECTIONAL

BOOK CASES

Doors cannot stick as they open down and out to horizontal position, forming a book rest, and shut automatically unless held open by book or otherwise; the easy automatic action of the doors eliminates any attention that might interrupt your train of thought.

Dust proof joints are secured by use of cyma recta (O G) edge. Cases are interlocking and have no cross bars or unsightly exposed joints for connecting sections.

Entire front is a series of doors, working independently of one another and hinged one inch below the shelf on which the books rest; thus there is but one joint to each section and entire back of book is visible when case is closed. This is the most rigid bookcase built.

Sold on absolute guarantee. Money refunded if not satisfactory.

Ask for catalogue giving information as to style, size, finish, price.

Comments by Reichhelm in The North American, Philadelphia.

(a) A departure from the books. Mr. Chilton always likes to play his own game.

(b) Also on the lines of originality. Its immediate purpose is to prevent Kt—K 5.

(c) White calculates that the position gained is worth the sacrifice.

(d) With a Pawn to the bad, Mr. Voigt realizes that his first investment will go to pot unless supplemented by further efforts. The present sacrifice is a very ingenious chapter in this game.

(e) He might have played Q—K sq and given up the Bishop's Pawn, but the situation would have been critical. The move in the text is Chilton's smart way of getting out of the trouble by sacrificing Rook for Knight!

(f) Not good. R—B 2 is best.

(g) Better K—K sq and lose the Rook.

PICTURES OF THE PEOPLE AND LIFE OF THE GREAT EAST SIDE JEWISH QUARTER OF NEW YORK

The Spirit of The Ghetto

By HUTCHINS HAPGOOD

ISRAEL ZANGWILL says:

"It is the work of one able to interpret what he sees, to understand its ratios, and finally to divine the deep springs of idealism that transfuse the Ghetto with a poetry that the larger American life often loses."

JOSIAH FLYNT says:

"We are greatly indebted to Mr. Hapgood for the sympathetic intelligence with which he has studied and described this strange eddy in the current of things American."

MARY A. JORDAN says:

"This series of papers belongs characteristically to what may be called literature by documentary evidence, and at once challenges and rewards attention."

Handsomely printed, ornamental covers, 12mo, cloth. With Drawings from Life by Jacob Epstein. 320 pages. Illustrated. Price, $1.35 net; By mail, $1.50.

Evidently, Pillsbury was satisfied with his game until the Russian made his 33d move. If Black plays 33... K x B, then 34 Q—Q B 5 ch followed by Q—B 6, and wins.

Napier, in Pittsburg *Dispatch*, has this note:

"The Muscovite has always been one of Pillsbury's most difficult adversaries, and if he has a hoodoo, I should say Tschigorin is the man. It will be remembered how, at Monte Carlo last year, the games between these opponents counted so fatally against Pillsbury's chances.

"The termination is right handsome and the whole game indicates the trend of opinion regarding this debut, viz., that on better acquaintance it will sink into disfavor."

A Pillsbury Win.

We give a game played between the Russian and American in 1898. It is the same opening as the preceding game, and it will be interesting to compare the lines of play.

The Monte Carlo Tournament.

The Third International Tournament in Monte Carlo began on February 1st. The absence of Lasker, Janowski, and Tschigorin detracts somewhat from the importance of this contest, altho the other great Masters are present: Pillsbury and Marshall; Mason and Teichmann (England); Tarrasch and Mieses (Germany); Albin, Marco, Schlechter, and Wolf (Austria); Maroczy (Hungary); Moreau and Taubenhaus (France); Reggio (Italy). Each player will meet every other player twice. Probably the games between Pillsbury and Tarrasch will arouse greatest interest. At the time of going to press, the score stands:

	Won.	Lost.
Pillsbury	4	0

PRICE.—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents. Foreign postage, $1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

SIGNIFICANCE OF THE CRUM CASE.

THE chorus of objection which the President's negro policy has raised in the South has seemingly extended to the United States Senate, if the adverse action of the Senate committee on commerce on the Crum appointment is a sufficient indication. Washington correspondents say that it is, and they report that prominent Senators have assured the President that the Senate is loath to thrust negro office-holders upon unwilling Southern communities, and have advised him to withdraw the nomination. The President, however, can not find that there is any other objection to Dr. Crum except his color, and does not think that that would incapacitate him for performing the duties of collector of the port of Charleston; so he has told the senatorial emissaries, according to the Washington correspondents, that he will not withdraw the appointment, and that if the Senate takes no action on it, as is threatened, he will make Crum a recess appointee.

This dispute between the President and the Senate, which is under Republican control, does not seem to extend to the party press. The Republican press support the President, and most of the independent papers in the North are with him. The Chicago *Evening Post* (Ind.) says:

"Dr. Crum's nomination was one eminently fit to be made, and there is no legitimate, respectable, entertainable ground for 'turning it down.' We hope the President will not withdraw the appointment. He will be upheld by earnest and just citizens in demanding a vote in the Senate. Defeat in a good cause is not in the least humiliating. The principles of the American Government abundantly justify—in fact, impose—the course taken by the President. Let the Senate openly accept responsibility for obstructing it."

One of the strongest supporters of the President in this matter is the New York *Evening Post* (Ind.). Its Washington correspondent reminds Mr. Roosevelt's critics of a few things in the following paragraphs:

"Mr. Roosevelt is not the last President who will sit in the White House. Other men are going to compete for possession or control of the place of power he now holds. Ten million negroes—one-eighth of the population—are not going to disappear with the fall of Crum. Ambitious politicians, struggling for the Presidency, are not going to ignore the negro; they can not afford to do so, whether they would like to or not, when in twenty States and two Territories outside of the solid South the colored voters range in number from 2,700 in little Rhode Island to nearly 52,000 in Pennsylvania, and 75,000 in Kentucky. No constitutional amendment can be so ingeniously framed, no statute made so iron-bound, in any Southern State as to preclude the possibility that some patronage will go to the negroes by way, at least, of impressing the negroes in the North. But if it is made plain that the choice of colored men to be thus honored will not be from the best class because the Southern white people will not tolerate such a recognition of personal merit, the human scum which rose to the surface under reconstruction will surely rise again. Meanwhile, the opportunity for heading off the worst evils heretofore charged against negro office-holding will have gone by, and the South will have only itself to blame for letting it slip.

"But the Southern agitator retorts: 'Then we shall resort once more to the shotgun, the torch, and the midnight whip.' Granted, and with what result?

"All that has prevented the execution of the threat, repeatedly made during the last few years, of cutting down the representation of Southern States in Congress to correspond with the changed civic conditions locally has been a lack of the pressure of public sentiment in the dominant party. That lack has in turn been due to a dread on the part of the Northern people of reawakening the animosities of a generation ago. The North, whose better element has sympathized with the feeling of the South against the political outrages of the carpet-bag era, is slow to move, but its inertia must not be mistaken for sleep now, any more than in the later fifties. Let the aggressions of the South pass a certain point, and there will be a response that must bring trouble in its train. It is the Northern friends of the South who most dread to see this come; for hand-in-hand with such measures as the Crumpacker resolution, aimed at those States of the South which have boldly effaced the negro's civic rights under the forms of law, will come measures for the federal control of elections, aimed at those States in which personal intimidation still remains the chief weapon for the defense of white supremacy."

The Southern press, as might be expected, are advising the President to take the back track. Says the New Orleans *Times-Democrat*:

"The rejection of this nomination should be instructive to the whole country. It should remind the American people that these race problems should be elevated from the domain of partizan contention and dealt with in a broadly patriotic spirit. If it but do this, the President's policy of forcing unwelcomed appointments upon the Southern people will not have been without some energy for good. It is to be hoped that Mr. Roosevelt will now recognize the error he has made and promptly attempt to correct it. 'Twould be wise in him to withdraw the nomination of Crum and to supplement the withdrawal by appointing a white postmaster to succeed Minnie Cox at the town of Indianola in the State of Mississippi."

And the Atlanta *Constitution* says:

"There is no longer political rime or reason in President Roosevelt hanging to Crum. The Senate Republican committee on commerce has eliminated Crum by refusing to recommend the confirmation of the nomination, and now, more than ever, is the Crum case a fair test of the President's true attitude toward the South in the matter of appointments. The way has been opened for Mr. Roosevelt to meet the issue, and he should have every reason for being glad to close the untoward incident. The whole thing hinges on the President's willingness to waive any scruples of pique or pugnacity of temperament and do the right thing at the right time."

MR. BAER AGAIN UNDER CRITICISM.

"IT is not pleasant and it is not convenient to be the target at which all public denunciation is aimed," remarked Mr. Baer in the course of his speech before the strike commission on February 12, and then in the same speech, a few minutes later, he indulged in some sarcastic flings at the National Civic Federation that have brought down upon his head still more of the "public denunciation" that he finds unpleasant and inconvenient. He related how the operators met the Federation, whom he described as "distinguished gentlemen, some bishops, and others dressed like bishops, and many that we did not know," who "sat there, wisely looking on—not one of them, with the exception of Senator Hanna and a few of the labor leaders (two of them, I believe) offering any advice—but, puffing good cigars, they seemed to enjoy the discussion which was carried on principally between Mr. Mitchell and myself." A sub-committee was appointed by the Federation, and, after several meetings, a report was prepared:

"Strange to say, the Civic Federation never convened to hear that report. At a crucial time, when they had heard our discussions before them, and we had met the committee which they had appointed, they did not even have the small courtesy to hear the report that that committee was willing to make, even tho it would be a report of no ability to agree. Nor did they have the manly purpose to meet again and render to each side the services which they proclaimed to the public they wanted to render, namely, the power of conciliation, and the effort, by honest talk, to bring men together. But for the mere purpose of saving their faces, for fear no advantage for the time being could come to the particular interests they represented, they never convened.

"One of the distinguished gentlemen connected with that Civic Federation, whose vocation almost prohibits me from criticizing him, has contented himself with saying that if Mr. Mitchell and Mr. Baer could have been eliminated from the situation, the Civic Federation might have accomplished results. Not unless the Civic Federation is born again."

The indignation of Senator Hanna and Oscar S. Straus, two of the most prominent members of the Federation, was stirred by these slurring remarks. "I believe the American people have such a profound contempt for Mr. Baer that anything he may say on that subject will not be accorded any consideration," declared Mr. Hanna to a press representative, and he added:

"The reason we did not meet to hear that report was that we were advised by one of the railroad presidents that it would be useless. Mr. Thomas, president of the board of directors of the Erie Railroad, which is one of the coal-carrying roads, is the gentleman who advised me that the Federation would be wasting time in assembling and hearing the report of the committee. He explained that no good would come of it and that the operators would not yield. For that reason the Federation did not meet to hear the report; and I repeat that I do not care what Mr. Baer says about it."

Mr. Straus, in a newspaper interview, intimated that Mr. Baer was guilty of an untruth, and intimated further that he was responsible for the coal strike. Mr. Straus said:

"I regret to say that Mr. Baer's statements regarding the Civic Federation are incorrect as to facts and misleading in deduction. I trust for the sake of truth that his other arguments are more in keeping with facts. I can only attribute his attack to a defective memory or a clouded imagination.

"The Civic Federation did everything in its power to bring about an adjustment of the difficulty, and after repeated efforts succeeded in having the operators confer with the miners. Had Mr. Baer been willing to make the concessions he offered yesterday at the time of his coming before the Civic Federation I feel quite sure there would have been no coal strike."

Mr. Baer is "the Mephistopheles of the whole strike tragedy," declares the Baltimore *American;* and the New York *American* says: "There is no subject that involves the rights of labor and capital, or the general welfare, on which the American people will listen to Mr. Baer with respect. The most charitable view that can be taken of him is that he is a monomaniac living in the delusion that property is divinely commissioned to do as it likes." The New York *Mail and Express*, which has sympathized more with the operators than with the men during the controversy, feels that Mr. Baer is wrong this time. It says:

"The good effect of Mr. Baer's moderate and logical address before the coal commission, and of his proposition for a settlement, promptly rejected by Mitchell, has been spoiled by the attack on the Civic Federation. That useful agency, which is composed of an eminently sensible as well as patriotic body of men, might have done at the start what the President's commission is doing now. It stood ready to do it, and would have done it if it had not been shut out of the whole affair by the refusal of the operators to make the slightest concession."

THE TERRIBLE TRUST WARFARE.

CONGRESSIONAL PERFORMANCES CARICATURED.

Copyright, by A. Dupont.

SECRETARY ELIHU ROOT.

Little, if any, criticism of his selection as a commissioner is heard.

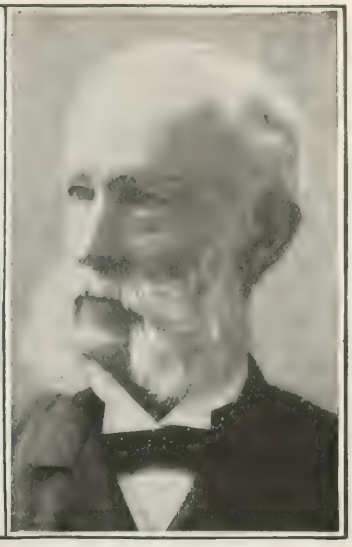
Copyright, 1901, by J. E. Purdy.

SENATOR HENRY CABOT LODGE.

Doubt is cast on his ability to view the boundary question impartially.

SENATOR GEORGE TURNER.

The fact that he is from the Northwest prompts the criticism that he is prejudiced.



GEN. JOHN W. FOSTER,

Counsel for the American side. One of the greatest living authorities on the question.

UNITED STATES REPRESENTATIVES IN THE BOUNDARY ARBITRATION.

BIAS OF OUR ALASKA COMMISSIONERS.

"IT is not likely that England will get anything she is not entitled to from that trio," remarks the Louisville *Courier-Journal*, commenting upon the selection of Secretary Root, Senator Lodge, and Senator Turner to represent the United States on the Alaskan boundary commission. Gen. John W. Foster, ex-Secretary of State, is probably the greatest living authority in the United States on the disputed boundary, and everybody appears to think that his selection as counsel for the American side of the case is the best possible one. But even our own papers think that the United States commissioners are a little too prejudiced in favor of the United States claim—especially Senator Lodge. "President Roosevelt ought not to appoint him to the place," declares the Springfield *Republican* (Ind.); "his public utterances against the Canadian claim have been too sweeping and emphatic to enable him to act with an open mind." And the Hartford *Courant* (Rep.) says, similarly: "He has been playing for years to the gallery where the England-haters sit, and to the determination of this boundary question he does not bring the judicial mind. If our recollection is not at fault, he said only last year that the Canadians should never get one square inch of the tract to which they lay claim, and spoke of their claim as impudent." As Senator Turner is from the State of Washington, he is also probably prejudiced in favor of our claim, thinks the Boston *Herald* (Ind.), leaving Secretary Root as the only commissioner to approach the question with an open mind. "We believe we have an excellent case," adds the same paper, "but for that very reason the ground does not exist for appointing as judicial commissioners men who may be suspected of an unwillingness to settle the question upon its merits. It is to be hoped that the commission will prove better than its peculiar composition would lead one to anticipate."

The Philadelphia *Press* (Rep.) calls all such talk "absurd," and thinks the commissioners will award the decision to the right side, which, however, it is careful to add, is our own. It says:

"Some Canadian newspapers criticize the reported choice of these members of the commission on the ground that they are prejudiced. That is absurd. Mr. Foster, who was a member of the joint high commission, has made a careful study of the question, and may have expressed an opinion. But that is immaterial on the part of the counsel of the United States. Mr. Lodge has expressed an opinion in a speech, but would be quick to change it if any reasons were presented to justify such a change. Secretary Root and Senator Turner have not, so far as is known, said anything on the subject.

"No intelligent American who has any knowledge of the facts doubts for a moment that the United States is rightfully and honestly in possession of Alaska, as the boundary is now understood. At the same time, if Canada can furnish any sound reasons for changing that view, the Americans, particularly those whose names are mentioned for members of the commission, will be quick to recognize those reasons and give them due weight. But while the Canadians have talked vigorously on the subject, they have produced no good reason to support their claims. This will afford them an opportunity. They can make out the best case possible, and the people of the civilized world will be able to judge of its worth.

"It does not seem possible that any facts can be produced on the Canadian side; but if they have any, they will not find better judges to weigh the evidence than those talked of for the United States members of the commission."

BEEF TRUST AND SHERMAN LAW.

WHETHER the injunction against the "beef trust" is an encouraging victory for the people of the United States, as the New York *Herald*, the Philadelphia *Inquirer*, the Baltimore *American*, and many other papers think, or "nothing less than a blow in the face of progress," as the New York *Commercial Advertiser* declares, remains to be seen; but the press are well-nigh unanimous in the former opinion. This suit against the beef-packers was begun last May, and a temporary injunction was granted by Judge Grosscup of the United States circuit court in Chicago on the 20th of that month forbidding the defendants from doing any of the unlawful acts in restraint of trade and in violation of the Sherman act that were alleged in the complaint. The case has been under argument and consideration ever since, and on Wednesday of last week Judge Grosscup made the injunction permanent. The alleged beef "trust" differs from the steel, oil, sugar, and other "trusts" in being a combination of separate and distinct concerns in trade agreements, so that this decision has less general bearing on the question of trusts than it would have had if it applied to a trust built on modern lines. Some papers believe that the beef-packers will now simply unite into one concern similar to the other big "trusts," and proceed with their operations much the same as

before. It is expected also that they will appeal the case to the Supreme Court. Judge Grosscup said, in part:

"There can be no doubt that the agreement of the defendants to refrain from bidding against each other in the purchase of cattle is a combination in restraint of trade; so also their agreement to bid up prices to stimulate shipments, intending to cease from bidding when the shipments have arrived. The same result follows when we turn to the combination of defendants to fix prices upon and restrict the quantities of meat shipped to their agents or their customers. Such agreements can be nothing less than restrictions upon competition, and, therefore, combination in restraint of trade; and thus viewed, the petition as an entirety makes out a case under the Sherman act.

"It may be true that the way of enforcing any decree under this petition is beset with difficulties, and that a literal enforcement may result in vexatious interference with defendant's affairs. But, in the inquiry before me, I am not at liberty to stop before such considerations. The Sherman act, as interpreted by the Supreme Court, is the law of the land, and to the law as it stands both court and people must yield obedience.

"The demurrer is overruled and the motion for preliminary injunction granted."

The New York *Mail and Express* recommends this decision to the attention of the critics of our judiciary. It says:

"There has never been the slightest ground for the impudent assertion that the United States courts were 'on the side of the trusts.' None of the federal courts have ever had any other motive than to get at the law and facts in every case before them, and to vindicate right and establish justice. The Grosscup decision is only a new proof of the disposition of the federal judiciary to defend every public right, as well as every private right, that is brought in question."

But the New York *Evening Post* does not look for much result:

"To infer that an act which is prohibited by law and enjoined by the courts will not be performed would be contrary to experience. In this case, there were large profits to be obtained by a combination of the butchers and packers to put an end to competition in the buying of cattle and in the selling of meats. The men in the combination do not consider it wrong to make such an agreement. They see dozens of other combinations operating on the same principle, some of which are more extensive than their own. They are prompted by the prospect of gain to find ways to circumvent the law, and they are not restrained therefrom by any moral consideration. The Interstate Commerce act forbids the making of secret rates and the giving of rebates by railway companies, yet the law has been systematically and continuously violated from the day of its enactment till a very recent date, and is probably violated in some parts of the country now. One of the complaints against the beef men was that they were receiving secret rebates from the railways. Are we warranted, then, in supposing that the beef combination will be broken up, or that the acts complained of will cease, merely because a federal judge has issued an injunction against them? It would be contrary to all that we know of similar combines to suppose so. What form the beef combination will next take we can not foresee, but it may be a combination like the sugar trust or the steel trust. The amount of money at stake is too large to be surrendered at the end of the first engagement."

The Buffalo *News* thinks that "trust-busters" who are feeling pessimistic should now look up:

"Trust-busters are generally in a state of discouragement over the situation of the people unless they are themselves leading the people up to divine regions of light and liberty, and all that. But the common man may be well content that his case against combines is in the best and ablest hands that it has ever been in since the combine rose to threaten the welfare of the business world, hands of men that are just and fearless and immensely strong. If the nation supports the President and his chief legal adviser, there will be no complaint about the supremacy of any trust in the commerce of this country. A good start has been made toward proving this belief to be reasonable."

NEW PLEA FOR THE OFFICE SEEKER

HOW will the President be able to repulse the man with a large family?—*The Chicago News.*

IT is among the upper ten that President Eliot finds the lowest birth-rate. The berth-rate for upper ten in a Pullman-car is also lower than for lower ten, paradoxical as it may sound.—*The Chicago Tribune.*

SHAKESPEARE wasn't much of a man. He raised a very small family.—*The Chicago Record-Herald.*

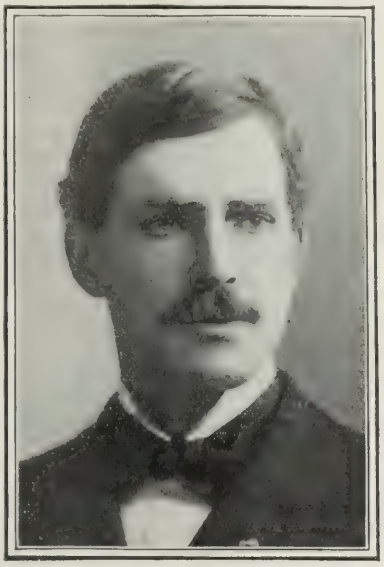
BY way of emphasizing his statements in regard to the dwindling of families, President Eliot might point out that the Democratic family has shrunk frightfully in recent years and that the Populist family has become wholly extinct.—*The Kansas City Journal.*

THERE is no doubt that if all the large families turn out and support President Roosevelt in 1904 Senator Hanna's negro pension bill will look like the little end of nothing.—*The Cleveland Plain Dealer.*

SOME "RACE SUICIDE" SKITS.

MR. BRYAN'S "BOOM" OF GOVERNOR GARVIN.

FEW of the Democratic newspapers have waxed very enthusiastic as yet over Mr. Bryan's suggestion of Governor Garvin, of Rhode Island, for the Democratic nomination for President next year. Most of the other papers do not take it seriously. One of the Democratic papers to indorse the suggestion is the Jefferson City *Democrat*, which says: "If we go east of Ohio for our candidate, give us Garvin. He is a democratic Democrat, and is giving Rhode Island the best administration she has ever had. The West can cheerfully and loyally support Garvin, for he is in love with Democratic ideals and in league with Democratic principles. The Democrats must nominate a man of that character if they mean to elect a President in 1904. It is a trifle singular that the wise men of the East seem to have overlooked Governor Garvin." Mr. Bryan, in his indorsement of Governor Garvin, says that some of the Democrats who have been "mentioned" in the East "have not made any public statements of their opinions, and the Democratic party does not really know where they stand." Governor Garvin, he adds, "not only has that advantage," but "he has also the prestige of having carried his State at the last election," a qualification "which is lacking in the case of the other candidates."



JAMES R. GARFIELD,
"Commissioner of Corporations" in the new Department of Commerce and Labor.

Governor Garvin expresses appreciation of Mr. Bryan's compliment, but he says that "it has no significance to speak of, as Mr. Bryan has named others in the same way." Governor Garvin was elected by a plurality of about 8,000 in a total vote of nearly 60,000. The suggestion "is not to be taken very seriously," says the Springfield *Republican* (Ind.); and the Providence *Journal* (Ind.) declares that "Mr. Bryan's gentle praise of Governor Garvin is intended to shame those Democrats who mention for the Presidency such men as Richard Olney, who takes fees from big corporations, Arthur P. Gorman, who hobnobs with rich men, and Alton B. Parker, who is at the head of the judiciary of New York, and consequently *persona non grata* among all who mistrust laws and courts as inimical to the 'dear people.'" "Mr. Bryan shows his customary shrewdness in picking out his Presidential candidate," says the Philadelphia *Press* (Rep.). It adds:

"Governor Garvin's political principles, it is needless to say, are in full accord with those of Mr. Bryan. He supported the Chicago and Kansas City platforms and has been known as an advocate of a mild form of Socialism. The platform on which he ran for governor last fall opposed all favors to corporations, demanded the initiative and referendum, favored municipal ownership of all public utilities, 3-cent street-car fares, and the election of Senators by the people. Governor Garvin was elected by the labor vote in Rhode Island uniting with the Democratic vote. A strike on the street-car lines in Providence in 1902 compelled Governor Kimball to call out the militia to preserve order. This angered the laboring men, and in revenge they voted for Dr. Garvin for governor, electing him by a large majority for Rhode Island.

"Governor Garvin is accordingly an ideal candidate to push to the front as the standard-bearer of the free-silver, Socialistic-inclined Democracy. He is in full accord with Mr. Bryan's views, and he is the only Democrat who gained any laurels in last November's election. Mr. Bryan knows that there is scant probability of his receiving a third nomination to the Presidency. He turns naturally, therefore, to a man who represents his purposes and whom he can at least use to revenge himself on those Democrats who refused to support him in 1896 and 1900."

JAMES R. GARFIELD AS TRUST INVESTIGATOR.

THE "diligent investigation into the organization, conduct, and management" of corporations that is to be carried on by the new Department of Commerce and Labor is to be in immediate charge of James R. Garfield, of Ohio, who will be commissioner of corporations; and the newspapers appear to think the choice a wise one. "Mr. Garfield is neither a professional politician nor a bookworm," says the Washington *Star* (Ind.), which is familiar with his work in Washington, "but a well-informed man of affairs, who has acquitted himself most satisfactorily in several posts calling for good judgment, prompt decision, and a clear head." The new commissioner is a son of President Garfield, and has made something of a record in the Ohio State senate and the United States Civil Service Commission. Of his work in the Ohio legislature, the Columbus *Dispatch*, published in the State capital, says: "Mr. Garfield made an enviable reputation when he fathered and secured the passage of the corrupt practises act, recently repealed. His purpose was good and for that he will be honored, tho the judgment of the practical politicians was adverse to the measure. His appointment will inspire confidence that the recently enacted law regarding corporations will be enforced honestly and without resort to demagogic display, to the full extent of the powers granted."

A Wall Street view of the new secretary and the commissioner of corporations may be seen in the following comment by *The Wall Street Journal*:

"Much can be said for Mr. Cortelyou and Mr. Garfield that is in their favor. No word of criticism has been heard. Mr. Cortelyou has, according to general testimony, made the best President's secretary in the history of the Government, with the possible exception of Daniel S. Lamont, who like Mr. Cortelyou, was also promoted to a seat in the Cabinet, and now holds an important post in one of the great railroad systems. Mr. Garfield is the son of President Garfield, but has made a reputation for himself quite independent of the great name he has inherited. He is a lawyer of some standing; he has a creditable record in Ohio politics, and he has served acceptably on the United States Civil Service Commission.

"It may be said that service as the President's secretary and as civil service commissioner is no special qualification for the offices of Secretary of Commerce and commissioner of corporations. It is not, and there might be some criticism of the President that he has not appointed to these places experts in economic subjects, students of the problems that relate to the expansion of our foreign trade and the regulation of the great industrial corporations, men deeply versed in the statistics of trade and labor. But after all, such experts, invaluable as they are in giving form and direction to theories, are often incapable when it comes to putting these theories into practise in the exercise of executive duties. It is perhaps just as well that the President has chosen men of affairs, of trained executive capacity—men, moreover, whom he knows and whom he can trust.

"They have a great opportunity before them. The expansion of commerce, the regulation of labor, and the application of the principle of publicity to the trusts, are now the three problems which more than any others occupy the minds of the leading nations of the globe, and on their solution depends, in largest possible measure, the destinies of this country. They have it in their power to perform an important service; but it is also true that their opportunities for mischief are infinite. This mischief might be none the less demoralizing to business interests for being unintentional. However, the new department starts out under auspices that give promise of success rather than failure."

DEVISING A COINAGE FOR THE FILIPINOS.

THE determination of the kind of money that the Filipinos are to use has been one of the most vexing questions that has taxed the congressional mind this winter. The House, by a combination of a minority of the Republican votes with the Democrats, cut the knot by a simple provision that the Filipinos should use United States money, like the rest of us. To the Philippine commission, to the War Department, and to the Senate, however, this arrangement seemed simple in more senses than one, and the Senate has passed a bill setting up for the islands a separate system of coinage that shall be based upon the gold standard and shall, at the same time, be suited to local usage. The provisions of the bill are given in more detail in the paragraphs at the end of this article. The bill also authorizes the calling of an international conference to devise ways of helping the silver countries to establish better currency relations with the gold countries. It seems to be the opinion of the press that the House will accept the Senate bill, and that this scheme of Philippine coinage will prevail.

The Senate measure meets pretty general approval, to judge from the press comment. "The enactment of this law," says the Brooklyn *Times* (Rep.), "will give to the islands such a uniformity and stability in monetary transactions as they have never had, and contribute materially to their prosperity." And the Pittsburg *Chronicle Telegraph* (Ind. Rep.) says similarly:

"Competent observers from America have been telling people at home for a long time that cheap money has been the curse of the islands. One explanation of the cause of hard times in the Philippines has been the almost incredible instability of the currency of the islands. The variations of actual value of money have made business transactions in the Philippine Islands almost a lottery. From December 1, 1901, to December 15, 1902, the proportionate value of silver coins to gold had changed from $2 Mexican for $1 American, to $2.60 Mexican for $1 American. Such instability is destructive to business, but with the new and stable currency an era of prosperity will dawn for the Philippine Islands."

Objection is made, however, by the Buffalo *Express* (anti-imperialist Rep.), which thinks our money is best for the Philippines. It declares:

"Whatever the faults of the present currency of the United States, it has proved to be safe in practise. American money already has been largely introduced in the Philippines and is the standard in fact, despite the efforts to establish a different standard by law. The proposition of the Senate is experimental. The experiment probably will prove successful just so long as the $10,000,000 borrowed to sustain the new currency lasts. When that sum is gone there will be another crash, and the American Congress will be called upon to try something else. The failure may come as quickly as did that of last year's experiment, tho it is likely that the $10,000,000 loan will uphold the currency for two or three years. If the Senate plan is adopted, the Philippines will have their present Mexican currency circulating, as now, at its commercial value, a native peso containing about the same amount of silver as the Mexican dollar, but valued arbitrarily at about 25 cents, and American silver dollars containing only a fraction more coin than the native peso, but worth 100 cents. But Congress is free to experiment on the Filipinos. They are not represented in the body that make laws for them."

The Senate measure is outlined as follows in the despatches from Washington:

"The bill prescribes that the unit of value in the Philippines shall be the gold peso, of 12 9-10 grains of gold, 9-10 fine, said gold peso to become the unit of value when the Government in the Philippines shall have coined and ready for circulation not less than 5,000,000 of the silver pesos provided for in the bill. The gold coins of the United States, at the rate of $1 for two pesos, shall be legal tender in the islands.

"The measure also provides for an additional coinage of 75,000,000 silver coins of the denomination of one peso, which shall be legal tender except where provided by contract. Coins of the denomination of 50 centavos, 20 centavos, and of 10 centavos also are provided for, all such coinage to be under the authority of the Government of the Philippine Islands in such amounts as it may determine, with the approval of the Secretary of War. The bill also provides for the issue of certificates of indebtedness to maintain the parity of the silver and gold pesos, such certificates outstanding at any one time to be limited to $10,000,000 or 20,000,000 pesos. The Mexican dollar and the Spanish coins heretofore used shall be receivable for public dues at a rate to be fixed from time to time by the civil governor of the islands, preference, however, being given to the Philippine coins and certificates. Provision is made for the issuance of silver certificates.

"The option is given for the coinage of the silver pesos, either in Manila or at any mint in the United States, which coins shall bear inscriptions or devices expressing the sovereignty of the United States. The act making any form of money legal tender after December 31, 1903, is repealed."

MOTHER EARTH: "Well, well! I'm sooner get one to sleep than all the others wake up."

ITALY: "I'm the Kaiser's monkey, whose monkey are you?"
—*The Tacoma Ledger*.

CARTOONS OF A TROUBLOUS TIME.

COLONEL PRATT AND THE PRESIDENT.

WHAT the Philadelphia *Inquirer* (Rep.) calls "a matter of national importance," and one that "is certain to arouse a great deal of controversy," is the resignation of Col. Richard H. Pratt as superintendent of the Carlisle Indian School, following his enforced retirement as colonel. Colonel Pratt has been at the head of the school since the time that he founded it, nearly twenty-five years ago, and altho he is over sixty, and altho he has seen some forty years of service, he remained until very recently only a lieutenant-colonel. About two weeks ago his nomination to be a colonel was confirmed by the Senate. To let the Philadelphia *North American* (Ind.) go on with the story:

COL. R. H. PRATT.

Who founded the Carlisle Indian School, and has been its superintendent nearly twenty-five years. The President has retired him from the army, and he has resigned his place as superintendent of the school.

"When he was made colonel a few weeks ago he received an official hint that his retirement would be graciously received. Lacking two years of sixty-four, the age of compulsory retirement, he did not accept the suggestion, for he knew that if permitted to remain he would become a brigadier before the end of his service, through the retirement of those ahead of him on the list. He would willingly have retired immediately on that rank, which would have been only a reasonable reward for his long and useful service.

"But the War Department has many candidates for brigadier generalships, and many of them are equipped with political or social influence, while Colonel Pratt has only his record to recommend him. Hence the President has been induced to retire him under the law which empowers him so to dispose of officers who have reached the age of sixty-two years.

"The substance of the decision is that this officer, who for years has performed duties far more difficult and arduous than those of a colonel of regiment, is reduced to three-fourths of a colonel's pay, or less than that of a lieutenant-colonel, from which rank he was recently promoted. The order is in effect an insinuation that he is no longer capable enough for a colonelcy, whereas his ability and long service ought naturally to lift him into the higher grade.

"Colonel Pratt has accepted the decision to mean, further, that he is considered unequal to the office of superintendent of the school, and therefore he has resigned. His resignation is a grievous loss to the school, and it is also a fitting answer to the cruel slight with which the War Department has rewarded a soldier's fidelity."

The New York *Sun* explains his treatment by saying that "his work at Carlisle has been noteworthy, but it was not military"; but the Philadelphia *Ledger* and some other papers think that Colonel Pratt has been serving his country just as faithfully at Carlisle as he could have done in some fort on the plains. The president of the Lake Mohonk Indian Conference said of him at the session last October:

"We may be proud of the United States army when we see men who have devoted their lives, not to destroying their fellow beings, but to elevating them and to instructing them in the principles of civil government. Our army is sometimes criticized very severely, but there are men who deserve the highest honors the Government can bestow for what they have done for the elevation of humanity and in the illustration of civic righteousness, and Colonel Pratt is one of them."

The Philadelphia *Inquirer*, quoted above, expresses the hope that the matter may be arranged so that the school will remain under the management of the man who has made it what it is:

"The future of Carlisle School is a matter of the first importance in Indian education. It was the creation of Colonel Pratt when a lieutenant. All that it is or has been is due to his untiring efforts. In season and out of season he has worked to develop it, and tho Congress has been niggardly in its appropriations he has succeeded in getting funds elsewhere, and the result is a model educational and training-school of its kind, which has sent out thousands of young Indians with some education, mechanical or professional training and some culture. The retirement of Colonel Pratt at the moment looks like an irretrievable disaster to the institution, tho its friends will hope that such will not be the case.

"It is true that many of the Carlisle students have either by reason of environment or in accordance with the principle of atavism returned to their former savage state with more power for evil than before; but we do not believe that this can be predicated of the great majority of them. The institution claims that such are only a very small minority. In any event it would seem that the proper course to pursue is to make the school more efficient and to continue the work of redemption beyond Carlisle rather than to abandon it entirely.

"It is to be hoped that some arrangement may be made whereby Colonel Pratt (or General Pratt) may continue at its head."

"Why Bryan would repudiate 50 per cent. of our debt and Castro would repudiate 100 per cent. of it, and there you are. Our creditors would owe us 50 per cent. of our whole debt."—*The Brooklyn Eagle.*

LETTERS AND ART.

THE FUTURE OF GRAND OPERA IN NEW YORK.

THE retirement of Maurice Grau from the management of the Metropolitan Opera House, on account of ill health, is regarded as marking "the conclusion of an era in the history of opera in this country"; and the election in his place of Mr. Heinrich Conried, the director of the German Theater in New York, suggests many reflections as to the future of American grand opera. Says the Providence *Journal*:

"In choosing Mr. Heinrich Conried as the successor to Mr. Grau, the directors of the Metropolitan Opera House seem to have made the best possible selection. There is disappointment, and even sharp criticism, in some quarters because the post was not offered to Mr. Walter Damrosch. But Mr. Damrosch, with all his merits, has never won the full confidence of the musical public; nor is there anything in his past achievements to indicate that he could equal Mr. Conried as a producer of grand-opera. It may be said, of course, that Mr. Conried's experience has been in the production of drama. But such a statement does less than justice to his eminence as a manager. His Irving Place Theater has been, in the opinion of competent judges, the scene of the most artistic work done anywhere in this country. No other stock company can compare with his organization of German players. He has given, at his own expense, performances of classical dramas for American students, and he holds honorary degrees from several universities in recognition of his services to education. The fact that he is not a musician in the technical sense, that he does not write or conduct operas, is an advantage rather than a disadvantage to him. He has a sufficient musical education to distinguish between the bad and the good and to secure competent service from his subordinates. In the matter of stage management his supremacy is admitted, and it is said that the future productions at the Metropolitan will be as free as possible from the blemishes which the 'star' system encourages. Should he be able to turn the public from the worship of singers to appreciation of the operas themselves he would accomplish a work of incalculable benefit to the future of opera in America."

MAURICE GRAU,
Manager of Grand Opera in New York during the past few years.

The New York *Commercial Advertiser* comments:

"Operatic conditions in New York are peculiar, and to cope successfully with them requires a broad, courageous, and resourceful man who is endowed with an abundance of tact. The last quality should perhaps come first, for the director of the Metropolitan must reconcile as far as possible three elements which are rarely in harmony. He has to deal first with his singers, a spoiled, capricious, whimsical body of grown-up children who have an exaggerated idea of their own importance. That is the easiest task of all, for in the end singers work for their living and will not let a caprice interfere with their prosperity. He has to deal with the stockholders and the class they represent, a class which does not take opera seriously and is as whimsical and capricious in its likes and dislikes as the prima-donnas themselves. Finally, he must watch the general public, for if the stockholders make opera possible, the public keeps it going, and on its patronage hangs the important question of profit and loss. The secret of Mr. Grau's success was that he was able to please these three elements at the same time. Without any artistic conscience, he gave the kind of opera he thought was wanted, and that he succeeded his retirement with a large fortune, made in five years, is convincing proof.

HEINRICH CONRIED,
New Manager of the Metropolitan Opera House.

"Mr. Grau succeeded by assembling the largest company of great singers in the history of opera and by providing from these *ensembles* which have been matched not even in Covent Garden, the only opera to rival ours in point of singers. He paid extravagant salaries, but the returns justified his extravagance. On the other hand, he produced only such operas of the French, German, and Italian schools as were popular, with now and then a novelty to excite curiosity. He scoffed at the idea of stage management, and pointed to his profits as a proof that the public cared only for the singers. He carried his idea to breaking-point, because he exhausted the available supply of great singers and there seem to be few growing up to replace the older ones. This is the great problem with which the new director must deal. He can not lower the standard set by Mr. Grau, and yet he has less material with which to uphold it. Can he restore the balance by staging his operas with great care, by developing the resources of scenery and light, by enlarging the repertory, by improving the *ensemble*, particularly the chorus and ballet? One season should demonstrate this. His task in a way will be made easier for him by the presence in the Grau company of a majority of the world's great singers and of most capable conductors of German and Italian operas; but he must realize that any effort toward stinting the expense and toward making the opera less cosmopolitan than it is will be to invite financial disaster."

The terms of the new contract with Mr. Conried extend over a period of five years, and his financial backers include Jacob H. Schiff and George J. Gould. It is stated that he contemplates no material change in the company of artists, and that he will devote his attention principally to the more adequate staging of operas, after the standards set by Munich, Vienna, and Paris.

INCREASING NUMBER OF AMERICAN BOOKS.

SOME interesting statistics relating to the books published in this country in 1902 are furnished by the last annual record compiled by *The Publishers' Weekly* (New York). It appears that 7,833 new books were issued during the year—a falling-off of 308 when compared with the previous year's total. This decline, however, is considered a desirable one, since it is confined largely to cheap reprints of novels. "In this respect," remarks the Chicago *Record-Herald*, "the change is a salutary result of the more stringent rulings of the Post-Office Department." The same paper says further:

"The most significant fact, however, is that American books

continue to increase much more rapidly than imported books. There were produced last year 5,210 books by American authors, an increase of 509 over the previous year. This increase in the domestic literary product is accompanied by a marked decrease in imports. Foreign books are of two classes—those printed in the United States under the copyright law, and those imported without copyright. There were 1,578 books of the former class in 1902 as against 2,122 in 1901, while the figures for the latter class were 1,045, as against 1,318 in 1901.

"These facts are an eloquent indorsement of the international copyright law, which has proved a boon to authors on both sides of the Atlantic. While it protects the foreign author from piracy, giving him the privilege of copyrighting a book in this country for a nominal fee, it also guards against an indiscriminate exploitation of foreign books by demanding that these must be printed and bound by American printers and binders in order to secure the copyright. This wholesome check has kept out no really good book, while it has given a marked stimulus to American authorship.

"Year by year the number of American writers who can live by the pen is increasing. Last year our authors produced 5,210 new books as against 2,623 from abroad. The tables have been turned, and England is now importing American books, whereas a decade ago the current flowed almost solely in the other direction. It can not yet be said that American fiction averages as well in quality as British fiction, but that is only a matter of time."

HAUPTMANN'S NEW PLAY.

THE German estimates of Gerhart Hauptmann's new play, "Der Arme Heinrich," and the opinions expressed by correspondents of American papers differ conspicuously. Not only is a more critical attitude assumed by the German press, but even the motive of the play is regarded in a different light. The American papers are entirely favorable in their comment; but, to the minds of some German critics, a leprous knight who is willing to permit the life of a maiden to be sacrificed that he may live, is a repulsive theme for a play.

In all essentials Hauptmann follows the famous medieval legend. Says Prof. Kuno Francke (in the New York *Evening Post*):

"The legend of 'Poor Henry,' as everybody knows, was first treated by Hartman von Aue in an epic poem which is among the few real masterpieces of medieval literature. Hartman tells us of a rich and powerful lord, Heinrich von Aue, who, like Job, in the midst of worldly affluence and splendor, is visited by a terrible affliction, being infected with leprosy; who, unlike Job, abandons himself—for a time at least—to grief and hatred and rebelliousness against God; but is finally healed, both bodily and mentally, through the pure faith and self-surrender of a simple peasant girl."

Of Hauptmann's rendering of the story Mr. Francke says:

"There are few works in the world's literature that aim higher than this sweet and noble poem. In depth of feeling, in simplicity of structure, in beauty of language, in strength of character-drawing, in spiritual import, it surpasses to my mind everything that has come from the hand of living dramatists."

In the same laudatory spirit Christian A. Luhnow, the Berlin correspondent of the Boston *Transcript*, declares that at the first performance Hauptmann "scored a brilliant success" and asserted anew his acknowledged priority among German dramatists. He says further:

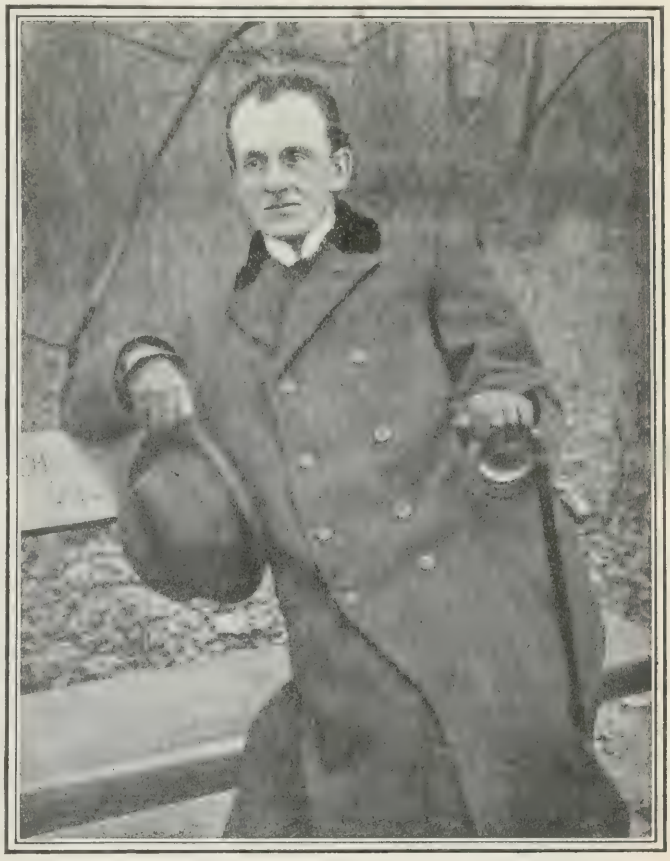
"Before the fall of the second curtain the old-time enemies of Hauptmann had been won over. Then followed an ovation, such as no other German dramatist has received from the proverbially cold and supercritical Berlin première habitués, within several years. Hauptmann added one more great poetic and dramatic achievement to his already long record. He created in 'Der Arme Heinrich' a figure which ranks among, if it does not excel, his best creations."

Speaking of the first-night performance of "Der Arme Heinrich" in Vienna, *Die Neue Freie Presse* (Vienna) says:

"A storm of applause swept the whole house at the end of the second act, and the author was called before the curtain so often that it seemed certain that the evening would end in an overwhelming success. This promise was not altogether fulfilled. Altho there was much applause throughout the play and the author was again and again called out, it was easy to see that the great uproar was a personal ovation to the guest, a tribute rather to the writer himself than to his new creation. . . . However, on the whole the evening's performance might be deemed a distinct success. The audience listened to the work of the poet with breathless interest, even tho that interest was not heightened from act to act."

From the feuilleton which the same paper devotes to the new play, we quote as follows:

"The language is lofty and beautiful throughout, and is full of thought. By reading and repeated reading one receives a



A RECENT PORTRAIT OF HAUPTMANN.

"Der Arme Heinrich," his new drama, adds "one more great poetic and dramatic achievement to his already long record."

better impression than by seeing it. As a drama it suffers from a fundamental mistake which in the relentless light of the stage can not be hidden; like a gray caterpiller, a deadly monotony creeps from act to act and will not let itself be dispelled. Four acts of leprosy are rather hard to sit through. We confess we left the theater in a singularly unpleasant state of mind. That a poet had spoken to us was not to be disputed, and yet he had given us no pleasure. His actors had done good work and brought his boat past rocks and shoals into a safe harbor, and yet we are left in an undecided frame of mind. There is only one way to account for this: the play, successful in its rendering, is disappointing in its subject."

Die Illustrirte Zeitung (Leipsic and Berlin), however, thinks that "Hauptmann has entirely grown away from his creed of naturalism and has portrayed disease in a manner which avoided everything that might offend good taste." The Vienna correspondent of *Die Litterarische Echo* (Berlin) exclaims: "At last, after a long period of time, the Burg Theater has again been the scene of the first performance of a work of the highest order." The severest criticism as well as the most detailed

analysis of "Der Arme Heinrich" is found in *Die Zukunft* (Berlin), which says:

"Herr Hauptmann has not even tried to weave a strand of a new color into the old web of the story. He has spiritualized Hartman's naïve sensuality, he has adorned the simple verses of Hartman, often with reflections that are very praiseworthy, and has made out of a wonder-tale a series of monologs, dialogs, and mystery scenes, which, because they have appeared on the stage, are supposed to be a drama. What was the use of this expenditure of energy? If he could not fill the old bottle with the new wine of his own personality, if Hauptmann could not see the medieval sacrifice as through the eyes of a modern Hartman, we could have contented ourselves longer with the epic of Herr von Aue.

"The most satisfactory way to approach this poem is to read it in book form. In the theater the hours are leaden-footed. I spoke to no one who did not groan: 'It may be very fine, but it certainly is tedious,' and true admirers of Hauptmann were among those who spoke in this way."—*Translation made for* THE LITERARY DIGEST.

THE NOVELS OF HENRY JAMES.

THE name of Henry James is so prominent in current magazine literature as to lead *Harper's Weekly* to declare that, during recent weeks, he has "attained to something like an apotheosis." *The North American Review* has departed from its traditions to open its pages to the first instalment of his new novel, "The Ambassadors"; Mr. William Dean Howells writes in the same magazine an appreciation of his qualities; and *The Edinburgh Review* devotes twenty-seven pages to an estimate of his work.

The writer in *The Edinburgh Review* is impressed at the outset by the mere bulk of Henry James's writing. He says:

"The amplitude of his work, the sheer space of shelf which his novels cover, comes as a first surprise to the collector. One has somehow regarded him as the reverse of a prolific writer, and the pleasures conferred by his successive volumes have always seemed too far apart; yet there have been published for the English reader close upon a hundred novels and tales, and others still are beached unprofitably in the stagnant harborage of magazines. Such an output is clearly not that of a man who regards literature as an amusement, and it is very interesting to observe that Mr. James's fecundity has increased with every decade of his working life. He was born on April 15, 1843, and, as his first tale appeared in 1866, he has been transcribing his impressions for thirty-six years. To his work such a description is especially applicable, for he has throughout adopted the part of the social recorder, and only for the briefest season has his attention been diverted from his own time. So close indeed has his attention been that the period of which he writes is most often that in which he is writing, an intimacy in association which gives his work a freshness of color like that of a canvas painted in the open air.

"Freshness of color would perhaps be by some critics considered the quality most conspicuously absent from his work; but by freshness we do not mean that false air of reality which is the result of superficial imitation, and may be produced so cheaply. The freshness of Mr. James is an effect of atmosphere, not of outline. One might say that in some of his work he is preoccupied with atmosphere, and occasionally resembles the artist who preferred to paint a purple cow to sacrificing the serenity of his twilight to the true color of the animal. Mr. James's pictures have their purple cows; he is concerned preeminently with effect, and to that end is always prepared to subordinate his material. Even in his longest stories he maintains marvelously the sense of tone, he keeps down his accessories, and produces a continuity of impression which makes him the admiration and the despair of his fellow craftsmen. No doubt to those who have no fondness for effect, who desire that every character should be depicted in the blinding light of noon-tide knowledge, his delicacies, his hesitations, his designed obscurity are an irritation, and his methods seems as artificial as they proclaim it. Yet artifice of some sort must always be used in reducing from the life, and impressionism may be but the finest order of realism, the rendering of a feeling instead of a fact."

Mr. James's fiction is divided by the same writer into three periods. "America supplies themes for the first; the second is essentially European; while the third scarcely wanders from English soil." The two most notable products of the earliest period, of nine years, are "Watch and Ward" and "A Passionate Pilgrim." During the next fifteen years appeared "Roderick Hudson," his first long novel; "Daisy Miller," a "simple and dispassionate study of the American maiden then looming into prominence"; and "Washington Square," a "miracle in monotone." The publication in 1890 of "The Tragic Muse" inaugurated the third period, to which belongs also "What Maisie Knew" and "The Awkward Age." The last-named novel is declared to be Mr. James's most distinctive effort, surpassing, by "its completeness, its sympathetic intrusion, its fine impartiality," anything else that he has done. The article in *The Edinburgh Review* concludes:

"How great Mr. James's achievement is, one is profoundly conscious after traversing, for such an article as this, the entire spread of it without any sense of satiety or of iteration. There is no more genuine proof of power, of originality, of imagination, than this unfading freshness, delicacy, and variety in remembered work, and against all that has been written of those qualities in these pages, one can but set a disinclination, perhaps a disability to handle the naked issues of emotion, and too frequent a tendency to immerse his drama in a saturated atmosphere of convention. That, however, is a defect of his qualities, a determination to contrive 'an immense correspondence with life,' and he has so completely succeeded as to have added a new conception of reality to the art of fiction. If he has dropped a line but rarely into the deep waters of life, his soundings have so added to our knowledge of its shallows that no student of existence can afford to ignore his charts. He has lived, as it were, in the chains with the 'lead' in his hands, intent on definite knowledge of the channels and shoals of the human heart, where so many another pilot has been content to steer by the mere appearance of the surface water. And to the pleasure he has given us by his sketches of the beauty and variety of that enchanting coast must be added gratitude for such a diversity of enlightenment on its perilous approaches as he alone, of those who have studied it, seems able to supply."

In his article on "Mr. Henry James's Later Work" in *The North American Review* (January), Mr. Howells has the following to say in regard to the alleged "obscurity" of his author:

"For my own part I take it that a master of Mr. James's quality does not set out with a design whose significance is not clear to himself, and if others do not make it clear to themselves, I suspect them rather than him of the fault. All the same I allow that it is sometimes not easy to make out; I allow that sometimes *I* do not make it out, I, who delight to read him almost more than any other living author, but then I leave myself in his hands. I do not believe he is going finally to play me the shabby trick of abandoning me in the dark; and meanwhile he perpetually interests me. If anything, he interests me too much, and I come away fatigued, because I can not bear to lose the least pulse of the play of character; whereas from most fiction I lapse into long delicious absences of mind, now and then comfortably recovering myself to find out what is going on, and then sinking below the surface again."

He continues:

"'The Sacred Fount' is a most interesting book, and you are teased through it to the end with delightful skill; but I am not going to say that it is a great book like 'The Awkward Age,' or 'The Wings of a Dove.' These are really incomparable books, not so much because there is nothing in contemporary fiction to equal them as because there is nothing the least like them. They are of a kind that none but their author can do, and since he is alone master of their art, I am very well content to leave him to do that kind of book quite as he chooses. I will not so abandon my function as to say that I could not tell him how to do them better, but it sufficiently interests me to see how he gets

on without my help. After all, the critic has to leave authors somewhat to themselves; he can not always be writing their books for them; and when I find an author, like Mr. James, who makes me acquainted with people who instantly pique my curiosity by 'something rich and strange,' in an environment which is admirably imaginable, I gratefully make myself at home with them, and stay as long as he will let me."

THE TRAGEDY IN TOLSTOY'S LIFE.

ALTHO so much has been written about Tolstoy, the many people in this country who are interested in his doctrines have had little opportunity of finding out what his own countrymen think of him. "Tolstoy, as Man and Artist," by Dmitri Merejkowski, is the first long critique which we have had translated from the Russian. Hitherto most of the accounts of Tolstoy's manner of life which have reached American readers have been those of Tolstoyan disciples who journeyed to his home prepared to worship at the shrine of the master. Merejkowski's book is the more interesting because his point of view concerning Tolstoy is quite different from the one with which we have become familiar. In his inquiry he proves, to his own satisfaction at least, that Tolstoy has practised on himself a colossal self-deception, and that his life, if considered as an embodiment of Christianity, has been a miserable compromise. He declares that Tolstoy is a superb pagan, who, under the cloak of simplicity, has attained a higher degree of luxury than have any of the most fashionable seekers of enjoyment; and who, instead of giving his all away, has merely shifted his responsibilities upon other shoulders. The result of Tolstoy's theories on his domestic life is described as follows:

TOLSTOY AND HIS WIFE BY THE CRIMEAN SEA.

"Tolstoy behaves toward his wife with a touch of exactingness, reproachfulness, and even displeasure, accusing her of preventing him giving away his property and of going on bringing up the children in the old way. His wife, for her part, thinks herself in the right, and complains of such conduct on her husband's side. In her there have involuntarily sprung up a hatred and loathing of his teaching and its consequences. Between them there has even grown up a tone of mutual contradiction, the voicing of their complaints against one another. Giving away one's property to strangers and leaving one's children on the world, when no one else is disposed to do the same, she not only looks on as out of the question, but thinks it her duty as a mother to prevent. Having said as much to Bers [her brother], she added with tears in her eyes, 'I have hard work now; I must do everything myself, whereas formerly I was only a helper. The property and the education of the children are entirely in my hands; yet people find fault with me for doing this, and not going about begging! Should I not have gone with him if I had not had young children? But he has forgotten everything in his doctrines.'

"And at last came the final, and scarcely credible admission, 'Leo's wife, in order to preserve the property for her children, was prepared to ask the authorities to appoint a committee to manage the property.'

"Fancy Tolstoy declared incapable of managing his affairs by his wife! This is indeed a tragedy, perhaps the greatest in Russian life to-day, and, in any case, in his life. This is that edge of the sword on which the whole destiny of the man, when in the balance, is poised, and we learn all this from casual observers, from people idly curious. And this terrible fact is born deaf and dumb, in the darkest and most secret corner of his life. There is not a word from himself, tho his invariable habit has hitherto been to write confessions, and he even now declares that he has nothing to hide from the public. . . . . .

"The great writer of our country [Russia] should have made himself the champion of the Russian people, a manifestation yet unknown and unique in our civilization, and the religious path once more found across the gulf, opened by Peter's reforms, between us and the people. It is not for nothing that the eyes of men are bent with such eagerness on him, not only on all he writes, but far more on all he does, on his most private and personal concerns, his family and home life. No, it is not mere idle curiosity. There is too much under that roof of moment to us all, to the whole future of Russian culture. No fear of being too prying ought to hold us back. Has he not said himself, 'I have no secrets from any one in the world. Let them all know what I do.'

"And what *does* he do? 'Not wishing to oppose his wife by force,' says Bers, 'he began to assume toward his property an attitude of ignoring its existence; renounced his income, proceeded to shut his eyes to what became of it, and ceased to make use of it, except in so far as to go on living under the roof at Yasnaia Poliana.' But what does 'except in so far' mean? He carried out the word of the Lord, and left house and lands and children, 'except in so far' as he still clung to them. He made himself a beggar and homeless, and gave away what he had, 'except in so far' as he consented, for fear of grieving his wife, to keep what he had."

Merejkowski gives an account of the way in which the Tolstoy *ménage* is conducted at present, of how the Countess ministers to his tastes, and everything tends to increase his comfort and well-being. We quote again:

"'He is very fond of French perfumes and scented linen. The Countess takes care that there is always a *sachet* of petal-dust in the drawer with his underclothes.' You see the method of this enjoyment. After manure, the perfume of flowers and essences. Here is the symbol, here the point of union. Under the peasant Christian's *pelisse*, we get, not a hair-shirt, no; linen, lavendered and voluptuous with *eau de Chypre* and Parma violets.

"That cheerful philosopher in ancient Attica who tilled a little garden with his own hands, who taught men to be easily content, to believe in nothing, either in heaven or earth, but simple enjoyment in the sunlight, flowers, a little brushwood on the hearth in winter, and in summer a little spring-water out of an earthen cup, would have recognized in Tolstoy his true and, it would seem, his sole disciple in this barbaric age, when in the midst of senseless luxury, coarse, sordid, and barbaric American 'comfort,' we have all, long ago, forgotten the finer part of pleasure.

"The Countess, who has, at last, ceased to quarrel about the giving up of the property, and with a sly motherly smile slips among her husband's linen a *sachet* with his favorite scents, is a faithful and trusty collaborator in this refinement of life. 'She learns his wants from his eyes,' an observer says; 'she cares for him like an untiring nurse,' says another, 'and only leaves him for a little while at a time.' As, for many years, she has studied minutely the habits of her husband, she can see, directly Leo leaves his study, from his mere look, how he has got on with his work and what humor he is in. And if he wants anything copied she at once lays aside all the work of which her hands

are always full, and tho the sun should fall from the sky, yet, by a certain time the copy will have been carefully written out by her hand and laid on her husband's writing-table.'

"Even if he seems ungrateful, says that his wife is 'no friend of his,' and heeds her love no more than the air he breathes, yet she wants no other reward than the consciousness that he could not get on without her for a day, and that she has made him what he is. 'The untiring nurse' rocks, pampers, and lulls, with care and caresses, like the invisible soft strength of the web of a 'feeble spider,' the self-willed, refractory, and helpless child of seventy."

We quote, in conclusion, Merejkowski's summing up of what he deems the failure and the achievement of Tolstoy:

"In the eyes of a man acknowledging only Christian sanctity and the forcible mastery of spirit over flesh, mortifying both flesh and spirit, the sentence passed by Tolstoy on his own career will seem just: 'I devoured the produce of the labor of my peasants, punished, misled, deceived them. Falsehood, theft, debauchery of all kinds, drunkenness, violence, murder, there was not a crime which I did not commit.' But if, apart from the sanctity of the spirit, we admit also a sanctity of the body outside the Christian law—the ancient heathen or Old-Testament standard of righteousness, not abolished, but only remodeled by Christ—then the life of Tolstoy will be one of the most consistent, uniform, and admirable of lives. It may even be called magnificent. From what has been written above, it will have been seen that his self-condemnation will not stand. The careful master and manager, the affectionate father of a family, like one of the Old-Testament patriarchs, his whole life breathes purity and freshness, like some old but lusty tree, some cool and transparent subterranean spring.

"There are no morbid contrasts or deceits in the life itself, in acts or even in feelings. These begin to appear only when we proceed to compare his perfect pagan conduct with his imperfect Christian intention. His acts are not put to shame by acts, but only by words and thoughts. In order that the life of Tolstoy may seem stainlessly fair, we must forget not what he does and feels, but merely what he says and thinks about his acts and feelings. He has fulfilled the old law; and the tragedy of his life lies in the fact that he has not justified the acts of his law by his Faith and his Consciousness."

THE "LOST ART" OF BLANK VERSE.

IS it a fact that blank verse is "largely a thing of the past"? Mr. Charles Leonard Moore, a writer in the Chicago *Dial*, would have us believe that it is so. Blank verse, he affirms, "is an instrument of speech intellectual and spiritual, and has shared in the decline of intellectual and spiritual things. The immense tangle of later lyric growths has choked out the monarchs of the forest of poetry." We quote further:

"Blank verse is our great English instrument of sounding speech. It has been found equally fitted for dramatic, epic, and reflective poetry. Marlowe fashioned the instrument first, and gave it a capacity for fiery energy and crashing volume of sound. But he left it somewhat monotonous and over-keyed. Shakespeare took it, and broke up Marlowe's mighty line, and gave it every variety of note, ran over the whole gamut of cadence. In his verse the cæsura flies from syllable to syllable as the foam leaps from crest to crest, and beckons the waves to follow in pliant but irresistible changes. Consider the difference between this word of Coriolanus:

> When, like an eagle in a dove-cote, I
> Fluttered their Volsces in Corioli,

where the whirling sweep of the first nine syllables suddenly checks itself at the tenth, and then, poised there a moment, actually vibrates as the sense demands; consider the difference between this and the slow pulsing and ebbing echoes of Prospero's great speech:

> Our revels now are ended; these our actors,
> As I foretold you, are all spirits, and
> Have melted into air, into thin air.

"After the molten speech of Marlowe, and Shakespeare's living rhythms, there was nothing for Milton to do but to make blank verse architectural—to build it up into magnificent edifices of symmetrical art. It may be said to have solidified in his hands; and the business of later poets has been to try to bring back to it the play and changeableness of life. Wordsworth in his best verse imparted to it a spiritual transparency, almost transfiguration; and there is a nameless necromancy in Shelley's 'Alastor.' But Keats alone was a spirit vivid and real enough to renew its former potency. Beside 'Hyperion' I would place Landor's 'Gebir' and Horne's 'Orion' as the best examples of modern blank verse."

Mr. Moore pleads for a renaissance of this "lost art." The popularity of lyric poetry, he observes, is due to the fact that it is easy for the eye and ear to catch its symmetries of arrangement. But blank verse "is a matter for reverie, for profound study. Its music rises and swells and branches into distinct strains, and loses itself in the distance, or is multiplied with reduplicated echo. It only surrenders its whole beauty to the finest ear."

ANOTHER FRENCH LECTURER.

TWO notable representatives of French culture are now lecturing in this country. Following close upon Comte Robert de Montesquiou-Fezensac, whose personality has already been described in our pages, comes M. Leopold Mabilleau, the invited guest of the "Alliance Française Federation" and of the "Cercle Français de l'Université Harvard." In previous years, MM. Doumic, Rod, de Régnier, Deschamps, and Le Roux have lectured under the same auspices, and it is confidently predicted that M. Mabilleau will maintain the high standard set by his predecessors. During his stay in this country he will deliver over a hundred lectures. He also plans to visit Cuba. The following account of M. Mabilleau's life and work is quoted from a public statement issued in the interest of his tour:

LEOPOLD MABILLEAU,
The New "Alliance Française" Lecturer.

"M. Mabilleau is about fifty years old. He is a graduate of the Ecole Normale Supérieure, upon leaving which he won a fellowship in the French School of Archeology in Rome. He was called thence to the University of Toulouse, where for some years he filled its chair of professor of philosophy, and taught afterward at the University of Caen, at the Collège de France and at the Conservatoire des Arts et Métiers. For many years he was above all a university man, but he is now chiefly interested in social science and has been for several years director of the Musée Social, founded by the late Count de Chambrun. He is at the same time one of the most brilliant contributors to the *Revue de Paris* and the *Gazette des Beaux Arts* and the author of many widely circulated books on art, literature, and especially on philosophy and moral and political sciences. Among the best known of his books might be mentioned the exhaustive work on Cesare Cremonini and the philosophy of the Italian Renaissance, and the admirable monograph on Victor Hugo in Hachette's 'Série des Grands Ecrivains Français.'

"M. Mabilleau is not merely a versatile man. He is one of the greatest economists of contemporaneous France, and few men in his country combine his exactness and solidity with his eloquence and brilliancy."

SCIENCE AND INVENTION.

IS THE MATERNAL-IMPRESSION THEORY A SUPERSTITION?

THE general belief that impressions made on the mother just before the birth of a child affect the latter is given countenance by most medical authorities and has even found its way in one shape or another into standard scientific text-books. Dr. E. T. Shelly, writing in *The Medical Record* (February 7), pronounces it a mere superstition, having no warrant in theory or fact and unworthy of credence by any sane person. Says this writer:

"Birth-marks are structural aberrations which, in the very nature of things, must originate in cellular accidents very early in fetal development—very much earlier, in fact, than the mental impressions to whose occurrence these deformities are attributed usually take place. It is a well-known fact that animals and plants frequently exhibit so-called 'marks,' analogous to those found in man, and yet it is doubtful if any one—even a professor of obstetrics—would try to explain their occurrence by the maternal-impression theory.

"There is no reason to believe that nature gives the female parent any greater power in determining the character and constitution of the product of conception than is granted the male parent. This rule holds true in the vegetable kingdom and in the animal kingdom, aside from man, and there is no good reason to believe that it does not hold equally true in his case. If the correctness of the maternal-impression theory be, however, conceded, the logical conclusion must be that nature is biased, and that the influence of the father on the organization of his offspring is entirely subservient to the nervous irritability and mental impressionability of the mother during pregnancy. If this were true it would be unfair to both parents, as well as to their child. As nature is never unjust, the theory is presumably untrue."

Besides this, Dr. Shelly tells us, there are no physiological grounds for such a belief. The relation between mother and child is never one of physical connection, only of contiguity. As for the two nervous systems, they are not even contiguous, for they nowhere approach each other. He goes on to say:

"In fact, it would be impossible for the child to be more completely separated from the mother and still be nourished and retained within her body.

"The setting hen patiently hatching her chicks is physiologically little, if any, more separated from her embryo chicks than is the mother from her embryo child. The mother supplies her embryo with nourishment, heat, and an abiding-place. The hen does no less. In the latter instance, however, the abiding-place, the nest—is made to order; in the former, the abiding-place—the womb—is ready made.

"Why birth-marks occur and monsters develop no one knows. But, in any event, to explain their appearance by claiming that it is possible for a nervous or mental influence to leap across the chasm which separates the nervous system of the mother from the nervous system of the fetus, and then register an effect so mighty and so selective as to produce the various structural and physical abnormalities known to teratology, is utterly preposterous.

"If a maternal impression can be so miraculously powerful as to produce a serious structural catastrophe in a fetus, why is it not powerful enough to cause, at least occasionally, a similar lesion in the pregnant woman herself? The path from her brain to her own tissues is certainly a less tortuous route than the one from her brain to the tissues of the fetus.

"The appearance of a nevus on the face of a child is usually ascribed to the mother's having seen a burning building at some time during her pregnancy and having thoughtlessly placed her hand over her face to protect it from the heat and glare of the fire. If this etiological explanation be correct, why is it that such psychic dynamics is unequal to the feat of producing, never so rarely, a nevus on the face of the mother?

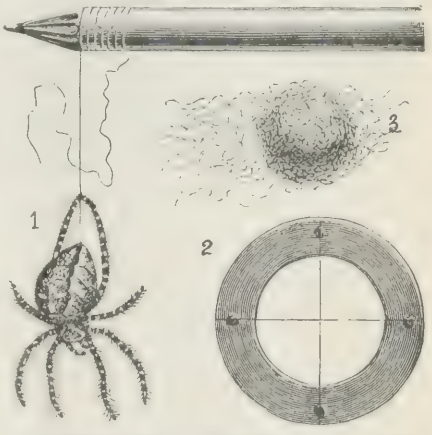
"If viewing the death-struggle of a toad may cause a maternal impression sufficiently powerful to change a properly developed fetus into a horrible monster; and if the slaying of this toad may cause blood to appear in the milk of the slayer's cows—a retributive phenomenon quite common in the days of our grandmothers—why is it that witnessing such a spectacle is never potent enough suddenly to transform the impressionable prospective mother into a hideous exencephalus?"

In fine, Dr. Shelly concludes, the fact that physicians still countenance a belief in any such effect is a "stigma on the medical profession," and he advises its speedy relegation to the background with other superstitions.

USES OF SPIDER'S WEB IN OPTICAL INSTRUMENTS.

FOR optical instruments, especially telescopes, where delicate measurements of the position of an object are to be made, it is necessary to determine that position very exactly, which is done by comparison with fine threads stretched across the field of vision. For this purpose, nothing better has ever been found than spider's silk, which combines fineness and strength in an unusual degree. In *La Nature*, M. A. L. Clément writes as follows on this subject:

"The spider uses the silk from its spinneret for various purposes; it makes its web of it, lines its nest, makes a snare to envelop its prey, and forms the cocoon in which it preserves its eggs. This silk issues from the spinneret through little holes whose number is estimated at 10,000, and forms a single thread whose fineness is such that it takes 90 of them to equal in size the thread of a silkworm's cocoon and 18,000 to make an ordinary thread of sewing-silk. It is this extreme fineness of the spider's silk that has made it sought for the 'spider lines' of astronomical telescopes, especially as it is easy to procure.



1. DIADEM SPIDER. 2. SPIDER LINES. 3. EGG COCOON OF DIADEM SPIDER.

"In woods and gardens we see everywhere a large spider, the diadem spider (Epeira diadema), called also [in France] the 'cross-bearer' and the 'cross of St. Denis,' because of the beautiful designs that ornament its abdomen. In autumn it lays a great number of eggs, which it surrounds with a cocoon made of thick wool and wound with golden-yellow silk, which is placed by the mother under some shelter . . . that will protect the eggs during the winter, for they are not hatched till May. Plunged into boiling water containing gum and soap, this cocoon easily separates and gives us the thread of whose fineness we have just been speaking, and which is used in optical instruments. But, lacking this, we may also use the threads of the vast radiating web that this spider spreads from tree to tree. At the least shock to its web, the spider generally lets itself drop by a thread; it can thus be seized and the end of the thread is wound around a pencil. The spider, to escape, lengthens the thread, which is kept wound upon the pencil by turning it between the fingers.

"When the thread has been obtained, nothing is more simple than its employment, altho this is a rather delicate operation. With a fine pair of tweezers an end is detached, and each extremity is fastened in a small lump of wax in which has previously been placed a tiny shot. The diaphragm that is to carry the spider lines is taken from the telescope. . . . It bears very fine grooves that have been engraved upon it to guide the lines. After cleaning these well the thread, stretched by its balls of wax, is placed on the diaphragm, where it is fixed by dropping rosin over each end.

"Ordinary telescopes have two lines crossing each other at

right angles . . . , but for observations of great precision several lines are employed. . . . In meridian instruments we use ordinarily five vertical threads and one horizontal. . . . Double threads are used especially in equatorial instruments. There are some telescopes that have as many as . . . twenty-six threads altogether, each about 14 centimeters [5.5 inches] long. . . . . .

"For night observations a lateral opening is made in the tube of the telescope, through which, by means of a candle or a mirror, the threads are lighted. Spider lines are sometimes replaced in telescopes by extremely fine platinum filaments, obtained by drawing out a platinum wire surrounded by silver and then dissolving the latter metal in nitric acid. These threads may be rendered luminous by passing an electric current through them.

"It should be added that the microscopes that serve to read seconds of arc on the divided circles are supplied with spider lines mounted on a carrier that can be moved by a micrometer screw."—*Translation made for* THE LITERARY DIGEST.

WHERE DID OUR EARLIEST ANCESTORS LIVE?

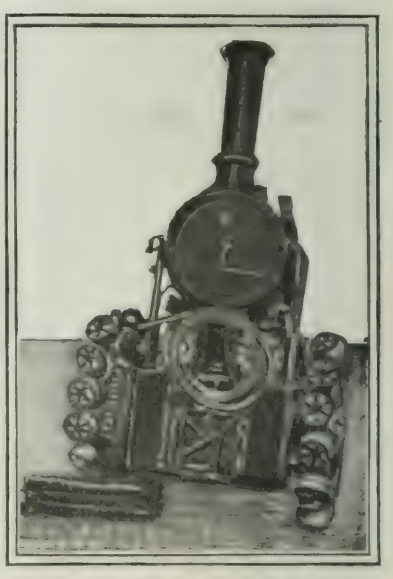
NOT so very long ago, it was generally believed that the ancestors of most of the civilized European races migrated from Asia. According to Max Müller, the Northern regions of India were the cradle, if not of the whole human race, yet of its predominant group; and while some of the members of that group stayed at home and remained black, others went forth to seek their fortunes in distant Europe and became white. The Vedas were the common inheritance of Hindu and Briton, and some even went so far as to declare that all Western wisdom originally came from India, the primitive seat of the Aryans. Scholars nowadays are not quite so sure of all this. A correspondent of *The Academy and Literature* (London, December 27) gives another point of view. Speaking of Max Müller's Aryan theory he says:

"This mare's nest, tho by no means the only one that 'daring Germany' has sent us to seek, had as its foundation the idea always dear to the German that linguistics are the key to all human knowledge. Sanskrit, the language in which the existing manuscripts of the Vedas are written, can be shown to be the parent tongue of the Romance, the Celtic, the Teutonic, and of some of the Slavonic languages, besides showing affinities with the ancient Persian or Zendic, and many of the modern dialects of Hindustan as well. Hence, it was argued that the speakers of these different tongues must at one time have all been of the same race. But this does not follow in the very least, for language is about the worst test of nationality that can well be devised. The Jews, for example, while preserving their racial characteristics unaltered, have, since the days of Nebuchadnezzar, spoken in different parts of the world almost every known tongue but Hebrew; and the instances of the Italian-speaking Lombards, the French-speaking Bretons, and the English-speaking Highlanders and Irish are too obvious to be dwelt upon. If we go further afield, we find, on the Western continent, both African negroes and aboriginal redskins speaking no other language but English, and Aztecs and Peruvians using Spanish as their mother-tongue. Language, indeed, is seen to be some indication of neighborhood and political supremacy, but hardly ever of origin.

"Nor can it even be said that the evidence of linguistics, such as it is, will bear the weight that the asserters of the Asiatic origin of the Aryans were inclined to lay upon it. Professor Sayce, Max Müller's successor in his Oxford chair of comparative philology, was not long in showing that the close relationship alleged between Sanskrit and Zend depended chiefly upon the fact that our relics of both these ancient languages were written at a date much earlier than any other Aryan writings in existence. He and others showed, too, that some of the languages still spoken in Eastern Europe, Lithuanian, for instance, were much nearer to the original form of Sanskrit than any modern Indian dialect. Hence a strong party sprang up which would transfer the primitive seat of the Aryans from Asia to Europe, and would make the southern parts of Russia the center from which the Aryans are supposed to have gone forth to the conquest of the whole world. Nor does this explanation fit one whit less well with all known facts than the other. From Southern Russia it would have been perfectly possible for successive hordes of 'Aryan' immigrants to have poured southward to the Mediterranean as the barbarians did on the break-up of the Roman empire; while if others had skirted round the Northern shores of the Caspian, and thus have fallen upon Western Asia, it would have only been what actually happened when the terrible Scythian or Cimmerian invasion took the same route in the closing days of the Assyrian empire, and thus opened the door for the successful advance of Cyrus. As for the chance of a power once seated on the Euphrates imposing its own language and culture even as far south as India, Alexander proved that to be possible enough by his conquest of Chitral and the Punjab. This seems to be the view most in favor with ethnologists at present, as is shown by the work of Professor Hirt, who thinks that he can fix the primitive home of the Aryans in a spot now inhabited by Letts and Lithuanians to the north of the Carpathians."

A WALKING LOCOMOTIVE.

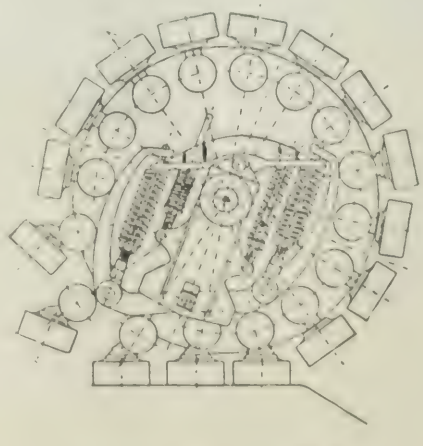
AN English form of traction engine, named the "pedrail," which literally walks upstairs "with the stride and surefootedness of an elephant," and hauls loads that an ordinary traction-engine could not possibly manage, is described by *Popular Mechanics*, which quotes as its authority *The Automotor Journal* (London):



WALKING TRACTION ENGINE.

"Ruts, curbstones, and boulders it makes nothing of, and even nine-inch beams of timber are as stubble before it.

"The pedrail consists of a rail somewhat in the form of an inverted heart, round which passes in succession a number of small wheels or rollers, each carrying a circular foot. Imagine a number of steel spokes to be all that remain of the ordinary wheel, each of these steel spokes having one of the rollers with the foot attached mounted on it. When the engine drives the axle carrying the spokes, these feet are placed in succession upon the ground with the roller upward. The lower part of the heartshaped rail slides upon the roller which it finds beneath it until it has passed off the roller, which is then picked up and carried over to the front part of the rail in order to take its place again in supporting the vehicle."



MECHANISM OF THE ENGINE'S FOOT.

Injurious Effect of Headache Powders. — Deaths among women caused by taking patent headache powders, says *Popular Mechanics*, have recently been the subject of considerable comment:

"Most of the fatalities, it is believed,

are people with weak hearts. Practically every one of the headache powders on the market has been found on analysis to contain acetanilid, or some other coal-tar product similarly affecting the heart. The drug costs but 30 cents a pound, and from five to fifteen grains is considered a fair dose. But even a five-grain dose may be deadly, doctors say, to a person with severe heart trouble. The drug's action on the human system is to lower the blood pressure, which is usually the cause of headache. An overdose paralyzes the heart, when it is dilated, and causes death. It is the sudden lowering of the blood pressure that causes the lips and finger-nails to turn blue. Some of the most costly headache cures contain some kind of heart stimulant to counteract the deadly effect of this drug; but the stimulant may be nearly as dangerous as the acetanilid. Some contain caffein with bicarbonate of soda, and some contain strychnin. Nearly every druggist has on sale a headache powder of his own invention, and in many instances the chief ingredient is a coal-tar product with no protection for the heart. These are the ones classed by doctors as 'deadly.'"

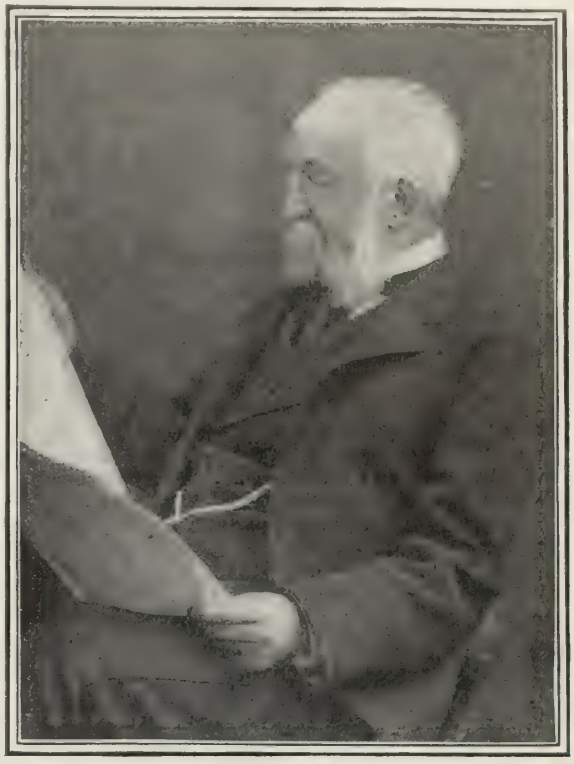
THE WORK OF THE CARNEGIE INSTITUTION.

THE institution for scientific research founded by Andrew Carnegie in Washington and endowed with $10,000,000 is now organized and at work. According to an official account of its plans, published in *Science*, the institution does not purpose to undertake to do anything that is being well done by other agencies; to do that which can be better done by other agencies; to enter the field of existing organizations that are properly equipped or are likely to be so equipped; to give aid to individuals or other organizations in order to relieve them of financial responsibilities which they are able to carry, or in order that they may divert funds to other purposes; to enter the field of applied science except in unusual cases; to purchase land or erect buildings for any organization; to aid institutions when it is practicable to accomplish the same result by aiding individuals who may or may not be connected with institutions; or to provide for a general or liberal course of education.

ANDREW CARNEGIE,
Founder of the institution for scientific research.

The executive committee, we are told, purposes, when facilities for research in any direction are not available, to create them, and to this end it advises the purchase of a large tract of ground at Washington, the erection thereon of a central administration building, the establishment of such laboratories as may be found necessary, and the employment of men for such research work as may be undertaken in Washington. Advisory committees of scientific men to aid in organizing and carrying on this work are to be formed in all parts of the country. "Research," in the sense in which it is to be carried and aided by the institution, is defined as follows:

"Research may be defined as original investigation in any field, whether in science, literature, or art. Its limits coincide with the limits of the knowable. In the field of research the function of the institution should be organization, the substitution of organized for unorganized effort wherever such combination of effort promises the best results; and the prevention, as far as possible, of needless duplication of work. Hitherto, with few exceptions, research has been a matter of individual enterprise, each worker taking up the special problem which chance or taste led him to, and treating it in his own way. No investigator, working single-handed, can at present approach the largest problems in the broadest way thoroughly and systematically."



DANIEL C. GILMAN,
President of the Institution.

While the income of the institution is large enough to enter upon some large projects and a number of minor ones, it has seemed to the authorities to be wiser, at the beginning, to make a number of small grants and to prepare thoroughly to take up some of the larger projects. With this in view the executive committee has recommended to the trustees that there be placed at its disposal, for the fiscal year 1902-03, $200,000 for aid to special researches in various branches of science, and $40,000 for the publication of the results achieved. During the year plans will be perfected, data secured, and experience gained that will be of great service in formulating recommendations for the ensuing year. To quote further:

"In the opinion of the committee, the most effective way to discover and develop the exceptional man is to put promising men upon research work under proper guidance and supervision. Those who do not fulfil their promise will soon drop out, and by the survival of the fittest the exceptionally capable man will appear and be given opportunity to accomplish the best that is in him."

The Shrinking of Great Salt Lake.—During the past few years there has been such a rapid decline in the water level of Great Salt Lake that the people of Northern Utah, and especially of Salt Lake City, have begun to be afraid lest this remarkable body of water will soon be a thing of the past. The reading of the gage at Garfield Beach on December 1, 1902, was 3 feet 5 inches below the zero of the scale, showing a fall of 11 feet 7 inches since the close of 1886, the year in which the last rise terminated. Mr. L. H. Murdoch, section director of the United States Weather Bureau in Salt Lake City, is of the opinion that these fears are unfounded, and he especially denies that irrigation-works are draining off the lake. In a recent note,

Science thus epitomizes a paper of Mr. Murdoch in *The National Geographic Magazine* (February):

The fall in the lake level has been much more rapid during the past three years than for any like period during the preceding years of drought. This is mainly due to the fact that the deficiency in precipitation has been greater during this period than during any similar period of the present dry cycle. The deficiency for the last three years alone was over 13 inches. The lake is not alone in showing the effects of the drought. Streams, springs, and artesian wells are drying up, and those which continue active are discharging much less water than a few years ago. It seems to the writer that the large deficiency of 29.60 inches in precipitation during the past sixteen years, as shown by the Salt Lake City records, must be far more of a factor than any possible loss of water resulting from irrigating 609 square miles of land. With precipitation continuing at about 15 inches, no further fall in the lake will occur, and if the annual precipitation is as much as 15 inches for the next three years, a slight rise may be expected.

NO MORE SUBMARINES NEEDED.

THE charges of attempted bribery at Washington in connection with submarine torpedo-boats have apparently put an end to all present possibility of adding any more of these vessels to the navy. According to *The Marine Review*, this is not an unmixed evil, for we have as many as we want at present. Says this journal in its editorial column:

"The United States Government has now seven submarines in various stages of construction, which would seem ample for purposes of experimentation; yet an active lobby is kept at Washington to induce Congress to purchase more. Latterly it has been charged that efforts of a more direct character have been advanced to promote the necessary legislation. . . . It is not, however, with such devious ways as these that this article has to deal, but rather to consider the practical efficiency of the submarine. Neither the bureau of construction nor the steam-engineering branch of the Navy Department considers the submarine to be much more than a toy. They have a certain moral influence with the timid, but they have yet to prove that they are practical engines of war. That a submarine can stay on the bottom for a certain length of time is certain, for it has already done so; but that it can maneuver intelligently, that it has any sense of direction, that it is other than absolutely blind are yet to be shown. Granting that it had a sense of direction, granting that it was not blind, its limited cruising area still remains, an era so restricted as practically to unfit it to seek a foe. Submarines are fitted for their guidance with periscopes. Now the great disadvantage of these instruments of sight is that they convey no idea of distance. Objects which appear a great way off may really be at their very noses. Quite recently a boat steered by one went into an English harbor. Far away in the dim distance was a dock wall for which she laid course. The next instant it smashed its snout against that very wall. It was only a few inches away. Getting at the enemy is the first consideration in all naval warfare, and the submarine, unfortunately, can not get anywhere. The United States Government certainly has submarines enough to demonstrate the advantages of the type and the case can be proved by them just as well as it could be by twenty more like them."

Wanted; More Platinum!—Platinum is the only precious metal that is really of industrial use. Gold and silver are valuable for decorative purposes, but platinum is almost indispensable in certain branches of industry. The fact, for instance, that its coefficient of expansion is almost exactly the same as that of glass, and that it can therefore be embedded in glass without danger of cracking, has made it of importance in electricity; but this is only one of the numerous points in its favor. Unfortunately this metal is very rare; it can not of course compete in this regard with such rare metals as are only chemical curiosities, like radium, of which it is estimated that the whole earth contains only two pounds; but the rarity of these substances is hardly felt as an industrial stringency. Says a writer in the *Revue Scientifique* (January 17):

"Platinum is a metal that was unknown until relatively recent times. The ancients did not have it; the alchemists of the Middle Ages, infidel or Christian, did not discover it in their crucibles and alembics. It was not discovered until toward the middle of the eighteenth century. But the curious thing about its history is that while all the other metals, as the need for them made itself felt more strongly, were found in greater quantities, platinum, altho greatly appreciated and much in demand, remains very rare. The places where it is found are few. Thus platinum never falls in price, altho its value often varies much. In 1822 it brought 10,000 francs a kilogram [$909 a pound]; in 1870, after the discovery of the deposits in the Urals, it was 1,500 francs [$136 a pound]. But in 1895 it was worth about 3,000 francs [$273 a pound], and in December, 1901, more still. Platinum was first discovered in South America; it was regarded as a form of silver, whence its name—*plata* being the Spanish word for silver. It is now found also in Colombia, Brazil, Haiti, and Borneo, but it is much more abundant in the Ural Mountains. The Ural mines furnish yearly about 4,000 kilograms [8,800 pounds]; the rest of the world, hardly a thousand. Thus Russia controls the production and sale of platinum. It would appear that the Russians had a plan to demonetize their silver pieces coined before 1850, in order that the platinum in them might be extracted; but these pieces have become very rare—the idea had occurred to individual chemists before it was suggested to the authorities. And platinum remains rare—very rare; there is a platinum famine, and industry demands loudly the discovery of new deposits of the precious metal."—*Translation made for* THE LITERARY DIGEST.

SCIENCE BREVITIES.

"THE ignorance and the mental state of the peasants of central Russia are shown forcibly by their ideas of the form of the earth and the nature of rain, thunder, and lightning," says the *Staats-Zeitung* (January 4). "They regard the earth as something like a sponge, a flat or possibly globular body floating in the ocean. The water of the ocean filters through the earth leaving its salt behind in the interior and, issuing from springs, flows back in small and large streams to the ocean. This view is probably due in part to the character of the country, which is filled with small lakes and swamps. The sky, being so near the sun, must become very warm and therefore it must perspire freely. In this way rain is easily accounted for. It should be noted that destructive cloud-bursts or violent downpours of rain are common in Central Russia and that they occur, there as elsewhere, chiefly in the hottest of summer weather. Thunder and lightning have nothing to do with each other. Thunder is the noise produced by the sky cracking from intense heat, while lightning is the glow of the chariot of fire in which Elijah was taken up to heaven. The stars are firmly attached to the sky, and an eclipse of the moon is caused by a cloud."—*Translation made for* THE LITERARY DIGEST.

HOW TO DESTROY BACTERIA IN FOOD.

The London *Lancet* says "mechanical shock" will destroy germs.
—*The Baltimore Herald.*

THE RELIGIOUS WORLD.

IS THE LINE OF GREAT PREACHERS DYING OUT?

IN a striking editorial lamenting the passing of Joseph Parker and Hugh Price Hughes, *The Christian Commonwealth* (London) takes occasion to note "the extraordinary dearth of really able and qualified men from whom successors may be found when famous pulpits lose their occupants." The same paper goes on to say:

"There never was a time since before the Reformation when pulpit eminence was so rare; when orthodox Christianity could produce so small a battalion of magnetic exhorters; when the church could count so few stars of the first magnitude in the theological firmament. The really great preachers amongst the 25,000 clergy could be counted on one hand. There are about as many non-conformist preachers of all denominations in this kingdom. The list of men of great pulpit power in each would be very small indeed—more meager by far than in the time of our fathers, and yet every great denomination is greater to-day than yesterday. In the days of Spurgeon there were a Punshon, a Vince, a Dale, an Aldis, a Wells, a Bickersteth, a Magee, a Hugh Stowell Brown, a Samuel Wilberforce, a Birrell, a McLeod, a Tulloch, a Haycraft, a Guthrie, a Gilfillan, a Brock, a George Dawson—only to specify a few out of a host of men whom people everywhere and anywhere thronged to hear. And in the generation preceding, when the common people knew so little, yet they had a host of grand preachers to whom to listen—Melvill, Robertson, Parsons, Robert Hall, Sortaine, Chalmers, Dillon, Bishop Horsley, Christmas Evans, Williams of Wern, Charles Stovel, Howard Hinton, James Spence, Rowland Hill, Toplady, Daniel Wilson, James Sherman, Hawker, Charles Simeon, Newman and Manning before their papal perversion, and the potent itinerating leaders who thundered out loud echoes of the message left by John Wesley. Where shall we now look for anything like the number of preeminent preachers who in those days made England great, changed it from a colossal sink of corruption, such as Wesley found it, to the world's head center of righteousness and founded the Christian civilization on which we now have to build?"

To the Boston *Congregationalist* this view seems unduly pessimistic. "We are not so sure," it says, "that 'never since the Reformation' was there a time when pulpit eloquence was so rare. . . . Tested by modern standards of eloquence, scholarship, and ethical living, many a reputed giant of the past would be found wanting." The New York *Observer* (Presb.) declares:

"If magnificent preachers are few, the truth is more effectively proclaimed than it has ever been since the world began. The general standard of preaching is immensely higher than it was. The pulpit has kept pace with the development of knowledge and civilization in all other walks of life. The ordinary rural minister to-day would have been a prodigy of learning a century ago, not but what the rural ministers are apt to know more than their city brethren even now.

"Nor is the standard only high, but in adaptation to popular need, no preaching has equalled it since the times of the apostles. You can of course point to the massive tomes of men like Owen and Barrow, or those of much more recent date, but these theological chapters no longer constitute the Christian ideal of a sermon. As displays of literary finish and philosophic depth they are remarkable, but that they ever really helped and comforted one in a hundred of the times in which they were uttered I seriously question. Doubtless, many go too far in attempting to make their preaching fit the popular mind, and seek to gratify the fancy rather than to enlighten the soul; but even so, the preaching of to-day speaks to the life and experience of our people better than even the greatest master could do. . . . . .

"While, therefore, conceding that for the present we are destitute of conspicuous luminaries in the pulpit, and insisting that this does not mark any deterioration in the profession, our eyes are scanning the entire horizon with breathless eagerness for any orb that may appear, and already we have discerned some upon whose rising we are looking with impatient gladness. God grant they may not prove mere meteors, that their sun may not go down while yet 'tis day. For our age needs great men. Our nation's size should be matched by men of ample soul and imperial zeal for God. If we are not to fall to fragments and lose all community of thought and feeling, we must have men who can speak to the whole people in language that compels the attention, wields the emotions, and bends the will, to ponder the things which have real, eternal, and spiritual significance."

THE BABYLONIAN ORIGIN OF THE BIBLE.

JUST one year ago, Professor Delitzsch, of Berlin, in his capacity as president of the German Orientgesellschaft, that is conducting the archeological researches in Babylon, delivered in the presence of the Emperor and the Empress an address on the relation of the thoughts of the Old Testament to those found in Babylonian literature, in which he maintained that the former, in its principal teachings, including the worship of Jehovah as God, was dependent on the latter, and that the Old Testament accordingly contains chiefly secondary and borrowed material. This address, which appeared in tens of thousands of copies and even in an *édition de luxe*, caused an international controversy in which the leading theologians and Assyriologists of the Continent participated. "Replies" literally by the dozen were published.

In view of this voluminous discussion, Professor Delitzsch, again early in the current year, in the presence of the Emperor and Empress, delivered an address on the same subject in which he more plainly than before developed his radical views. The address itself, an outline of which was cabled to America, has not yet appeared; but complete summaries have been presented in many journals. We cite from the report found in the *Vossische Zeitung* (Berlin), which evidently makes prominent the more sensational features of the paper, and from which it is clear that Delitzsch represents the most "advanced" school of Assyriology. The line of thought is as follows:

There is no greater mistake that the human mind has made than to suppose that the Bible is the personal revelation of God. The contents of the Bible in many ways antagonize this view. The Book of Job contains passages that virtually amount to blasphemies. The Song of Songs is full of secular songs of carnal lust, and the efforts of prejudiced interpreters to find in it higher religious ideals signally fail. Scientific theology has long since recognized the truth that the Scriptures came into being by the gradual accretion of various literary documents into a canon. A really honest confession of the heart must admit that we really do not need any further revelation than that found in our own selves.

How do matters stand with reference to the Ten Commandments, in the light of scientific research? It can be readily shown that changes and additions of an essential character were made in these at various times. If the Ten Commandments are the revelation of God, then Moses himself was one of the first sinners against them, not only by breaking the stone tablets, but by giving different versions that do not harmonize. The real origin of the Ten Commandments is the following: From hoary antiquity there existed old customs and laws that were regarded as norms for trade and business and for divine worship. These were used by Moses for his ends. Now we know for a certainty that long before the days of Moses there existed in Babylon an organized State with a well-regulated system of laws, as is made evident again by the discovery of the Code of Hammurabi [see THE LITERARY DIGEST, December 20]. These laws in many respects reflect the same principles that are found in the Decalog, and without a doubt Moses drew on these older sources for his code. It is folly accordingly to ascribe any originality or divine source to the Mosaic decalog. Future research must yet decide what portion of the Ten Commandments was derived from the Semitic peoples in general, what portion came directly from Babylonia, and what portions, if any, are specifically Israelitish.

In spite of all the opposition that has been aroused against the

proposition that the worship of Jehovah was borrowed from the Babylonians, scientific thought must still uphold this view. In some respects, the Babylonian system is even superior to that found in the Old Testament, as in the treatment accorded to women. Nowhere in the Old Testament is there to be found the name of a woman, from which it would appear that a girl was regarded as the gift of God. Yet this is the case among the Babylonians, where the social status of the female sex was superior to that enjoyed by the women in Israel.

Among the other journals that report this address, none gives more complete details than are found in the *Beilage* of the Munich *Allgemeine Zeitung* (Nos. 10 and 11). Here attention is drawn to a mass of interesting details of interpretation presented by Delitzsch on Old Testament passages, as they appear in the light of the Assyriology of the day. We reproduce some of them:

Among these is the knowledge gained with reference to the Dragon of Babel, which now appears as a serpent covered with scales, standing on four legs, the front two being those of a panther and the hind two having the claws of a bird, while the head is adorned with horns and the tail ends with a scorpion's sting. The Book of Jonah, it is claimed, now appears as an Oriental fantastic poem, and the psalms find their counterpart in Babylonian literature. The parallels between the two literatures are represented as often phenomenal. While Jeremiah cries out, "Land, land, land, hear the voice of the Lord!" the cuneiform cylinder says: "Hail, hail, hail, to the King and Lord of Assyria!" The Seraphim sing, "Holy, holy, holy is the Lord Sabaoth," which corresponds to the "Achur, Achur, Achur" found in the Babylonian temples. The virtue of the spittle which Christ used to open the eyes of the blind finds its counterpart in the Babylonian cry: "O Marduk, thine is the spittle of life." The pillar of fire with which Jahve preceded the children of Israel is found in Babylon, where the goddess Istar precedes King Assurhaddon with a pillar of fire on his right and one of smoke on his left. When Isaiah says to King Hezekiah that he had arisen from death unto life, this same thought is found among the Babylonians, where an Assyrian general thanks the King for having brought him out of death into life; and an Assyrian physician who was not thought able to bring dead persons to life again was not considered proficient.

Finally, it must be added that the moral power of the Israelitish monotheistic system was no greater than that of Islam. The Mohammedan five times a day prays to his God to lead him on the narrow way; and just as the Mohammedan considers himself exclusively predestined for salvation, just so the Old Testament looks upon the Jews. This religious egotism which is embedded in the Old Testament system is a fatal foe to all higher ethical ideals and life. This part of the system was abrogated by early Christianity, and the Reformation put aside many fallacies that remained. It is now left for independent Biblical research to restore a truly historical picture of the religious development in the Old Testament and to put upon this the true estimate.

As yet but few comments have appeared on this remarkable address, but these are as antagonistic as were the comments on the first address of Delitzsch a year ago. The *Allgemeine Zeitung* significantly draws attention to the fact that the opposition to Delitzsch did not come from the circles of conservative theologians, but that the Assyriologists themselves, almost to a man, protested against the hasty and, as they alleged, groundless conclusions of the Berlin savant. All the addresses that touched on this subject at the International Congress of Orientalists held in Hamburg were against Delitzsch, and liberal theology, as voiced by Professor Cornill, of Breslau, declares his proposition is an insult to thorough scholarship.

Emperor William has been severely criticized in conservative religious circles for his "patronage" of Professor Delitzsch's views, and some of the most influential church administrators, including the accomplished Dr. Dryander, have besought him to make a definite statement of his own attitude toward the theories propounded. This he has done, in a letter addressed to Admiral Hollum, councillor of the German Oriental Society, in which he censures Professor Delitzsch and places himself in line with orthodox Christianity of a progressive type. He writes in part as follows:

"During the evening entertainment with us Professor Delitzsch had the opportunity to fully confer and debate with her Majesty the Empress and Dr. Dryander, while I listened and remained passive. Unfortunately he abandoned the standpoint of the strict historian and Assyriologist, straying into religious and theological conclusions and hypotheses, which were quite nebulous or bold.

"When he came to speak of the New Testament, it became clear at once that he had developed such quite divergent views regarding the person of our Savior that I had to express the diametrically opposite point of view. He does not recognize the divinity of Christ, and as a deduction therefrom asserts that the Old Testament contains no revelation about him as the Messiah. Here the Assyriologist and the historical investigator ceases, and the theologian begins, with all his light and shadow sides. In this province I can only urgently advise him to proceed very cautiously, step by step, and at any rate ventilate his theses only in theological books and in the circle of his colleagues."

The Kaiser concludes that it is "self-evident" that the Old Testament contains "many sections which are of a purely human and historical nature, and are not God's revealed word." But this does not alter the fact that God did reveal Himself, in a special sense, to the people of Israel.—*Translations made for* THE LITERARY DIGEST.

A RELIGIOUS DISCUSSION OF "TAINTED GIFTS."

AN editorial article in the New York *Outlook*, entitled "The Gifts of Millionaires," has started a most interesting discussion in the religious press regarding the propriety or nonpropriety of educational and religious institutions accepting gifts of money from donors whose money is believed to have been obtained by unrighteous methods. The immediate occasion for the discussion was afforded by addresses made by John A. Hobson, the English economist, and Prof. John Bascom, of Williams College. Both of these speakers took the ground that the "charity of millionaires" is undesirable in any community; and Professor Bascom has not hesitated to apply this general principle to the specific case of Chicago University, in which, he affirms, "John D. Rockefeller's dollars have sealed the lips of every instructor." *The Outlook* comments:

"It is quite impracticable for trustees to undertake any such inquisitorial function as this principle would lay upon them; but if they were able to perform it, and in the performance of it found that all the money was acquired by methods wholly immoral, this would of itself constitute no adequate reason for refusing to accept the money in trust for the public. Let us suppose the clearest of cases. A man has made his money as a professional gambler. Now that he has it, he desires to give it to the public. What better use can he put it to? He can not ordinarily search out the men whose money he has won and return it to them. If he converts it into government notes and bonds, and burns them up, he gives it to the Government. If he leaves it to his children, is it more moral for them to take it for personal uses than for a board of trustees to take it for public uses? Was Christ wrong when he suffered the woman that was a sinner to anoint his feet with ointment which it is quite certain she had bought with the wages of her sin? Ordinarily the best thing a sinner can do with his ill-earned wealth is to give it to the community; the fact that it is ill earned is no reason why it should not be devoted to the public service. It is rather an added reason why it should be so devoted."

Professor Bascom attempts to vindicate his position in the pages of the New York *Independent*. He says:

"To first rob men of their own and then return it as a gift is the mere semblance of virtue. This is the thing Christ pronounces impossible in the kingdom of heaven. 'Tory Social-

ism' is no new thing in the world, and yet we are entering on it with a glad spirit, as if it were a fresh-found virtue to steal a man's heritage and then fling to him the waste of it, as one gives parings to a dog. It is quite easy to serve two masters, if one is the head of a divinity school. Christ must have overlooked divinity schools in saying it can not be done. You have only to take the money of the devil and employ it in extending your own version of the precepts of our Lord, and you are sound with both. . . . . .

"A man never touches money, receives it or gives it, without imparting character to it. 'Thy money,' said Peter, 'perish with thee, because thou hast thought that the gift of God may be purchased with money.' The chief priests and elders, when Judas repented himself and brought again the thirty pieces of silver, would not put them into the treasury of the Temple, because they were the price of blood, but bought with them the Potter's Field. Our elders can do better than that. Even before Judas hints of repentance they can wash their hands of his transgressions, saying, 'What is that to us? See thou to that,' and then cast the millions gained into—is it blasphemy or is it wisdom to call it—'the treasury of God'? That is the best thing we can do with it, say these our elders. We have no need of a Potter's Field. Yet every large city has a Potter's Field, and a Potter's Field kept crowded by the unchristian methods of our commercial life. It may well be doubted whether money is ever more completely wasted than when it is used to gild transgression."

Dr. Henry S. Pritchett, president of the Massachusetts Institute of Technology, writes a letter to *The Outlook* affirming his belief that "when the acceptance of a gift carries with it a tacit excuse for past misdeeds, when it involves the placing of a name which stands for violated law and disregard of the rights of men side by side with the names of the great and of the unselfish, when it implies the recognition of a false measure of success—a thing most common in our American life—then the college which accepts such a gift suffers in its moral leadership." The same view is taken by Mr. Edwin D. Mead, of Boston, in an article in *Unity* (Chicago). He declares his opinion that no money from "tainted" sources can "ever safely feed the lamp of truth or knowledge or ever sanctify or really vitalize any great endeavor." On the other hand, the New York *Christian Work and Evangelist* and the Philadelphia *Church Standard* put forward editorial comment supporting the conclusions of *The Outlook*.

EMANCIPATION OF MOHAMMEDAN WOMEN.

THE question of woman's emancipation seems to be occupying considerable attention in the Mohammedan world just now. We presented recently, from a Moslem journal, a defense of the Moslem treatment of women (see THE LITERARY DIGEST, January 31); but contrary views are held and vigorously expressed among Moslems of some note. For instance, a new book has been written by Kasem Ameen, a learned Mussulman jurist, which is described as nothing less than "epoch-making."

The author makes a strong and unprecedented plea for the emancipation of the Mohammedan woman, who is still considered a mere chattel. He would raise her to the level of man, and have her declared his equal, both socially and legally; he would give her a fair elementary education, to start with; he would reinvest her with the rights accorded her by Al-Koran; he would protect her by legislation from the widespread evil of divorce; he would check the demoralizing practise of polygamy; he would have her come in contact with the outside world. Seclusion he would do away with, and the veil he would abolish, not at once, but by degrees. And to effect all these important changes, he brings to his support, not only the traditional tenets of the Mohammedan religion, but the Koran and some reported sayings of the Prophet himself. Kasem Ameen, therefore, is not wholly iconoclastic in his ideas. The reform he desires to effect, he admits, is certainly a wide departure, but a departure not from the religion of Al-Islam, but from the customs and habits of the people.

The author denies that the Bible has been the cause of the Christian woman's social and mental development, and observes that if religion really affected the customs of a people, the Mohammedan woman would be to-day the most developed and the most enlightened of her kind. Al-Koran provides for her as no other sacred book does; it declares her equality with man, and affords her sufficient protection; it relieves her of the burden of support: she does not have to contribute to the maintenance of the home. The trouble has been, argues Ameen, that the teachings of Al-Koran have been forgotten, and have been superseded by pernicious Mohammedan customs. These customs were introduced into Al-Islam by the conquered races that embraced the Mohammedan faith, and that brought with them the tissues of their effete civilization. Their conquerors accepted the dross that came with the grain. They did not have time to sift and to purge; they were then only intent upon making conquests.

Speaking of the present relation of the Mohammedan woman to man the author says:

"Man is the absolute master and woman the slave. She is the object of his sensual pleasures, a toy, as it were, with which he plays, whenever and however he pleases. Knowledge is his, ignorance is hers. The firmament and the light are his, darkness and the dungeon are hers. His is to command, hers is to blindly obey. His is everything that is, and she is an insignificant part of that everything."

Ameen's panacea for the evils of the present condition is education. "The girl," he says, "must attend school if we are to have capable, conscientious, and enlightened mothers." Hence the necessity of breaking through the barriers of seclusion and abolishing gradually the use of the veil. These customs, he contends, are not even conducive to domestic happiness:

"Ask those that are married if they are loved by their wives, and they will answer in the affirmative. The truth, however, is the reverse. I have personally investigated the conditions of a number of families that are supposed to be living in harmony, peace, and love, and I have not found one husband who truly loved his wife, or one wife who evinced a sincere affection for her husband. This outward appearance of peace and harmony —this thin veneering—only means one of three things, namely, either the husband is made callous and nonchalant by incessant strife, and has finally determined to let things take their course; or the wife allows herself to be utilized as an ordinary chattel, without uttering a protest; or both parties are ignorant and do not appreciate the true value of life. In this last case, the parties are nearer to a sort of happiness than in the former two, altho their happiness is negative in quality and evanescent in nature."

The condition of woman being so degraded, it follows that the children must be wanting in good culture and right breeding. The ignorance of the mother produces the mentally deformed child—the demoralized man. It is to this ignorance that the writer ascribes the humiliating and degrading condition of the Egyptians. He asks:

"Is it not the result of such conditions that we are all victims of moral paralysis? We are never moved by anything, however repulsive or attractive it may be. If we see a beautiful object, we praise it under our breath, and if we witness a foul deed we disapprove of it with a shake of the head, without being inwardly moved to admire the former and denounce the latter. . . . We have such a low opinion of woman that when we want to denounce a man for his rascality we say: 'He is brought up by a woman.'"

The author points to the American and the European woman as edifying examples of the result of education. He believes that the Mohammedans as well as the Europeans have gone to extremes in different directions: the former in the use, and the latter in the non-use, of the veil. While the Mohammedans have

rendered the custom ridiculous and absurd, it must also be admitted that the Europeans have rendered woman more open to temptation. There is, therefore, a middle course, which he would have his people adopt until the mental and social condition of woman is somewhat ameliorated. He dismisses the argument that the veil is conducive to chastity with a reference to the unveiled woman of America. The continuous incarceration of woman awakens in her feelings that would never be promotive of chastity. Extremes produce extremes. "And is it not a fact," he asks, "that the majority of our women are victims of obesity and anemia by reason of their seclusion, indolence, and sedentary habits?" Just as soon as a Mohammedan woman first becomes a mother, she waxes old in the prime of her life. Love and mercy are stronger bonds than compulsion and cruelty. Social intercourse between the sexes, he concludes, is more likely to promote chastity than seclusion and the veil.

Kasem Ameen's remarkable book is the subject of spirited discussion in Mohammedan circles. Its teaching is vigorously opposed by the conservatives; but the radical element, composed largely of young Mohammedans who have been educated in Europe, is in sympathy with the reforms advocated.—*Translation made for* THE LITERARY DIGEST.

A PULPIT CRUSADE AGAINST CRIME IN KENTUCKY.

ON February 2, the Louisville Ministerial Association issued a notable protest against "the terrible epidemic of crime" which is declared to exist at the present time in the State of Kentucky. "Scarcely a Sunday passes," we are informed in this document, "that there is not a shooting of some sort. . . . . Within the very shadow of the Louisville city hall and the police headquarters, these frightful acts of bloodshed are perpetrated." We quote further:

"In spite of our large and expensive police force and our courts of law, judges and juries, all sworn to protect human life and punish crime, these violations of the most sacred and elemental laws of humanity continue to increase among us. And when these murderers are apprehended, or, as is usually the case, when they voluntarily surrender themselves into the hands of the law in the presumptive assurance of their acquittance, even then these felons are scarcely even subjected to more than a light punishment. Lodged in jail for a few days to preserve the appearance of respect for law, they are generally let loose upon a nominal bail, and, after a trial in which, as a rule, the whole machinery of justice is powerless to secure evidence against these miscreants, are set free to commit some fresh assault against the helpless public.

"We also note with much alarm the deadness of the public conscience upon this grave matter. Our people seem to have lost the sense of their own terrible culpability and disgrace in permitting this horrible state of things to continue without some public and organized protest. We are all guilty of the blood of these murdered men as long as we keep silence and do nothing. These crimes should move us to abhorrence, and to the expression of a just indignation against those whom we have placed over us to protect us from the bloody hand of the murderer and assassin."

Thirty-six ministers signed this statement, which concludes with an appeal to the pastors of the city to observe the following Sunday as a special day of prayer and protest. The call was duly acted upon by the clergymen of Louisville, and the following account of the day's sermons is taken from *The Courier Journal*:

"From the pulpits of churches all over Louisville, in common with the churches all over Kentucky, a cry went up yesterday for the regeneration of the State. . . . In nearly all the churches statistics were cited to show the multiplicity of homicides in the State. Those in Louisville were dwelt upon as being startling in their results, and the statement was made that the record of the criminal court does not half tell the story, inasmuch as there are men who take the lives of their fellows and who are released before they ever reach the criminal court.

"While all practically agree that the apathy of the public conscience was responsible for the 'carnival of crime,' as it is denominated, various specific causes for the crime were named.

"The causes of crime as enumerated by the speakers in the different churches can be named as follows:

"(1) All-night saloons, conducted by men many of whom have been convicted of criminal offenses. (2) The poolrooms, which inveigle young men within their doors and tempt them to lose their money and the money of their employers. (3) The 'gilded palace of iniquity on Fourth Avenue' which, with similar places, leads young men astray. (4) Unscrupulous criminal lawyers who, for pay, agree to secure the release of murderers, and who always succeed, in that way allaying fear of punishment and death in the minds of criminals. (5) The fatal construction put on the right of self-defense by the State's court of highest appeal.

"Among the remedies suggested by the different ministers are the following:

"(1) Close up all saloons at eleven o'clock at night. (2) "Revoke licenses of all saloons where disorder occurs. (3) Arouse the public conscience and let every good citizen vote for men who will do their duty. (4) Let every good citizen do jury duty when called upon. (5) Enforce the laws, which are adequate. (6) Frown down criminal lawyers who only serve their clients and do not subserve the public good.

"One of the speakers yesterday declared that Louisville was in much the condition that Cincinnati found herself in some years ago. Then crime was so rampant and criminals so indifferent to the law that the people arose in their anger, burned the courthouse, took the criminals from the jail and hanged them, independent of the law.

"The meetings at some of the churches yesterday partook of the nature of mass-meetings. At the Warren Memorial Church, Dr. Hoge, the pastor, spoke with Mr. Temple Bodley; at McFerran Memorial Church the speakers were the Rev. W. W. Hamilton, the pastor, Mr. A. Y. Ford, Professor McGlothlin, and Professor Sampey, both of the Baptist Theological Seminary, and Prof. W. H. Tharp. At the Fourth Avenue Presbyterian Church the Rev. J. Kinsey Smith, the Rev. Francis R. Beattie, the Rev. Charles R. Hemphill, and Mr. Alex. P. Humphrey spoke.

"It is likely that an organization will be formed to develop the movement."

The Atlanta *Constitution* adds:

"The law-abiding, Christian people of the State are thoroughly alive to the importance of making lawlessness odious and placing the man of blood under the ban of the public conscience.

"The crusade against crime will by no means be confined to the church. It is proposed that every editor in Kentucky agree to publish at least once a month an article written with a view to fostering a sentiment in favor of more general observance and enforcement of the law, and that every public-school teacher, white and black, deliver a monthly lecture warning their pupils of the consequences of crime, the danger of carrying concealed weapons, the horror of shedding the blood of one's fellow man, and the sin of yielding to the passions of hate, jealousy, avarice, and the long train of crime's incentives. Thousands of Kentucky fathers and mothers have pledged themselves to be doubly diligent in endeavoring to inculcate the same wholesome lessons in their children at home.

"The suggestion is a good one for the people of every State of the Union to follow, and the place to begin the crusade is in the home, school, and church, as is the intention in Kentucky."

RELIGIOUS NOTES.

THE Rev. A. P. Doyle, of the Paulist Fathers of New York, is planning to raise a quarter of a million dollars for the building of an Apostolic Mission House in Washington. The aim of the founders is to provide a training school for missionaries and priests in America's new insular possessions.

THE twenty-fifth anniversary of the election of Pope Leo XIII. was celebrated with due pomp and pageantry on February 20. One of the most interesting events of the day was the presentation to the Pope of a golden tiara costing $25,000, the Jubilee present of the Roman Catholic world. Three purses of $40,000 each were offered, to be devoted to religious purposes; and addresses expressing loyalty and devotion were read by Cardinal Respighi, Vicar of Rome, by Cardinal Ferrari, Archbishop of Milan, and by Cardinal Boschi.

FOREIGN TOPICS.

TERRITORIAL INTEGRITY OF SOUTH AMERICA.

SOUTH AMERICAN papers note from time to time that the affairs of their continent are too often considered solely with reference to European exploitation. This tendency, we are told, leads to misunderstanding because questions of an exclusively South American character are ignored by the world at large. For instance, the territorial integrity of South America is regarded by the outside world from a standpoint either wholly European or wholly North American. In South America, however, they have a standpoint, too. According to this standpoint, territorial integrity means something besides freedom from the interference of Europe and the United States. It means that the persent national boundaries and jurisdictions of the continent shall be recognized as final. The *Prensa* (Buenos Ayres) thinks the United States Government fails to grasp this principle and as a result incurs much unnecessary prejudice. Brazil's dispute with Bolivia is declared to be a case in point. The influential organ just alluded to considers this matter of far graver import than any South American complication involving a European power. The situation with regard to it, after promising to tone down peacefully, has again become strained, threatening, indeed to involve no less than five South American republics. Brazil has concentrated troops in the states of Amazonas and Matto Grosso, while President Pando, of Bolivia, has taken steps of a bellicose nature. The trouble grows out of the question of Acre, the region made over to the New York-London syndicate by Bolivia. Brazil had recognized the rights of Bolivia to Acre by treaty, but when the syndicate came upon the scene, armed, it was contended, with excessive sovereign powers, questions of international law and of diplomacy arose that seem to obscure the purely business aspect of the syndicate's charter. The *Jornal do Commercio* (Rio Janeiro) says the Brazilian Government would now like to buy Acre back from Bolivia or cede another strip of territory in exchange for it. A favorable solution of the difficulty is looked for along some such lines as these. The *Prensa* takes the position that the Acre concession amounts practically to the creation of a new sovereignty in South America, a proceeding which the other republics can not consent to under any circumstances whatever:

"Territorial integrity is the principle upon which South America's preservation depends. The doctrine that territory may be the subject of conquest by adventurers, in order to form principalities, states or semi-states, is an innovation from Europe, applicable only to the wastes of Africa and Asia, inhabited by inferior and uncivilized races."

Since this was written it has become apparent that the Acre syndicate does not aim at the acquisition of any "sovereignty" as that term is understood in South America. But a good deal of ill feeling has survived the movement to set up an independent republic in Acre. The Bolivian press, and notably the *Capital* (Sucre), which vehemently opposed the Government throughout the Acre crisis, is hostile to Brazil. It says:

"There can no longer be any doubt that a movement exists in Brazil to challenge Bolivia's sovereignty in Acre. This movement is based upon the open or clandestine support of the federal Government, or of the governments of the states of Para and Manaos. We should be on our guard."

"Ex-President" Galvez, of the collapsed republic of Acre, severely reflects upon the course of the state government of Manaos, in a statement published by the *Jornal do Brazil* (Rio Janeiro). A sharp attack upon Bolivia is made in the editorial columns of the *Gazeta de Noticias* (Rio Janeiro), which says that the Bolivian Government has clearly shown its incapacity to rule its own territory. It is also intimated that the President of Bolivia did not dare lead the regiments of the republic into Acre lest the Vice-President should start a revolution behind the Chief Magistrate's back. But we learn from another authority that the President eliminated this possibility by exiling the Vice-President.—*Translation made for* THE LITERARY DIGEST.

RISE AND DEVELOPMENT OF MACEDONIAN CRISIS.

EUROPE has been again confronted with a serious crisis in the shape of the Macedonian question. Nevertheless there is an element of mystery in the situation due, it is said in England, to Russia's efforts to conceal the true state of affairs from Western Europe. Certainly the news that reaches the outside world from the Balkans is of a meager and bewildering character. Macedonian information is at a premium. It has been intimated more or less vaguely that a certain great Power—"neither Austria-Hungary nor Russia"—is resisting the rest of Christian Europe in demanding that Turkey end once for all a "peril and scandal." All attempts to explain the crisis are thus hampered by obscurities that have their origin, apparently, in what goes by the name of European diplomacy. Luckily, however, it is possible to weave something like a connected narrative from the tangle of comment and conjecture in which the press of Europe is involving the object of Macedonia. *The Daily News* (London) lays the foundation of the subject in these words:

"The treaty of San Stefano handed over a considerable part of Macedonia to Bulgaria. England and Lord Beaconsfield stepped in and handed her back to the Turk, who since that period has been pillaging and murdering at will. There has never been anything but anarchy in Macedonia, or in Albania either, since the treaty of Berlin. There never will be as long as the Turks remain there as the governing power. Before the Greek movement came to a head a serious rising was threatening in Macedonia, and at one moment a dramatic and powerful union between Greece and the Balkan states seemed inevitable. Would that it had been consummated! Macedonia would then have been free, Crete would have been as Greek as she is certain to be in a few years or months, and the Turk would have been pushed back farther and farther from the civilization point, with which he can never be in any real contact."

The "Unspeakable Turk" being thus assigned his part in the piece, our trenchant commentator distributes the rôles of the Christian Powers in the following fashion:

"The material ambitions of Germany and the selfish and short-sighted indifference of Russia stayed the march of freedom in those unhappy years. Armenia was crushed, Greece was beaten, but not entirely foiled; Macedonia was thrown again into 'the sullen furnace of her afflictions.' Then, as now, the Balkan states were the not very edifying centers of the rival intrigues of the great Powers. Russia, only half successful in her emancipating work, spoiled it by her violent interference in Bulgaria and her cold-hearted abandonment of Armenia and Greece. Of late she has certainly improved her position. Bulgaria, with her shifty Prince, is largely in her hands, and Montenegro is naturally and wisely her firm ally. With Macedonia she has large affinities—ties of religion and of race and language—which did not exist in the case of Armenia. In Constantinople Germany has largely supplanted her, but the Kaiser has made no progress either in the affections or the interests of the Balkan states, while Austria, another great factor in the solution of the near Eastern problem, has shown a keen desire to cultivate Macedonian feeling. Now it would seem as if Russia were feeling her way to an advance."

All this does not take us into Macedonia. Information from within that area of desolation has the tantalizing inadequacy of the particulars vouchsafed us from time to time concerning the canals on Mars. *The Edinburgh Review* (London) undertook in one of its recent numbers to lift the veil. It painted this melancholy picture:

"The economic exhaustion of the country is only equaled by

the moral degradation of its inhabitants. Rebellion or utter ruin is the only alternative left to a population groaning under a yoke of almost unparalleled severity. That recourse has not yet been had to rebellion is chiefly due to the fact that Macedonia is a house divided against itself. Heartily as the Christian races hate their common oppressor, they would rather be ruined by him than agree on a common plan of action. This intensity of racial antipathy and antagonism and the number of the rival races are precisely the features which lend such a peculiar interest to the study of Macedonia, as compared with Albania, and render it a source of grave peril to the peace of Eastern Europe."

THE SULTAN OF TURKEY'S "PLOT TO DRENCH THE WORLD IN BLOOD."

—Poster displayed by the New York *American and Journal.*

The Turkish system of taxation flourishes "with savage disregard for decency," while "the picture would not be complete without a reference to the uncleanly troop of Jewish brokers and money lenders who, like a flock of carrion crows following in the wake of any army marching to battle," accompany the predatory tax-gatherer "in the hope of an easy prey." And there is worse to tell:

"Robbery is another cause of impoverishment. The peasant is plundered not only by professional brigands and outlaws, but by the very persons who are paid to protect him. No sooner is he out of sight of the *karakol*, or wayside guard station, where he has been forced to leave part of the produce which he carries to market, than he is as likely as not to fall in with some of the numerous gangs of Albanian ruffians who, armed to the teeth, roam about the country for booty."

"However," proceeds this graphic chronicler, "all these grievances wax pale before the terrible pest of brigandage, which has done more than anything else to bring the country to its present state of desolation":

"Many are yearly driven to the mountains by the tyranny of the Turkish landlords, others seek in them a refuge from the clutches of Turkish officialdom, while not a few embrace the brigand's career from sheer love of independence. 'Better one day's freedom than forty years of slavery and prison' is a popular maxim very frequently acted upon. The hope of speedy enrichment is also an attraction which goes far to minimize the risks of mountain life, while the slothfulness and the venality of the authorities inspire the brigand with the assurance of impunity. The ranks of these free agents of evil are further swelled by the creatures of the revolutionary committees, who profess to be actuated by motives of pure patriotism, without, however, disdaining to combine with them the pursuit of less ideal objects. The districts near the frontiers, affording as they do greater facilities for escape, are those most commonly infested with brigand bands, but there is hardly any part of Macedonia quite free from the scourge."

Such is Macedonia from within. Reverting to the external aspect of the problem, we find a writer in *The Fortnightly Review* (London), defending the Turk and finding him not so very unspeakable after all:

"The Macedonian question is symptomatic of the general disease which permeates this heterogeneous empire [of the Sultan], and tho on the occasion of each fresh outburst of the complaint we expect the last hour has come, still things manage to drag on and nothing in particular happens. As regards Macedonia, however, the chronic state of unrest is almost openly, but none the less insidiously, fostered by Greece and by Bulgaria; the former still cherishing the Greek idea of a restored Byzantine empire—the latter largely arising from the ambition of the Prince of Bulgaria to become a king (and to be a king a kingdom is necessary), whilst his ally, Russia, is only too willing to help him in anything that will keep the sore between him and the Sultan open and raw. . . . The high road to a new Byzantium would be Macedonia, and in Macedonia the Greeks have no difficulty in disseminating disloyal sentiments against the Sultan."

The situation being analyzed for us in this fashion, the question arises, What is to be done? "Owing to disunion among the Powers," we read in the London *Times*, "which are agreed only in maintaining the *status quo*, there seems little hope that the reforms stipulated in the Berlin treaty will ever be put into execution":

"The deliberate purpose of Russia is to foster the disintegration of the Ottoman empire. The protectorate which she is gradually assuming over the Christian populations of Turkey is detrimental to the established rights of France and prevents any cordial cooperation between her and her ally. Germany, bent on securing material advantages, is ready to tolerate the worst excesses of Turkish misgovernment, provided she attains her ends. Austria, paralyzed by internal dissensions, is only too thankful to see things remain as they are."

A great deal of water has flowed under London Bridge since the above was written. The great English organ formulates its editorial ideas in a more optimistic strain, and we find it now saying:

"What is imperatively demanded as the first step to bettering the present condition of things in Macedonia, as elsewhere in the Turkish empire, is not the publication of liberal constitutions or the carving out of independent principalities, but a serious and sustained endeavor to work the existing administration properly. It has been pointed out again and again that Turkey possesses honest and capable officials who, if backed by the real support of the Powers, could probably carry on the government of the vilayets in the way all disinterested well-wishers desire. It is quite true that, as is pointed out by the authority quoted by our Paris correspondent, the disorganization of Turkish finance, with its corollaries of a half-fed army and unpaid officials, constitutes a bar as nearly insuperable as anything can be to the effective carrying out of improved administrative methods. For this reason it might prove necessary to secure effective and far-reaching reforms at the heart of the empire as well as in its outlying members; but such a prospect should not deter the Powers from taking the more obvious steps toward practical amelioration

THE DARDANELLES SEE-SAW.

The game played by Great Britain and Russia consists in seeing who will be at the top if by chance both are on a level in testing the strength of Turkey's old carcass. —*Fischietto* (Turin).

to which everything seems now to point. The crushing burden of taxation under which the Macedonian peasant labors would be robbed of most, if not all, of its terrors if he were freed from illegal extortions by the presence of honest officials. That the task of the latter might prove a hopeless one unless they could count on efficient European aid we can, however, hardly doubt. The more vital, in view of this fact, becomes the need for securing measures of European supervision and inspection which shall be adequate to the need. That some such practical scheme is embodied in the Austro-Russian plans of reform seems certainly evident."

Austrian opinion seeks to minimize the importance of the crisis, the *Pester Lloyd* (Budapest) declaring that "there is no occasion for panic" and alluding to former troubles tided over. The Paris *Temps* says the situation may bring Europe face to face with a peril of the first magnitude when the spring season sets in. The *Tribuna* (Rome), organ of the Italian ministry, has a very elaborate study of the crisis. "Turkey," it says, "can not tolerate anarchy as the normal condition of existence in Macedonia, nor can Europe tolerate it either, not only out of considerations of humanity but for the sake of international equilibrium and peace":

"The rivalries among the Powers, which alone prevented a carrying out of the provisions of the agreement of 1878, have not ceased. A Macedonian Macedonia, that might become the nucleus of a future Balkan federation, would not further the designs of Austria any more than an Armenian Armenia would have furthered the designs of Russia. So it is not to be wondered at if obstacles emanating from Vienna hinder everything in the shape of a complete development of Macedonian nationality. But Europe, for the sake of her own self-respect, can not permit a renewal of the Armenian experiment. Too often, as it is, has the Sublime Porte been warned in vain that every act of bad faith must entail most serious consequences to the Ottoman empire. It would be impossible to prolong indefinitely the struggle between the reactionary forces of Mohammedanism and the impatience of the Balkan populations."

It will be observed that this Italian opinion conflicts with some of the British opinion already quoted. The British aver that the opposition to an equitable settlement in Macedonia does not emanate from Austria, but the *Tribuna* insists that it must. However, the *Allgemeine Zeitung* (Vienna) asserts that Austria is ready and eager to act in cooperation with Russia to settle the Macedonian question. This paper has certain official relations which give great weight to its opinion. The *Journal des Débats* (Paris) thinks there is no doubt of the existence of a thorough Austro-Russian understanding with reference to Macedonia, and it adds that France will act in harmony therewith. Official German opinion is expressed by the *Kreuz Zeitung* (Berlin), which is resentful of insinuations that Germany is obstructing a settlement of the trouble. Says this organ:

"We are urged to support Russia in the efforts of her diplomacy to bring about a better state of affairs in Macedonia. . . . . The reforms in Macedonia which Russia desires have our hearty support, and we hope that the efforts of Austria and Russia—which we have earnestly seconded—will be successful. Nothing is further from our purpose than a Metternich policy. But we do not feel called upon to assume the burden of Oriental policy. It is to our interest to hinder as far as we can the development of an Oriental crisis, which could easily lead to a European crisis. For this reason we have not approved of the agitations of Macedonian committees, altho we deplore the barbarities of the Turks."

The consensus of European opinion indicates a settlement of the crisis by the Powers under the leadership of Austria and Russia, with France a strong supporting influence. All authorities agree, nevertheless, that a crucial difficulty must present itself when the spring season has advanced sufficiently to enable the revolutionary bands to arouse the Macedonian population.—*Translations made for* THE LITERARY DIGEST.

VICTORY OF THE SULTAN OF MOROCCO.

THE ups and downs of the young Sultan of Morocco have been overshadowed by crises in other parts of the world. But he has given a good account of himself in his dealings with the pretender, Bu-Hamara, upon whom he inflicted a smart defeat recently. The Sultan Abd-el-Aziz has since that time been reasserting his impugned supremacy throughout Morocco. It is generally assumed that the pretender's cause is doomed, because the fanatical tribesmen will deem him a shattered idol. Nevertheless, this view of the matter is not shared by an anonymous writer in the *Revue de Paris*, who says the Sultan will

MULAI ABD-EL-AZIZ,
Sultan of Morocco, with his American bicycle.

surely have to face another insurrection in no very distant future. The Moroccans are resolved to be rid of him because he has fallen too much under the influence of Europe and Christianity:

"Changeable tho public opinion in Morocco may be, as elsewhere, it is very probable that the majority of the Moroccan tribesmen will never willingly serve this unpopular Sultan who, having inherited none of the qualities of his father, affronts by his every act the religious convictions of the people, and seems to rule under the tutelage of Great Britain, the most unpopular of European Powers in Morocco. If the present revolt be suppressed in slaughter another revolt will follow it in some portion of Morocco. The Moroccan question will always be on the point of reopening. In the interest of Morocco, as well as in the interest of Europe, every effort should be made by diplomacy to rid Abd-el-Aziz of the pernicious influence of his Christian environment. If the Sultan refuses to follow the straight path traced by his predecessors, the accession to the throne of a strongly orthodox prince should be favored—one imbued with the principles and traditions of [the former Sultan] Mouley-el-Hassan."

A good deal of importance is attached to this view as emanating from a source in close touch with the French Foreign Office. The *Kölnische Zeitung* says the French Government regards itself as in a sense "a Mohammedan power" in view of its colo-

nial connections. "France particularly aims at the neutralization" of the great Moroccan center of Tangier, "which commands the Mediterranean opposite Gibraltar." The French style themselves "Morocco's nearest neighbors," and that country "is within the French sphere of influence." The German paper adds:

"The French program means that all Morocco must go to France with the exception of Tangier, which is to be made neu-

READILY UNDERSTOOD.

The Morocco Pretender was formerly a conjuror, and the Sultan flees from him to avoid being extinguished.

—*Fischietto* (Turin).

tral. We agree with this last stipulation. It is no longer a secret that this policy is that of the French colonial party, which aims at the acquisition of the whole of Morocco, in order thereby to round out the colonial empire of France. This colonial empire is to comprise all northwest Africa as far as the Kongo, and to be matched only by the colonial empire of Great Britain in India. There are not wanting indications that this policy accords with the ambitions of the French colonial and foreign offices, as is shown by the pains and expense lavished by successive cabinets in operations along the Algerian-Moroccan frontier. Morocco is to this element the great prize of the future."—*Translations made for* THE LITERARY DIGEST.

THE LIBERAL CHAOS IN SPAIN.

EVER since the death of Sagasta, the Liberals in Spain have struggled to form themselves into a cohesive body for political purposes, but quite in vain. They have found a nominal leader in the person of Señor Montero Rios. This publicist is both experienced and able. He has formulated a policy based upon the principles of the lamented Sagasta; but the Liberal factions have at last ceased negotiating with one another, and as a result there is no recognized opposition in the country at all. This situation is ascribed to the radicalism of Señor Canalejas, formerly a member of a Sagasta ministry and now the leader of Spain's democratic element. The *Indépendance Belge* (Brussels) says the present situation is "for the best":

"What destroyed the Liberal party in Spain was its constant compromise with elements claiming to be Liberal, but which in reality pursued Conservative aims. These were the elements that drove Sagasta, from the very beginning of his last ministry, to make concessions to Clericalism that were inconsistent with Liberal principles. To this cause must be attributed the discredit into which the Sagasta ministry fell toward its decline. At present the situation has the advantage of being well-defined. The democratic element can group itself openly about Señor Canalejas, who has a policy that all anti-Clericals and all friends of financial and economic reform can support. But in view of the political methods that prevail in Spain, where the party in power determines, before the elections are held, just what number of seats the opposition shall win, it goes without saying that the Liberal faction headed by Señor Moret will be favored by Premier Silvela, since the opposition of that faction is only a matter of form. It is not, therefore, in the Cortes that Señor Canalejas and his friends will do their best work. They will win public opinion to their side by an agitation in the country at large. Their influence will thus become strong enough in time to enable them to make headway against the forces of reaction."

This view is partially indorsed by the utterances of the Spanish press. The dynastic *Epoca* (Madrid) is very much concerned at the Liberal chaos because it threatens the artificial party system and may lead to the creation of a genuine instead of a sham opposition. The idea is not expressed so nakedly, but that is what its comment amounts to. For instance:

"We do not forget the services rendered by the Liberal party, notwithstanding its errors and shortcomings. We note, not without alarm, the factions into which it is shattered. The existence of strong and well-disciplined parties seems to us preferable to a multiplicity of separated groups, which too often merely obstruct legislative activity and disarrange parliamentary life. We deem it to the interest of the nation and the monarchy that a strong and united Liberal party should exist, in which experience and the spirit of moderation temper the exaggeration of mere theory and adjust policy to the exigencies of the time."

There are six different factions among the Liberals, says the *Heraldo de Madrid*, organ of Señor Canalejas. It alludes to the efforts of Señor Montero Rios to unite these factions under his own leadership, but declares such efforts vain until a genuinely democratic policy is decided upon. The *Imparcial* (Madrid) calls attention to the interminable character of the Government's negotiations with the Vatican, and declares that the conclusion of these confabulations affords a basis of union upon which any number of factions ought to be able to unite. The Republican *País* (Madrid), however, says that these negotiations are practically over for the present at any rate, and it even admits that Spain may have gained from them an increased control over the religious orders.—*Translations made for* THE LITERARY DIGEST

POINTS OF VIEW.

BOER WOMEN.—Had the Boer women been given their way, the war in South Africa might still be "on," thinks the *Gids* (Amsterdam). Rather than yield "they would have endured endless woes."

FROM CÆSAR TO MORGAN.—J. Pierpont Morgan can be compared only with Julius Cæsar, according to Mario Morasso, writing in the *Rassegna Internazionale* (Rome). "The Napoleon of to-morrow can only be the Morgan of to-day."

ALSACE STILL FRENCH.—The efforts of Emperor William to Germanize Alsace are a failure, if we may accept what the *Revue Internationale de Sociologie* (Paris) asserts. The economic situation of the territory makes it dependent upon France, and all its ideas and aims are French.

POLITICAL CALM IN FRANCE.—"France is passing through a period of great political calm," says *The Outlook* (London). "She is to be congratulated upon this as long as the calm lasts, but some close observers will be apt to think that this unusual and most un-Frenchlike peacefulness is in itself a portent. More remarkable still is the subsidence of the bitter animosities aroused by the Religious Associations Act. Not often has the Church of Rome allowed so complete a victory to its opponents."

RUSSIAN PALACE INTRIGUES.—"Reliable information from St. Petersburg points to great dissensions among the leading members of the Czar's Government," says *Free Russia* (London). "The struggle for supremacy between Messrs. von Plehve and S. Witte is an open secret. It is well known in official circles that the Home Secretary, profiting by Mr. Witte's absence on his journey to Siberia, tried to undermine his position, and privately 'offered' the post of Minister of Finance, as a future vacancy, to Mr. Kokovtsev, at present Mr. Witte's assistant. Some people, however, who ought to know, do not believe in this candidature, and name General Lobko, the present State Controller, as Mr. Witte's successor, in the event of that minister's downfall."

NOTABLE BOOKS OF THE DAY.

A BUNCH OF CAMEOS.

THE MONK AND THE DANCER. By Arthur Cosslett Smith. Cloth, 5 x 7½ in., 241 pp. Price, $1.50. Charles Scribner's Sons.

WHETHER collections of short stories published in book form find purchasers enough to repay the firm that brings them out, or not, such a group of them as the six printed under the caption of "The Monk and the Dancer" can not but win the heartiest encomium of every reader sensitive to the peculiar charm of this form of literary art. Mr. Arthur Cosslett Smith must be admitted as a master in this fascinating field. That he is a man of forty, or thereabouts, cosmopolitan and ripened to perfection by the study of French models, might be astutely conjectured, and the conjecture is borne out by the facts.

ARTHUR COSSLETT SMITH.

In these admirable stories, Mr. Smith's touch is firm, knowing, and refreshingly effective. His style suggests the trenchant vigor and luminous clarity of De Maupassant. The manner of the telling is half the battle in his case, tho the stories are fresh, original, and ingenious as to motif and exposition.

"The Monk and the Dancer" is not a startlingly novel idea in substance; but it is reenforced by engaging accidental modifications. An innocent young man succumbs to the perilous fascinations of a Spanish danseuse; that is the story in a nutshell. But this virginal Apollo is a monk of the abbey of La Trappe, at Staoüeli, in Algeria. More, he has been reared from his infancy within the silent walls, and the world and that agitating factor in it, woman, are a closed book to him. Again, to intensify the situation, Brother Angelo learns on the very day on which Dolores strays into the guest-chamber of the monastery that he is the son of a Count Charles d' Apremont, colonel of the Fourth Chasseurs d'Afrique, and an Almée woman, who danced in the café of Biskra; and at the same time that he learns who his parents were he is also informed that they are both dead. The father abbot lifts the veil of the past for him. Tumult enough is thus injected into the warm, white soul whose whole existence of twenty-two years has been passed in the geranium-scented silence of the severest monastic rule known to the Church.

With unhesitating promptness, this modern Adam succumbs to the wiles of Dolores. After a few months, when she has tired of the toy she has made of him, the young monk drags himself back to the convent, his whole soul a lacerated garment of penance, and they take the stricken prodigal in, back to the silence which will never be voiceless to him again, and to whom the breath of the geraniums will be a perfume with the scent of a shattered ideal in it.

Mr. Smith has a humor not dry, not caustic; only polished and inoculated with cosmopolitanism. Different lands and human nature in its myriad phases are things he knows by heart. Never for a moment is his pen not that of the gentleman and the artist. One story is specifically humorous; another, embroidered with needle-pricks of humor. In his touch, his sentiment, his manner, he is the sophisticated club-man, who knows it all. But the artistic sense is never crippled by this embodied worldly pen. The work is clean-cut, assured, and you will never mistake him, or fail to be glad that he has written for your appreciative taste.

THE DOINGS OF THE SUBURBAN WOMAN.

THE HOUSEWIVES OF EDENRISE. By Florence Popham. Cloth, 5 x 7½ in., 285 pp. Price, $1.50. D. Appleton & Co.

ONCE in a while the reader of modern fiction comes across an oasis in the desert of adventure and romance—a book in which nothing very much happens and yet whose every-day affairs are presented in so amusing a fashion that they interest some of us far more than do the lovers and the beautiful heroines in the romantic novels. The latest of such books is "The Housewives of Edenrise." Edenrise is a little village not far from London, and the "housewives" are the ladies in the little society of the town. While we read the book, the doings of these ladies, their petty affairs, and the difficulties which they have with their servants become for a moment the most absorbing thing in the world. The writer has the unusual gift of making one understand and sympathize with not only the joys and sorrows of her characters, but with their little jealousies and petty annoyances. In fact, all the personages in the book are real people; when one has finished it one has lived in Edenrise, taken tea with Mrs. Peacock, and listened to the scandalized ladies as they discussed the affairs of the impossible Mrs. Greenlaw. The author, too, has resisted the temptation to burlesque the housewives. The humor with which their affairs and themselves are described is never strained or overdone. It is doubtful if many men will enjoy this book as thoroughly as its women readers. A man would have to be a very close observer of feminine nature to understand what a very close study of life this is. There is a widely spread superstition among men that a woman is mysterious, that it is impossible to comprehend her motives, and that, when estimating her character, one should reckon twice two as five. For such people these housewives would be too transparent. Suburban womanhood is here described as it is after the husband has gone to town. The different characters are very like those one would be apt to find in a suburban village. They are neither all stupid nor "catty." Some are sensible, fine, and broad-minded; they talk as women do when there are no men around, and it is this very thing that men would be very likely not to understand.

THE PASSING OF A FIGHTING BURGHER.

THREE YEARS' WAR. By Christian Rudolf De Wet. Portrait by John S. Sargent, R.A. Four Plans and a Map. Cloth, 6 x 9 in., 448 pp. Price, $2.50. Scribner's Sons.

IN the judgment of a competent military critic, this book is neither a treatise on the Boer war nor a history of it; "it does not pretend to be." It is more justly described as "a log" of the events in which De Wet was personally concerned—a chronicle of detached movements and spirited "affairs." "So far as the military history of the war goes, the book might as well have been written by a corporal." True; but such a corporal! One who, from the condition of a private burgher, was called to be commander-in-chief in less than five months; and from whom the fighting Free-Staters took their orders, from the capture of Cronje to the end of the war.

A free-footed partizan chief was this Boer farmer; a phenomenal leader of irregulars; keeping thousands of British horse racing over the Veldt in the vain hope of catching him; cutting through the British lines "with an audacity justified by his fertile resourcefulness"; a man who has mastered the Boer tricks of cover and stalking, and who "shot at a mark"; one who knew how to keep the enemy busy wondering what he would do next, and whose place in the world's story of romantic and formidable bushwhacking is found somewhere between Forrest and Mosby.

The most convincing impression of the mind and temper of De Wet that we get from these pages concerns the logical and practical direction of his criticisms and requirements. Whatever the emergency, he "means business"; in no predicament, for no strain or stress, has he any use for heroics—for "exalted sentiments," even of magnanimity or of reverence. At Paardeburg, "Our arrival on the previous day had made a way of escape for General Cronje"; but Cronje would not move. The world will honor that great general, he declares; . . . "but I believe that he ought to have sacrificed his own notions to the good of the nation; he should not have been brave at the expense of his country's independence, to which he was as fiercely attached as I." It was Cronje's conviction that he must stand or fall with his laager. He never realized that his capture would mean the death of many burghers, and that indescribable panic throughout all the laagers on the Veldt. That fatal surrender, De Wet maintains, was not only the burghers' undoing; it reenforced the enemy.

CHRISTIAN R. DE WET.
From portrait by John S. Sargent.

The fact that the Boers of the Free State fought in small detachments was, to De Wet's notion, pregnant with much vexation to the English, whose wits were troubled to invent a new vocabulary of epithet suitable to the occasion—"Rebels," "sniping-bands," "guerillas." He seems to have been always at a loss to comprehend why guerillas. But he is in a measure relieved by their withdrawal of the obnoxious fling at the peace negotiations, when they acknowledged that the Boer leaders formed a legal government. "They really did not mean to use the word at all."

To the Boers, "Majuba Day" (27th of February) was a date of ominous import. On the "Majuba Day" of 1902, Commandant Van Merwe and four hundred stout burghers fell into the hands of the enemy. On that same day—nineteen years after the great battle—befel the terrible defeat at Paardeburg, where the Boers lost General Cronje and a great force of their best fighters. And when the twenty-first anniversary was upon them, they were called upon to commemorate it in appalling losses of men and cattle captured by the enemy. Says De Wet:

"We had always been able until now to get the cattle safely away; the unevenness of the Veldt here was greatly in our favor. But this time,

we could not. How am I to explain the inexplicable? It was [illegible]—but not against England."

On the 5th of June the first commando laid down their arms near Vredefort. "The whole miserable business" came to an end on the 16th. To continue the desperate struggle was to court extermination. Already the women and children were dying by thousands. Starvation was knocking at their doors, and knocking loudly. "I have often been present," says De Wet, "at the death-bed and at the burial of those who have been nearest to my heart—father, mother, brother, friend; but the grief I felt on those occasions was not to be compared with what I now underwent at the burial of my nation."

By the light of that pathetic outburst, it is not difficult to detect the grimly bitter protest that lurks in De Wet's Dedication: "To my Fellow Subjects of the British Empire!"

HEART CHORDS ON AN IRISH HARP.

Father Tom of Connemara. By Elizabeth O'Reilly Neville. Cloth, 5½ x 7¾ in., 394 pp. Price, $1.50. Rand, McNally & Co.

MOST Americans have rather vague ideas about Ireland. Many could give no more graphic definition of it than the country which is moving to New York. But even the least interested know it as the land of such discrepant sobriquets (or are they cognate?) as the "Green Isle," and the "Isle of the Saints." The importation of verdancy to these shores is palpably evident, tho the "Saints" do not appear to make their hegira to New York in surging throngs.

This modest cluster of stories by an Irish woman is redolent of the Irish sod. Mrs. Neville selects one of the barest sections of the island as her *terrain*, and sounds the depths of the primitive Keltic nature which it produces and fosters. "The nearer the bone the sweeter the meat." The humor, bed-rock virtues, and child-like poetry of Connemara and its folk breathe with the pathos of an æolian harp from her pages. They are unaffected tales, but rich in their simplicity, and tho there is an amateurish touch at times in her style, it somehow accords beguilingly with the hearty directness of her narration.

"Connemara lies on the uttermost verge of the most western island of Europe, and is the last spot on which the sun rests before he is lost to the eyes of men," she says. It is a natural stronghold, between Killary and Galway bays on the west coast, and few tourists penetrate into its wild but beautiful fastnesses, and if the land grudgingly feeds the bodies, the souls of its simple folk have noble quality in them. We believe this because Mrs. Neville says it in a way that makes doubt base. Can such passages as this be withstood?

"Each Connemara man holds his head high, and he has reason for doing so. He may be a fisherman depending on the elements for his breakfast, or a farmer breaking his heart over a crop that would evoke a curse from a Roscommon cotter; but he comes from royal blood, and he knows it and is deeply thankful. He is brave because his ancestors were brave, he is hospitable because they were hospitable, and he is courteous because they were courteous. His dinner may consist of some potatoes and a freshly caught salmon, or potatoes and milk, or potatoes and nothing at all; but he invites you to partake of it with the dignity of a prince."

It is astonishing what a hardy race the potato and sea-air will breed. Their sterile land is clothed in wild beauty and the perfume of flowers sweetens the air. What freshness in the simple annals of these poor, as told by Mrs. Neville! Character is rich and individual, and the simple Connemara incidents are tragic, pathetic, humorous, and endearing as she weaves them into these tales. There is one story, "Vulcan and Venus," that is very strong in its granite rawness of emotion. But the vein of Irish humor predominates, the "real thing," the quick, unctuous, colored flow of retort, that playful effervescence of the fancy, stiffened by a grasp of the adversary's weak point, which, like some delicate wines, does not survive exportation from the country of its vintage.

PICTURES OF IRISH LIFE.

The Lovers of Loosalara. By Jane Barlowe. Cloth, 5 x 7½ in., 341 pp. Price, $1.50. David, Mead & Co.

AS a novelist Miss Barlowe is singularly lacking in what has been regarded as the great essential, that is, the ability to make a plot which moves, to tell a story which carries one along so swiftly on its current of events that it gives one an illusion of life. It may be that there will come a time when the traditional plot, the events of which are all "dovetailed" together, and which all lead up to what we call a "climax," will seem antiquated and artificial. Already there are signs of a diminishing loyalty to it. Some of our best books are mere fragments, so to speak, of life, with not any particular beginning or end. And some writers who began to write in this way have found later that the so-called plot paid, and their most dramatic work, in the conventional sense of the word, has been less vivid and less vibrant with the real drama of life than the work which had a less conventional form.

It is to be hoped that Miss Barlowe will not be one of these. In the "Founding of Fortunes," the line between the kind of work which she is best suited to do and the kind which she has labored to learn to do is well defined. All her attempts to tell a connected story have an artificial result. Nowhere does she create in her reader the desire to turn the page over quickly to see what happened next, for it really matters very little. Rather one desires to linger over the little clear-cut pictures of Irish life, the small dramatic incidents, which have no important relation to the story. Looked at from a literary point of view, as one of the literary signs of the times, an observant person can not but feel that the old species of story-telling and the new, which sacrifices form to the close observation of life, have met oddly here in this book, and somewhat to the discomfort of both.

Any one who knows Miss Barlowe's work knows how well she understands her people. No one, perhaps, has ever drawn so clearly their desperate merriment and their consoling melancholy. Her studies of Irish life are more exact and more human than Miss Wilkins's studies of New England have ever been, and better then Miss Wilkins's. She has been able to make her readers see the look of the country in which her people live.

A RUSSIAN VIEW OF TOLSTOY.

Tolstoy, as Man and as Artist. With an Essay on Dostoyevski. By Dmitri Merejkowski. Cloth, 5 x 7½ in., 310 pp. Price, $1.50. G. P. Putnam's Sons.

IT is very difficult for us to get a just opinion of the great men of other nations. This is especially true when the great man is obscured behind a difficult language, so that his countrymen's estimates of him are inaccessible to most readers. When such an estimate is translated, it is likely to be a shock to our preconceived ideas. This is certainly the effect of the recently translated book of Dmitri Merejkowski on his distinguished countryman, Tolstoy. This writer paints Tolstoy in the light, not of a great Christian reformer who has given up the things of the world to return to a simpler and purer mode of life (the light in which the American reading public has been wont to consider him), but as a great pagan who somehow has gotten tangled up with Christian ideals which are quite foreign to his nature and in direct opposition to his acts. According to Merejkowski, Tolstoy's attempt to renounce his worldly goods has been only a pathetic failure; his attempt to lead an austere life has resulted in a life of austere but perfect luxury. Whether the reader is or is not convinced in the end, this Russian critic makes out a very telling case against the latter-day apostle. To strengthen his most vital arguments, he uses the testimony of Tolstoy's devoted brother-in-law, Bers, and that of other intimate and sympathetic family friends. Nowhere does he convey the idea that Tolstoy is consciously a fraud, but simply that he has utterly failed in living the life he aimed to live, and has merely shirked where he pretended to renounce.

DMITRI MEREJKOWSKI.

Merejkowski's opinion of Tolstoy as a writer is no less interesting and individual. He gives him, of course, a place among the highest in the Russian literary Olympus. But he admires him, not as a psychologist, but as a writer who more than any one else has understood the physical life of the people. He is the "great seer of the body," and he describes the bodies of his personages, not their souls. They all talk alike, so Merejkowski claims, and it is by some curious personal and physical trait that they become real to us, some poignant gesture that makes them live.

It seems almost a dramatic perversity that leads the Russian critic to contrast the art of Tolstoy and the art of Dostoyevski. The one sane, of splendid physical health, living an almost patriarchal life among his family; the other abnormal, irregular in every detail of his life, a wanderer on the face of the earth, an epileptic even—the two most sharply contrasted types it would be possible to find even in Russia, the land of contrasts.

The later portion of the book is devoted to contrasting the subtle, curious, and tortured art of Dostoyevski with the obvious and physical work of Tolstoy. The works of these two men complete each other, Merejkowski thinks; by their very difference they interpret each other.

The author has managed to make his book of criticism as dramatic as a romance. He has set into vivid relief two of the most interesting figures in Russian literature, and his point of view, whether or not the reader agrees with it, is intensely interesting.

With its February issue Scribner's old established literary magazine, *The Book Buyer*, changes its name to *The Lamp*.

IF YOU WANT CASH

FOR YOUR

Farm, Home, or Business,

I Can Get It

No matter where your property is located or what it is worth

If I did not have the ability and facilities to sell your property, I certainly could not afford to pay for this advertisement. This "ad." (like all of my other "ads.") is practically sure to place on my list a number of new properties, and I am just as sure to sell these properties, and make enough money in commissions to pay for the cost of the "ad." and make a good profit besides. That is why I have the largest real estate business in the world to-day.

Why not put your property among the number that will be sold as a result of this "ad."?

I will not only be able to sell it—some time—but will be able to sell it quickly. I am a specialist in quick sales. I have the most complete and up-to-date equipment in the world. I have branch offices throughout the country and a field force of 2500 men to find buyers.

I do not handle any of the side lines usually carried by the ordinary real estate agent. I do not make any money through renting, conveyancing, mortgages, insurance, etc. I MUST SELL real estate—and lots of it, or go out of business. I can assure you I am not going out of business. On the contrary, I expect to find at the close of the year 1903, that I have sold twice as many properties as I did in 1902, but it will first be necessary for me to "list" more properties. I want to list YOURS and SELL it. It doesn't matter whether you have a farm, a home without any land, or a business; it doesn't matter what it is worth or where it is located. If you will fill out the blank letter of inquiry below and mail it to me to-day, I will tell you how and why I can quickly convert your property into cash, and will give you my complete plan (free) and terms for handling it. The information I will give you will be of great value to you even if you should decide not to sell. You had better write to-day before you forget it.

If you want to buy any kind of a Farm, Home, or Business, in any part of the country, tell me your requirements. I will guarantee to fill them promptly and satisfactorily.

CURRENT POETRY.

Mollusks.

By HENRY JEROME STOCKARD.

Down where the bed of ocean sinks profound,
Lodged in the clefts and caverns of the deep,
Where silence and eternal darkness keep,
These dumb primordial living forms abound.
What know they of this life in the vast round
Of earth and air,—how wild the pulses leap
At love's sweet dream; what storms of sorrow sweep;
What hopes allure us, and what terrors hound?
And, scattered on these slopes and plains below
This atmospheric sea, one with the worm
And beetle for a momentary term,
What know we more of those ethereal spheres,—
What rapture may be there, what poignant woe,
What towering passions, and what high careers?

—In February *Harper's Magazine*.

$10 DRESSES ANY WOMAN
COMPLETE FROM HEAD TO TOE IN LATEST STYLE.

Free Samples
and Measurement Blanks.

To Introduce Direct to the Wearer our Ladies' Custom Tailoring we will make the first ten thousand suits absolutely to measure sent us for only $10 and give the following complete outfit **FREE**

Actually $28 value for only $10 and nothing to pay till after you receive the suit and free outfit and find it just as represented. Send us your name and post-office address, and we will send you FREE SAMPLES OF CLOTH, 5-ft. tape line and measurement blank for size of Suit, Shirtwaist & Shoes.

A genuine wool mixed repellant latest style, Tailor Made Blouse Suit, for such ladies' tailors charge	$20.00

A Tempting Delicacy 104

Shredded Whole Wheat Biscuit
is the Natural Food for Invalids because it is the most porous and light of all foods and presents *greater surface for the action of digestive fluids.* These fluids are drawn by absorption into every part of the wheat shreds, making the food immediately assimilable.

Shredded Whole Wheat Biscuit contains a food property to upbuild each and every element of the depleted body. Foods made of part of the wheat, such as white-flour bread, cannot do this, and the ferment contained in them results in a sour mass in the stomach. There is no lard, yeast or health-disturbing ingredient of any nature in *Shredded Whole Wheat Biscuit* and its use insures a sweet, clean stomach.

Shredded Whole Wheat Biscuit purifies the digestive tract, and constipation is unknown to those who eat it regularly. It can be prepared in so many tempting ways that the fickle appetite is always attracted by its goodness and the ailing body quickly responds to its all-nourishing force.

For sale by all grocers. Send for "The Vital Question" (cook book, illustrated in colors) **FREE.** Address
THE NATURAL FOOD CO., Niagara Falls, N. Y.

The Best Fire-escape
is precaution against fire. Dumping hot ashes into rickety cans or barrels is a menace to safety.

Witt's Corrugated Can is fire-proof. Made of galvanized steel. Close fitting lid prevents wind scattering ashes. Safest, strongest, best ash and garbage can made.

KLIPS Write for price-list. H. H. Ballard, 327 Pittsfield, Mass.

William Allen White

Will write a series of articles on the political situation at Washington as he sees it from week to week. Exclusively in

THE SATURDAY EVENING POST

There are perhaps three or four men in the length and breadth of the country who can write on political topics as sanely, shrewdly and clearly as Mr. White; but not one of them possesses in like degree his fine native humor or his ability to wring the last drop of human interest out of his subject and into his writing. Mr. White has also the rare gift for stripping a complex theme of its non-essentials and showing it forth in its simplest terms.

How the Cabinet Does Business

By Charles Emory Smith

Former Postmaster-General. A very general ignorance of the inner workings of the Cabinet room prevails, and yet the Cabinet is the least formal, the most active, of the arms of the Government. Mr. Smith will illustrate with anecdotes of actual occurrence how the assembly handles grave questions.

A Congressman's Wife

A regular letter from one of the brightest women in Washington, giving us all the social gossip of the Capital, telling us the good things said at the social functions; bright, sparkling, full of life—*the* social life of Washington.

The Saturday Evening Post will be sent to any address every week from now to July 1st, 1903, on trial, on receipt of only 50 cents.

It is the handsomest weekly magazine you ever saw

The Curtis Publishing Company, Philadelphia, Pa.

People are reading

The Conquest

Because it stirs their American pride, and brings vividly before them the deeds of the pioneers whose adventurous daring won for us a continent

Phœbus Apollo.

BY GUY WETMORE CARRYL.

Hear us, Phœbus Apollo, who are shorn of contempt and pride,
Humbled and censured on a world gone wrong since the smoke on thine altars died!
Hear us, Lord of the Sunrise, and come, as of old you came;
Dawn on the doubts and darkness born of our later shame!
There are strange gods come among us, of passion, and scorn, and greed:
They are throned in our stately cities, our sons at their altars bleed.
The smoke of their thousand battles hath blinded thy children's eyes,
And our hearts are sick for a ruler that answers us not with lies,
Sick for thy light untarnished, Fruit of Latona's pain:—
Hear us, Phœbus Apollo, and come to thine own again!

Our eyes, of earth grown weary, through the backward ages peer
Till, wooed of our eager craving, the scene of thy birth grows clear,
And across the calm Ægean, gray-green in the early morn,
We hear the cry of the circling swans that salute the god new-born;
The challenge of mighty Python, the song of the shafts that go
Straight to the heart of the monster, sped from thy slender bow.
Again through the vale of Tempe a magical music rings,
The song of the marching Muses, the ripple of fingered strings;
But this is our dreaming only: we wait for a stronger strain:—
Hear us, Phœbus Apollo, and come to thine own again!

There are some among us, Diviner, who know not thy way and will,
Some of thy rebel children who bow to the strange gods still,
Some that dream of oppression, and many that dream of gold,
Whose ears are deaf to the music that gladden the world of old;
But we, the few and the faithful, we are weary of wars unjust.
There is left no god of our thousand gods that we love, believe, or trust;
In our courts is justice scoffed at, in our senates gold has sway,
And the deeds of our priests and preachers make mock of the words they say.
Cardinals, kings, and captains, there is left none fit to reign:
Hear us, Phœbus Apollo, and come to thine own again!

We have hearkened to creeds unnumbered, we have given them trial and test,
And the creed of thy Delphic temple of them all is still the best!
The clean-limbed blithe disciples, slender, and strong, and young,

Charlotte Brontë
George Eliot
Jane Austen

Studies in their Works

By HENRY H. BONNELL, 8vo, 485 pages. *Net*, $2.00. By mail, $2.17.

I. Charlotte Brontë, (a) Her Realism, (b) Her Attitude toward Nature, (c) Her Passion.

II. George Eliot, (a) Her Religion and Philosophy, (b) Her Art, (c) Her Sympathy: Further considered.

III. Jane Austen, (a) Her Place, (b) Her Wonderful Charm.

"In Mr. Bonnell's criticism we certainly gain the satisfaction of seeing the writers described intimately and through a sympathetic medium. Obviously he has read . . . to saturate his mind with the writings under his consideration, to get out of them all that they can yield him, and to make the product of his study an inspiration to other readers. Consequently . . . to read his book is to renew one's interest in his subjects and to respect his attitude toward them."—*New York Times Saturday Review.*

"Whoever is interested in the three women most famous in English letters, cannot fail to hail with pleasure a volume like this" . . .—*New York Literary Digest.*

"The three great female novelists of England are once more made the subjects of thoughtful and sympathetic appreciation." . . . —*New York Sun.*

". . . This work, aside from being biographical, is an intimate psychic study of these three full-souled women. It contains many anecdotes and incidents that are known but to few, and the insight into the character of the three women is, in some particulars, also new." . . . —*Atlanta Constitution.*

THE "BEST" LIGHT CO.
92 E. 5th Street, CANTON, OHIO.

The swing of their long processions, the lilt of the songs they sang,
Thine own majestic presence pursuing the triumph of dawn
In thy chariot eastward blazing, by thy stately steeds drawn
The spell of thy liquid music, heard once in the speeding year:—
These are the things, Great Archer, that we long to see and hear!
For beside thy creed unblemished all others are stale and vain:
Hear us, Phœbus Apollo, and come to thine own again!

Monarch of light and laughter, love, and trust, and truth,
God of all inspiration, King of eternal youth,
Whose words are fitted to music as jewels are set in gold,
There is need of thy splendid worship in a world grown grim and old!
We have drunk the wine of the ages, we are come to the dregs and lees,
And the shrines are all unworthy where we bend reluctant knees:
The brand of the beast is on us, we grovel and grope and err.
Wake, Great God of the morning! The moment has come to stir!
The stars of our night of evil on a wan horizon wane:—
Hear us, Phœbus Apollo, and come to thine own again!

—In February *Scribner's Magazine*.

PERSONALS.

Mr. Collier Always "Touches Wood."—The superstition of actors is so well known that sometimes even a single habit is construed into being an omen for good-luck or fortune. William Collier, says the New York *Evening Telegram*, will never enter or leave a room or go on or off the stage without touching a piece of wood.

This is particularly noticeable in his stage entrances. Mr. Collier stands in the wings at Weber & Fields' Music-Hall waiting his cue, and when it arrives he reaches out to the frame of the nearest scene, passes the tips of his fingers over the surface of the wood, and walks before the audience.

Once, in the excitement of a first performance, he made a few steps toward the footlights when he remembered that his wood-touching had been neglected, While the audience was still applauding him, he backed a few steps, bowing modestly, and in the most careless fashion reached out his left hand and touched the edge of the scene-frame. Then he went on with his lines.

This hobby was noticed by Charles Bigelow, who was standing beside him in the wings.

"Do you always touch wood before you go on?" asked the scanty-haired comedian.

"Sure," replied Mr. Collier, as he gently stroked Mr. Bigelow's head before making his entrance.

And Mr. Bigelow thought hard for a time.

——

Horace Greeley's Broken Heart.—Senator Depew introduced an account of the disastrous close of Horace Greeley's life into his eulogy of the late Representative Amos Cummings, of New York, in the Senate recently. He said:

"I have seen many a death-bed in my life; I have seen life go out under conditions that were sad or sweet, hopeful or despairing. I never but once

A Successful Concern

For a long time LITERARY DIGEST readers have been addressed on various phases of the real-estate proposition by Messrs. Wood, Harmon & Co., and in this week's issue another of their announcements will be found.

It will perhaps be interesting to know that out of the thousands of readers of this periodical who have become patrons of Wood, Harmon & Co., no case of complaint or of dissatisfaction has arisen.

This is certainly remarkable, and it is no less creditable. Their offers have always contained a clause offering in good faith to make good every promise, and an honest adherence to this offer has resulted in a measure of success not often attained.

THE PUBLISHERS believe that in the publication of "Modern Eloquence" they are adding something of value to the world's literature—a work that traverses entirely new fields. For the first time, the best After Dinner Speeches, Lectures, Addresses and Anecdotes of the most brilliant men of the present generation (the past fifty years) have been gathered together.

A work on oratory has meant, heretofore, a musty collection of time-worn speeches, some of them good, but all of them to be found in divers similar collections. The present Library is as different from these as its distinguished Editor-in-Chief was different from other men. Former Speaker Thomas B. Reed, with the assistance of an able staff, succeeded in compiling a work on new and original lines—a work eminently needful to every library, public or private—as the most cursory examination of its purpose and scope will testify.

PURPOSE AND SCOPE

THE purpose underlying the Library of Modern Eloquence was to collect and publish in permanent form the best spoken thought of recent times; but nothing has been included save what is replete with genuine literary value and undoubted popular interest. No excerpts or mutilated portions of speeches have been admitted. Texts have been given in full, since incomplete readings work an injustice to both author and reader.

This work is without a precedent. It has neither predecessor nor competitor. It is sole occupant of a new field. Although the speeches are not all new in themselves, yet, as here given to the public, they are literally treasure-trove. They constitute an important body of Nineteenth Century literature, heretofore inaccessible and hidden in widely separated places.

No experiments have been tried. Whatever is included is of proved value and interest. Speeches which have been flashed across a continent; lectures which have been repeated with ever-renewed fervor; addresses which have brought fame to the speaker and have marked an epoch in history—these have been collected for the first time after months of laborious effort.

Appended to this collection and reenforcing its purpose to entertain, will be found a series of witticisms, anecdotes and eloquent sayings, making the work in effect a cyclopedia of later oratory.

After-Dinner Speeches—Vols. I, II and III

MANY of the brightest, wittiest, wisest sayings of our time have been engendered amid the incense of fragrant Havanas and the aroma of cafe noir. There is something particularly inspiring in a group of congenial men who are in the best of humor from having just dined, and who settle back comfortably in their chairs to listen to some ethical, scientific, literary, or, perhaps, satirical discourse from a speaker of national repute.

Such a speaker must be entertaining. The nature of the occasion demands that quality. He must be brief and to the point. While his speech may have the bright ring of an impromptu effort, the best examples are rarely haphazard. It has been remarked that Emerson put into an after-dinner speech the best philosophy of a long essay. Joseph H. Choate, Mark Twain, Chauncey M. Depew, and Charles Dickens have established international reputations in this special field.

Lectures—Vols. IV, V and VI

A LECTURE is kneaded, twisted, and revamped by frequent repetition till it becomes a model of eloquence. Many of the noblest flights of oratory must be credited to the lecturers of this and other countries. Their subjects have cost them weeks and months in the preparation; they have been tried by the fire of public ordeal.

In a book, the public will endure, though not graciously, a mass of truthful, even though unenlivened, sentiment. In a lecture, brightness is the saving grace. Should a man produce a great lecture he has, of sheer necessity, created literature worthy to endure.

Famous Addresses—Vols. VII, VIII and IX

THIS department includes Literary, Scientific, and Commemorative Addresses and Eulogies. The authors represented are renowned orators, men whose authority to treat of their subjects is as unquestioned as is their power to speak with ability.

The editorial committee have aimed to give only those speeches that would "read well"—that would be attractive from both charm of style and force of thought. Comparatively recent as is the history of America, its literature is already teeming with noteworthy examples. The patriotic American as well as the litterateur will be inspired by and delighted with these "Occasional Addresses."

Anecdotes—Vol. X

FOR the man desirous of becoming a public speaker, or for him who is called upon at short notice to respond to a toast, "Modern Eloquence" will prove an ever-present helper. To such persons the last section will especially commend itself; it includes several hundred pages of anecdotes, reminiscences, and repartee. A well-timed story is often the salvation of a speech; and here such stories may be found in the widest possible variety—and of the highest possible quality.

The Indices

The indices are complete and thorough, furnishing instant reference to every topic, both general and specific, in the entire work.

saw a man die of a broken heart, and never do I wish to see such a tragedy again.

"I made a speech with Mr. Greeley in his presidential campaign, just before its close. We spoke from the same platform, and both of us knew that he was to be beaten. We went back to his home, and he was jeered upon the train and at the depôt when he arrived. We went into his study, which was littered with those famous caricatures of Nast, representing him as the embodiment of all that was evil or vile in expression or practise in life. Mr. Greeley glanced them over for a moment, and then said:

"'My life is a failure. I never have sought to accumulate a fortune. I never have cared for fame, but I did want to leave a monument of what I had done for my fellow men, in lifting them up and in doing away with the curse of slavery and the curse of rum; but here I am, at the close of this campaign, so represented to my countrymen that the slave will always look upon me as having been one of his owners, and reform will look upon me as a fraud.'

"Then, his head falling upon his desk, he broke into uncontrollable sobs. I sent for his family. The brain that had done such splendid work snapped. The next morning he was taken to an asylum, where he died. His heart literally broke."

Secretary Shaw as Sherlock Holmes.—When Secretary Shaw came out of the White House recently, says the New York *Times*, he missed his hat. Looking around he found a hat that closely resembled his own. It bore the initials "T. C. P." in gilt letters:

"Here," said Mr. Shaw to the bystanders, "is where I display the talents of Sherlock Holmes. Discovering the initials 'T. C. P.' in this hat, I seek for a man with those initials who has been at the White House to-day. There is only one such man, and his name is Thomas C. Platt. That does not prove that the owner of these initials has taken my hat, but when we ascertain that Mr. Platt is not now at the White House, the conclusion is irresistible that he has gone away wearing a hat. Since this hat is here and mine is not, it is obvious that he has taken my hat. Is the demonstration clear?"

Amid the admiring comments of the spectators Mr. Shaw put on Senator Platt's hat, walked over to the Treasury Department, and rang up the Senator on the telephone. Mr. Platt confessed that he was the man who purloined the Secretary's hat.

"This looks to me like a Wall Street game," said Mr. Shaw. "I may have the best end of the deal, but I don't believe it. You have been accused of making trades, but I did not think you would work them off on your friends."

"I think it's a flim-flam game," responded Mr. Platt. "I didn't suppose you would have the nerve to do a thing like that almost under the eyes of the President. But for the Nelson amendment, providing for publicity for all suspicious enterprises, I suppose I would never have gotten that superior hat of mine back. I suspect that the newspaper men at the White House threatened to expose you if you did not make restitution."

Later in the day they exchanged hats.

Edison's Way of Working.—Thomas A. Edison is said never to read a book, outside of his technical reading, unless it is mentioned to him by his wife or some friend. Then he sits down and reads until he has finished it. One evening, says the New York *Times*, he happened to be unusually engrossed with some "problems," and was nervously pacing up and down his library.

To divert his thoughts his wife came in and picked up the first book she saw. It happened to be "The Count of Monte Cristo."

"Have you ever read this story?" said Mrs. Edison to her husband.

He stopped and looked at the title.

"No, I never have. Is it good?"

JOHN F. DRYDEN, President. Home Office: NEWARK, N. J.

Mrs. Edison assured him that it was.

"All right. I guess I'll read it now," and within two minutes the "problem" whatever it was, had been forgotten, and he was absorbed in Dumas's great story. As he finished the book he noticed the light of day peeping in, and on looking at his watch found it was five o'clock in the morning.

No sooner had he laid down the book than the forgotten "problem" jumped into his mind, and, putting on his hat, he went to his laboratory and worked unceasingly, without food or sleep, for thirty-six hours.

MORE OR LESS PUNGENT.

The Charge of the Four Hundred.—

Half a block, half a block,
Half a block onward,
All in their 'motobiles
Rode the Four Hundred.
"*Forward!*" the owners shout,
"*Racing-car! Runabout!*"
Into Fifth Avenue
Rode the Four Hundred.

"*Forward!*" the owners said,
Was there a man dismay'd?
Not tho the chauffeurs knew
Some one had blundered.
Theirs not to make reply,
Theirs not to reason why,
Theirs but to kill or die.
Into Fifth Avenue
Rode the Four Hundred.

Tunnels to right of them,
Tunnels to left of them,
Subways beneath them
Volley'd and thunder'd;
Stormed at with shout and yell,
Boldly they rode and well.
Into Fifth Avenue,
While rang the chauffeur's bell,
Rode the Four Hundred.

Flashed all their goggles bare,
Flashed as they cleft the air,
Smashing the people there,
Charging the people, while
All the town wondered.
Plunged in the gasolene smoke,
Right down the street they broke;
Copper and pedestrian
Reel'd from their lightning-stroke
Shatter'd and sunder'd.
Then they rode back again,
Rode the Four Hundred.

When can their glory fade?
O the wild charge they made!
All the town wondered.
Proud of the charge they made,
Proud of themselves, they said,
Were the Four Hundred.

—J. C. D. in *Life*.

Always the South Wind.—[illegible] keeper in the Scottish highlands a tourist asked: "Is this a good place, landlord, for a person afflicted with a weak chest?"

"Nane better, sir, nane better," was the encouraging reply.

"I have been recommended, you know, by the doctor to settle in a place where the south wind blows. Does it blow much here?"

"Toots, ay!" was the reply; "it's aye the south wind that blaws here."

"Then how does it happen that it is blowing from the north at the present time?" said the tourist.

"Oh, that's easily accounted for, sir," was the reply. "It's the south wind, a' the same, sir, jist on its road back again."—*Chicago Chronicle.*

The New Cellar Door.—In the slums of Manchester a rent collector had great difficulty in getting the rent from one Pat Maginnis. On being applied to for a couple of weeks' rent he said he would pay it if the landlord would put in a new cellar door. This was done, and the collector called for the money. Maginnis was out, but his eldest son paid the money that was due.

"Glad you have it ready for once," said the man.

"Yes, sir," the boy replied; "but it has been an awful trouble. We had to sell some of the furniture."

"Oh?" said he, pocketing the rent. "I didn't know you had any."

"Yes," continued the lad; "father sold the new cellar door to get it."—*Tit-Bits.*

"Prudential Promptness."

The Prudential Insurance Company of America has paid all the policies carried by that Company on the lives of those persons killed in the New Jersey Central Railroad disaster near Westfield on January 27th.

Of the twenty-four persons killed, six had policies in The Prudential, and that Company, immediately upon learning of the accident, notified its representatives located at Plainfield to hasten in every way possible the filing of proofs of death at the Home Office of the Company in Newark, in order to expedite the payment of the insurance money to the afflicted families.

The Locomotive Stops

every 125 miles for coal and every 90 miles for water, but the 20 horse-power

Winton Touring Car

travels 150 miles with one filling of gasoline and lubricating oil. With the improved cooling system the only loss of water is by natural evaporation, consequently one filling of the water tank will suffice for several days.

The Winton is a practical, symmetrical and handsomely appointed touring car, with greater enduring qualities than the railroad locomotive, greater than any other automobile manufactured or sold in America.

Every mile in a Winton is a mile of comfort. Body of carriage is suspended on long and elastic springs—there is a long wheel base—tires are large and resilient—upholstery of seats the most luxurious ever made part of automobile equipment—backs of seats are high—tonneau accommodates three persons comfortably—front seat is divided, giving a snug and secure position to the driver. These, and many other features which combine to insure the greatest possible degree of comfort in riding, make you think rough roads do not exist.

Lubrication is automatic; there being no oil cups or gauges to call the operator's attention from the road ahead. Transmission gears are secured within a dust-proof case and run in an oil bath. The motor, differential, water-pump, etc., are similarly encased and protected. Price of WINTON TOURING CAR, complete with two full brass side lamps, detachable tonneau, etc., $2,500.

Visit any of our branch or agency depots in two score leading cities, and the many features of Winton excellence will be fully demonstrated.

The Winton Motor Carriage Company, - Berea Road, Cleveland, U. S. A.

THE CITY OF NEW YORK,
DEPARTMENT OF TAXES AND ASSESSMENTS,
MAIN OFFICE, BOROUGH OF MANHATTAN,
NO. 280 BROADWAY, STEWART BUILDING.
January 12, 1903.

NOTICE IS HEREBY GIVEN, AS REQUIRED by the Greater New York Charter, that the books called "The Annual Record of the Assessed Valuation of Real and Personal Estate of the Boroughs of Manhattan, The Bronx, Brooklyn, Queens and Richmond, comprising The City of New York," will be open for examination and correction on the second Monday of January, and will remain open until the

1ST DAY OF APRIL, 1903.

During the time that the books are open to public inspection, application may be made by any person or corporation claiming to be aggrieved by the assessed valuation of real or personal estate to have the same corrected.

In the Borough of Manhattan, at the main office of the Department of Taxes and Assessments, No. 280 Broadway.

In the Borough of The Bronx, at the office of the Department, Municipal Building, One Hundred and Seventy-Seventh Street and Third Avenue.

In the Borough of Brooklyn, at the office of the Department, Municipal Building.

In the Borough of Queens, at the office of the Department, Hackett Building, Jackson Avenue and Fifth Street, Long Island City.

In the Borough of Richmond, at the office of the Department, Masonic Building, Stapleton.

Corporations in all the Boroughs must make applications only at the main office in the Borough of Manhattan.

Applications in relation to the assessed valuation of personal estate must be made by the person assessed at the office of the Department in the Borough where such person resides, and in the case of a non-resident carrying on business in The City of New York, at the office of the Department of the Borough where such place of business is located, between the hours of 10 A. M. and 2 P. M., except on Saturday when all applications must be made between 10 A. M. and 12 noon.

An Efficient Home Treatment

I Treat with Absolute Success Constipation Without the Use of Drugs, Medicines, Injections or Tiresome Exercises, and I have Successfully and Permanently Relieved the Worst Cases of Chronic Constipation.

Full Information Free to All Who Send Name and Address.

Constipation, that "King of all Diseases," can be cured. I have cured hundreds of the worst chronic cases after great specialists and all known drugs and other artificial means had failed. Improvement begins the first day. You can discard your pills, injections and other aids at once. My method is a secret the result of years of experiment and careful study—but I am glad to explain it fully to every sufferer, free. Write me to-day, and I will furnish absolute proof of some of the most remarkable cures of chronic cases that have been declared absolutely hopeless. I have prepared a handsomely illustrated book on the "Causes and Cure of Constipation and Appendicitis" which explains fully my method. It is free. You have only to read it and you will be convinced that at last the secret of a positive and lasting cure for constipation has been discovered. Write to-day, for no matter how many remedies have failed to cure you, I will cure you at once and cure you to stay cured. Prof. Stephen G. Burridge, 101 Monroe Bldg., Kalamazoo, Michigan.

Cod Liver Oil is a food

and the greatest care should be exercised in its selection.

Peter Moller's Cod Liver Oil

is the best oil that over fifty years of continued scientific research has produced. By the process employed the oil is kept free from contact with the atmosphere from the beginning of the process of manufacture until it is safely corked up in bottles, thus preventing contamination of any kind and excluding all impurities.

Ask for Peter Moller's Oil, and see that the bottle—a flat, oval one—bears our name as agents.

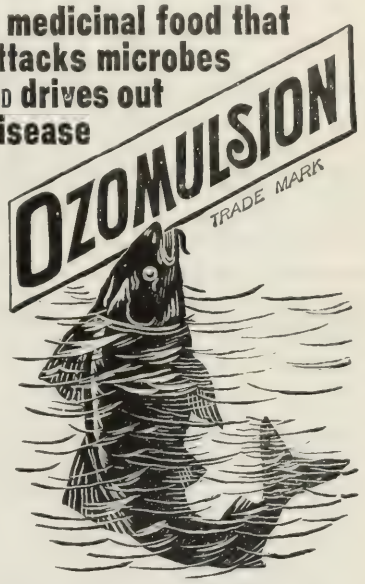
THE FOOD THAT DOES GOOD

A medicinal food that attacks microbes AND drives out disease



The only vitalized Emulsion of Cod Liver Oil with the hypophosphites of lime and soda and guaiacol.

For weak, thin, consumptive, pale-faced people, and for those who suffer from chronic skin disease and weakness of lungs, chest or throat.

Ozomulsion is a scientific food, prepared under aseptic conditions in a modern laboratory under supervision of skilled physicians.

To be had of all druggists.

A Large Sample Bottle Free

will be sent by us to any address on request, so that invalids in every walk of life can test it for themselves and see what Ozomulsion will do for them. Send us your name and complete address, mentioning this paper, and the large sample free bottle will at once be sent to you by mail, prepaid. Address

The Ozomulsion Co.
De Peyster Street, New York.

J. CAMBRIDGE WHARTON, M.D.
102 West 89th Street,
NEW YORK, February 3, 1903.

Ozomulsion Company, N. Y. City:

GENTLEMEN—I feel I must write you about the wonderful success I have had with your Ozomulsion.

Particularly in one case of incipient consumption. This patient came to my office in November, 1902. He was emaciated, had a constant cough, with night sweats, and all the symptoms of Phthisis Pulmonalis. A microscopical examination of the sputum showed the characteristic tubercle-bacilli.

I prescribed Ozomulsion, telling the patient when I did so, that I thought I could not help him any. Much to my surprise, the first bottle was of marked benefit to him. He has taken in all six bottles and has gained ten pounds. His cough is very slight and he feels so much better that he has gone back to his work as salesman.

I can endorse your Ozomulsion in every way. I have prescribed it in many cases of Bronchitis and in wasting diseases, where a real food was needed. One thing that impressed me was the fact that Ozomulsion did not interfere with digestion, as so many preparations of Cod Liver Oil do.

Yours truly,
J. CAMBRIDGE WHARTON, M.D.

Answers to Correspondents.

J. R. B. Ruy Lopez is pronounced Rū'i Lō'pes.

F. O. F.—(1) Whether or not there is a player living the equal of Paul Morphy, is an open question, concerning which there are diverse opinions. Morphy was the greatest of his time; Lasker and Pillsbury are the greatest now.

(2) Pillsbury and Lasker have never played a series of match games.

G. O. M.—The game beginning with Black's first move P—K 3 is called the "French Defense" because it was favored by Labourdonnais, the great French Master. Staunton never liked the "French," and called it a "King's Pawn one sneak." Lasker gives an analysis of it in his "Common Sense in Chess," and says: "This defense had for a long time the reputation of leading to a dull kind of game. In later years it has been found that it gives opportunities for a great many violent attacks of a character which it is difficult to obtain in any other opening."

W. R.—Your questions are answered, and other information given, in our little book "First Lessons in Chess."

NEW AMSTERDAM BOOK CO.

156 FIFTH AVENUE, NEW YORK

"Macey" SECTIONAL BOOKCASE Patented—Other Patents Pending

Is the ONLY bookcase having absolutely "Non-Binding, SELF-Disappearing" doors.

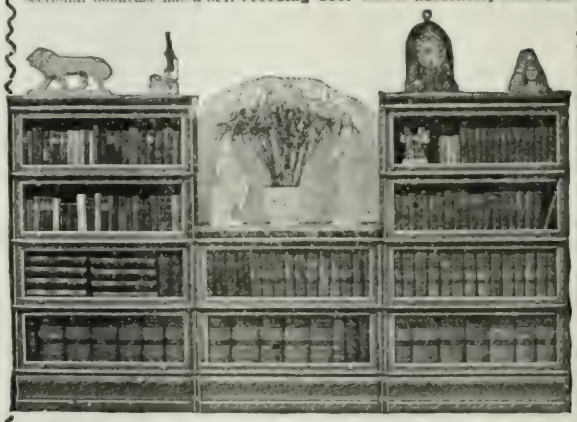
It combines in the highest degree convenience, imposing appearance, economy of space, protection to books, strength, simplicity, all at small expense.

ON APPROVAL. There is never any risk in buying genuine "Macey" goods. We ship every article "On Approval," subject to return at our expense if not found at our factory price 40 to 50 per cent. greater value than is obtainable anywhere at retail.

GOLD MEDALS HIGHEST AWARDS

For superiority of design, material, construction, workmanship, finish and perfect operation of "Non-binding, Self-receding doors," the "Macey" Sectional Bookcase received the Gold Medal—the highest award at both the Pan-American and Charleston Expositions.

CAUTION Do not be misled by the deceiving advertisements of imitators. No other sectional bookcase has a **self-receding door** that is **absolutely non-binding** and **automatic**—the basic patents completely covering these features are owned by this company exclusively, and no other bookcase can embrace the same valuable features. In the law suit concerning which a competitor has maliciously advertised "Warning to the Public" the United States Circuit Court rendered a **sweeping decision in our favor.**



Stack No. 106.—Genuine Mahogany, $56.50. Golden Quartered Oak, $42.00.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents. Foreign postage, $1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

HOLDING UP THE UNITED STATES SENATE.

SCENES enacted in the two houses of Congress during the closing weeks of the session have elicited from the American press many comments in disapproval of the methods of procedure in national legislation. The House of Representatives adopted rules that "sent the bills through the House as if they were greased," according to a Washington correspondent, and gave the minority about as much direct influence on legislation as if they had not been present. Only one roll-call was permitted on any measure received from the Senate, and motions for recess were given precedence over motions to adjourn. At the other end of the Capitol a situation in striking contrast existed. Two Senators, Mr. Quay, of Pennsylvania, and Mr. Morgan, of Alabama, practically monopolized the time for several weeks to such an extent that there was virtually no opportunity for discussing important bills, and hardly time for passing them. Senator Quay's purpose was to force the "omnibus" Statehood bill through the Senate by blockading all other legislation until that bill was passed. Senator Morgan's purpose was to "explain his objections" to the Panama Canal treaty. It has been freely charged, both in the press and on the floor of the Senate, that Senator Morgan, who is the chief advocate of the Nicaragua route, was trying to kill the Panama treaty; but as he has denied the charge with great vehemence and indignation, the only other explanation left is that his objections were so many and weighty that several weeks were necessary for their proper elucidation.

The newspapers have shown more patience with Senator Morgan than with Senator Quay. The Washington *Times* says, in a representative comment:

"This obstruction of legislation is the work of one man, Senator Quay. It is true that, on this occasion, Senator Morgan divided the responsibility with him. But Senator Morgan is a sincere opponent of the Panama canal. He had a clear right to make a final presentation of his arguments against that route and in favor of the Nicaragua project.

"No one wanted to abridge his right. He might be tedious, but he was sincere. The Senate was prepared to listen to him at whatever length he might find it convenient to speak, and then to proceed to a vote.

"But with Senator Quay the case was different. His is a rule-or-ruin policy. To promote projects of his own, and to force the Senate to vote on the omnibus bill, he has not hesitated to hold up all important legislation for weeks. He has loaded his bill on half a dozen appropriation bills, and is willing to cut off the supplies of the departments rather than lose his scheme."

Mr. Quay's tactics are "vicious," says the Baltimore *American;* and the Pittsburg *Gazette* calls them "odious" and "revolutionary." The Pittsburg *Dispatch* characterizes the situation as "amazing," and goes on to say:

"The Senate has lately more than ever been arrogating to itself a supremacy over the coordinate branches of the Government. Yet almost simultaneously with his pretension it exhibits a spectacle of utter futility due to its own faults. Its members have admitted that its acts are subject to the prohibition of selfish cliques, and it approaches the close of the season with a confessed inability to pass measure of which nine-tenths of its members approve. Could there be a more humiliating demonstration that the Senate needs to reform its procedure, as well as that the people should reform its membership?"

Many other papers are also urging a reform in the method of electing Senators. Says the Buffalo *News:*

"The truth is that the Senate has become the nearest approach to an illustration of what is meant by anarchy that this country affords. This is due to the doctrine of the courtesy of the Senate, now employed after the fashion of the highwayman whenever it suits any man of any school of politics to employ the deadly weapon on a helpless mass of victims. The cry is rising all over the land that the Senate must do business or suffer reform. The House does not stand on its dignity and rights with half enough insistence, and thus the Senate has a clear field to hold up everything in the way of legislation until it can fix things to suit the individuals who compose it. It is vain to blame Morgan or Quay or any other Senator for this state of things. It is the fault of the majority for clinging to rules that are obsolete, and for making specious answer to demands that issues be settled by vote before the country gets unsettled about the Senate itself."

The President tried to break this blockade, the Washington correspondents report, by warning the party leaders in the Senate that if the Panama canal and Cuban reciprocity treaties were not acted upon by March 4, he would call the Senate in extra session to act upon them, and on Monday last he issued the call. Some papers regard this interference as worse than the blockade. The Kansas City *Journal*, for instance, says:

"This is clearly an attempt to influence legislation by the executive department, and to that extent is a usurpation of the prerogatives of the law-making department. The President's duty to convene Congress in special session is limited to occasions when something arises during a recess of Congress that necessitates quicker action than could be had by waiting until the next regular session. The framers of the Government never contemplated that the Executive should say to a sitting Congress, 'Pass this measure, or I will straightway call another session.' It was never intended that the President should hold a special session as a club over the head of a regular session, to drive it to do his wishes.

"Probably no harm has ever come to the country from this practise; it has been used thus far only to promote needed legislation. But nevertheless it is a usurpation by one branch of the Government of the prerogatives of another branch, and it might easily be carried to harmful extremes or used for unwise purposes."

CARTOON GLIMPSES

GROWING POWER OF THE GOVERNMENT OVER COMMERCE.

A PROMINENT Democrat in Washington was quoted by the Washington correspondent of the New York *Herald* the other day as saying that the present Administration is being equipped with weapons against combined capital more keen and far-reaching than any with which the Democratic party, in its wildest days of radicalism, had ever dreamed of arming William J. Bryan. This declaration was prompted by the Supreme Court decision on Monday of last week that Congress can prohibit interstate commerce in lottery tickets. If Congress can stop interstate commerce in lottery tickets, most of our daily papers argue, it can stop interstate commerce in trust-made goods; in short, as the New York *Tribune* declares, the Supreme Court ruling "opens the door wide for the most drastic sort of anti-trust legislation which Attorney-General Knox and Mr. Littlefield have been denounced for proposing." A decision that is even suspected of opening a door to such interesting possibilities prompts one to turn to the New York *Sun*, to see how it takes such startling news. *The Sun* finds the case little short of alarming. It sees in the future the possibility of "a law prohibiting any person from crossing the line between one State and another," "a law closing to traffic every ferry line across the lower Hudson and across the Delaware at Philadelphia," or "a law prohibiting for supposed sanitary, moral, or sociological reasons all communication of any kind, whether by personal visit, messenger, letter, telegraphic despatch or telephone, between the citizens of one State and those of another; this under the plenary power of Congress over interstate commerce, which the majority opinion defines as embracing 'navigation, intercourse, communication, traffic, the transit of persons, and the transmission of messages by telegraph.'"

Any such startling possibilities, of course, are matters of inference. Mr. Justice Harlan, who read the majority opinion, concurred in by Justices Brown, White, McKenna, and Holmes, was careful to distinctly disavow any intention to rule on the power of Congress over other articles of commerce. He said:

"The whole subject is too important, and the questions suggested by its consideration are too difficult of solution to justify any attempt to lay down a rule for determining in advance the validity of every statute that may be enacted under the commerce clause. We decide nothing more in the present case than that lottery tickets are subjects of traffic among those who choose to sell or buy them; that the carriage of such tickets by independent carriers from one State to another is therefore interstate commerce; that under its power to regulate commerce among the several States Congress—subject to the limitations imposed by the Constitution upon the exercise of the powers granted—has plenary authority over such commerce, and may prohibit the carriage of such tickets from State to State: that legislation to that end and of that character is not inconsistent with any limitation or restriction imposed upon the exercise of the powers granted to Congress."

Chief Justice Fuller, who read the dissenting opinion (concurred in by Justices Brewer, Shiras, and Peckham), said, in part:

"Does the grant to Congress of the power to regulate interstate

SENATE: "I thought I heard some one calling."
The Cleveland Plain Dealer.

OF STATESMEN

commerce impart the absolute power to prohibit it? It was said in Gibbons vs. Ogden that the right of intercourse between State and State was derived from 'those laws whose authority is acknowledged by civilized man throughout the world,' but under the articles of confederation the States might have interdicted interstate trade, yet when they surrendered the power to deal with commerce as between themselves to the general Government it was undoubtedly in order to form a more perfect union by freeing such commerce from State discrimination and not to transfer the power of restriction.

"It will not do to say—a suggestion which has heretofore been made in this case—that State laws have been found to be ineffective for the suppression of lotteries, and therefore Congress should interfere. The scope of the commerce clause of the Constitution can not be enlarged because of present views of public interest. . . . . .

"The power to prohibit the transportation of diseased animals and infected goods over railroads or on steamboats is an entirely different thing, for they would be in themselves injurious to the transaction of interstate commerce, and, moreover, are essentially commercial in their nature. And the exclusion of diseased persons rests on different ground, for nobody would pretend that persons could be kept off the trains because they were going from one State to another to engage in the lottery business. However enticing that business may be, we do not understand these pieces of paper themselves can communicate bad principles by contact.

"I regard this decision as inconsistent with the views of the framers of the Constitution and of Marshall, its great expounder. Our form of government may remain notwithstanding legislation

or decision, but, as long observed, it is with Government as with religion, the form may survive the substance of the faith."

The Baltimore *News* believes that the court has made a mistake. It says:

"Congress clearly has power to regulate commerce, but regulate does not mean prohibit, and not even a ruling of the Supreme Court of the United States can make it mean prohibit. The trouble with decisions of this sort, which do violence to language and common sense in interpreting words which are well understood, is that they make precedents which return to plague us and are sooner or later twisted to our harm. Everybody is glad to see the lottery get its *coup de grace*, but it would have been infinitely better if it could have been done without subterfuge and the putting of such a grotesque twist on the seemingly plain phrase 'to regulate commerce among the several States.'"

Most of the press, however, will not be sorry if it proves true that Congress can lay a restraining hand on the operations of the trusts. To assume that Congress "will ever do more than exercise wisely and well the prohibitory functions vested in it," says the Brooklyn *Eagle*, "is to assume that Congress will abuse its privileges to an extent that would make the Union a farce and reduce the separate commonwealths to a condition of absolute dependence upon the whims and wishes of the federal legislature." And the New York *Mail and Express* says, with equal approval:

"Unless it is wrong for the nation to move forward on the path of progress and destiny, this decision is right. Unless it is wrong for a Government to be competent to do the things necessary for the peace, the safety, the prosperity of its citizens, this judgment is right. Its wisdom is not qualified nor its rectitude impeached by the fact that it is a close decision—that four of the ablest men on the Supreme bench dissent from a judgment pronounced by five. It is no new thing for the most vital questions to be decided in this great tribunal by a narrow margin.

"What of the effect of the decision on the business of the great combinations engaged in interstate commerce? That is a question which the future must fully answer. Whether for good or for ill, so far as enterprises of the utmost public usefulness and industrial value are concerned, these great interests must make up their minds to bow to the inevitable. The time is past for insincere experiments, for readjustments which are intended to meet public and legal obstructions in a new way and to surmount them, always striving to accomplish the same thing. The tendency must be recognized and met fairly. Regulation comes nearer and nearer to being prohibition. All this may be bad for some kinds of business, but is it not clear that the people will have it that way, and that the courts will sustain them?"

COASTING ON CAPITOL HILL.

IN THEIR HOUR

UNITED STATES NAVAL STATIONS IN CUBA.

THE coaling and naval stations secured by the United States in Cuba, as stipulated in the Platt amendment of the Cuban Constitution, are, in the opinion of the press, well selected and admirably located. Two naval bases were chosen, instead of four as originally planned, one at Bahia Honda and the other at Guantanamo. It was the first intention to locate one of the stations at Havana, but the Cubans objected to the presence of a United States naval station at their capital city, so Bahia Honda was selected instead. The stations were ceded to enable the United States, according to the Platt amendment, to maintain the independence of Cuba and to protect the people thereof, "as well as for its [the United States'] own defense." "The concession of the naval stations is a reasonable return for the sacrifice of life and treasure made for Cuban independence by the people of the United States," says the Philadelphia *Ledger*. As for the location and the possible usefulness of these two stations, the Baltimore *American* says:

"The two sites selected for naval-stations are most admirably located. Bahia Honda is located on the northern coast of the island, but a short distance west of Havana. From it we can command the Florida Straits at the same time that we protect the city of Havana and the approaches to our Southern coast. With a station at this point and another at the Dry Tortugas, it will be impossible for an enemy to enter the Gulf of Mexico bent on ravaging our coast or in the hope of reaching the Caribbean Sea to strike at the transisthmian canal, without encountering an American force advantageously placed.

"The base at Guantanamo possesses equal strategic value and importance. It will be located on Guantanamo Bay, forty miles east of the entrance to the harbor of Santiago and only about 100 miles west of the eastern end of the island. The harbor is excellent, being, like nearly all those on the Cuban coast, securely landlocked, the entrance being through a narrow defile between the hills. This was the rendezvous of the naval force on the North Atlantic station during and after the blockade of Santiago, in the Spanish-American war, and it is familiar to a great number of our naval officers. From this point it will be possible for an American naval force to effectually prevent any

WRECKED AGAIN.

OF TRIAL.

approach to the Caribbean Sea through the Windward Passage, while at the same time the south coast of Cuba and the American possessions in Porto Rico can be looked after.

"These two stations afford us, therefore, great additional range for our naval establishment, and their importance from the viewpoint of our national defense will be demonstrated when first we are called upon to fight a foreign foe boasting rank as a naval power."

CHILD LABOR LEGISLATION IN FIVE STATES.

THE legislatures of South Carolina, Oregon, Pennsylvania, New York, and Alabama have been busy this winter with laws for protecting the little children from the manufacturers and parents who would put them into the mills and mines at too tender an age. In South Carolina a law has been put on the statute books placing the age limit for child workers in factories and mines at ten this year, eleven next year, and twelve in 1905 and thereafter, and prohibiting night work for children under twelve; but allowing orphans and the children of widows or disabled fathers to work in the textile-mills, and allowing children who have been in school four months during the current school year to work in the textile-mills during June, July, and August. In Oregon the legislature has provided that children under fourteen shall not be employed in stores, mills, or mines, and that children under sixteen shall not be so employed unless they can read and write. In regard to the situation in Alabama the Philadelphia *Record* says:

"In Alabama an agreement was reached early in the session by representatives of the mill operatives, the child labor committee in the legislature, and the Federation of Women's clubs on a bill providing that no child under ten should be employed in any manufacturing establishment; and no child under twelve should be employed unless a widowed mother or an aged or disabled father were dependent upon such child for support; that no child under thirteen should be employed in a factory at night; that no child under sixteen should be employed at night more than forty-eight hours in a week, and that no child under twelve should be employed more than sixty-six hours a week, which is much longer than adults work in most Northern States."

In New York and Pennsylvania similar measures are on their way through the legislatures. *The Record* goes on to say:

"In New York four bills are being pressed. One requires parents to file with the board of health absolutely unquestioned evidence that the child is fourteen years old before they can secure a certificate allowing the child to be employed in a factory or store. The only thing now required is the affidavit of the parent, and it is found that many parents will commit perjury without hesitation. The pending bill would require the birth certificate and the school record. Another bill would prohibit the employment of children under fourteen as messenger-boys, telegraph or delivery boys, or office boys. More than a thousand boys under that age are now employed in New York city. A third bill prohibits vacation work in factories or stores by children who have not had advantage of the full school term. A fourth bill fixes a nine-hour limit for children between fourteen and sixteen, instead of the ten-hour limit, and forbids the employment of any child under twelve as a newsboy, bootblack, or street pedler, or the employment of any children under fourteen after 9 P.M."

The Philadelphia *Ledger* recommends to the Pennsylvania legislature a bill introduced last week by Senator Sproul. The main features of the bill it recounts and comments upon as follows:

"The Sproul bill provides that it shall be unlawful to employ any child under fourteen at any labor during the hours when the public schools are in session, or more than ten hours in any one day, or more than fifty-five hours in any one week. In addition, no child between the ages of fourteen and sixteen shall be employed between nine in the evening and six in the morning, nor shall any child from fourteen to sixteen years old be employed at all who shall not be able to read and write, or who has not complied with the education laws of the State. This requirement may be called a supplement to the compulsory school law of the commonwealth.

"One of the most important sections, if not the crucial one of the bill, is the requirement that parents and guardians shall file with the employer affidavits certifying to the age, and that these affidavits shall be open for inspection at all

CARTOON RAPS AT MR. BRYAN.

times to any one connected with the school system, the juvenile court, or the factory inspector's department.

"It has been difficult to have a satisfactory child-labor law enacted, but the chief difficulty is to enforce the law when passed, either because the parents or the children, or both children and parents, wish to practise deceit, or because the employers are indifferent.

"If the affidavits are readily accessible, as, for instance, under the Sproul law, a few prosecutions for perjury would have a most salutary effect."

NEGRO VIEWS OF THE EX-SLAVE PENSION BILL.

"MAY the Lord bless his efforts!" exclaims the Augusta (Ga.) *Baptist* (Afro-American), in comment upon the bill to pension ex-slaves, which Senator Hanna introduced into Congress "by request" a few weeks ago; and it assures the Senator that he will occupy a "warm place in the heart of every intelligent colored man and woman in the country" if he succeeds in getting the measure enacted. The Littleton (N. C.) *True Reformer* (Afro-Am.) expresses similar gratitude to Mr. Hanna, but believes that the bill will not get through Congress unless it is "prayed through." "This is a blessing worth praying for," the editor assures his readers, "and all who would like to enjoy it are at liberty to go at it." Senator Hanna is "the idol of the masses," declares the Washington *Bee* (Afro-Am.), and he will win the Presidential nomination and election next year in a walk. And the Columbus *Standard* (Afro-Am.) adds:

"The bill introduced by Senator Hanna, allowing pensions to ex-slaves, is an exemplification of his humanitarian spirit. Think of it, four millions of people of one race, after over two hundred years of bondage, turned loose upon the world uneducated and without a dollar. The Government should have protected them and by all means should have given them some aid. Should the bill never become law, the spirit in which Senator Hanna introduced it will be appreciated by the ex-slaves and his name forever honored."

It must be said, however, that the Afro-American papers quoted above represent a very small section of the negro press in their attitude toward this measure. "The bill is a humbug from start to finish," declares the Charlotte (N. C.) *Star of Zion* (Afro-Am.), and it is urging its readers to inform the illiterate negroes of the fact. "Senator Hanna can do but one thing to set himself right," says the Philadelphia *Odd Fellows' Journal* (Afro-Am.), "and that is, go before the committee on pensions and have the bill reported adversely at once. It is a serious matter when a United States Senator lends his name to a national fraud, no matter how unwillingly it may be done." "Mr. Hanna is playing to the gallery, and in doing so he has opened the door for sharks to rob the poor old colored people," thinks the Huntsville (Ala.) *Journal* (Afro-Am.); and the Little Rock *Citizen* (Afro-Am.) says: "The whole scheme is but an attempt at this juncture on the part of Hanna to fool the prospective colored delegate, and any sensible colored man who goes off after Hanna in our estimation is either a fool or a knave, and possibly both." Many other negro papers, such as the Cincinnati *Enterprise*, the Chicago *Conservator*, the Pensacola (Fla.) *Sentinel*, the Columbia (S. C.) *Recorder*, the Houston *Freeman*, and the New York *Age* also regret that the bill was introduced. The suspicion expressed by many of our daily papers that Mr. Hanna had the Southern delegates to the Republican national convention in mind is handled by the Salt Lake City *Oracle* (Afro-Am.) as follows:

"Senator Hanna's bill to pension ex-slaves has aroused much discussion as to his motives in introducing it. There seems to be a well-defined idea that he is making a strong bid for the colored vote at the next Presidential election, provided he secures the nomination. Be that as it may, the introduction of a bill, which stands but a poor chance of passing, would have but little weight, when compared with Roosevelt's proven friendliness to the race."

And the Cleveland *Gazette* (Afro-Am.) says similarly:

"Senator Hanna's introduction of a bill granting pensions and bounty to all ex-slaves who were freed by Lincoln's proclamation is a piece of buncombe we did not think that even he would stoop to. Hanna knows there is no more chance of the passage by Congress of such a bill than there is of his going to heaven as he is, should he die. The introduction of that bill but helps scamps and scalawags, white and black, in the South to fleece thousands upon thousands of poor ignorant souls who do not know that there is absolutely no possibility of the passage of such a bill. This cheap attempt of Ohio's 'lilywhite' Republican sympathizer to gain favor with Ohio Afro-Americans is so ridiculous as to be disgusting, and will fall as flat to the ground as it should."

THE TYPHOID EPIDEMIC AT ITHACA.

"WE have been careless and thoughtless, and we are paying the price," is the way the Ithaca *Journal* sums up the matter in relation to the typhoid epidemic there, which has stricken many of the inhabitants of the town and many of the students attending Cornell University. *The Journal* holds everybody responsible—the Ithaca Water Company, the Ithaca board of health, the university, and the private citizen. Many of the other papers agree with *The Journal* in holding the authorities responsible, but they omit the public. At this writing about 450 cases of typhoid have been reported in Ithaca. Eighty of these are student cases at the university, of which nearly 20 have proved fatal. It has been alleged that the university has shown culpable carelessness in relation to the water-supply in the college buildings, but President Schurman, in a recent interview defending the college authorities, declared that "every building on the university property is now supplied with tanks of artesian well-water, from which the students may draw freely," and the faculty proposes to spend $150,000 to assist the village in establishing a filtration-plant. He said further:

"It is not true that there is any reason to suspect the purity of the university's own supply of water. Not a single case of typhoid fever has occurred among those who have used that water alone. It does not seem to be generally known that there are no dormitories for men students at Cornell, and that they all live in private houses outside of the university property, and scattered over miles of the city's territory. These houses all get their water from the city water company's supply. The university has no control over them or over the water they use. . . . While the university has no legal right to control the action of the proprietors of the boarding-houses in which the students live, it has been doing all that was possible to insure proper precautions by those proprietors. It has secured written pledges from more than two hundred of such proprietors that no water will be used in these houses unless it is first thoroughly boiled, so as to remove all possibility of danger from it, and it is taking pains to secure the fulfilment of these pledges."

The following paragraph taken from the New York *Tribune* gives a description of the condition that exists in the neighborhood of Lake Cayuga, which probably led to the epidemic:

"Investigation has revealed a condition of affairs in the water-supply which is simply hideous. Mention was made the other day of a dead horse on the bank of a stream from which water is taken. That was a mere trifle. Drainage and sewage from barnyards, pigpens, outhouses, and what not are all poured indiscriminately into the hell-broth which is distributed for drinking-water to the city and university, and which carries disease and death with it wherever the poison-laden stream flows. The moral responsibility which rests upon the company owning and operating the water-works is not light, nor is that which falls upon the health board of the city. Had either of those bodies done its duty this monstrous epidemic could never have occurred."

It is "very difficult to realize that some one is not gravely

derelict in duty in not having the company which has supplied water unfit for use indicted for maintaining a public nuisance," remarks the New York *Times*. "Men who do not know pure water from that which is polluted," it adds, "and can not appreciate the difference between them as affecting the public health, are not to be trusted to manage public utilities of this character." The Philadelphia *Press* comments:

"It was common talk in that city five years ago that the sewage was emptied into Lake Cayuga and that the ice supply was cut from the same lake only a few feet away from the outlet of a sewer. Whether the statement was true or not, its utterance is proof of a general belief that adequate care was not being exercised. And as to the water-supply, the recent discoveries need no additional testimony to prove that almost criminal negligence was shown in providing the city with this necessary of life.

"In saying this there is no purpose to add to the embarrassments of the authorities of Ithaca or to discredit Cornell University. They have been no more negligent than many other cities. But the result of this negligence at Ithaca affords such an object-lesson that it ought to be impressed as vividly as possible on the public mind. There are scores of cities, old and new, that have been violating all the laws of health for years, and the accumulated penalty must be paid in time."

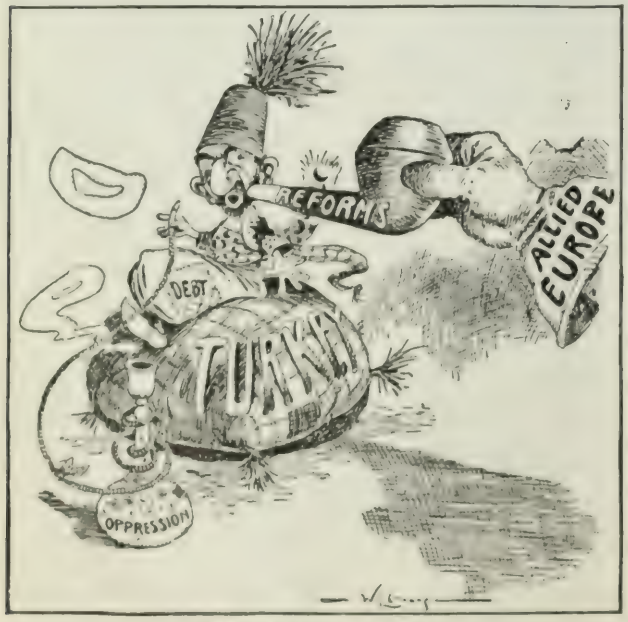
MR. DARROW ON PUNISHMENT FOR CRIME.

IT is rather interesting to know that Clarence S. Darrow, counsel for the coal-miners' union, is not in favor of the execution or imprisonment of criminals. His views on this subject are set forth in a new book entitled "Resist Not Evil," in which he advocates the Tolstoy and Crosby doctrine of non-resistance. Our present method of dealing with crime, he declares, is a failure; and as he had been a lawyer nearly thirty years, he should speak with some knowledge on the point. Punishment, he argues, does not make good the damage done by the criminal, does not make the criminal good, and and does not deter others from crime. "By no method of reasoning," says Mr. Darrow, "can it be shown that the injustice of killing one man is retrieved by the execution of another, or that the forcible taking of property is made right by confining some human being in a pen." Instead of reforming the criminal, it has often been demonstrated that our prisons harden him and school him in crime; and the fact that "prisons grow and increase in the same proportion as other institutions grow" shows that the punishment does not deter others from wrong-doing. "Whether brotherhood, love, and non-resistance would lessen crime may be a matter of debate," remarks Mr. Darrow, "but that punishment does not lessen it seems to be as well established as any fact that can not be absolutely proved."

"Nearly every crime could be wiped away in one generation by giving the criminal a chance," is Mr. Darrow's belief. He finds by an examination of statistics that there is more crime in winter than in summer, and more crime in hard times than in good times. The improvement of the material conditions of the poor, therefore, would reduce crime. The number of crimes rises and falls with the price of food. "England made Australia its dumping-ground for criminals for years, but these same criminals, when turned upon the wide plains, with a chance to get their living from the soil, became peaceable, orderly citizens, fully respecting one another's rights."

Mr. Darrow's program, then, is to provide a more equitable distribution of wealth, pull down the jails, and dismiss the officers of justice. "To use violence and force upon the vicious and the weak," he reasons, "must produce the evil that it gives. Like produces like. Clubs, jails, harsh language, brutal force inevitably tend to reproduce the same state of mind in the victim of the assault." The world would not become an Eden in a week, Mr. Darrow admits, but the mob law that might be necessary would, in his opinion, be better than the present system. He says:

"With our long heredity and our imperfect environment, even if the organized force of the state should disappear, even if the jails and penitentiaries should close their doors, force would only completely die in course of time. Evil environment and heredity may have so marked and scarred some men that kindness and love could never reach their souls. It might take generations to stamp out hatred or destroy the ill effects of life; but order and kindness most surely would result, because nature demands order and tolerance and without it man must die. No doubt, here and there these so-called evil ones would arouse evil and hatred in return, and some sudden act of violence would for a time occasionally be met with violence through mob law in return. But uncertain and reprehensible as mob law has ever been, it is still much more excusable and more certain than the organized force of society operating through the criminal courts. Mob law has the excuse of passion, of provocation, not the crimi-



"HERE, SMOKE UP!"
The Cleveland Leader.

THE EUROPEAN CONCERT RESUMES OPERATIONS.
—The Detroit News-Tribune.

WOES OF THE TURK IN CARICATURE.

nal nature of deliberation, coldness, and settled hate. Mob law, too, generally reaches the object of its wrath, while evidence is fresh and facts are easily understood and unhampered by those rules and technical forms which ensnare the weak and protect the strong. And unjust and unwise as the verdicts of mob law often are, they are still more excusable, quicker, more certain and less erring than the judgments of the criminal courts."

And as men came to understand the new order of things, crime would disappear:

"When society is taught the truth that it is wrong to punish, to use force, to pass judgment on man, it will have no need for jails. The man who really knows and understands this truth can have no malice in his heart, can use no force and violence against his fellow, but will reach him with love and pity. The man or society that understands this truth will know that so-called crime is only so-called crime; that human conduct is what the necessities of life make of the individual soul. Then in reality, as now only partially, men will turn their attention to the causes that make crime. Then will they seek to prevent and cure, not to punish and destroy. Then man will learn to know that the cause of crime is the unjust condition of human life; that penal laws are made to protect earth's possessions in the hands of the vicious and the strong. Man will learn that poverty and want are due to the false conditions, the injustice which looks to human law and violence and force for its safeguard and protection. Man will learn that crime is but the hard profession that is left open to a large class of men by their avaricious fellows. When new opportunities for life are given, a fairer condition of existence will gradually be opened up, and the need for violence and the cause of violence will disappear."

FUTURE OF THE SOCIALIST PARTY.

THE great increase in the Socialist vote last November led many to predict that in the near future we shall have a Socialist President at Washington; but Henry W. Wilbur, connected with the Prohibition party of New York, declares that the Socialist party will never elect a President, because, like other "symptomatic parties," it voices "the dissatisfaction of a class." Hence the influence it exerts and the following it secures show "the local and not the general character of the issue." To prove this, Mr. Wilbur, in *Gunton's Magazine*, gives the votes of three former "symptomatic parties," the Greenback party of the seventies, the Union Labor party of 1888, and the Populist party of the nineties, to show that their issues were of a local and not of a general character. An analysis of the vote of these three parties shows that the rural vote predominated; that in one instance ten States gave no vote at all; while in another, the Populist vote of 1892, New York, Pennsylvania, New Jersey, Massachusetts, New Hampshire, and Connecticut gave, in all, 30,400 out of the 1,040,000 votes polled.

The Socialist vote demonstrates, according to Mr. Wilbur, that "the Socialist movement has its strength almost entirely in cities"—a condition just the reverse of that of the other three "symptomatic parties." Take, for instance, the Socialist vote of New York State last November. The Socialists polled in all about 39,000 votes, of which seven counties containing large cities cast nearly 32,000, while the remaining fifty-four counties cast about 7,000. Mr. Wilbur continues:

"It will thus be seen that while Populism and Greenbackism were symptoms of the adversity which at particular periods affect the tillers of the soil, Socialism is a symptom of prosperity not satisfactorily diffused. All three parties, however, have furnished the avenues through which the voice of dissatisfaction and discontent is poured into the ears of the Government by way of the ballot-box. In cities the dividing-line between wealth and poverty, prosperity and penury, is more sharply drawn than in the rural districts. In the city the range of wants is wider, and ungratified legitimate desire more impressively annoying than in the country. It is therefore perfectly natural that political parties which are symptoms of existing social envy, or the unrest which is characteristic of men possessing a desire for a higher standard of living, and who see no plain way of immediate satisfaction, should receive support almost entirely in cities. It is easy to recognize the symptom and sympathize with the discontent, without seeing a remedy where there is none.

"The increased Socialist vote is simply symptomatic of condition, and from it those who have the power of apprehension and comprehension may learn a lesson. We have a large and growing class in this country, constantly being recruited by importations from over the sea, that will always take the shortest cut to an expression of dissatisfaction with bad or misunderstood conditions, and vindictiveness toward those who it is justly or unjustly supposed are responsible for them. The exigencies of the coal strike, and certain matters connected therewith, have wonderfully tho differently impressed all classes of society, and have intensified the prejudices of the superficial and the poorly informed to a marked degree. Baer's doctrine of the divine right of the holders of capital to possess the earth, without a doubt helped to increase the followers of the symptomatic party of 1902. The lesson which the believers in the evolution of society rather than its revolution must learn is plain. It is the lesson of justice and enlarged opportunity for the masses of men, no matter what may be their part in the world's work."

HENRY W. WILBUR,

Who gives reasons for thinking that the Socialist party in this country will never elect a President.

The Greenback, the Union Labor, and the Populist parties have ceased to be. The last named, in spite of "promises of permanency and prophecies of success contained in the Populist platform," was "disrupted" and "swallowed up, not in victory, but in the capacious maw of a Bryanized Democracy." "Thus did the party which claimed to have a remedy for commercial disaster cease to do business even as a symptom." As for the Socialist party:

"History may be expected to repeat itself. Whenever the symptomatic party of 1902 assumes dangerous proportions, and the number of its discontented followers may be necessary to the victory of some larger party, another act of political absorption may take place. The Socialist coal plank in the New York State Democratic platform is only a hint of the bidding which may be indulged in when the symptom of Socialism becomes sufficiently formidable.

"No party which appeals in the main to a class, which gets its support from localities and not from the country at large, can be depended upon to either discover or apply real remedies for economic disorders. It may be that a revolt against despotic capital and tyrannical capitalists will result in localized and temporary resort to some form of Socialism, but the common sense of America is not likely to supplant that intelligent competition and persistent struggle by which the race has secured its social and economic development, in order to try a revolutionary experiment."

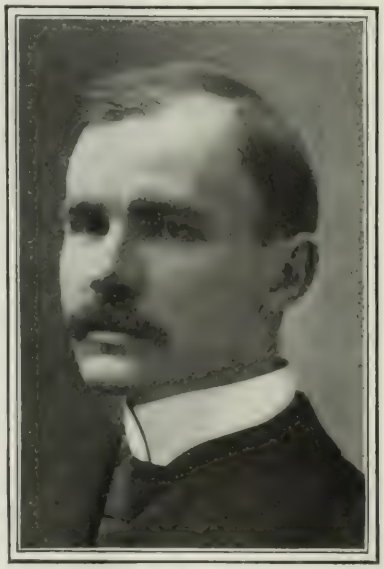
LETTERS AND ART.

PRESENT TENDENCIES IN AMERICAN FICTION.

AN interesting chapter in Mr. Bliss Perry's new "Study of Prose Fiction" is devoted to the present tendencies of American fiction. In estimating these tendencies, we are too apt, as Mr. Perry points out, to assume a "contemporaneous point of view." The literary student, he thinks, needs to get a sense of historical perspective, and to become acquainted with American literary achievement. "It is still possible," he observes, "to select twenty or twenty-five American story-writers of the past forty years who have published enough good books to place American fiction well alongside of American poetry, and certainly far in advance of American music, painting, sculpture, or architecture." This great body of works suggests to Mr. Perry three main tendencies in American fiction. The first is "the production of novels of the soil," that is to say, the presentation of American types and scenes. Here we quote:



BLISS PERRY,
Editor of *The Atlantic Monthly*.

"The service of Fenimore Cooper in this direction was a most important one. Before his time, Brockden Brown, for instance, had treated American themes, yet in so romantic a fashion as to disguise the reality. But Fenimore Cooper's backwoodsmen and sailors and frontier landscapes have the verity of nature herself. Hawthorne, too, did for New England, by very different methods, but with an equal honesty of rendering, what Cooper did for northern New York. Before the war, notes Professor Richardson [in 'American Literature'], there were few attempts to delineate American home life in the various sections of the country; but the improvement in American minor fiction since 1861 is largely owing to the attempt to describe American life as it is. This tendency is growing more and more marked with every year; it is very little, if at all, affected by the present revival of romanticism; it has been helped, rather than hindered, by the sudden crop of historical novels. If every American county has not its novelist, its painter of manners—as Scotland is said to have had—at least every State can show fiction-writers who aim to delineate local conditions as faithfully as they may, and there is every reason for thinking that this movement will be permanent."

A second characteristic of American fiction, and one that follows closely upon the first, is "its excellence in a limited field, rather than any largeness of creative activity." Mr. Perry writes on this point:

"The qualities which a foreign critic would be inclined to postulate theoretically about our fiction, reasoning from our immense territory, our still youthful zest, our boundless faith in ourselves, our resources—in short, the general 'bigness' of things American—are precisely the qualities which our fiction has hitherto lacked. Instead of fertility of resource, consciousness of power, great canvases, broad strokes, brilliant coloring, we find a predominance of small canvases, minute tho admirable detail, neutral tints, an almost academic restraint, a consciousness of painting under the critic's eye. American fiction lacks breadth and power. What Walt Whitman tried, with very imperfect success one must admit, to do in the field of 'All-American' poetry, if I may use the phrase, no one has even attempted to do in fiction. Some magazine critics have expressed the opinion that the cause of this is to be found in the fact that the conventional standards, the critical atmosphere, of the effete Atlantic seaboard have hitherto been dominant in our literature. They profess to believe that when the 'literary center' of the country is established at Chicago, or Indianapolis, or thereabouts, our fiction will assume a scale proportionate to the bigness of our continent. But this matter is not so simple as it looks, and the question whether excellence in a small way rather than largeness of creative activity will continue to characterize American fiction is still to be solved."

The third fact by which Mr. Perry is impressed is the "fundamental morality" of the American novel.

"It is optimistic. Its outlook upon life is wholesome. The stain of doubtful morality or flaring immorality which has often tinged English and continental fiction, and made both the English and the American stage at times unspeakably foul, has left scarcely any imprint as yet upon the better-known American story-writers. Our greater magazines have remained for the most part unsoiled. Bad as our 'yellow' newspapers are, brazen as our stage often is, people who want the sex-novel, and want it prepared with any literary skill, have to import it from across the water. The outlook for the morality of the distinctively American novel seems assured. If our professional novelists have, in the last five years, withstood the temptation to win notoriety and money by *risqué* books, we can confidently say of the American fiction of the future that while it may not be national, and may not be great, it will have at least the negative virtue of being clean."

In concluding, Mr. Perry ventures the following forecast of "the kind of subjects with which American novelists of the immediate future seem likely to occupy themselves":

"That there will be very shortly—if indeed there is not already—a reaction against over-production of Colonial, Revolutionary, and other types of American historical fiction, can not be doubted. But this is chiefly because the supply has temporarily outrun the demand. The story of our own ancestors and their struggles upon American soil will never lose its essential fascination when depicted, not by a horde of imitative weaklings, but by masters of the fictive art. The marvelous epic of the settlement of the Western half of the continent still waits an adequate reciter. We have had already a legion of Civil-War stories, and yet we have not begun to see the wealth of material which that epoch holds for the true imaginative artist. The romance of labor, of traffic, of politics, in our strangely composite civilization, has been perceived by a few writers; but how much is still to be told!"

SIR HENRY IRVING AS DANTE.

"DANTE" is the title of a new drama in four acts written by MM. Victorien Sardou and Emile Moreau for Sir Henry Irving. The play is to be produced in the near future in London, and has been translated from the French by Mr. Lawrence Irving, a son of the actor. In an interview with a representative of the *Journal* (Paris), the translator furnishes some interesting particulars in regard to the drama. We summarize as follows:

The prolog takes place in 1303 in Pisa, near the "Tower of the Seven Sorrows." Dante is seen accompanied by his mistress, Pia de Tolomei. They are looking for a lost daughter, Gemma. The search for Gemma provides the central motive of the play, and Dante, during the course of his quest, resorts to subterfuge and assumes various disguises. In one act he appears as a monk, in another as a physician. A very dramatic scene occurs in the prolog, when Dante comes into violent conflict with Archbishop Ruggieri, on account of the latter's brutal treatment of the imprisoned Ugolino. Francesca da Rimini, her brother Bernardino da Polenta, Giovanni and Paolo are all introduced, and Paolo and Francesca are slain by the jealous husband early in the play. In the third act Dante meets the spirit of Beatrice and asks her what has become of Gemma. He follows her to the

PORTRAITS OF FAMOUS AMERICAN COMPOSERS.

under-world, and sees the spirits of Vergil, Pope Nicholas III., Francesca, and others. In Purgatory he meets the spirit of his former mistress, Pia de Tolomei, who tells him that their daughter is a prisoner of Pope Clement V. at Avignon, and that with her is Bernardino. Dante returns to earth in time to intercede for the life of the couple, and to witness the sudden death of the Pope.

The Paris critics detect a number of historical inaccuracies in the play, and take the view that the character of Dante has been "made over" and adapted to the peculiar characteristics of Sir Henry Irving. The Italian critics are even more severe in their comment. *La Fanfulla* (Turin) terms the play "an incredible mixture," and says further: "Sardou betrays historical truth with the same insolence with which he betrays human truth. . . . His 'Dante' is repugnant to every feeling and principle of reasonableness and fitness; one would rather think it a great joke than a serious attempt."—*Translation made for* THE LITERARY DIGEST.

SOME VITAL FIGURES IN AMERICAN MUSIC

THE American composer is gradually coming into his own. A generation ago he had but little honor even in his own country. To-day, his works are performed in London, Berlin, and St. Petersburg. In short, he has become an authentic power in contemporary music. Mr. Lawrence Gilman calls attention to these facts in an article in *The Theatre* (New York). He goes on to say:

"We have, I think, adopted a somewhat uncritical attitude toward the American composer: we are inclined to accept him *en bloc*, as if the mere fact of his Americanism endowed his work with a superior and magical virtue—inclined, in the phrase of Philip Hale, 'to cover mediocrity with a cloak of patriotism.' One lacks somewhat of discrimination, surely, in according the same measure of approbation to Mr. Paine and Mr. Buck, Mr. Foote and Mr. Chadwick, for example, that one accords to Mr. MacDowell, Mr. Parker and Mr. Huss. Not to perceive the fundamental and incalculable difference between work that is merely unexceptionable and derivative and work that is self-sprung and vital is to exhibit an unenviable want of critical sensibility. Between the accomplished, conscientious, and generally ineffectual work of the academics and the amiable trifling of certain of the younger men, there is little to choose; but both are equally negligible in comparison with the achievements of such composers as Mr. MacDowell, Mr. Huss, Mr. Parker, and Mr. Van der Stucken—musicians of conspicuous individuality and force, who are engrossed in the task of realizing musically, with all possible poignancy and truth, some personal and valid experience of human life—and not, let it be noted, through the imagined efficacy of an adventitious nationalism; for they have realized that a national note will not suffice—that every race passes, and that provinciality in art, even when it is called patriotism, is fatal."

Edward MacDowell is given the place of distinct primacy among American composers. "Of Mr. MacDowell only," we are told, "is it possible to speak soberly in comparison with such foreigners as Richard Strauss, Goldmark, Debussy, Rimsky-Korsakoff, and Elgar." Mr. Gilman says further:

"It has been remarked before that Mr. MacDowell is essentially a poet—a poet profoundly enthralled of 'the mystery and the majesty of earth,' and intent upon vivifying, through the medium of tones rather than of words, a deep and intimate vision of the natural world. One feels that here, actually, is 'music . . . woven of streams and breezes'; and he is a native to a remote, enchanted, spellbound region of fairy waters and magical, haunted woods—an aerial, Shelley-like world of dream and fantasy, where, as in his 'Nautilus,'

> . . . . a silver vision floats
> Obedient to the sweep of odorous winds,
> Upon resplendent clouds—

music in which the mood is so tenuous, the emotion so incalculable and evanescent, that it seems scarcely to have a credible existence as material fact. . . . . .

"I do not know if a remoter verdict will award Mr. MacDowell greater honor as a writer for the voice or for instruments—certainly it is rash to be over-positive in decision upon the relative value of such work as, on the one hand, the 'Four Songs,' and, on the other, the 'Keltic' Sonata; but, for my own part, I must believe that, admirably affecting song-writer as he is, Mr. MacDowell has never equaled, certainly never surpassed, that work of his which I have already named: the 'Keltic' Sonata, his Fourth in E minor (op. 59); as I must believe also that no finer, no more eloquent and noble music has been written by an American."

Like Mr. MacDowell, Henry Holden Huss, of New York, is a composer with impressionist and romantic feeling. He "holds for himself an ideal whose beauty and nobility he has realized with memorable completeness in such achievements as his fine scene for soprano and orchestra, 'Cleopatra's Death'—in which he has interpreted Shakespeare's text with impassioned eloquence and effect—and his 'Home They Brought Her Warrior Dead' (after Tennyson)." Of Horatio W. Parker we read:

"Horatio W. Parker, who is professor of music at Yale University, is paramountly a writer for the church, altho he has written not infrequently in the secular forms. It is by his 'St. Christopher' and his 'Hora Novissima'—both oratorios—rather than by his 'Harold Harfager' or his 'Northern Ballad,' that he would probably care to be remembered—altho he has scarcely, if ever, surpassed his magnificent rhapsody for baritone and orchestra, 'Cáhal Mór of the Wine-red Hand' (after the lyric by James Clarence Mangan). Mr. Parker had been acutely aware of the genius of Wagner, particularly in his 'St. Christopher'; but then one may say that of almost any composer who has written since the mighty Richard's death; and the impeachment is not really serious, for Mr. Parker owns a distinguished and forceful gift of musical speech—a speech that is, in the main, indisputably his own."

Mr. Gilman passes on to a consideration of Frank Van der

[illegible], of Cincinnati. This composer is described as "a modern of moderns," who achieves "richness without turgidity, intensity without bombast, flexibility without diffuseness." His songs, in particular, are praised as inimitable expressions of a "sumptuous color sense" and a "sensitive feeling for dramatic values." Mr. Gilman concludes:

"If I have seemed to ignore the excellent work of Mr. Kelley and Mr. Whiting, Mr. Hadley and Mr. Shelley and Mr. Loomis—not to speak of the admirable art of Charles Martin Loeffler, whose Americanism is questionable—it is because the line had obviously to be drawn somewhere, and that it was necessary to make a choice—not arbitrarily, if that were possible, tho from a standpoint necessarily personal and fallible."

THE DISADVANTAGES OF EDUCATION.

GOETHE once said, "The greater the knowledge, the greater the doubt," and Hazlitt, "The most learned are often the most narrow-minded men." These sayings are quoted in a striking article in *The Nineteenth Century* (February), in which we are reminded that education has its disadvantages, as well as its advantages, and that "the most prominent men in nearly every province of human activity have been amateurs." The writer, Mr. O. Eltzbacher, declares:

"Amateurs, and not professionals, are selected to rule our great public departments. Our great administrators have nearly all been amateurs and autodidacts. To take a few of the best known examples: Cromwell was a farmer, Warren Hastings and Clive were clerks, Mr. Chamberlain was brought up for trade, Lord Goschen for commerce, and Lord Cromer for the army. Other countries have had the same experience with self-taught amateurs. Prince Bismarck was brought up for law, failed twice to pass his examination, became a country squire, and drifted without any training into the Prussian diplomatic service and the cabinet, and founded the German empire. George Washington was a surveyor, Benjamin Franklin a printer, Abraham Lincoln a lumberman, M. de Witte a railway official.

"In a less exalted sphere we meet with the same phenomenon. Sir William Herschell was a musician, Faraday a bookbinder, Scott a lawyer's clerk, Murat a student of theology, Ney a notary's clerk, Arkwright, the inventor of the spinning-machine and the first cotton manufacturer, a barber; Spinoza a glass-blower, Adam Smith a clergyman, Lord Armstrong an attorney, Herbert Spencer an engineer, Pasteur, the father of modern medicine and chirurgy, a chemist; Edison a news-vender; George Stephenson and most of the great inventors and creators of industry of his time were ordinary workingmen.

"When we look round we find not only that many leaders of men were devoid of a highly specialized training in that particular branch of human activity in which they excel, that they were self-taught amateurs, but that many of the ablest politicians and of the most successful business men have not even had the advantage of a fair general education. Abraham Lincoln had learned at school only the three R's, and those very incompletely; President Garfield worked with a boatman when only ten years old; President Jackson was a saddler and never spelled correctly; President Benjamin Harrison started life as a farmer, and President Andrew Johnson, a former tailor, visited no school, and learned reading only from his wife. George Peabody started work when only eleven years old; the late Sir Edward Harland was apprenticed at the age of fifteen years; Andrew Carnegie began his commercial career when twelve years old as a factory hand; Charles Schwab, president of the United States Steel Corporation, drove a coach as a boy, and then became a stake-driver at an iron-works. Josiah Wedgewood started work when only eleven years old; Arkwright, the father of our cotton industry, was never at school; Edison was engaged in selling papers when twelve years of age, and Sir Hiram Maxim was with a carriage-builder when he was fourteen. 'Commodore' Cornelius Vanderbilt, the railway king, who left more than a hundred million dollars, started as a ferryman at a tender age; the founder of the wealth of the Astors was a butcher's boy, Baron Amsel Mayer von Rothschild a pedler, Alfred Krupp a smith, Rockefeller, the head of the Standard Oil trust, a clerk. All these most successful men were autodidacts."

In view of these numerous well-known instances of greatness achieved by men uneducated, is it to be wondered at if "even the learned begin to waver and to ask themselves whether the much-vaunted benefits of learning have not been largely overestimated?" We quote further:

"It has been truly said 'Knowledge is power,' but knowledge in itself is not power, only *applied* knowledge is power. Knowledge is like money, not valuable in itself, but only valuable for what it will buy. Knowledge is like a strong weapon, but the best weapon is useless to a man who does not know how to wield it. Knowledge is an elementary power, but the power of the Niagara, or of steam, or of electricity, would be useless to mankind unless intelligence directs that power to some practical purpose. The Chinese knew magnetic iron long before the Europeans knew it. To them it was a piece of iron and nothing more. Handled by European intelligence, magnetic iron became a useful power in the compass, which gave Europe the rule of the seas. The Chinese knew also gunpowder before the Europeans knew it, but to them it was only a plaything used in fireworks. A man who has read endless treatises on boxing, and who has studied the fights of all great boxers, gets knocked out while he is reflecting how Jackson or Fitzimmons would have behaved. The officer whose mind is soaked in military literature, and who can tell why Napoleon won the battle of Austerlitz and why Frederick the Great lost the battle of Hochkirch, has lost in nine cases out of ten his common sense, the buoyancy, resourcefulness, and impartiality of mind with which a less erudite officer would tackle a difficult question."

New ideas, continues Mr. Eltzbacher, are hardly ever welcomed in schools. On the contrary, "schools have ever proved reactionary and inimical to new ideas."

"Great minds have ever been persecuted owing to the narrow-mindedness and the jealousy of the schools from Socrates onward. Galileo, Columbus, and many other great discoverers were imprisoned and treated like criminals with the approval, and largely at the instigation, of schools of science because their discoveries threatened the tenets of accepted learning. Even the heavy artillery of theology has been advanced by the universities of the Middle Ages, and also of later days, against geological and astronomical discoveries. Newton and Darwin were laughed at by the faculties, and in Roman Catholic universities Darwin is still ostracized, according to report. Kant became a professor only when he was forty-six years old, after fifteen years' lecturing; Schopenhauer never became a professor owing to the jealousy of the universities. Liebig and Pasteur were jeered at by the profession, vaccination and homeopathy had to fight for decades against the envy of the medical schools. David Strauss and Renan were compelled to leave their universities; Beethoven and Wagner were persecuted by the schools of music, and were treated like madmen because they did not conform with musical traditions. Millet was neglected by the Salon in Paris, and Whistler snubbed by the Royal Academy in London. The inventions of Edison, Marconi, Roentgen, Koch, could not be explained away by modern science schools, but their discoveries have been greeted by the universities with personal attacks full of animosity, and these men have been pictured as the commercially successful exploiters of other people's ideas. A late correspondence in *The Times* with regard to discoveries of Mr. Marconi is typical in that respect."

The writer comes to the conclusion that in order to improve education, it "may have to be individualized." That is to say, "the present uniformity of the schools may have to give way to schools catering directly for the practical needs of the various classes of the population." "Let us hope," he adds, that the spirit of combination which seems to be growing, tho somewhat slowly, within the community, will in due course dot the whole country with technical schools founded and supervised by the various industries themselves, and planted under the very eye of these industries in their business center. . . . Let us hope, besides, that the direct active interest in education, which prac-

tical men are beginning to take, will cause in course of time the mapping out of specialized school programs by competent experts for all schools from elementary schools to universities throughout the country; for, after all, practical men, not tradition-bound schoolmasters and well-meaning clergymen, can determine the practical requirements of education."

A PLEA FOR "INTELLECTUAL" PLAYS.

OPPOSITION to the theater has not entirely disappeared, but the growth of the popularity of the play as a form of popular entertainment is generally recognized as a characteristic feature of modern life. Is theater-going good for society, or is it to be reckoned among the corrupting and demoralizing influences? Aristotle believed in the stage, and many great thinkers since his day have regarded the drama as a potent teacher of virtue and righteousness. D'Alembert said the stage was "morals carried into action; rules reduced to examples," and Matthew Arnold urged the "organization" of the theater as an educational and uplifting institution. Rousseau, on the other hand, condemned it, and declared that the only people who are not morally injured by the stage are those who are too degraded to be injured by anything.

Citing these and other authorities, ancient and modern, a Russian writer, I. N. Ignatoff, discusses elaborately in the *Rousskaye Bogatstvo*, a leading and advanced periodical, the psychological and social effects of stage representations. He dismisses as superficial the ordinary division of the plays into "good" and "bad." Of course, he says, there are immoral and pernicious plays, and right-thinking men justly condemn them. But the deeper, the real, question is whether the best plays, the masterpieces of the Greek, English, French, and German dramatists, are wholesome from the standpoint of individual character and social progress. In other words, do moral plays necessarily promote virtue and goodness and humanity?

His answer is a negative one, and he is led to a new classification of plays, and to a plea for the intellectual, literary, and problem-giving play, as against the emotional and "strong" play which is addressed to the feelings, sensations, or nerves.

The great fault of the theater is, according to this writer, its tendency to encourage and strengthen *passivity* in the spectators —to develop the restraining centers of the psychical system. He says:

"All plays, good and bad, have for their direct effect this strengthening of the auditor's disposition to passivity. Of course, if a habitual theatergoer were to see on the street a real Othello attempting to strangle his wife, he would not remain as passive as he does in the theater; according to his temperament and proclivities he would reach some decision—to throw himself on the murderer, run after the police, or cry 'Help!' Still, whenever the circumstances, in a real case, favored inactivity, the habitual theatergoer would be prone to yield to his disinclination to act and behave as he does in the theater, where he restrains himself under excitement and grows enthusiastic over the artistic form while giving no expression to his feeling of indignation. . . . . .

"The spectator [in the case of an emotional play] leaves the theater overwhelmed, crushed, depressed, perhaps esthetically gratified, but at the same time mentally paralyzed and incapable of action. He has lived through a great deal, but this experience has not taught him any lesson, has not provided him with any guide to future conduct. Grant that his sympathy has been enlisted on the side of the weak and poor; all the same, this will not enable him to realize his humane aims."

Should, then, the theater be abolished, or should it be encouraged only for the sake of the uncultured whose natural tendency is to act without sufficient reflection and do more harm than good by unreasonable or improper interference? No, answers the writer. The theater has another distinct and important mission—to make people think, inquire, analyze, and ponder grave questions of individual and social morality and duty:

"The theater forces us to think, and this quality modifies largely those conclusions to which we should be driven did we confine our analysis to its influence on the emotional nature. If the sufferings depicted in a play do not summon one to immediate action, but induce thought upon the causes of this suffering, upon human relations, then there is nothing pernicious in the restraining effect upon the will exerted by the enforced passivity. It is essential, therefore, that the play shall address itself much to the reason and but little to the feelings."

Referring, for illustration, to Ibsen's "Nora" and to Hauptmann's "Weavers" and similar dramas, the writer points out that in each of these, while the emotions are appealed to and our sympathy and antipathy are aroused, yet at the same time there is no call for any immediate action. There is a delicate complex and difficult problem to solve. What could we do for Nora in her Doll's House? How can we help the misery-stricken and disinherited weavers?

"The activity of the intellect does not end with the play; it continues until other impressions supervene and give the mind a new direction. If thus the theater often causes me to think about certain problems, a habit is formed which is extremely useful in life, if these problems closely concern humanity. Whether I solve these problems or not; whether I apply my solution when found, is a different question. At any rate, the theater which stimulates thought not only leads us to sympathize with the weak and unfortunate, but also to consider ways and means of helping them, and such reflection is a step toward participation in human affairs."

It is true that intellectual plays at certain periods of the drama have caused extreme and inartistic didacticism, concludes the writer, and dry moralizing is foreign to the stage; but excess in one direction does not justify excess in another by way of reaction. The fact is that reason is the element in the drama to which we must look for its highest and most beneficial influence. Harrowing, "clinical," and intense plays, whether moral or immoral superficially, are fundamentally anti-social.—*Translation made for* THE LITERARY DIGEST.

THE TEN BEST BOOKS FOR CHILDREN.

WHY should grown-up folks have a monopoly of lists of "best books"? *St. Nicholas*, the well-known children's magazine, has been inviting the opinion of its readers upon the best books for children under ten years of age, and in December awarded the prize to the child who sent in this list:

"Alice in Wonderland"—Lewis Carroll.
"A Child's Garden of Verses"—Robert Louis Stevenson.
"The Birds' Christmas Carol"—Kate Douglas Wiggin.
"Greek Heroes"—Charles Kingsley.
"Hans Brinker"—Mary Mapes Dodge.
"King of the Golden River"—John Ruskin.
"Little Lord Fauntleroy"—Frances Hodgson Burnett.
"The Prince and the Pauper"—Mark Twain.
"Water-Babies"—Charles Kingsley.
"The Wonder Book"—Nathaniel Hawthorne.

In its January issue *St. Nicholas* publishes another list, showing, in the order of preference, the ten most popular books, as they appear in the multitude of replies sent in for the competition:

"Little Lord Fauntleroy"—Frances Hodgson Burnett.
"Alice in Wonderland"—Lewis Carroll.
"The Wonder Book"—Nathaniel Hawthorne.
"The Birds' Christmas Carol"—Kate Douglas Wiggin.
"Wild Animals I Have Known"—Ernest Thompson-Seton.
"Water-Babies"—Charles Kingsley.
"The Jungle Books"—Rudyard Kipling.
"Black Beauty"—Anna Sewell.
"Nights with Uncle Remus"—Joel Chandler Harris.
"A Child's Garden of Verses"—Robert Louis Stevenson.

The Lamp (formerly *The Book Buyer*) finds the first list a good one, but the second "far more interesting." "The difference," it says, "is just this: the first list is the one *St. Nicholas* thinks is the best of all those submitted, while the second list represents the opinions of the children themselves."

SCIENCE AND INVENTION.

A NEW THEORY OF OLD AGE.

THEORIES of old age differ according to the particular symptom that is assumed to be its characteristic. We recently published an account of an elixir of youth whose action depends on the hypothesis that hardening of the arteries is the central feature of old age. To-day we translate from the *Revue Scientifique* (January 17) a theory that looks upon certain cell alterations in the tissue as its characteristic feature. The fact is doubtless that the numerous changes that we find in the aged all unite to produce the condition that we know as senility. They may perhaps be ultimately referred to a common cause, but that does not seem to have been done as yet. The new theory is that of M. Metchnikoff, the eminent Russian physiologist, whose study of the phagocytes or "devouring-cells" of the body has made his name famous. Old age, he says, is itself a result of a devouring process of this kind, the nerve-cells being destroyed by nerve-eating cells that are specially numerous in the aged, altho they appear also in many diseases. Similar cells, the "color-eaters," destroy the pigment cells in the hair and turn it gray or white. Says the writer in the *Revue Scientifique*:

"In a former study . . . Messrs. Metchnikoff, Mesreil, and Weinberg proved that the whitening of hair and fur is the work of certain ameboid cells, the pigmentophages or rather chromophages [color-eaters]. These elements, under the influence of causes not yet determined, become overexcited and at a given moment surround the pigment grains of the hair and transport them either into the skin or out of the organism. In this way the hair whitens, often in a very short space of time.

"It is certain that we have here a phenomenon capable of throwing light on senile degenerescence in general, and the authors have pursued their researches along this line, where they have already made a curious discovery. Owing to the difficulty of operating on fresh specimens, they have given up human organs and have selected the parroquet, which alone, among all creatures that may be easily procured, is able to live as long as man."

On individuals of this species the investigators carried on their researches. Of one of the birds, who had reached the advanced age of eighty-one years, the writer says:

"During the last years of its life, the parroquet manifested evident signs of senility and feebleness. . . . The microscopic examination of the organs revealed no particular anomaly, nor any sign of acute disease to which the death of the creature could be attributed.

"But the attention of the investigators was specially attracted to the central nervous system by very curious phenomena in the brain. . . . It was filled with single-nucleated cells, playing the rôle of macrophages. The nerve-elements were characterized by the absence of pigment, which is so abundant in the nerve-centers of old people and of old mammals like the dog and horse. . . . Despite the absence of degenerative symptoms of the nerve-cells, a very great number of them were surrounded by neuronophages [nerve-cell eaters], mononuclear cells with round nucleus and generally rich in chromatin.

"The phenomena of neuronophagy are well known in the pathology of the nervous centers. They are met in a considerable number of nerve-diseases and poisonings. They are very frequent also in the brains of old people and old animals, as Pugnat announced for the first time. But Metchnikoff never had observed neuronophagy comparable to that of the old parroquet. Whole regions of the cerebrum were filled with masses of the nerve-destroying cells, in the midst of which no more nerve-cells were found. These masses were formed of a variable number, about twenty or more, of neuronophages. . . . All the intermediate stages between the presence of the typical nerve-cell and its complete disappearance leave no doubt that we have here to deal with a real and intense phagocytosis [devouring of cells]. The phenomena indicate that this consists of a progressive passage of the contents of the nerve-cells into the interior of the surrounding neuronophages. The latter do not devour the nerve element whole, but, so to speak, they suck it dry. . . . . .

"These observations, which surely need to be multiplied, tend to establish the legitimacy of the phagocyte theory of old age, formulated by M. Metchnikoff."—*Translation made for* THE LITERARY DIGEST.

HOW PEPPERMINT IS GROWN.

THAT 300,000 pounds of peppermint oil are annually consumed by the world, and that more than ninety per cent. of this is grown within seventy-five miles of Kalamazoo, Mich., are two of the interesting facts about peppermint told by Charles B. Richardson in an article on the subject in *The Rose Technic*. Kalamazoo, Mr. Richardson tells us, may fairly be called the center of the essential oil industry of the world. Formerly Wayne County, New York, was the peppermint center of the world, but the product for this year was only 1,000 pounds, so that this industry in New York has practically passed into history. The writer goes on to say:

"The 'mint' industry is a specialty with peculiar features, combining farm and factory—agriculture in growing the plant, and manufacture in separating the oil from the plant by distillation. There are about 80 'stills' in Southwestern Michigan, and since there are 4,000 acres of the plant under cultivation, we see that one 'still' is required for every 50 acres of peppermint.

"The mint is grown on marsh or 'muck' land, which is coal black in color and very moist; so moist, in fact, that during a rainy season water may be seen standing all over a large field. The land, prepared as for a garden, in the fall, is laid off in furrows early the following spring. The furrows are three feet apart and run north and south, if possible, so that the sun will strike both sides of each row. This work is done the first of April and the planting should be completed in the same month. The roots for planting are 'root-stocks' or 'runners,' like strawberry runners, only they run just under the ground, like hop 'roots,' instead of on top of the soil like berry runners. They are pulled with potato-hooks from new mint of the preceding year; two men working on each row, one pulling, the other following, shaking out the muck with a fork. The roots, thus cleaned, are taken to the furrowed field, where the planters proceed to put them in the ground. Each planter has a burlap sack, holding three to four bushels of the roots, and with this swung over his shoulder he takes a furrow or row, draws the roots from the sack with the right hand, holding back the roots at the mouth of the sack with the left, and with a peculiar 'uplift'-forward motion throws them straight into the open furrow. The roots are from one to two feet long and thus, in planting, a continual line of roots is formed. These are slightly covered with dirt and pressed into the ground by the feet of the planter as he moves forward. A roller is then passed over the ground.

"The fields are kept clean by cultivating and hoeing until about the 20th of June, when runners start, and the weeds are pulled by hand, until 'stilling,' which begins August 1st and continues until about the 20th of September. The mint grows to a height of three or four feet. The new mint is cut with scythes, each row being passed over twice, because the row parts in the middle and falls in a tangled mass on either side. It is left to wilt thoroughly, and is then bunched and drawn like hay to the 'still.'

"The wilted mint is here pitched into large tubs seven feet top diameter, six feet bottom diameter, and six feet high. Two men walk around on the mint in the tubs and tramp it solid, after which a steam-tight cover is let down, closing the tub. Steam is let in at the bottom of the tub, breaking the little sacks on the under side of the leaves which contain the oil, and converting this released oil into vapor. The steam and oil vapor pass upward and escape through a pipe near the top of the tub into the 'worm,' which is a series of tin pipes, one above the other, two inches or more in diameter. Cold water is caused to drip from above upon the 'worm,' and this condenses the vapors. The water and liquid oil pass out at the end of the worm into a receiver, where the two liquids are separated by gravity, the oil being lighter than water. All the oil is removed from the leaves

after steaming for an hour, and from one to ten pounds of oil are obtained from one tub. The oil thus obtained is 90 per cent. pure. The juices of weeds, which are more or less mixed with the mint in the tubs, and other foreign substances are removed from the oil at refineries.

"The price of peppermint oil six years ago was 70 cents, now it is $5 per pound. The price has advanced within the last month from $2.50 to $5 a pound. This advance was caused by one of the largest growers in Michigan having bought up 95 per cent. of the oil produced this year, and thus practically cornered the market. The total value of the crop this year is approximately $650,000, and the advance in price, caused by the corner, is in the neighborhood of a quarter million dollars. With the price at $5 per pound, peppermint growing is a very paying industry, since from ten to forty pounds of oil are produced per acre and the cost of cultivation is only from $15 to $25 per acre.

"The growing of peppermint has not been remunerative for the past five years, and the market in New York and London has been ruined by manipulations and adulterations. There is a constantly increasing demand for the oil, and an idea of the trade may be gained from the fact that this oil enters into the manufacture of various pharmaceutical articles, confectionery, gum, toilet waters and perfumes, extracts, etc. . . . . .

"A large field of peppermint is a very pretty sight indeed, especially when the plants are about half-grown, at which time the foliage is the brightest green and shows up very nicely against the coal-black soil beneath. . . . . .

"The oil is handled in 2½-gallon tin cans, which when filled weigh twenty pounds. Thus $300 worth of oil can be packed in a little box 30 × 8 × 12 inches, and it sometimes happens that a man's entire crop can be packed in a peppermint oil-box of this size."

WHAT BECOMES OF A DISSOLVED SUBSTANCE?

THE ideas of scientific men of different schools, and in different periods of the world's history, regarding the nature of solution, have been recently described in a volume by M. P. Duhem, the French physicist. A reviewer in *The Popular Science Monthly* epitomizes them as follows:

"If we drop a lump of sugar into a glass of water, the sugar disappears, and we have in the tumbler a colorless liquid which looks like water, but which has a different taste. We are all agreed as to the fact, but there has always been a difference of opinion as to what became of the sugar. One view is that the sugar and water are still there, but so finely divided that we do not see the sugar. If we grind a little dry sugar together with a good deal of charcoal, we get a black mixture in which the eye does not detect the sugar, tho the sugar is unquestionably there. Another view is that we have neither water nor sugar in the tumbler, but a new substance having properties differing more or less completely from those of the sugar and water. This is the view that we take in regard to sugar itself when we speak of it as made up of charcoal and water. The first view, of a mechanical mixture, was held by the Greek atomistic philosophers under Epicurus, while the second view was defended by Aristotle and the peripatetic philosophers. Through the Middle Ages, the views of Aristotle prevailed; but Bacon and Descartes brought the atomistic view to the front again, while Newton modified the views of Descartes by substituting assumptions in regard to mutual attractions and repulsions for assumptions as to the shape of the atoms.

"In the second half of the nineteenth century, the application of thermodynamics to chemistry has led to the discovery of new laws, and these discoveries have been made without assuming anything in regard to atoms. The natural tendency is therefore to reject the atomic theory as a superfluous hypothesis. The only distinction that we can draw between chemical compounds, like sugar or salt, and solutions, such as a mixture of sugar and water, is that the composition of the solutions can vary continuously, while the composition of the compounds can not. The natural inference is that solutions are to be looked upon as compounds or new substances with varying composition. The scientific world has thus come back to the view of Aristotle. The matter stands now as it stood centuries ago. One school still holds the views of Epicurus, another stands ready to break a cudgel for Aristotle. Even now we do not know what happens when we put sugar in our coffee, tho we know why we do so—except where it is merely a matter of habit."

THE ALGEBRA OF VITAL PHENOMENA.

SOCIOLOGY has hitherto consisted largely of statistics; it has remained for a Belgian, M. Ernest Solvay, to make an attempt to reduce at least one division of it to mathematical expression. M. Solvay believes that the part of the output of energy of each individual that is useful to society may be figured out by the methods of exact mathematics. Solvay has founded an institute in Brussels to carry out his ideas and investigations, and he has stated his opinions somewhat fully in a note published at its opening. The following is a condensed statement of them given by the *Revue Scientifique* (December 20):

"Convinced of the preponderant rôle played by oxidation in the phenomena of life, M. Solvay in the first place forms the algebraic equation that connects the quantities of heat set free by the animal with the potential energy of the oxidized food and of the excreted matter. He denotes by appropriate symbols the total energy set free by the organism in the unit of time (which may be separated into heat or thermic energy registrable in a calorimeter, and mechanical energy), the energy of the food consumed, that of the matter eliminated, and that of the food assimilated."

We then have an equation stating in algebraic form the fact that the total energy set free, including heat and mechanical energy, equals that taken in with the food less that left in the body and that eliminated by excretion. To continue the quotation:

"This equation, which is pretty well verified by experience, implies that no outside energy has any particular influence on the available mechanical energy of the body. It would be of the highest interest to pursue the minute verification of this relation in various animal species. M. Solvay is led to consider the ratio of the total energy set free to that of the food consumed, whose variations with age it would also be interesting to determine. He defines a perfect organism as one in which this ratio tends toward unity.

"From the sociologic point of view it is the term denoting the available mechanical energy that is interesting; or rather, the fraction of this energy that is socially utilizable. . . . . .

"From the biological standpoint, the term denoting energy received represents only food, but by judicious considerations M. Solvay justifies its extension to objects of a purely sensorial order, like dwelling-place and clothing, or of intellectual nature, like the productions of art or science. These indirect factors of energy enable us to assimilate better the matter consumed. . . . . We may therefore assume that these values will be more precisely determined by the methods of psychophysics, properly extended. . . . . .

"M. Solvay notes that cerebral phenomena have no direct and characteristic mechanical equivalent. 'Amounts of work of very unequal value,' he says, 'may be connected with the same degree of oxidation.' These phenomena correspond simply to different states of distribution of neuromuscular energy. How shall we introduce these factors into our formulæ, since they are so weighty from the sociological point of view?

"M. Solvay evades the difficulty very ingeniously; he measures intelligence by the economy of effort that it produces in the unit of time. The intelligent being, in order to obtain a definite result, diminishes mechanical energy exerted, and therefore also the energy of the food consumed for the same value of the energy excreted.

The difference between the energy exerted by an intelligent and an unintelligent being measures the intellectual capacity; everything takes place as if there was a real gain of utilizable energy. . . . . .

"This, however, does not exhaust the value to society of brain-work. Inventions and ideas save units of energy to humanity outside of the inventor himself and even after his death. We

must, then, besides the terms relating to physical and psychical energy add a third, which M. Solvay calls ideo-energetic. . . . .

"An immediate consequence of these points of view is a new definition of the values of things. What we pay out (and we can pay out nothing else) are calories (heat units), directly or indirectly; what we get are increases of production or phenomena of pleasure that are always reducible to such increases. There ought then to be concordance between the values of transactions and those of energy. In fact, this concordance does not exist, but it will tend more and more to be established, as we succeed in bettering the social yield and getting the maximum out of it, so that we shall be more nearly directed toward the perfect state of a normal society.

"The principle of tendency to the maximum product dominates both sociology and biology; the ingenious artifice by which M. Solvay calculates cerebral phenomena may be applied, we believe, to numerous problems. M. Solvay has inaugurated a true social physics, not simply social statistics, as was intended by his compatriot, the illustrious Quetelet. We hope that numerous collaborators will follow him in this fertile field."—*Translation made for* THE LITERARY DIGEST.

A CLOSE MENTAL CONNECTION BETWEEN TWINS.

A CURIOUS case has been reported from France in which twin sisters, living far apart, developed at the same time the same unreasoning fear, namely, a repugnance toward drinking from glass vessels. Advocates of telepathy will probably make use of this theory in explaining the case, but probably, if not a mere coincidence, it may be regarded as due to an undeveloped tendency present in both sisters and coming to the surface in each at about the same time. The case, which was reported to the French Biological Society by M. Charles Féré, is thus summarized in *The Medical Record* (February 7):

"The twins, females, were of a neuropathic family on the mother's side. They resembled each other singularly closely, even to an almost exactly duplicated birth-mark; also physiologically and psychologically (voice, articulation, expression, walk, attitude, holding of pen or needle; certain repugnances and preferences, such as a marked taste for salt, and repugnance, to the point of vomiting, for butter; sympathies and antipathies for persons and animals, and appreciations of colors and odors). The mother dying a few days after their birth, each of the twins was taken by an aunt, reared by a separate nurse, and brought up differently, along with its cousins, male and female. Up to six years of age they saw each other often. Then one aunt removed from the country, and thenceforth their communication was limited to a few words added to the letters of the aunts."

At thirteen years of age, one of the twins was frightened by a carriage passing rapidly near her. No further immediate results appeared, but soon afterward the following took place:

"At supper, on wishing to drink, she put down her glass suddenly, with fright, saying there must be fragments from the rim of the glass, this rim could wound her, there must be fragments fallen to the bottom of the glass. It seemed impossible for her to use this glass, and a silver cup was given her instead. Little by little she came to examine the bottle, fearing that there were fragments of glass which had fallen to the bottom, and had not been emptied, and she would drink only when the glass bottle was nearly full. When this singularity was reported to the family where the other twin lived, attention was directed to a singularity which had existed several weeks in her; she did not empty her glass completely, but threw out what remained at the bottom before refilling it. Questioning was avoided, and things remained unchanged for a fortnight, but, following a rather grave angina, the fear acquired a considerable intensity, and extended from fear of swallowing glass to fear of touching it, and fear of glass objects and of objects resembling glass; and, some months later, to the inability to speak of glass objects without visible repugnance. Meanwhile, with the first twin, the fear of swallowing glass has remained, and she wipes her hands after touching it. Interesting as the case is, it can, however, hardly be said to satisfy the demands of modern psychiatry, as it lacks a sufficiently detailed study, or, at any rate, report."

THE ELECTRIC FURNACE AS A MEANS OF SCIENTIFIC DISCOVERY.

THE temperature of the ordinary electric arc, formed between carbon points, is extraordinarily high, and when this arc is properly enclosed in a crucible, forming an electric furnace, it is possible to reach a degree of heat not obtainable in any other way. The electric furnace is most widely known for some of its sensational performances such as the melting and vaporization of quartz, and the production of real gems; but engineers are familiar with its commercial applications and have come to appreciate it as a powerful means of producing reactions otherwise unattainable. An editorial writer in *The Electrical World and Engineer* predicts that it will also take high rank as an instrument of pure research. The reasons, he says, why it has not yet been so used to any extent are complicated, but he attempts to set them forth as follows:

"In the first place, for the past quarter-century inorganic chemistry has fallen into disrepute, and the attention of nearly every first-class chemist has been turned to the wonderfully futile field of organic compounds. These are vastly more manageable in the laboratory, are more amenable to comprehensible theory, and have yielded commercial results of truly immense importance. In inorganic chemistry, on the other hand, the list of fundamental working reactions is a short one, and the products tend either to great stability, which is inconvenient, or too extraordinary instability, which is equally bad. Nor has there been evolved any general theory of inorganic compounds that can serve as a guide to research. Inorganic chemistry has, therefore, remained comparatively undeveloped and has largely fallen into the hands of technologists able in their respective lines, but not with time or taste for purely scientific study. . . . . .

"The present interest in radioactive substances has stimulated investigation in inorganic lines, but not yet to edification. Now the electric furnace with its tremendous temperature is capable of enormously increasing the possible range of inorganic reactions, and for this purpose it should form a part of the apparatus of the expert theoretical chemist instead of being, as at present, mostly in the hands of the technical chemist. We would not in the least depreciate the work of the latter, but it is directed at results rather than at the exact causes of results. Now chemistry, especially physical chemistry, is at a point where extensions of theory are greatly needed. The data are fast accumulating for some tremendous generalizations, and every powerful means of research at hand ought to be worked to the very utmost to furnish additional facts."

Perhaps the very greatest problem in theoretical chemistry, the author reminds us, relates to the splitting-up of the so-called elements. Belief in the indivisibility of the atom has been shaken by recent work in electricity, but no element has yet been resolved into simpler parts. The author, in making this statement, takes no account of "the mere isolation of minute traces of hitherto unknown components as in the cases of argon, krypton, and their allies," but means the actual breaking-down of an element as now known into definite components. He says:

"Not a few of the elements have been long open to suspicion. Zinc, cadmium, and magnesium, for instance, form a trio conspicuously open to attack. In fact, one noted scientist thought a score of years since that he had broken up cadmium, and communicated the result to the French Academy. Iron is another element which is very likely dissociated at very high temperatures, as it probably is in the sun, and who knows what strange properties its components might have if they could be isolated? Perhaps calcium is in the most exposed position of all to successful attack, for it is well-nigh certain that when vaporized at the temperature of the electric furnace it splits off a gaseous component, or passes into a new condition, comparatively simple,

nearly as tenuous as hydrogen and well known in the solar atmosphere. If the elements could be split up into their primal components, there is at least a chance that these could be recombined in what marvelous ways no man would now dare to predict. Problems such as these lie at the very foundation of science, and are deserving of the best efforts of the best investigators. It is to this colossal theoretical work that we hope to see engines like the electric furnace successfully applied. And it should be remembered that no great advance in theory has ever failed of producing great advances in practise, sooner or later."

THE COMING WOOD FAMINE.

THE world is using wood faster than the forests are producing it. This means that the forests are disappearing and that ultimately we shall not be able to get what we want. Aside from the question of esthetics, therefore, or the still more practical one of the regulation of the flow of our rivers, which has been shown to depend so largely on forests, there is every reason why we should try to treat our wood crop like any other. Only we must remember that it is not a matter of a season, but of long years—a forest can not be grown in a few months like a crop of wheat. And even in Europe, where scientific forestry has been much more generally practised than in this country, the cry is now going up that good wood for building and cabinet-making is getting scarce. Says a writer in the *Musée Commercial* (Rouen, France):

"If we examine official statistics . . . we may easily convince ourselves that most European countries, especially industrial countries, do not produce the quantity of wood that they need. England has to call on foreign aid more than any other country; she imports nearly 500 million of francs [$100,000,000] worth annually. Other countries, better endowed by nature, have to make the same appeal to their neighbors, Belgium for 100 million francs [$20,000,000]; Germany for 350 millions [$70,000,000]; Switzerland for 15 millions [$3,000,000]; Spain and Italy for 30 millions [$6,000,000]. France imports 140 millions and exports 40 millions, and thus finds herself in arrears 100 millions [$2,000,000].

"In Europe the only countries that have to-day an excess of exports are the Austrian empire, Norway, Sweden, and Russia. In these countries, therefore, are found the reserves of wood, to which we must add, in the New World, those of the United States and Canada.

"When we compare the commercial movements of the past twenty years, . . . we shall become convinced that the demand for wood for manufactures has increased during this period, and as the product of the forests has not increased in the same proportion, we may conclude that the amount of wood in the world has grown less.

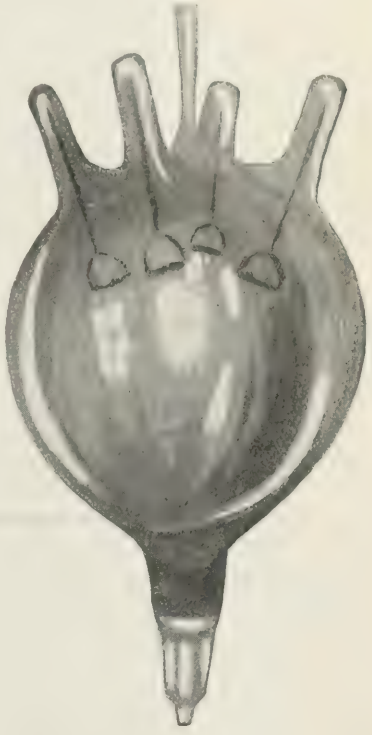
"Demand for wood is increasing considerably. When we say that since the introduction of metal into construction wood is no longer sold, we should add that the kind of wood that no longer sells is firewood, which can not compete to-day with more economical combustibles, such as coal, coke, and gas. But wood is used more and more in manufactures, and for certain kinds, notably wood for paper pulp, the development of the market is considerable. . . . With us [in France] there is a great excess of firewood, which sells with difficulty, and an insufficiency of wood for manufacture.

"To have at our disposal a large quantity of wood it is first necessary for the owners of forests to enter upon habits of foresight. The Government should take restrictive measures against the lack of it; for instance, the Swedish Government has forbidden in certain provinces the cutting of trees before they have reached a certain stage of growth.

"In what degree should we encourage the intervention of the state in this matter? What reforms should be made in the management of our forests, and what provision should be made for the future by the reforesting of uncultivated land? Every one recognizes that it is for the public interest to take hold of these questions and provoke discussion on them."—*Translation made for* THE LITERARY DIGEST.

AN INGENIOUS ELECTRIC INVENTION.

IT has long been known that certain media present a much easier path to a current of electricity when it is passing in one direction than when the flow is reversed. Peter Cooper Hewitt, whose invention of the mercury-vapor lamp has already made him known, has been investigating this phenomenon and has based upon it what he calls a "selective converter," which is expected to have important results in the electrical transmission of power. The device is thus explained by a writer in *The Electrical Age*:



SELECTIVE CONVERTER FOR THE THREE-PHASE CIRCUIT.

"The basis on which this apparatus works is: when an alternating current is caused to jump through a space filled with mercury vapor of a given degree of attenuation, it presents a ready passage to certain portions of the wave, whereas other portions of the wave are damped back or form a selective electric valve, which allows impressed electromotive force of a certain character only to flow through the apparatus. The practical utility of such a device becomes immediately apparent, for it forms a method of producing a direct current from an alternating circuit, and extends the field of alternating-current transmission into those fields which have required undirectional currents, such as the storage-battery and electrolytic work.

"The device used for this selective converter is as simple as an incandescent lamp. The containing shell in the device exhibited is made of glass and of spherical shape. Into this shell project the terminals from the alternating current circuit, whereas the terminal for the direct circuit is taken from a separate terminal at the bottom of the globe. A starting terminal is also introduced into the globe, which is used for starting the converter, and to this a higher tension is first applied. After being once started, the action is continuous as long as the impressed alternating electromotive force is applied.

"This selective converter is surprisingly small for the energy it converts. In one, rated at eight kilowatts, the vapor globe is seven inches in diameter and weighs not over four pounds, whereas a rotary converter to do the same work would weigh over 700 pounds.

"We feel that Mr. Hewitt has made a great stride, and has, at least, thrown down the barrier which separated the alternating and direct-current fields, and it is hard to predict at this early date the influence on the art this radical innovation will make."

Air Purification by Fog.—The atmosphere is cleared of suspended matter by a fog just as surely as by rain, we are told by a writer in *The Lancet* (London, January 31), the only difference being that the drops are smaller and do not fall so fast. He says:

"It is rarely that suspended matter in air or in water fails at length to subside, but the process may be slow or it may be rapid. In either case the act of subsidence effects purification. The condition of the London streets after persistent dense fog is

well known—the pavements are covered with a greasy grime, the impurities of the air, oily soot, and tarry bituminous particles, combining to make a slippery, pasty mass. This mass possesses a remarkable and objectionable bacteriology as well as chemistry, which during the existence of the fog belonged to the air. In this manner a fog may exercise a distinctly purifying effect upon the air. A fine rain produces a similar result, and when the shower is ended the air is freshened and clean. In the same way bright clear water, that has been just recently muddy, is probably pure for drinking purposes, or at any rate it will be found to be absolutely free from bacteria. Matter in suspension would thus appear to be endowed with a function of importance to the health of the community which is not generally considered, and, if we only knew, there might be occasions when we should be grateful for a muddy river, a foggy day, or a persistent drizzle. The effect of rain upon the air, however, is probably chemical as well as mechanical—that is to say, the air is not only 'scrubbed' but it is 'braced up,' so to speak, for after a shower it possesses an added freshness which is possibly due to the formation of peroxid of hydrogen and in some cases even of ozone."

SUSPENSION OF LIFE AT LOW TEMPERATURES.

CURIOUS experiments showing that in very primitive organisms, such as certain bacteria, the effect of low temperature is such as to produce a strange suspension of vital activity that is neither life nor death, but a state midway between the two, were described by Dr. Macfadyen and Mr. Rowland at the last meeting of the British Association. Says *The Scientific American Supplement* in an abstract of their paper:

"The first experiments were made with organisms possessing varying degrees of resistance, the extremes in this respect being represented by the sensitive spirillum of *cholera asiatica* and the resistant spores of *bacillus anthracis*. Ten organisms altogether were used and cooled down to −190° C., in the first instance for twenty hours, and eventually for seven days. These exposures did not produce any appreciable impairment in the vitality of the organisms, either as regards their growth or their characteristic physiological properties, such as pigment and gas production, pathogenicity, etc. Among the organisms tested were photogenic bacteria, and these likewise preserved their normal luminous properties; and we were able, through the kindness of Professor Dewar, to apply a still severer test—namely, an exposure to the temperature of liquid hydrogen (about −252° C.), a temperature which is as far removed from that of liquid air as is that of liquid air from the average summer temperature. Ten hours' exposure to this temperature had no appreciable effect on the vitality of the micro-organisms tested. At such temperatures it must be assumed that the chemical metabolism of the cell ceases, in the absence of heat and moisture. At the same time it appeared to us advisable to test the influence of a prolonged exposure to low temperatures on the vitality of cells. The experiments were conducted with the aid of the liquid-air plant at the Jenner Institute of Preventive Medicine. The organisms employed were the *B. typhosus*, *B. coli communis*, *Staphylococcus pyogenes aureus*, and a *saccharomyces*. The bacteria were suspended in small loops of platinum wire or on cotton-wool swabs, and directly immersed in the liquid air. The yeast, washed and pressed, was wrapped in rice-paper, and likewise directly immersed in the liquid air. Samples were taken and tested at intervals for a total period of six months. In no instance could any impairment of the vitality of the organism be detected. The yeast gave a good growth, and exhibited its fermentative powers unaltered; the typhoid bacillus retained its pathogenic and other properties; the *Staphylococcus aureus* gave characteristic pigment growth; and the *colon* bacillus responded to all the typical tests that were applied to it. Judging by the results, the experiments might have been prolonged for a much longer period than six months without appreciable influence on the vitality of the organisms in question.

"The ordinary manifestations of life cease at zero, but at −190° C. we have every reason to suppose that intracellular metabolism must also cease—as a result of the withdrawal of two of its cardinal physical conditions—heat and moisture.

"It is difficult to form a conception of living matter under this new condition, which is neither life nor death, or to select a term which will accurately describe it.

"It is a new and hitherto unobtained state of living matter—a veritable condition of suspended animation."

Oysters as a Cause of "Mysterious" Typhoid.—That oysters polluted by infected sewage can cause typhoid in those who eat them physicians are now agreed. A writer in *The Hospital* states his belief that shell-fish are responsible for many isolated cases of the disease whose origin has been looked upon as unaccountable. Speaking of oysters that have lain in sewage-polluted water, he says:

"A moment's consideration is sufficient to show what a toss up it is whether an oyster so laid does or does not become a vehicle of infection. Sewage does not consist of a homogeneous liquid throughout the whole of which its various constituents are evenly and impartially distributed. It consists of a fluid in which float a large number of bits of solid matter, no two of which are alike in regard to the infection with which they may or may not be charged. Into the open shell of one oyster there may float a fragment charged with virulent infection, while into the shells of ten thousand others there may enter nothing of any moment. Thus the distribution of infection is an absolute lottery. . . . Out of the thousands of oysters sold, only one here and there may have received its infection in such quantity and at such a date as to be capable of acting injuriously at the moment it is swallowed, and thus it happens that in the great majority of cases 'shell-fish typhoid' is spread haphazard over large areas, arising apparently without cause, sometimes acting as the starting-point of local outbreaks, sometimes ending with the single case. So far as present knowledge enables one to speak positively at all, there seems no doubt that we must regard the consumption of infected shell-fish as the explanation of many apparently inexplicable cases of sporadic typhoid."

SCIENCE BREVITIES.

"THE making of carbon paper and typewriter ribbons is a trade secret known to scarcely two dozen people in the world," says *Popular Mechanics*. "It has been handed down from father to son for probably a century. So carefully is the secret guarded that the process has never been patented. The method is said to be so very simple and inexpensive that any one could easily manufacture it if only the secret of the composition were known. Much money and time have been spent in endeavoring to make the valuable discovery, but all to no avail. The secret yet remains with the original discoverers and certain members of their families."

"MOST people are aware," says *The Scientific American*, "of the power of egg-shells to resist external pressure on the ends, but not many would credit the results of tests recently made, which appear to be genuine. Eight ordinary hen's eggs were submitted to pressure applied externally all over the surface of the shell, and the breaking pressures varied between 400 pounds and 675 pounds per square inch. With the stresses applied internally to twelve eggs, these gave way at pressures varying between 32 pounds and 65 pounds per square inch. The pressure required to crush the eggs varied between 40 pounds and 75 pounds. The average thickness of the shells was 13-1000 inch."

THE way in which billiard-playing is simplified by the device of a Munich professor has astonished those who have witnessed the test, says *The American Inventor*. "The sides of an ordinary billiard-table are provided with six mirrors, one or more of which can be turned down when a play is made, and the advantage rests in the fact that any image is reflected in the same angle in which it falls on the mirror, just as the billiard-ball rebounds from the cushion in the same angle as that of striking. The mirror shows at once the different ways in which a shot can be made. Even the tyro is said to make difficult indirect shots as readily as direct ones, and the intricacies of the game are quickly conquered by anybody."

IT having been proposed to introduced the American "quick-lunch" into London, the following protest is made by *The Lancet*: "We do not hesitate to ask that all our readers will impress upon their patients that the adoption of this proposal would be a wicked physiological step. The repair of the body is not a process to be trifled with in this way; eating should not be done in a hurry. The demands of business may be pressing, but the demands of the body are in reality more serious. Just as by stoking a steam-engine to cramming point the fuel burns badly and the intensity of the fire is lowered, so by bolting his food the vital processes within a man's body are hindered rather than helped. Necessarily food eaten rapidly escapes in a great measure the preparatory processes of digestion and sooner or later a breakdown in the maltreated human machine supervenes. In a word, hurrying over eating is fatal to the healthy sustenance of the body."

THE RELIGIOUS WORLD.

A LIBERAL CATHOLIC SCHOLAR'S VIEW OF PROTESTANTISM.

NEXT to Harnack's "Essence of Christianity," the most discussed theological book of the times is the work, already referrred to in our columns (December 13), of the Catholic professor of theology in Freiburg, Dr. Albert Ehrhard, entitled "Der Katholizismus des Zwanzigsten Jahrhunderts" ("The Catholic Church of the Twentieth Century"). In something over a year twelve editions of this book have been issued, which is phenomenal considering that it is a purely scientific production. The author is a devoted son of the Roman Catholic Church, but this does not prevent him from criticizing what he considers defects of his own communion, nor from expressing admiration for certain features of Protestantism. His views on this latter subject particularly have been attracting attention. They are substantially as follows:

It is an undeniable fact that Roman Catholics in their judgment of the Protestant Church are more just than Protestants in their judgment of the Roman Catholic Church. Here, too, it is evident that Catholicism is not purely anti-Protestantism. Indeed Roman Catholic scholars often go so far in their irenic appreciation of Protestant thought and church life that they even do injustice to their own cause. It must, however, be recognized that a purely objective history of the Reformation and of the origin of the Protestant Church, one that does justice to both the Catholic and the Evangelical sides, has not yet been produced by either a Protestant or a Catholic scholar. The opinion, however, that the Reformation and the Protestant Church it produced is the solution of the great church problem of Christianity is a mistake. Luther's fight against the Catholic Church was the consequence of the peculiar views which he took on the question of the personal relation of the believer to his God. Under the influence of an unsound and inharmonious religious life and a dissatisfaction with the types of piety prevailing in his age, and under the influence of certain Biblical books, especially the Psalms and the Pauline Epistles, he found an answer to this problem in the doctrine of justification by faith alone without works, and therein sought perfect certainty of salvation. He and with him the whole Protestant Church never attained to a fully developed and harmonious religious system. Luther's character and work were preeminently of a practical nature.

The Reformation spread as it did on account of a depression of the Christian ideals of the times. The doctrine of justification by faith alone suited the ease of the current religious life and encouraged the natural tendency to shun practical exhibitions of Christian life. The pride of the people was encouraged by the doctrine of the universal priesthood; and a further factor lay in the appeal to the Germanic national feeling against the Latin and Romance peoples as representatives of the Catholic principles. To the present day, in such agitations as the "Away-from-Rome" movement in Austria, the Protestant Church is lauded as preeminently the church of the Germans. The rapid spread of Protestantism is accordingly no evidence of its inner justification or intrinsic strength. Far from being what the people and the times needed, the Reformation has turned out to be rather the mother of revolutionary and radical movements in the religious and intellectual life of the peoples. It must ever be remembered that Protestantism placed religion in the control of the princes, in accordance with the principle "*cujus regio ejus religio.*" The Protestant movement was accordingly not a step forward, but rather the first serious interruption of and break with the historical development of the church. Not indeed that it is a barren product or factor. The view expressed by so many Catholic writers that Protestantism will dissolve by the process of self-integration is not at all justified by actual facts. Protestantism has saved for itself enough of the essence of Christianity to be a living religious and ecclesiastical power and even the source of a genuine religious life. The Catholic Church, in claiming to be the "only saving" church, does not deny this to Protestantism, and it is high time for Protestants to cease repeating the stale charge against the Catholic Church as tho the latter claimed that outside of her communion there can be no salvation. The smallest results, however, have been achieved by Protestants in the department of ethical and social service. It has nothing to compare with the great work of the Catholic orders. Notwithstanding this, it must be acknowledged that Protestantism has exercised a highly beneficial influence on the Catholic Church, and where the latter must live and labor side by side with the former, the latter appears in the best light.

Protestant periodicals have discussed the views of Ehrhard extensively, and practically agree in placing the author in the same category with Doellinger, when that great historian, before the days of the Vatican Council, passed severe judgment on Luther and the Reformation, which he afterward openly retracted. The *Kirchenzeitung* (Leipsic), in commenting on these views, states that while Ehrhard shows a remarkable independence of thought for a Roman Catholic savant, it was not necessary for him to make a special declaration of the fact that he is still a faithful son of his church.—*Translation made for* THE LITERARY DIGEST.

A "BOOM" IN AMERICAN IDOLS.

A REPRESENTATIVE of a wholesale firm of Seoul, Korea, has arrived in this country to contract for idols to be used in the heathen temples of his country, as well as in China. It seems that a few years ago an American firm sent some idols to one of the Korean sacred orders, and the results were so satisfactory that there is now a widespread demand for American idols. "For years," observes the Chicago *Tribune*, "England and Germany have been monopolizing the trade in Buddhas, Krishnas, Sivas, Ganeshes, and Jumjums. . . . The American manufacturer has now succeeded in bringing the trade where it really belongs." The Philadelphia *North American* adds:

"This recognition of our industrial supremacy was bound to come. American bridges span the sullen Nile, American locomotives toot along the banks of the sacred Ganges, American mules drag the guns of empire across tropic deserts. But these are mere commercial triumphs. At last the skill of the American artisan is recognized in the realms of poetic legend. Philadelphia idols will glower in the dim, scented gloom of far-off temples. The almond-eyed devotee will burn his paper prayers to a Frankford god. The shaven bonze will swing his censer before images made in Jersey City and Tacony."

The New York *Christian Herald* is disposed to view the matter seriously:

"Merchants who send rum and other intoxicating liquors to heathen lands are little likely to have any compunction of conscience about sending idols. When the greed of money takes full possession of a man's soul, he is ready to supply almost any demand that has the promise of profit in it. Yet what a horrible situation it is, that the men who are pandering to the degradation of their countrymen should be able to obtain the means of doing so from a civilized, not to say a Christian, country! It would be interesting to learn what account they give of the origin of these idols. The image that the Ephesians worshiped was said to have fallen from Jupiter, and similar supernatural origins are assigned for other objects of worship; but what will be the account given of these American idols? Will they say that they are the gods that are worshiped in the great nation beyond the sea? How it will puzzle the people who have listened to the Christian missionaries whom America has sent to Korea, to reconcile such a statement with the Christian message! It will be embarrassing to the missionaries, too, to have the idolatrous worship they are laboring so hard to destroy galvanized into new life by such importations. For the credit of our country, we could wish that the origin of the images might be kept a secret, for it is a disgrace that we should have among us men who would aid in perpetuating the superstition and degradation of a simple people. We can but wonder whether conscience and principle are not dead in men who, in this age of the world, can make images to be worshiped; and so the Psalmist have been right when he compared the idols to the idol-makers: 'They that make them are like unto them.'"

EDWARD EVERETT HALE'S "SACRILEGE."

WHEN the Rev. Dr. Edward Everett Hale partook of the communion on the occasion of the recent service held in Trinity Church, Boston, commemorating the tenth anniversary of the death of Phillips Brooks, it was hardly expected that his action would arouse any special attention or comment. He has taken communion in the same church before, at the invitation of Bishop Brooks himself; and other prominent Unitarians, as is pointed out by the Boston *Christian Register* (Unit.), have been frequently admitted to the communion-table of the Protestant Episcopal Church. In view of these facts, a charge of "sacrilege" brought against Dr. Hale by the High-Church Episcopal organ, the Milwaukee *Living Church*, has created something of a sensation. *The Living Church* says, in part:

"Friday, January 23, was a notable day in Boston, because the tenth anniversary of the death of Bishop Phillips Brooks, observed by the bishops and clergy of Massachusetts, showed the depth and reality of the affection with which that bright and venerable name is cherished there. . . . But one thing jarred upon the harmonious seemliness of the occasion, with a note so false, so strident, as to make comment absolutely necessary. We are informed by credible eye-witnesses that the Rev. Dr. Edward Everett Hale, a well-known minister of the Unitarian denomination, advanced to the altar and received outwardly the Blessed Sacrament of the Body and Blood of Christ, the Bishop of Western Massachusetts administering the bread, and the Bishop of Maine the chalice. Dr. Hale is a *littérateur* of distinction, a true philanthropist, and a most engaging gentleman of blameless life, whose four-score years place him in the first rank of New England's citizens. But he is not a communicant of 'the Protestant Episcopal Church in the United States of America,' nor of any church in communion with that church; he is not 'confirmed or ready and desirous to be confirmed'; and, more than all, he openly denies the Deity of our blessed Lord and Savior Jesus Christ, whom Christian folk, ever since St. Thomas the Apostle, have worshiped as the Lord and their God. Bearing this in mind, we unhesitatingly avow that the act was sacrilege, and we deplore it inexpressibly.

"It is difficult to imagine why Dr. Hale should have wished to receive the Blessed Sacrament, since he would be prompt to disavow as 'stuff and nonsense' any doctrine which churchmen could receive concerning it. Why should one desire to 'show forth the Lord's death,' who does not acknowledge that death as the 'full, perfect, and sufficient sacrifice, oblation, and satisfaction for the sins of the whole world'? He can not have been ignorant of the law of the church; for, many years ago, a similar act on his part drew forth from the present Bishop of Vermont an admirably clear statement in severe reprobation of those who admitted Dr. Hale to the highest privilege of the Catholic religion. . . . . .

"We make no attempt to place responsibility for this most unhappy scandal. Bishop Vinton, the celebrant, was outside his own diocese, and indeed may not have recognized the person of Dr. Hale. The Bishop of Massachusetts was in another part of the chancel; and the rector, we learn, had no part in the service. But we should be false to the duty we owe the whole church, if we did not bear solemn record of the grief which fills the hearts of loyal churchmen at the knowledge of the dishonor done our Lord in the Sacrament of his love; and at the possibility of grave danger done, under the guise of a blessing, to the respected divine who, being outside his rightful environment, ought to have placed neither himself nor the officiating bishops in such a position."

Copyright, 1902, by Davis & Sanford, New York.

EDWARD EVERETT HALE.

His participation in a communion service at Trinity Church, Boston, has "shaken the religious world to its center."

This incident has aroused great interest in the secular, as in the religious, press. The Boston papers print interviews and letters reflecting every phase of thought on the subject under discussion. The Springfield *Republican* terms the charge made by *The Living Church* "one of the most astonishing pranks of ecclesiasticism." Miss Lilian Whiting, the well-known Boston author, herself a life-long Episcopalian, writes in the Boston *Budget*:

"There was a peculiar fitness and beauty in the presence of Dr. Hale, and his sympathetic uniting in the commemoration of the life and work of Bishop Brooks; and that a church journal representing, at best, but a minority of the Episcopal faith, could adversely criticize an ideally beautiful illustration of the true Christian fellowship that transcends all mere forms and sects, seems incredible in the present age. The journal in question calls itself *The Living Church*. It might far more accurately announce itself as *The Dead Church*, and, being dead, is thus deaf and blind to all the finer meanings of life."

The Boston *Universalist Leader* says:

"It ought not to shake the religious world to its center when Dr. Edward Everett Hale takes communion. But it has. One part is shaking with laughter and the other with cold, sacrilegious shivers! . . . We can but commend the strident note of *The Living Church*, if it really believes that sort of thing. If it is its conscientious conviction that, 'The clergy are "ministers and stewards of God's mysteries," and they are answerable for seeing that the table of the Lord is rightly fenced,' then it can do no less than protest, but we are sorry for it! We are sorry, too, that any one, however holy, should so far seem to violate the proprieties as to intrude in the holy of holies behind the fence! But we would not overlook in this small ecclesiastical incident the pernicious eagerness of the secular newspapers to 'work up' trouble for the church."

The Boston *Pilot* (Rom. Cath.) makes the following comment:

"To Dr. Hale this invitation could mean no more than courtesy and good nature; nor had he to do violence to any scruples on his part to accept it. In common with all Unitarians, he looks with lofty patronage, not unmixed with pity, on the various Protestant Christian bodies, regarding their internal dissensions as family troubles, not to be taken too seriously and of little moment in themselves, except as landmarks in the progress of each toward the freedom of Unitarianism. He does not believe in the divinity of Christ, nor in the communion as more than a testimony of human fraternity—the feast of the children of the All-Father, is probably as far as he would go in ascribing to it a religious character. Looking forward, reasonably enough, to the near future of consistent Protestantism, he finds no insincerity in participating in a religious rite which for so many of them already means so little. The indignation of *The Living Church*,

of Chicago—organ of the 'Catholic party,' apparently—is therefore absolutely thrown away upon him. . . . . .

"But those Episcopalians who believe that the divine Christ instituted the sacrament in which he gives himself for the daily food of true believers, should ask themselves—What authority did he institute to separate the true from the false? Was ever its need more evident than at this moment in the divided and subdivided house of Episcopalianism?"

Dr. Hale's reply to his critics is: "I received my invitation nineteen hundred years ago"—an "admirable answer," in the opinion of the New York *Independent*. The Unitarian *Christian Register* says: "Whether Unitarians can accept the letter and spirit of the Lord's Supper as administered by an Episcopal bishop is a matter for their own consciences to decide."

AUTHORSHIP OF THE FOURTH GOSPEL.

PROF. GEORGE PARK FISHER, of Yale University, has reissued, after twenty years, his "Grounds of Theistic and Christian Belief" in revised form with a great part rewritten. One of the most interesting chapters of the new book is that devoted to the authorship of the Fourth Gospel. His treatment of this question is regarded by Prof. Albert T. Swing, of Oberlin College, as the most able and satisfactory treatment anywhere to be found. "What Professor Fisher," he says, "has not presented in these pages, pro and con, on the subject, can be set down as of no special importance." The treatment of the subject reaches its high-water mark when the various hypotheses against the historical testimony are brushed aside and the author comes forward with his conviction of its genuineness on the score of its appeal as autobiography. Professor Fisher asserts that if the apostle really did not write the Gospel, it would be very difficult to escape the inference that the writer, whoever he might be, practised deceit, and deceit of a different sort from that practised by most pseudonymous writers. He adds:

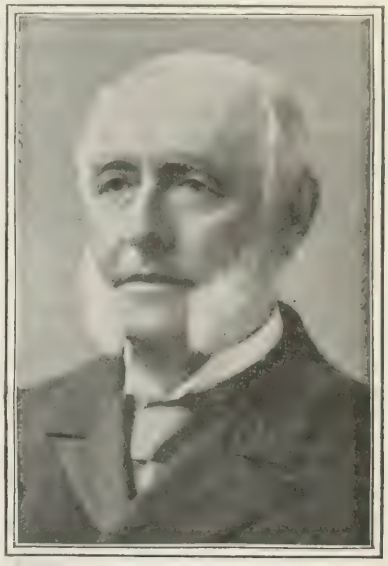
"There is none of that *naïveté* of the authors of this species of literature, which constitutes the sole apology that can be made for them. They do not set a trap for the reader. They do not in a sly way entice him to connect the book with its pretended author. They betray, as they feel, no hesitation in assuming his name. On the contrary, if the Apostle John was not the author, it is difficult to escape the conviction that an artful device is carried from the beginning to the end of the book. The writer not only pretends to be the apostle, but in order to succeed in this aim affects modesty. He puts himself side by side with Peter, leans on the breast of Jesus, goes to his sepulcher, stands before the cross, there to have the mother of the Lord committed to his charge; but, in order to mislead his readers more effectually, takes pains to avoid writing the name of John—except when he speaks of the Baptist, whose usual title, however, he suppresses—doing thus from cunning what John the apostle, being of the same name and a disciple of the Baptist, might do naturally."

Professor Fisher then turns from this line of speculative argument to the real evidences of autobiographic verity:

"The Gospel professes to tell the story of the origin and development of the author's personal faith in Jesus as the divine Son of God. It is the grounds of his own faith which he wishes to set forth, his purpose being to inspire others with the same faith, or to confirm them in it. After a short preface, a glowing avowal of the faith which had brought joy to his soul, he enters upon the story of its genesis and growth. Why not recount the very facts which were really the source of this faith in his heart? Why betake himself to fables? Did he imagine that the words and works of Christ, which had actually evoked faith in his own soul, required to be reenforced by action?

"The fact of the personal love of the author of the Gospel to Jesus appears irreconcilable with the supposition that the narrative is non-apostolic. It is evident that the author regards Jesus with a warm personal affection. Whom does he love? Is it an unreal person, the offspring of philosophical speculation? The person whom he loves is the historic Jesus. Of him he says, 'which we have seen with our eyes, which we have looked upon, and our hands have handled.' He is conscious that he had been specially an object of the love of Jesus—'the disciple whom Jesus loved.' To Jesus he is consciously united by the closest tie of personal friendship. Did the author picture to himself a character, and then, conceiving of him as an actual person who had said and done what imagination had attributed to him, concentrate on this ideal creation the heart's deepest love?

"Does not the tender simplicity which marks so many passages of the narrative stamp them with the seal of truth? The record of the tears of Jesus on witnessing the sorrow of Mary and her friends; the saying that, as death approached, having loved his disciples, 'he loved them to the end'; the pathetic words 'Behold thy mother,' 'Behold thy son,' which were spoken from the cross—is not the verity of these accounts evident of itself?"



GEORGE PARK FISHER, D.D., LL.D., Emeritus Professor of Ecclesiastical History in Yale University.

This method of viewing the Gospel is interesting in that it allies itself with the point of view often taken in testing examples of purely secular literature. In the following paragraph, however, the professor points out an element of distinction to be noted in such a view as applied to the Gospel of John:

"It is clear that, upon the supposition of the apostolic authorship of the fourth Gospel, a certain subjective element is perceptible in its contents. Imagine that an aged disciple, who has long been in the habit of musing on the doings and the sayings of Jesus, undertakes to set down his reminiscences. Might he not be spontaneously led to tell the tale in his own language? Would it be strange if it were to be tinged with a hue imparted by his own meditations? Should it even occasion surprise if, here and there, in his recalling of what Christ said, there were to mingle, without advertisement to the reader, an explanatory comment? This suggestion does not imply that the Gospel resembles even remotely that species of biography (or autobiography) which goes under the name of *Dichtung und Wahrheit*—wherein truth and poesy are of set purpose indistinguishably blended. We are only required to assume that the acts and words of the Master are steeped, rather than mechanically held, in the memory of the devoted disciple."

THE CHICAGO CONVENTION FOR RELIGIOUS AND MORAL EDUCATION.

THE daily press devoted but scant space to the great assembly of educators, pastors, and other Christian workers who recently met in Chicago, in accordance with plans formulated several months ago (see THE LITERARY DIGEST, December 27) to consider the problems of religious and moral education. And yet, observes the Boston *Congregationalist*, "probably no gathering of men of equal influence has ever before been held in this country for such a purpose." The New York *Outlook* adds:

"In the number and representative character of its attendance it surprised not only all who responded to the call for it, but quite as much those who worked so long and hard to assure its success. Not less than three thousand people faced its chairman as he opened the first session in the great auditorium, and each of its five succeeding business sessions averaged an attendance of fully a thousand."

Prior to the sessions of the convention, its organizers, including President Harper, of Chicago University, and Prof. Frank

K. Sanders, dean of Yale Divinity School, were called upon to meet not a little hostile criticism in the religious press. Some critics of the movement were disposed to think that the conference was designed to exploit the higher criticism of the Bible and to force radical doctrines on the churches; while still others asserted that the conference aimed to usurp the place of the time-honoured International Sunday-School Association. The outcome, however, according to the view of the New York *Christian Advocate* (Meth. Episc.), "showed conclusively that the promoters of the movement had neither thought in mind, and that their sole object was to compel attention to two important truths: first, that there was an imperative need for a widening of the popular conception of religious instruction; and an equally imperative need for the improvement of methods in our Biblical instruction."

The convention was attended by nearly four hundred delegates, representing twenty-three States and twelve denominations. President James B. Angell, of the University of Michigan, opened the conference, and among those who took part in its subsequent discussions may be mentioned: Dr. Francis E. Clark, president of the United Society of Christian Endeavor; Prof. George A. Coe, of Northwestern University; President Henry Churchill King, of Oberlin College; President Frank W. Gunsaulus, of the Armour Institute, Chicago; President Little, of Garret Biblical Institute; President Bashford, of Ohio Wesleyan University; President Rhees, of the University of Rochester; Professor Dewey, of the University of Chicago; and Professor Starbuck, of Stanford University. The most important action of the convention was taken on the third day, when a new national organization, "The Religious Education Association," was formally launched. Its scope is thus described by the New York *Outlook*:

"The constitution of the National Educational Association was adopted bodily, with only such changes as adapt it to the specific purposes of 'The Religious Educational Association.' The admirable balance of this well-adjusted and thoroughly representative form of organization, it was thought by all, would prevent any possibility of the use or abuse of the new association by any faction, section of country, school of thought, sectarian influence, or even by direction in the exclusive interest of any single phase of its own work. It will undertake 'to render service in unifying the efforts of the different agencies already engaged in various lines of work; in correlating the forces already established, to the end that these agencies may accomplish even larger results,' the acceptance of such service being, of course, wholly voluntary and in no case involving the giving up of independence. By resolution it was declared not to be the purpose 'to publish a series of Sunday-school lessons or to compete with existing Sunday-school or other organizations, but rather to advance religious and moral education through such agencies.' The type of relationship between the new association and any of the other agencies for similar work was fixed as wholly cooperative by the action of the 'Council of Seventy,' which called the convention on behalf of the Institute of Sacred Literature. Before it convened, this Council of Seventy formally resolved to have no other relation to the new organization than might subsist between it and any cooperating body. Independence of any and all publishing interests was emphatically stated to be the settled policy of the Association. Conspicuous among the speakers and officers of the convention were several prominent members of the International Sunday-School Association. The difference between the ideals, functions, and methods of the two organizations was most distinctly drawn and fraternally discussed by representatives of both. The election of Dean Frank K. Sanders, of Yale Divinity School, as president of the Association, and Nicholas Murray Butler, of Columbia University, as vice-president, together with the choice of widely differing but very representative men to the other offices and the council, guarantees the catholicity and effectiveness of this timely and forceful movement in American life and education."

The Chicago *Standard* (Baptist) comments:

"A new organization was established last week in Chicago which enters a totally new field. That field is the coordination and stimulation of all agencies now occupied in the religious and moral training of the young. We have had many societies that have attempted to federate religious forces in one direction or another—the Evangelical Alliance, the Young Men's Christian Association, the Christian Endeavor movement, as well as the International Sunday-School Association and others—and they have all had their difficulties in promoting actual cooperation, as distinguished from nominal fellowship. It is too much to expect that the Religious Education Association will get all the machinery of religious education belted and geared together and running smoothly all at once. Nobody expects that. But there is reason to hope that after the preliminary period of adjustment is over, with its inevitable squeaks and occasional breakdowns, there will be genuine and rapid progress."

The St. Louis *Christian Evangelist* says:

"The convention may well mark the beginning of a new era of religious progress. We say the *beginning* because it is thoroughly understood that nothing of great importance is to be accomplished suddenly, but that it will take time to bring about the various reforms needed in our present educational ideals and methods. The spirit of unity that marked the utterances and proceedings of the convention was very beautiful and very inspiring to those of us who are looking and longing for the fulfilment of Christ's prayer for the unity of his disciples. It remains now for the new organization—the Religious Education Association—to vindicate the wisdom of the movement by the ability and single-hearted devotion it shall manifest in carrying forward the great work for which it was brought into existence."

The Philadelphia *Presbyterian*, on the other hand, is entirely out of sympathy with the work of the convention, and prints the following:

"One who attended the recent Chicago convention writes:

"'One thing which grows upon me is the one-sidedness of this convention, despite its claims to represent Protestantism. There was no paper on the history of religious education; none on the other side of the critical questions concerning the Bible; none on Protestant doctrine as related to the new psychology, etc. The most ultra views were set forth and the Protestant churches were expected to accept them as representative without demur.'

"This is damaging, but just, criticism. The whole affair is a set-up job on the Christian church. It is a scheme in the interest of critical scholarship and of liberal thinking, and the church will find it out in due season to her bitter cost if she lends it countenance."

RELIGIOUS NOTES.

THE first number of a monthly *Review of Catholic Pedagogy*, edited by the Rev. Thomas E. Judge, has been published in Chicago. Some of the most prominent American and European educators, among them members of the Roman Catholic hierarchy who have had long experience in teaching, have promised to contribute to the magazine.

AN appeal has been issued by "The Central Committee of the Twentieth Century National Gospel Campaign"—a national committee representing the leading denominations—urging that all churches unite in the observance of Lent. It is suggested that noon and evening services be held for the purpose of promoting a spiritual quickening among the churches; and that special prayer be made "for a return to absolute faith in the Bible as the inspired, authoritative word of God."

A BALTIMORE firm has been sending out a circular to ministers offering to sell ready-made sermons, written by "an earnest and able theological student in England." The incident evokes both surprise and indignation in the religious press. "This is an offense against ministers of no small proportions," says the St. Louis *Herald and Presbyter*: "an enemy, seeing this circular, might imagine that there is some basis for such a proposition. We know of no minister in our Presbyterian Church who would see anything attractive in such an offer, and certainly of no one who would not see it to be an insult to both honor and intelligence."

GENERAL BOOTH'S last meetings in New York recall something of the old spirit of religious evangelism. It is estimated that about 12,000 men and women attended the services held in the Academy of Music on Sunday, March 1. According to the account in the New York *Times*: "Twenty-eight converts marched up to the 'mercy seat' at the end of the morning service, in response to the exhortations of General Booth and Colonel Lawley. In the afternoon there were thirty-six and in the evening many more. Beggars sat side by side with handsomely gowned women in the auditorium. Rags brushed against silks as the converts knelt along the row of plain oak chairs called the 'mercy seat.' . . . Each new convert was led across the stage into the registration room behind the scenes. There he would write down his name—not as a prospective member of the Army, but as one who had been led to promise a change of life through General Booth's efforts."

FOREIGN TOPICS.

LANDLORD AND TENANT IN IRELAND.

A SETTLEMENT of Ireland's great land difficulty is in sight, if we may trust Dublin and London opinion. Last autumn there was formed a body representing Irish landlords and Irish tenants, and this body was styled the Irish Land Conference. It is now some weeks since it issued its report, embodying a series of proposals for buying out the landlords on the instalment plan at a cost varyingly estimated at from $150,000,000 to $250,000,000. Sir Wemyss Reid thus summarizes the scheme in *The Nineteenth Century and After* (London):

"The recommendations of the conference are that the holdings should be bought wherever possible by mutual agreement between owners and tenants, and, where that is impossible, by compulsory state purchase; that the landlords should be bought out at a figure which will give them their present net income from their estates, mansion-houses, demesnes, and sporting rights being reserved to them, and that the tenants should be able to obtain full ownership after a certain term of years by the annual payment of a sum of money representing a reduction on their present rents of not less than fifteen and not more than twenty-five per cent. The state is to be called upon to guarantee the payment to the landlords, and to provide whatever sum may be required to make up the difference between the payments due to the owners and the contributions of the tenants. It is not surprising that such a scheme as this should have found favor in the eyes of those for whose benefit it is intended. In what light it will be viewed by the British taxpayer when its full significance and cost are explained to him remains to be seen."

GEORGE WYNDHAM.
Irish voice of the British Ministry, who will be called upon to "steer" the coming land bill.

The mutually conciliatory attitude of both landlords and tenants is the grand fact in the situation, points out *The Daily News* (London), which paints a very rosy picture in these words:

"Not only have the landlords consented to discuss terms, but they have consented to discuss them with Irish members of Parliament as the natural representatives of the tenants; a proceeding which was fiercely criticized by the enemies of the scheme. There is no need to reiterate our arguments in favor of that representation. . . . The dual ownership is condemned, and the replacing of it by an 'occupying proprietary' is described as the only satisfactory settlement. If Mr. Wyndham's Irish land bill is to be the statesmanlike measure which the friends of Ireland hope for, here is a sound basis for him to go upon. The direct intervention of the state in the matter of purchase is not countenanced; the settlement, it is recommended, should, generally speaking, be left between owner and occupier. A just price is declared to be a thing necessary in the general interest of the country, and a basis for arriving at it is agreed upon; and it is here, of course, that the aid of the state is invoked as the guarantor of the landlord's rights, as it is further called upon to assist the tenant with something 'beyond the use of its credit' in cases where this can reasonably be done. The report insists that any project for the solution of the land question must be accompanied by a fair adjustment of the evicted tenants' difficulty; and this is a point that must be kept well in the foreground."

But this optimistic tone was dropped by *The Daily News* when it found that the scheme would cost a lot of money. This caused *The Freeman's Journal* (Dublin) to say:

"It might be imagined that Ireland was asking fifty or a hundred millions of a free gift across the counter for the transaction. 'The British people,' says *The Daily News*, 'would pay almost anything to be quit of the Irish land question; but there are some sums which at the present moment they can not pay. The war has stopped that. Twenty years ago, as Sir Henry [Campbell-Bannerman, the Liberal leader] said, it was very different.' Apparently the Liberal journal has not quite realized that the British people are not to be asked to pay anything; that what is sought for is permission to use Irish credit and Irish land as the quite sufficient security for a settlement absolutely necessary to Irish industrial progress, and to facilitate the settlement by funds obtained from the retrenchment on the present criminal waste of Irish taxation."

Notwithstanding the harmony between Irish Home Rulers and Irish landlords on the basis of this new settlement scheme, there are dissident voices. *The United Irishman* (Dublin) says:

"The result of the land conference is a greater victory than Irish landlordism hoped for. Mr. William O'Brien, Mr. John Redmond, Mr. Timothy Harrington, and Mr. T. W. Russell, have agreed to mulct the tenant-farmers of Ireland to the extent of thirty-three years' purchase to oblige Lord Dunraven and Lord Mayo. Mr. T. W. Russell claims to be the only man who fought up for the tenants, and he alleges that Mr. O'Brien, on the contrary, was eager to placate. Whether that be so or not, does not concern us. What the tenant-farmers of Ireland, who pin their faith to Mr. O'Brien, who, at one graceful bound, has jumped from eighteen years' purchase to thirty-three, have got to do now is to open their eyes to the fullest extent and refuse to be cozened into agreeing to this monstrous proposal."

THE SECRET ENEMY OF THE HAGUE TRIBUNAL.

THE path of The Hague court of arbitration has not been one of roses for some months past. Recent events have brought out clearly that a certain influence is at work to discredit it in the eyes of the world and to prevent any reference to it of international differences of importance. The spirit behind this hostile movement has defined itself in the European editorial mind as of Teutonic origin. When the Venezuelan diplomatic fencing was energetic, there appeared in the *Journal des Débats* (Paris) an oracular utterance calling attention to the unwillingness of an unnamed Power to have anything to do with The Hague tribunal. This unwillingness was traced to an objection to arbitration as such. Arbitration as a principle would interfere with imperialist ambitions. This consideration was said to have operated to the detriment of The Hague court at more than one period of its history. The Paris paper made further remarks in the same general strain, and hinted that other Powers were being influenced adversely. The subject was referred to more than once. This, among other things, was said by the observer on the banks of the Seine:

"One can not but regret the tergiversations to which the Powers have resorted in their efforts to avoid The Hague tribunal. These tergiversations have given rise to unnecessary complications and have aroused international prejudices not only with immediate reference to the Venezuelan question itself. As far as the future of international arbitration is concerned, it is not reassuring to observe that certain Powers resort only in the last extremity, as if urged and compelled, to the institution designed to make a political reality of the principle of arbitration."

These Parisian pronouncements proved exceedingly distasteful to the *Norddeutsche Zeitung* (Berlin), an organ of the German Government. It repudiated the suggestion that the authori-

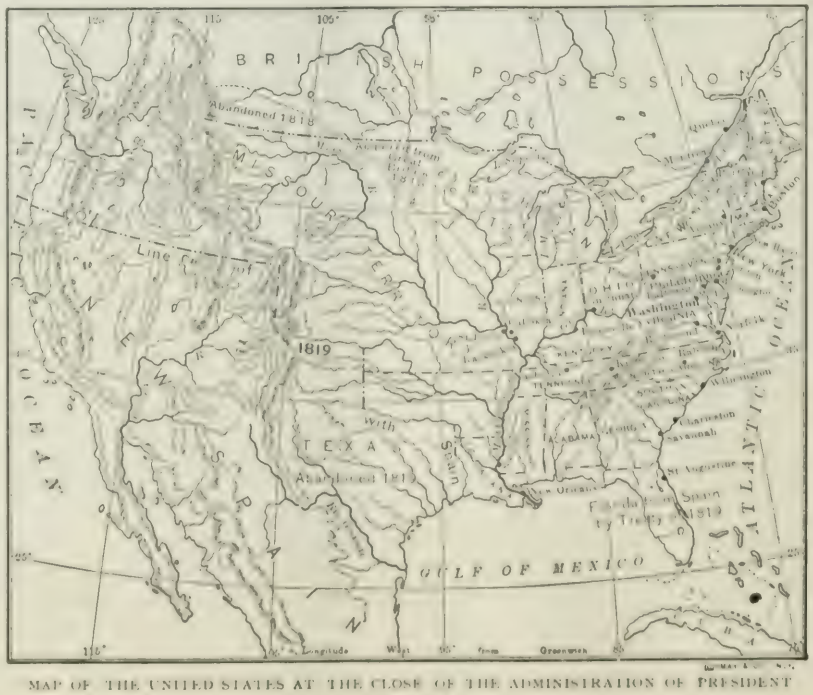
ties in Berlin are opposed to The Hague tribunal. The intimation that Germany has any secret connection with the enemies of the court of arbitration is pronounced a calumny. In the face of this, the London *Times* permits its Paris correspondent to reiterate the charges against Germany in an aggravated form, as follows:

"The moment may not be very far off when it will be possible to set forth the cause of Germany's systematic opposition to the idea of The Hague court. Suffice it to say that there are serious considerations of general policy affecting the realization of well-known German aspirations that inspire Germany with profound reluctance to contribute toward giving The Hague and Holland in general anything approaching an international *status*. There may also be an instinctive aversion on the part of the German Emperor to have his hands tied by anything in the shape of an international conscience. What would happen in all probability if The Hague court were to acquire prestige by the settlement of one or two important cases would be that the people of all nations would frequently look to that tribunal for the redress of their grievances, and not always to the sagacity of their own rulers. In any case it is a fact beyond dispute that Germany is an inveterate opponent of the settlement of international difficulties by The Hague court."—*Translations made for* THE LITERARY DIGEST.

CAPTAIN MAHAN ON DEFINITION OF THE MONROE DOCTRINE.

HAMLET'S madness was never more of a mystery to his relatives than the Monroe Doctrine seems to be to the intellect of Europe. The United States is besought by organs of an official character in Paris, Vienna, and Berlin to "define" the Doctrine. In the absence of any definition Europe professes to be at sea, while English papers insist that America fails to perceive that the Monroe Doctrine entails "responsibility" for South America—of a financial kind, presumably. Now Captain A. T. Mahan, the famous author of "The Influence of Sea Power upon History," comes forward in *The National Review* (London) to assert that definition of the Monroe Doctrine is out of the question. "To cage its free spirit within the bars of a definition," he assures the world, he "certainly will not," and he does not see how his country can, either. The brilliant and distinguished captain thus enlarges:

"Nor can there be finality of definition, antecedent to some national announcement, formally complete, which it is to be hoped will never be framed; but which, if it were, would doubtless remain liable to contrary interpretations, sharing therein a fate from which neither the enactments of legislatures nor the bull of a Pope can claim exemption. The virtue of the Monroe Doctrine, without which it would die deservedly, is that, through its correspondence with the national necessities of the United States, it possesses an inherent principle of life, which adapts itself with the flexibility of a growing plant to the successive conditions it encounters. One of these conditions, of course, is the growing strength of the nation itself. As Dr. Johnson ungraciously said of taxing Americans for the first time, 'We do not put a calf to the plow, we wait till he is an ox.'"



MAP OF THE UNITED STATES AT THE CLOSE OF THE ADMINISTRATION OF PRESIDENT MONROE.

As Captain Mahan develops his theme, we perceive that the Monroe Doctrine, like everything else endowed with life, has an organic growth of its own:

"The Monroe Doctrine has not obtained the full legislative sanction even of the country of its origin; and its present development there rests upon successive utterances of persons officially competent to define, but not of full authority to commit the nation to their particular expressions. So, too, international acquiescence in the position now taken has been a work of time, nor can there be asserted for it the final ratification of international agreement. The Monroe Doctrine remains a policy, not a law, either municipal or international; but it has advanced in scope and in acceptance. The one progress as the other has been the result of growing strength; strength of numbers and of resources. Taken with position, these factors constitute national power as they do military advantage, which in the last analysis may always be resolved into two elements, force and position."

The captain lays stress upon these two factors of American geographical position and American strength. The Monroe Doctrine has no other legs to stand on:

"In the conjunction of these two factors is to be found the birth of the Monroe Doctrine and its development up to the present time. It is a product of national interest, involved in position, and of national power dependent upon population and resources. These are the permanent factors of the Monroe Doctrine; and it can not be too strongly realized by Americans that the permanence of the Doctrine itself, as a matter of international consideration, depends upon the maintenance of both factors. To this serious truth record is borne by history, the potent mother of national warning and national encouragement. That the Doctrine at its first enunciation should not at once have obtained either assent or influence, even in its most limited expression, was entirely natural. Altho not without an antecedent history of conception and occasional utterance by American statesmen, its moment of birth was the announcement by Monroe; and it had then all the weakness of the new-born."

There is a good deal of fault-finding with this, and also with the Captain's statement that the Monroe Doctrine does not entail upon the United States any responsibility in South America other than the prevention of territorial acquisition there by a European power. Says *The Westminster Gazette* (London):

"Captain Mahan declares that the United States can not adopt a 'quasi-suzerainty' in America, and that the true correlative of the Monroe Doctrine is abstinence from interference in questions territorially European. We confess not to following this, since we feel sure that the Monroe Doctrine can not be made to mean that the United States is to have no responsibility for the Powers and states over whom she casts her cloak."

The assurance of Captain Mahan that the Monroe Doctrine is practically incapable of definition inspires in

the London *Times* a whole column of editorial regret, from which we extract this specimen:

"The Monroe Doctrine has, unfortunately, never been defined, tho it meets us at every point in dealing with transatlantic politics. Captain Mahan practically holds that it is incapable of definition, while, at the same time, he is clear that it must be regarded as a cornerstone of American policy. . . . Perhaps it is technically incapable of definition. But the policy it represents is perfectly intelligible and is well understood by all those who have to reckon with the Government at Washington. The United States will not acquiesce in any assault on the independence or territorial integrity of any other American state, but neither will they countenance by their support any shirking on the part of such a community of its international responsibility. In that sense the doctrine is heartily accepted here; but we regret that Captain Mahan denies the corollary that the Power which holds a shield over the weaker states is under an obligation to compel them to observe their duties in regard to others."

GENERAL MATOS, REVOLUTIONIST.

VENEZUELA merged herself so completely in Mr. Bowen recently that the world quite overlooked the existence of General Matos. President Castro is said to be far more concerned about General Matos than he is regarding Great Britain, Emperor William, The Hague court, and the series of indemnities now stretching out like the endless line of kings in Macbeth's vision. For General Matos, the revolutionist, is what is known in pugilistic circles as a "stayer." President Castro's friends denounce Matos as a tool in Germany's hands whose only aim is to pawn Venezuela to the bankers in Berlin. His revolution has been languishing of late, but like truth crushed to earth it will rise again. That much may be gathered from the *Revue* (Paris), which imparts this information:

"At the name of Matos, sworn detractors of the Spanish-American republics will not fail to say: Who is this adventurer, or this hero? Is he a bandit like Ludovico Sforza; a plowman like Cincinnatus? What are his motives? What aims does he pursue? Matos is neither a countryman devoted to agriculture nor a city lounger seeking the surest means of attaining the Presidency of the republic. Matos is a simple citizen, a business man who held an important position in Caracas and the possessor of one of the largest fortunes in Venezuela. His enemies accuse him of being devoted to the interests of British and German financiers. They say he derived from them the funds to maintain his struggle with President Castro. His friends protest energetically against this malicious insinuation, affirming that he defrays the expenses of the war out of his own private means."

Matos, we read further, was finance minister under three Venezuelan presidents. He was also a candidate for the Presidency once. During his incumbency of the financial post he established the solvency of his country and he voluntarily quitted office. "Matos is not therefore, it is plain, an adventurer. He has antecedents which attest his merit. He is a man of resource":

"The friends of Matos—and they are numerous—see in him the man for the emergency. They think he alone is in a position to restore the former prosperity of Venezuela. It being an economic ill from which the country suffers, its destinies should be entrusted to a financier and an economist like Matos. In any event he remains Castro's resolute foe. . . . As for the aim he pursues, it is of the noblest. Restore the country, free it from the robbers and men of violence now rending it, impart new energy to commerce, agriculture, and industry, place the republic in a position to meet its foreign and domestic obligations by a rigorous administration of justice, by establishing peace, order, and increased revenue—such is the purpose of Matos."

Recent events, including the blockade, have favored the Matos cause, says this authority, which hopes that Castro may yet be driven from power. And the *Revue des Deux Mondes* (Paris), which deals with the subject at length, anticipates a formidable revival of the revolutionary movement, but it hints at "the development of a mysterious plan" behind the recent show of force in Venezuelan waters. It quotes charges to the effect that a well-known German banking-house is aiding the revolutionary cause with funds, while a revolutionary committee is active in London and makes the British island of Trinidad a base of operations. We quote:

"What is there to be surprised at, asks President Castro, if the revolution is still unsubdued? It has, he says, secret sympathizers, even open ones, in certain European Powers, because its chief, Matos, dared to promise what he would never have promised himself: the establishment of foreign control over the national finances. And these sympathies were not passive or Platonic."

Attention is also called to the fact that even if General Matos be driven from the field his supporters have a leader ready to succeed him, and future developments may further complicate a situation already too complicated.—*Translations made for* THE LITERARY DIGEST.

THE PERILS OF THE FRENCH MINISTRY.

IT is well known that the present anti-Clerical ministry of M. Combes retains power in France only through a temporary combination of the more advanced groups in the chamber of deputies. This combination is now threatened by the inability of the groups to agree regarding the separation of church and state, the question of dogmatic instruction, the regulation by law of the religious orders, and the suppression of the embassy at the Vatican. Debates on these allied topics were proceeding in a way that developed discord, when Premier Combes made a speech that plunged the situation into still greater confusion. The subject of his remarks was the necessity of religious instruction. While announcing himself favorable to the separation of church and state in theory, the Premier said that the immediate institution of such a reform would greatly embarrass the republic, because, in his opinion "religious ideas are still necessary for the masses." He announced that he was a "spiritualized philosopher." The people "can not do without faith. Reason alone can not guide man through the perplexities of life. We can not and should not disturb the people in those habits of faith implanted in them by fourteen hundred years of Catholic training." These words created confusion among the groups that support the Premier. The radical organs denounced M. Combes, and his anti-Clericalism was gravely questioned. Some days later, accordingly, the Premier returned to the subject. He said he had been misunderstood, that his speech was left incomplete, and that the sense of his utterance had been perverted. He never meant to say that morals, as taught by a laity, should rest upon a foundation of dogma. On the contrary, he eulogized "lay moral teaching," which he said was "based upon eternal ideas of justice and right." It seems generally admitted that the incident might have led to serious consequences for the ministry had not the Socialist leader Jaurès come to the support of the Premier. The *Indépendance Belge* (Brussels), an anti-Clerical Liberal paper, comments pessimistically upon the episode:

"It is clear that it would have been better had the Premier made his explanations when he delivered his remarkable address, which the radicals disapproved of, whereas the Conservatives applauded it. The misunderstanding would still have been decided, but as it is we do not know if we can credit the absolute sincerity of M. Combes. It should be noted that the ideas expressed by M. Combes were discussed in the cabinet, that many members of the ministry protested energetically, and that the

radical press debated at length whether it would be best to continue supporting the Government until the question of the religious orders is disposed of, or whether it should not be abandoned at once. All this naturally impressed M. Combes, who saw the necessity of saving his ministry, since its task is unfinished, and who therefore retracted what he had said. It was very generous on his part, for many politicians would not have consented to a retraction of this kind. We fear, however, that this retraction will not efface the impression made by the incident and that the cleavage produced in the combination of anti-Clerical parties will grow greater. Twice the Conservative elements voted with the Government, while the radicals voted against it. Twice, in the matter of the Vatican embassy, and after the fine speech of M. Jaurès, the majority split, the greater part opposing the ministry's view, while the moderate fraction voted with the Conservatives to save the cabinet. Such demonstrations are significant, and it would be idle to suppose that M. Combes, in making amends, has repaired the evil."

It would be folly to turn the ministry out now, contends the *Petite République* (Paris), "on account of some philosophical opinions," and as this paper is the organ of M. Jaurès himself, it speaks with authority. The Paris sheet says the fall of the ministry would undo all the anti-Clerical labors of the years of radical combination. The *Radical* (Paris) speaks of "the patriotism of Jaurès," and the *Lanterne* (Paris) says Jaurès has "unmasked" the enemies of the state. The *Aurore* (Paris) says the difficulties have no significance because the parties that voted together to settle them are antagonistic. The *République Française* (Paris) thinks the situation makes Jaurès all powerful, while the *Gaulois* (Paris) remarks sarcastically that fine words can not save France. The *Temps* (Paris) does not wish anti-Clericalism pushed too far. The French press in general suspects that some secret pact exists between the ministry and the Vatican. This agreement, if we are to believe the *Intransigéant* (Paris) is that the Vatican will not interfere to protect the religious orders, while, on the other hand, the ministry will not suppress the French embassy at the Vatican and will not bring about a separation of church and state. The *Journal des Débats* (Paris), which affects impartiality as between Clericals and anti-Clericals, heaps ridicule upon M. Combes for blundering into abstract philosophical remarks that almost wrecked his ministry, and it heaps greater ridicule upon M. Jaurès for the style of his defense. We read:

"The unexpected speech of M. Combes has thrown his followers into alarm and confusion. The more radical roundly condemn the tolerant and religious speech made by the Premier. For them there can be no equivocation. M. Combes has precipitated a doctrinal conflict that can not be evaded. He stated his mind clearly. The *Radical* invites the majority to state their own with equal clearness, and this amounts, as might be expected, to a repudiation of the ministerial utterance. M. Jaurès is not so severe. He wants no conflict, no equivocation, not even a misunderstanding. He dreams of a reconciliation of the fractions of the majority at the expense of the religious orders and to the glory of Combes. This is no easy matter when one remembers that certain radical groups are in a very bad temper and are scowling at the spiritualized effusions of the Premier."

But M. Jaurès is a man of infinite resource, proceeds this authority, and he has used all his mental astuteness and all the subtlety of his logic to prove that Mr. Combes is innocent. Thus:

"No doubt M. Combes spoke, and dexterous as is M. Jaurès he did not pretend to demonstrate that the Premier said nothing. But what does saying anything amount to? Nothing or almost nothing. Speech is a light, uncertain, and ephemeral thing. He is foolish who depends upon it. It is affecting to observe M. Jaurès thus depreciate language, of which nevertheless he is a master. That is modesty. It is also the fruit of his ripe experience. M. Jaurès knows better than any one what words amount to, and when he proclaims that too much importance should not be attached to them we must believe him."—*Translations made for* THE LITERARY DIGEST.

THE PACIFICATION OF MADAGASCAR.

STUDENTS of the situation in Madagascar can not fail to be impressed by certain of its resemblances to the situation in the Philippines. "The pacification of Madagascar," we read in the accurate *Journal des Débats* (Paris), "is an accomplished fact." The vast and vaunted island was officially proclaimed a French colony in 1896, a distinguished officer, General Galliani, being then sent to make the proclamation a reality. He seems to have succeeded brilliantly. The native races, notably the Hovas, are contentedly accepting French supremacy to-day, but there are warlike tribes in the south and west of Madagascar who do not know when they are pacified. We quote the Paris paper:

"Their only occupation in the line of industry is cattle-stealing. For generations it has been their custom to raid villages and capture herds. Their enterprise in this direction is somewhat less audacious now. But encounters of a more or less serious kind take place in the valleys, and the frays have led to loss of life."

These untamed natives are pursued by French troops, but victory has not invariably been on the side of the Europeans. Yet this state of affairs is exceptional, and Western civilization has made Madagascar practically its own. Ample evidence to this effect is supplied in an article in the *Nouvelle Revue* (Paris) from the pen of P. B. Gheusi on "the work of General Galliani in Madagascar." We learn from it that a long and well-equipped railroad was opened last October, highways have been extended for miles into the interior and rendered safe for travel, public works have been equipped and maintained. Our authority thus summarizes the task to be done:

"From the native point of view, the chief features of the program were abolition of slavery and of corporal punishments, abolition of caste and feudalism, establishment of private property and the recognition of public rights, the creation of representative bodies in native communities in place of the authority of tribal chiefs, organization of an educational system, creation of various bodies of native officials, institution of citizenship, marriage laws, and finally a medical service, which exists to-day in a state of perfection unknown to any other of our colonies and which extends throughout every province of the island. It has greatly improved the sanitary situation in Madagascar. From the European point of view there was an equally important work of organization to be done—the division of the country into provinces, the establishment and administration of government departments, justice, finance, posts and telegraphs, agriculture, forestry, and the like."

All these things and more were taken in hand by General Galliani with a success that wins him golden praises from the writer of the article quoted. The greatest difficulty was experienced in getting the natives to accept the family institution, the wilder tribes particularly resisting it. But the work of education in this direction has not been in vain, and monogamy is being gradually accepted as the law of the land. Another very important matter was the rumored presence of gold in the soil, a point on which the *Revue Coloniale* (Paris) says:

"The precious metal exists in all the valleys of the island. It has even been contended that Madagascar is an immense goldfield. But, with the exception of two or three mineral centers, the quantity of metal per cubic foot of earth or alluvial soil is small and pays only the pan-worker. Therefore it is useless to seek gold in Madagascar as a commercial venture. It has been said that the auriferous rocks of Madagascar are similar to those of the Transvaal. This opinion was based on the proximity of the two regions, which are separated only by the Mozambique Channel. This opinion, however, is untenable. The auriferous conglomerates of the Transvaal are located in Devonian and Silurian layers. . . . The ores of Madagascar, on the contrary, are primitive rocks, granite, gneiss, and mica-schist. In other words, the quartz of the primitive granitoid rocks of Madagascar is aurigenous, while the quartz of the Siluro-Devonian rocks of the Transvaal is auriferous."—*Translations made for* THE LITERARY DIGEST.

NOTABLE BOOKS OF THE DAY.

THE EPIC OF THE WHEAT.

THE PIT. A STORY OF CHICAGO. By Frank Norris. Cloth, 5¼ x 8⅛ in., 421 pp. Price, $1.50. Doubleday, Page & Co.

IT is difficult to regard this work except through a sort of hallowing mist that the author's untimely death has cast about it. Yet the work is in no need of any extraneous influence to make a lasting impression. The conception is a strong one and the workmanship is stamped with sincerity on every page. Mr. Norris shows the influence of Zola and Howells, and his methods are those of the realists; but he has not felt compelled to limit himself to petty events and drearisome, commonplace characters. He was not afraid of strong dramatic situations, and in "The Pit," as well as in "The Octopus," there are scenes that remind one of Victor Hugo in his great passages.

FRANK NORRIS.

As in "The Octopus," the Wheat itself is the *deus ex machina*. It was the Wheat that conquered the railway, "the octopus," and finally wreaked vengeance upon S. Behrman; and it is the Wheat that breaks down Jadwin in the flush of his vast success in the Chicago wheat-pit. What human power had failed to do, this mighty tide flowing from the farms of the West accomplished, and one sees in this tide a force like that of gravitation itself, and as ineluctable as fate. As one feels in the old Greek tragedies the implacable power of the gods back of human passions and making mock of human efforts, so one feels in this work the vast resources of nature as typified in the Wheat, back of the machinations of man and ready when the fulness of time has come to brush aside all such petty things as railroad corporations and millionaire speculators. It is a true epic.

The first half of the story moves slowly, and to most novel-readers will prove disappointing. Laura Dearborn and her three lovers are the principal characters here, and their relations to one another are interesting, but not absorbingly so. The best parts of this section of the story are in the nature of incidents, such as Laura's first night at the opera and the rehearsal for private theatricals at the Cresslers, and the conversation between Laura's sister Page, just budding into womanhood, and her first lover, Landry Court. But the real power of the author is developed after the marriage of Laura and Jadwin, when "The Pit" begins to drag him into its maelstrom of speculation, when he begins to neglect her, and she, piqued and outraged, almost throws herself into irretrievable ruin with an old lover, halting, however, on the very brink. Jadwin's stupendous operations on 'change, the fights between the bulls and bears, are a sort of modernized "Iliad," and, like the ancient tale, thrill with personal encounters, until Jadwin, overturning all opposition, is himself overwhelmed by a power more than human. Crushed, but not destroyed, he returns to sanity, to health, and to domestic joy, and the end is a happy, tho pathetic, one. It is one of the strongest works of fiction produced in America in recent years.

A CASE OF FATAL GENIUS.

THE JOURNAL OF ARTHUR STIRLING. Cloth, 5 x 7½ in., 356 pp. Price, $1.50. D. Appleton & Co.

THE case of a poet whose delicate wings are shattered by friction with the world, and who consigns a brain still teeming with unuttered fancies to the extinction of an early grave, is not absolutely unknown in the annals of literature. But it is most unusual that one of these exotic creatures, foredoomed to be broken on the wheel of life, should leave a florid and carefully prepared statement of his case, such as this "Journal of Arthur Stirling" purports to be.

Briefly, Stirling is represented to us a youth consumed with a frenzy for expressing himself in verse, which enabled him to endure no end of hardship in order to write a poem called "The Captive." He succeeds in doing so by accepting such lowly employments as cable-car conductor, wholesale paper vender, waiter in cheap restaurants, and shoveler of snow. He does not submit to these with very good grace, but it is his merit that he could put up with them even doggedly. When ten publishers in succession "decline with (or without) thanks" "The Captive," Stirling declared that he would drown himself if the eleventh followed such Bœotic example. The eleventh did, and Stirling jumped into the Hudson with a large dumb-bell attached to his person.

That is, "*Did* he?" One can not be too sure that there ever was any "Arthur Stirling" outside of the brain of the kindly "S" who edits his memoirs. It makes a difference, whether he is a myth or not, in estimating his story. If he lived the life the "Journal" sets forth, it is fearfully sad. But if, instead of being "a human document," it is only a somewhat morbid literary creation, one will let it pass with much tranquillity.

The book is divided into three parts: "Writing a Poem," "Seeking a Publisher," and "The End." Each is as harrowing as possible, and the sufferings of the poor youth are all the more pathetic to the reader because he can not believe in Stirling's "genius."

But nevertheless, there is something heartrending about the "Journal." However fictitious the character, many of the phases of misery which he is represented as undergoing have been undergone by many a young man who has practised literature as a profession. Many of his callow, dogmatic utterances are not calculated to win sympathy or assent. He is so cocksure of some things which even great philosophers ponder upon. After he has decided on and "billed" his coming suicide, here are some of his intemperate remarks in regard to it:

"When I was young they taught me to be orthodox. And I see them stare at me now in horror. 'Suicide!' they gasp. 'Suicide!' Yes. Why not? Am I not the lord of my own life, to end it, as well as to live it? And the law! Prate not of laws. I know of no laws, either of man or God; my law is the right and my holy will.

"And the punishment! Well, and if your hell be a reality, why, it is my home—it is the home of all true men. The sublime duty of being damned is ever my reply to theological impertinences."

This is very puerile and bumptious, and quite qualifies Stirling for entrance into the Mary McLane class. Mary panted for the Devil.

A TALE OF THE SUDAN.

THE FOUR FEATHERS. By A. E. W. Mason. Cloth, 5½ x 8 in., 400 pp. Price, $1.50. Macmillan Company.

IN plot and construction, the intention here was to achieve a novel of incident. The result, however, shows also a quite remarkable soul-study. Philip Faversham is the son of a long line of British soldiers, men who have lived but to fight for the extension of their country's glory. He is introduced to the reader at the age of fourteen, while he sits listening to the tales of a group of veteran companions whom his father is entertaining on the anniversary of one of their great Crimean battles.

One of the men, Lieutenant Sutch, watches the boy while his face blanches and a pitiful smile wreathes his lips in his effort to hide his feelings. Sutch perceives what the father is mentally incapable of seeing, a subtle imagination likely to prove the boy's undoing in the career his father will choose for him; and his heart goes out to the lad whose mother, if living, could have understood him.

When next seen, Philip is a young officer, entertaining a group of companions to whom he announces his happy engagement to a young Irish beauty. Even while they toast to him, he is handed a telegram which conveys a private hint that his regiment is likely to be ordered to the Sudan. A spasm of old revulsion seizes him and mingles with his newly found happiness; but, making light of the telegram, he casts it without explanation into the fire, even while determining on the instant to resign his commission. Later, three of the men penetrate his secret, and on their way to the seat of war mail to him with their cards three white feathers.

A. E. W. MASON.

He is then visiting his fiancée in Ireland, and the box containing the feathers is handed him while they pause on the veranda of her home after enjoying a waltz together. They look at the contents together; she suspects; native truth compels him to confess. The high-spirited girl is shocked, cut to the soul, and in the ebb and flow of feeling she breaks from her fan a white ostrich tip and adds it to the three heron plumes.

Philip's plight is one to touch the reader's heart. Morally heroic to the extreme of martyrdom, he finds himself irrevocably branded a coward and can not explain. His swift and poignant imagination only comes to his aid. Then and there he makes up his mind to go to the Sudan as a civilian, and through disguise and strategy perform deeds that will compel the three men to take back their feathers. He sees all the difficulties, but at worst can die in the attempt.

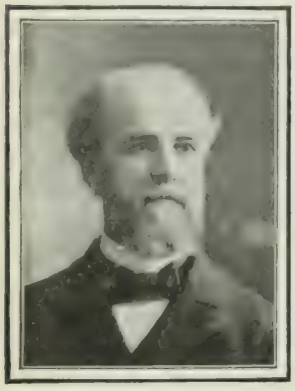
From this the reader makes the acquaintance of a new Philip Faversham. The scenes he lives through and the things he achieves tax the resources of the best novel-writing, and also the credulity of the reader; yet they are within the bounds of possibility. One seems to witness the full horrors of war in a savage country. The evolution of character is wrought with a master-hand. To the marrow of one's being one is

made to *sense* the difference of different kinds of courage; and one lays down the book feeling that its author is a psychologist no less than a weaver of plot and situation.

SCIENCE FOR THE SPEAKER AND WRITER.

SCIENCE [illegible]. Compiled by James C. Fernald. Cloth, 6½ x 10 in., 917 pp. Price, $5 net. Funk & Wagnalls Company.

THERE will be many readers of this compilation to whom these "lights" will not remain merely "side-lights," to be thrown upon other related themes, but will have direct illuminating value in themselves. These selections, thirty-eight hundred in number, have a merit of their own that makes nearly unnecessary the compiler's statement that they "are not primarily for the astronomical, geological, chemical, or other scientific teachings" which they convey. As with many other plans, so with the plan of this book—an idea which was subsidiary and secondary may become its most valuable feature. The amount and variety of its scientific instruction may easily make it more useful in that way than as a work of illustration for the preacher, or lecturer, or writer. One would almost certainly derive from its reading an inspiration for the further study of many of the 192 great authors quoted in the book. A pivotal paragraph, striking in most cases a central idea or fact, or answering, on the authority of a master, recurrent and pressing questions about the world, follows every numbered title. One learns, for instance, how volcanoes occur and erupt (Judd), how earthquakes are produced (Milne), how a glacier excavates its bed (Tyndall), what we ought to mean by intelligence in animals (Romanes), the opinions of Henry Drummond on the goal of evolution, how Helmholtz explains the spots on the sun, Geike's theory of earth sculpture, Carpenter's speculations upon the development of reptile organisms into birds, and similar facts and opinions extending through 770 double-column pages, that are literally packed with varied information about the natural world.



JAMES C. FERNALD.

The primary idea of the author, however, as we have said, is to furnish an unlimited supply of feathers for the arrows of the speaker and writer, and the thoughts suggested in the interpretative titles will guide those who use the book for this purpose. The author's suggestion to the preacher that illustrations from the realistic domain of science should give a sense of interesting reality to a discourse in which they are used, is a hint to be regarded. There was never so great a demand as now for preaching and teaching of practical realities, and it goes without saying that the preacher or other public speaker who can rest his thought upon the facts of science and the authority of great masters in that realm, will thereby increase his effectiveness.

THE JESUS OF EARLY TRADITION.

THE EXTRA-CANONICAL LIFE OF CHRIST: BEING A RECORD OF THE ACTS AND SAYINGS OF JESUS OF NAZARETH, DRAWN FROM UNINSPIRED SOURCES. By Bernard Pick, Ph.D., D.D. Cloth, 311 pp. Price, $1.20 net. Funk & Wagnalls Company.

THE unquenchable thirst to learn all about the Founder of the Christian religion gets considerable satisfaction in this contribution of Dr. Pick. It may be, indeed, even more valuable in one way than the Gospels themselves, as showing the exaggerated and at times fantastical estimate of Jesus held by so many writers of a near succeeding age. The coincidences that obtain between these apocryphal compositions and the canonical Gospels, as well as the divergences, help the critic to make the discriminations between the reasonable and the unreasonable affirmations about Jesus that higher criticism has pointed out as necessary. The work is likely to reopen in the mind of many inquirers all the pertinent questions relative to the validity and binding force of the accepted canon, and to provoke queries as to just the reasons that have led to the selection, out of such a mass of testimony relative to Jesus of Nazareth, of the four Gospels as accepted canon of Scripture.

Dr. Pick gives in his introduction a thoroughly digested and analyzed account of all the apocryphal literature of the life of Jesus, from which the reader may pursue this study further if he should feel interested to do so. Following this introduction there are chapters of extracts carefully translated concerning Mary, the birth and childhood of Jesus, his passion and resurrection, and miscellaneous records of his life.

One of the most pregnant and interesting passages included in this apocryphal literature is the (alleged) report of Pilate to Tiberius Cæsar, giving an account of the marvels that attended the death of Jesus:

"Herod, therefore, and Archelaus and Philip and Annas and Caiaphas with the whole people delivered this man to me for examination, stirring up much tumult against me as regarded their accusation against him. At first, scourging him, I found no fault in the matters which they charged against him. Afterward I gave him to them again, and they had crucified him, when a darkness occurred over the whole world, the full-orbed sun being hidden, and the firmament of darkness appearing in the daytime (so that the stars were not visible); but nevertheless having its far-shining brilliancy darkened, as is not unknown to your highness, since in the whole world they lighted lamps from the sixth hour until early. And the moon being as blood did not disappear during the whole night, altho she was full. And the whole world was shaken by unheard-of portents, and the whole creation was about to be swallowed up by the under-world: likewise the veil of their temple was rent from above downward as thunder, and a great noise from heaven occurred so that the earth shook and trembled. In the midst of the fright dead persons appeared rising up. And the Jews themselves who had seen stated: That we have seen Abraham and Isaac and Jacob, and the twelve patriarchs, those that died twenty-five hundred years ago, and many others, and we saw Noah visible in the body."

Theological students and ministers should find in this book ample material for sermonic illustration.

A PICTURESQUE FIGURE IN AMERICAN HISTORY.

THE STORY OF THE TRAPPER. By A. C. Laut. Illustrated by Arthur Heming and Others. Story of the West Series. Cloth, 5 x 8 in., 284 pp. Price, $1.50. D. Appleton & Co.

FROM the red man on his hunting-grounds (crowded from the Atlantic seaboard back over the mountains, from the mountains to the Mississippi, west to the Rockies, north to the Great Lakes), the trapper, French or American, *voyageur* or *coureur des bois*, mountaineer or "free trapper," buffalo-runner, or he for whom every line in the open page of nature spelled "Bear"—from the red man, first of all, this Romany of the wilderness learned the cunning of his trade. For the first man to blaze a trail into the wilderness between the Gulf of Mexico and Hudson's Bay, or between the Great Lakes and the Rockies, had gone to school to him of the muskrat gauntlets and the caribou capote. And now the scholar stands out, the most picturesque figure in American history—the French trapper, "king in the wilderness and pauper in the town, living hard and dying hard, lavish to-day and penniless to-morrow"—Pierre the scamp, reckless and splendid.

But the time came when the Rocky Mountain traders swept up the Missouri with their brigades of hundreds, and overran the mountains five years before the American Company's line of forts, slowly extending, reached as far west as the Yellowstone. Then came the clash of rival bands, inevitable by the peculiarities of the hunting-ground; streams too turbulent for canoes, boats to be abandoned for horses, cañons with sides sheer as a wall, driving the trapper back from the river-bed to interminable forests, with windfall, underbrush, and rockslide every foot of the way.

A. C. LAUT.

The mountains had bred a new type of trapper, a new style of trapping. Only the most daring of the Pierres and Bâtistes would sign contracts for the "Up-Country." He who ventured for a term of years went in the laughing, chattering, mocking *voyageur*, and came out horseman, climber, scout, Indian fighter, "lank and thin and lithe, silent and dogged and relentless." "The great silences of a life hard as the iron age had done it."

But it is in the "free trapper," such as John Cotter, that this strong singer of traps and trails shows us the true Romany of the wilds—revolting against all trammels of civilization, impelled by that passionate impulse for migration which, to the hunter, "was what the like instinct is to beast and bird and fish, and all wild things." The "free trapper" owed allegiance to no man, hunted where and how he would, on his own free foot, and scorned to carry his furs to any fort but the one that paid best.

Of such was the stuff that went to the making of that band of heroes, without the heroics, "who won a continent and bred a new race." Fearless, reckless, lawless, often shameless, prodigal, and wassailer—fighting, always fighting, knowing no truce but in victory, "the American trapper must ever stand as a type of the worst and the best of the militant heroes of mankind."

We salute the lady who has contributed to our national gallery so strong a portrait, and to our national epic so inspiring an episode. Miss Laut, of whose quality we have had an alluring taste in her "Heralds of Empire" and "Lords of the North," is mistress of the lore of her subject, and knows her woodcraft cunningly. She has cronied with the spirits of the cañon and the torrent, and knows how to put their spell upon her reader, with all the glamour of a fine witchery. We find a boyish rapture in the book; and the American boy will find, in the flash of paddles and the crack of rifles, many a place for a boyish shout.

Your choice of these Booklets will be sent you complimentary

"Something for nothing" is a proposition which usually invites suspicion, and justly, too. We have something we want to send you for nothing, but we propose to be perfectly frank with you, and tell you just how and where we expect to receive an adequate return for our expenditure. We have the happy fortune to be the publishers of the late Speaker Reed's unique library of

"MODERN ELOQUENCE"

and we know that if you were to read any one of the 500 brilliant After-Dinner Speeches, Lectures and Addresses found in this library of the world's best spoken thought, you would surely be enthusiastic in your appreciation, and would probably never be quite satisfied until you had placed the complete work in your library. This, then, is the plain reason why we shall be pleased to mail you, upon receipt of 6 cents in stamps to cover postage, your choice of the following booklets. All we ask is that you read the first page and we know you will read the rest. In these Booklets, as in MODERN ELOQUENCE itself, each speech is given in full, just as it was delivered. Please cut off the coupon below and mail it to us, indicating your choice of booklets.

Booklet Number 340 — This Booklet contains ACRES OF DIAMONDS. By Russell Herrman Conwell.

. . I noticed the lady at the time, from the color of her bonnet. I said what I say to you now: "Your wealth is too near to you. You are looking right over it." She went home after the Lecture and tried to take off her collar. The button stuck in the buttonhole. She twisted and tugged and pulled and finally broke it out of the buttonhole and threw it away. She said: "I wonder why they don't make decent collar buttons!" Her husband said to her: "After what Conwell said tonight, why don't you get up a collar button yourself. Did he not say that if you need a thing other people will need it? So if you need a collar button there are millions of people needing it. Get up a collar button and get rich. *Wherever there is a need there is a fortune.*" (Applause.) That very woman invented this snap-button. That woman can now go over the sea every Summer in her own yacht, and take her husband with her; and if he were dead she would have enough money left to buy a foreign Count, or Duke, or some such thing. (Loud laughter and applause.)

Booklet Number 344 — This Booklet contains POPE LEO XIII. By Francis Marion Crawford.

. . Joachim Vincente Pecci, who has been Pope under the title of Leo XIII since 1878, was born in the year 1810. . . He was born in a small mountain town called Carpinato, situated thirty or forty miles to the South of Rome, on the very border of a district which is called Sandal Land—the land where the people wear sandals. There, in that town, is still the residence of the family of the present Pope, and in the old residence are portraits of the Pope's father and mother. . . . He has from his father the upper part of his head and the main features—the bony forehead, the prominent cheekbones, a very aquiline nose and firm jaw. From his mother he has the piercing black eyes that seem to hold you as you get into his presence so that you cannot get away from his look. Then he has a very strong mouth, very white, very thin lips, always set in a peculiar expression, which is firm, not unkind, something like a smile, and yet not altogether gentle. One of the most remarkable characteristics of his appearance is his complexion, which he shares with other members of the family. When the Pope comes toward you in one of those shadowy galleries of the Vatican, or in the dimmer church below, a real radiance seems to proceed from his face. It is absolutely colorless, but yet it is luminously pale. It has often been compared to a face carved out of alabaster, with a strong light within it.

Booklet Number 350 — This Booklet contains THE RACE PROBLEM, by Henry Woodfin Grady; and NORTH AND SOUTH, by John R. Fellows.

. . I had rather see my people render back this question rightly solved than to see them gather all the spoils over which faction has contended since Catiline conspired and Cæsar fought. Meantime we treat the Negro fairly, measuring to him justice in the fulness the strong should give to the weak, and leading him in the steadfast ways of citizenship that he may no longer be the prey of the unscrupulous and the sport of the thoughtless. We open to him every pursuit in which he can prosper, and seek to broaden his training and capacity. We seek to hold his confidence and friendship, and to pin him to the soil with ownership, that he may catch in the fire of his own hearthstone that sense of responsibility the shiftless can never know. . . . . .

Booklet Number 341 — This Booklet contains WIT AND HUMOR. By Edwin Percy Whipple.

. . Wit marries ideas, lying wide apart, by a sudden jerk of the understanding . . Wit exists by antipathy; humor by sympathy. Wit laughs at things; humor laughs with them. Wit lashes external appearances; . . . humor glides into the heart of its object, looks lovingly on the infirmities it detects, and represents the whole man. Wit is abrupt, darting, scornful, and tosses its analogies in your face; humor is slow and shy, insinuating its fun into your heart. Wit is negative, analytical, destructive; humor is creative . . . Wit, when earnest, has the earnestness of passion seeking to destroy; humor has the earnestness of affection, and would lift up what is seemingly low into our charity and love. Wit, bright, rapid and blasting as the lightning, flashes, strikes and vanishes in an instant; humor, warm and all-embracing as the sunshine, bathes its object in a genial and abiding light. . . .

Booklet Number 343 — This Booklet contains THE SCATTERED NATION. By Zebulon Baird Vance.

. . The Jew is beyond doubt the most remarkable man of this world, past or present. . . Though dead as a Nation—as we speak of Nations—they yet live. Their ideas fill the world and move the wheels of its progress, even as the sun, when he sinks behind the western hills, yet fills the Heavens with the remnants of his glory. As the destruction of matter in one form is necessary to its resurrection in another, so . . . the perishing of the Jewish nationality was in order to the universal acceptance and the everlasting establishment of Jewish ideas . . . We affect to despise the Jew, but accept and adore the pure conception of a God which he taught us. . . . The God of the Jews is the great governing Mind that directs and guides the whole frame of nature—eternal, infinite, and neither capable of change nor subject to decay. . . . The Jewish people, church and institutions are still left standing, though the stones of the temple remain no longer one upon the other, though its sacrificial fires are forever extinguished, and though the Tribes whose glory it was, wander with weary feet throughout the earth. A few remarks upon their numbers . . . present status in the world, their probable destiny, and my task will be done. . . . . .

Booklet Number 342 — This Booklet contains NAPOLEON BONAPARTE. By Garrett Putnam Serviss.

. . And this . . . must stand as a true representation of the Napoleonic era, for these are the thoughts and these the scenes which his name conjures. Let not the bitterest enemy of Napoleon deny to him the name and fame of the greatest maker of war and the greatest winner of victories that the world has ever known! Greater than Cæsar, greater than Hannibal, greater than Alexander. Let him have all the glory; let him be the bright particular star-of-war, the great representative figure in the Valhalla of Mars and then let us rejoice that he belongs to our time, for thus he predicts the daybreak! There is no hour so dark as that which precedes the dawn. We may well believe that history will never frame a second Napoleon. She has done her best in that line, and now she turns to nobler things. Let the century that knew him wrap the tattered flags of war about it and lie down to dreams of slaughter, but let us look forward across the new century, whose sunrise now brightens the hills of coming time, believing that it will usher in the thousand years, the ten thousand years, ah! the endless era of peace universal. (Applause.) .

Booklet Number 346 — This Booklet contains FREEMASONRY, ANCIENT AND MODERN, by The Earl of Carnarvon; UNIVERSAL FRATERNITY OF MASONRY, by Charles Whitlock Moore; SPIRIT OF ODDFELLOWSHIP, by Alfred S. Pinkerton, and THE UNITY OF HUMAN NATURE, by John Jay Chapman.

. . Masonry is indeed a universal Institution. . . . It exists where Christianity has not gone; and its claims will be respected even where the superior claims of religion would fail. It is never obscured by the darkness of night. The eye of day is always upon it. Its footprints are to be traced in the most distant regions and in the remotest ages of the earth. Among all civilized people, and in all Christianized lands, its existence is recognized. It came to our shores at an auspicious period; and it was here rocked in the Cradle of Liberty by a Washington, a Franklin, a Hancock, and a Warren. Unaffected by the tempests of war, the storms of persecution, or the denunciation of fanaticism, it still stands proudly erect in the sunshine and clear light of heaven, with not a marble fractured, not a pillar fallen. It still stands, like some patriarchal monarch of the forest, with its vigorous roots riveted to the soil, and its broad limbs spread in bold outline against the sky; and in generations yet to come, as in ages past, the sunlight of honor and renown will delight to linger and play amid its venerable branches. And if ever, in the providence of God, lashed by the storm and riven by the lightning, it shall totter to its fall, around its trunk will the ivy of filial affection, that has so long clasped it, still cling, and mantle with greenness and verdure its ruin and decay.

Booklet Number 351 — This Booklet contains OHIO AND THE NORTHWEST, by Thomas C. Ewing; THE LADIES, by William B. Melish; A REMINISCENCE OF THE WAR, by William Tecumseh Sherman; and THE BRIGHT LAND TO WESTWARD, by Edward Oliver Wolcott.

. . We are somewhat in the predicament of the green bridegroom at Delmonico's, who said: "Waiter, we want dinner for two." "Will ze lady and ze gentleman haf table d'hote or a la carte?" "Oh, bring us some of both, with lots of gravy on 'em!" . . . I can do no greater justice to my subject, the occasion, and myself, than by closing with the words of Shelley: "Win her and wear her if you can. She is the most delightful of God's creatures. Heaven's best gift; man's joy and pride in prosperity; man's support and comfort in affliction." . . . God bless her. (Prolonged Applause.) . . . . . .

Please indicate your choice of booklets on the attached blank and mail it to us. The Booklet will be forwarded promptly.

CURRENT POETRY.

Out of the Shadow.

By LOUISE MORGAN SILL.

You did not think, who blindly were forsworn
In alien arms, that I might come some day
And greet you from the first dawn of my youth,
Clean and unsullied by a worldly chance.
You did not dream once in those hot bright dreams,
When earth so madly called you from the height,
And your soul answered, stumbling down the path,
That you might wake one day, you might crave
Another soul as fair as once you were.
You did not think to keep yourself withdrawn
From things that soil, that one day you might look
With equal courage into equal eyes.
You did not think of this when self besought
The gifts of selfishness, nor dared to spurn
The contumacious alms you paid your soul
To keep its silence.

Then, as morning light
Comes to a night of tempest,—thus you say—
I came. My path led close beside your own;
You stretched your arms and plead with eloquent eyes.
I knew not then the uses of your eyes,
What they had charmed, nor how, nor when, nor where.
To me they seemed the eyes of chivalry,
Of all that I had loved in union blent.
They drew me no less surely than your arms,—
I knew not then, what others these had held.
Knew! I knew nothing! Maiden solitude
Had never brooded deeper than had mine,
Rapt in the contemplation of a world
Serenely good. Nay, listen, I'll not weep;
I am too sad for tears; their time is past.

Well, thus I came, unquestioning, and thus
You loved me, as a young and saving grace
Borne from far heaven to lift your spirit up
And teach you new philosophies of life—

THE MAINE COAST

From Kittery Point to Casco Bay.

Best section of greatest summer resort State. Free booklet describing cottages to let, hotels, etc. K. P.-C. B. Co., Old Orchard, Me.

A pool where you might bathe and was: you
white.
And I—God help me!—loved you as the rare
Bloom of my life; the ultimate good of things:
The crown of all—my husband: blushing even
To speak the name, so sacred seemed the sound
To the child-soul of the incipient woman.
Then, passing all the rest, the pride, the hope,
The exquisite trust, the simple hidden faith
In worshiping you—aye, there I sinned indeed,
For true it is, in thinking thus of you
I thought less of my God: a costly fault,
As later I have learned in weary pain.

Then, after this fresh happiness had passed
Into a calmer joy, one day you paused
Beside me, and, with strange-accoutered words
That needed some translation to my ear,
You told me of the others you had loved;
Told me the ancient story of the world;
Told me the inmost secret of your past,
And spared me nothing, not a single lash
Of the enscorpioned whip that struck me dumb.
I rose up, you remember. It was night,
And darker night within my stricken soul.
I rose and looked at you when you had done,
Nor knew the pain you smothered with your words:
(I told you I knew nothing. 'Twas in me
The ignorance of my virtue, as in you
The ignorance had been sin—I know not why.)
I looked, but could not speak. I went away
To hide myself, to hide the shame your own
Had put on me, your wife, your second self,
Your—there's the wound—your very worshiper.

From then, even as you say . . . I have been
changed;
Yet you were brave in the confessional,
And I not brave. I dreamed alone for hours,
And moaned a thousand times you had not kept
Your heart unsullied for my special shrine;
Shut your face out, cried often unto God
To know why you were you, and I was I,
Or some such infant-prattling in His ears.
And when the strain was over, came out pale,
And trembled in your arms, and saw your eyes
Were full of tears I had not seen before,
And felt my heart slow melting against yours—
You cried out at my kisses, "they were cold."
I pressed you closer. Was it pity or love
That surged into my soul? I do not know.
Yet all these years it has sufficed; for Love
Has infinite vistas, and through aisles of stars
Moves, humbly, toward the eternal Altar Light.

Now leave me, love; I weary, and would rest.

—From *The North American Review* (February).
By special permission.

To Julia Marlowe.

By CHARLES E. RUSSELL.

From out the pages of the Master's book—
Doublet and hose new russet like the morn,
A spear within her slim white fingers borne—
Comes now the very Rosalind that took
Captive his fancy; so in forest nook
He dreamed her, going past the flowered thorn,
All woman heart, all love in spite of scorn
For love, soothly pretended; as we look

A world of toil and tangled trouble fades;
As if to some Elizabethan seer
Dim Elfland comes again: and, straying, we,
Forgetful in its fairy lights and shades,
A sound as of a harp long silent hear;
A face as of a long-sought singer see.

—In February *Critic*.

The Lapidary.

By WILLIAM SAMUEL JOHNSON.

Great Lapidary, fix upon Thy mill
This sordid earth! Wipe off the mold of green,
The writhing life, vermicular, obscene,
The slime of sea, the scurf of town and hill.
Then grind, O Lapidary! Labor still;
Polish the lifeless, primal granite clean,
Till, mirrored true, shines from its heart serene
The undistorted image of Thy will.

And Love? Would'st Thou Thyself be still the same?
Would God be God if lacking even me?—
Nay! Here I shout my challenge into space:
Thou dar'st not lose, fronting Time's lonely face,
One monad cell that thrills its life to Thee,
One gem of love that sparkles back Thy flame!

—In February *Atlantic Monthly*.

Blending.

By Tom Masson.

Sanity I, and utter madness, thou!
Good day, O friend. I often wonder how,
(We are so near), that each of us can see
The thin line separating me and thee!

In February *Aimslee's Magazine*.

In Sorrow.

By John P. Tabb.

"What need had God of thee?"
I ask when faith is dim.
Then suddenly I see
What need hadst thou of Him:
And, lo! the mystery is plain—
My loss, thine everlasting gain!

In February *Aimslee's Magazine*.

PERSONALS.

Frick's Persistency.—"My acquaintance with Henry C. Frick, the coke magnate and capitalist," says Mr. Charles White, of Washington, to a Washington *Star* reporter, "was formed many years ago in a peculiar way," which he explains as follows:

"When Mr. Frick first went into the manufacture of coke my uncle was my partner in business. He was a man who thought old ways were the best, and when one day the firm received a letter from Mr. Frick stating that he would like to consign to us a car-load of coke on trial to use in our foundry, my uncle hooted at the idea, and wrote Mr. Frick in very plain terms what he thought of the proposition.

"A few days subsequent to the reception of the first letter came another from Mr. Frick, in which he extolled coke for smelting purposes, and concluded by saying he would send three car-loads on trial, and if the consignment did not suit he would pay freight on it both ways. Nothing more was heard from Mr. Frick until one day the firm was notified that three car-loads of coke were at the freight-yards, awaiting our orders. The persistency of Frick staggered my uncle, but, after due consideration, he decided that it might be hauled into our yard. Then he was seized with a sudden change of heart, and concluded that he would not use it. One day, while my uncle was at dinner and we were ready for a blast, I decided to test the coke. If I lost the cost would be to the firm about $1,500. As soon as I saw that the blast was well under way I fled, not caring to face the wrath of my uncle if a mistake had been made. When he returned to the works the molten metal

A WONDERFUL LIGHT.

Cost for service 1-11 as much as gas, yet a pleasanter brighter light. 100 candle power 25 hours costs 1c. Fine print read 45 feet away. was pouring from the furnace like lava from a volcano. 'Great Scott!' he exclaimed, 'what is the matter?' When informed by the superintendent he was greatly surprised, and expressed his satisfaction with the experiment. From that day to this nothing but coke has been used in our furnace, and the trouble now is to get enough of it to carry on our business."

Mr. Carnegie Recalls Old Days.—Mr. Carnegie was recently the guest of the American Institute of Electrical Engineers. In his speech he gave some incidents of his early life as a telegraph messenger and then with Edison as an operator. He said in part:

"Before the electrical engineer was, we—Mr. Edison, Mr. Barclay, and myself, we messenger boys—were. There was no engineering electricity in those days, but I have delightful reminiscences. I chew the cud over them many times. The greatest change that ever came to me was when I was passed from the dirty cellar of an engine-room—I was firing the engine and running it, too, and many times afraid it would explode—and translated to a telegraph-office where they had clean paper, clean pens, and clean windows. That, ladies and gentlemen, was the first glimpse of my paradise on earth in making a livelihood.

"When I first became able to touch that instrument, and, pounding the key, call up New Orleans—I had been practising surreptitiously before the operator came in the morning, receiving the princely salary of $25 a month. I said to myself: 'This is what Swedenborg said about heaven: space was annihilated.' So when I see Mr. Edison and others, then, I think, 'Why boys, you're a new generation.' But knowing what you do, no fond father was ever prouder of his boys than we are, Edison, Barclay, and I."

Roosevelt in Good Company.—The Prince of Wales, with his eldest son, Prince Edward of York, by his side, was recently turning over the pages of a magazine, says the New York *Times*, when he came across a page of portraits of well-known people of the day. In the center of the page was a picture of President Roosevelt and Prince Edward of York side by side.

"Oh, daddy! Look at me!" cried Prince Edward, naturally delighted at seeing his own little self among so many celebrities. "But, daddy, who is that gentleman next to me? What a kind-looking man he is! Is he a king, daddy?"

"No; he is not a king, my boy," answered the Prince of Wales, laughing. "He is, however, much greater and more powerful than many kings. His name is honored all over the world. That man is President Roosevelt of the United States of America."

"Oh," quietly uttered Prince Edward, wearing a somewhat thoughtful look; and then, animatedly: "Daddy, won't the American people be proud when they see their President's photograph next to mine!"

"The Most Powerful Man in the United States."—Senator Nelson W. Aldrich, of Rhode Island, has often been called "the most powerful man in the United States, because he dominates

THE MONROE PORCELAIN REFRIGERATORS.
SOLD BY MAIL DIRECT.

From Factory to You

The MONROE is a high-grade refrigerator for family use. Unlike, and better than others, its food compartments are molded, single pieces of solid white porcelain ware—without joint or seam—strictly sanitary.

An order will bring the MONROE at once to your nearest railway station, freight paid. You can have the satisfaction of examining and proving it in your home. If after a reasonable time it is not satisfactory in every respect, write us and we will take it back, and refund your money.

The only way to obtain a MONROE is to order it direct from us. We have no agents.

"Why do you sleep on Hair?"

DR. EGBERT GUERNSEY, one of New York's most famed physicians, writes on January 21, 1902:

189 Central Park, South, New York City.
Messrs. Ostermoor & Co.

Gentlemen: After twenty-seven years' use, it is my opinion too much cannot be said in praise of Ostermoor Mattresses. In point of contrast they are equal to the best curled hair, infinitely more durable and far superior in cleanliness.

Yours truly,
EGBERT GUERNSEY.

"Why not try an Ostermoor?"

An Ostermoor Patent Elastic Felt Mattress is softer and more elastic than hair and this elasticity is everlasting—it never mats or packs, loses its shape or spreads. An occasional sun bath keeps it in perfect condition.

The filling made from a vegetable fiber, purity itself originally, made germ-proof by sterilization, is repellant of all impurities and an everlasting comfort.

Hair is an animal fiber, filthy, unclean and uncleanable, a constant source of expense for renovation; it is porous and dirty, absorbent of germs of all kinds, a disease-breeder and a menace to health.

"Why not send for free book?"

We have a 96-page book, "The Test of Time," which we mail free. It tells all about the best mattress ever made, and our offer of 30 Nights' Free Trial—money returned if it is not all you even *hoped* for. It tells about unscrupulous dealers who offer worthless stuff as "felt"—fraudulent substitutes do not bear **the name Ostermoor & Co., which is on every genuine mattress.** It is not a "felt" mattress if it is not an "Ostermoor."

Stallman's Dresser Trunk

Have you seen one? It is up-to-date. Think of it, everything within reach. No heavy trays, but light, smooth drawers. Holds as much and costs no more than a good box trunk. Hand riveted, almost indestructible. One trial, always recommended. Sent C. O. D. privilege examination. 2c stamp for catalog.

F. A. Stallman, 4 W. Spring St., **Columbus, O**

Lee Senate," says Davis Graham Phillips, writing in *The Saturday Evening Post*. He adds:

"We often hear of a something called 'the power behind the throne'—a thrilling, half-admired, half dreaded figure. But we do not hear of the real power—the power behind 'the power behind the throne.' Mr. Aldrich of Rhode Island, master of the United States Senate, which is master of the federal statute book is not the power behind the throne—the Senate is that. He is the power behind 'the power behind the throne.' That is, he is The Power. Others have influence; he has power.

"Mr. Aldrich is a very rich man. He was rich before he made the powerful alliance through the intermarriage of his family and that of the Rockefeller. He began life poor. He built himself from a retail grocer to a wholesale grocer, to a street-car magnate with all the street-railways of Rhode Island under the control of his syndicate. It can not be said of him that he loves money. Rather, is he a lover of power—one of those secret, silent, passionate lovers of power who bar the doors, draw the blinds, retire to the cellars, to the coal-bin, and there beneath the closed lid shut their eyes and venture to indulge in their ecstasies."

Ready for Emergencies.—When, it 1868, Humbert, Prince of Piedmont, the future King of Italy, was married to his cousin Margherita, Princess of Savoy, says *The Youth's Companion*, a wonderful court ball was given. There the following incident occurred:

During the dancing the dress of the princess caught in an officer's spur. A tremendous rent was torn, resulting in a long wisp of trailing gauze.

Before the princess had time to signal one of her ladies-in-waiting, the Crown Prince of Prussia, the future Emperor Frederick of Germany, producing a pretty little morocco case, from which he took a tiny pair of scissors. Then he knelt at the bride's feet and skilfully cut away the rag. He rose, bowed low, returned the case to his pocket and resumed his place at the King's side, subdued murmurs of satisfaction from all the ladies near him.

From that moment he was the hero of the evening. Nothing could appeal more strongly to the Italian mind than such readiness, gallantry, and fertility of resource. Later, when King Victor Emmanuel complimented the crown prince on his fore-thought, "our Fritz" replied:

"Sire, the merit of the idea belongs to my wife, not to me. Long ago she gave me a pocket-case, with all sorts of useful things in it,—needles, thread, button-hooks and scissors,—and made me promise to carry it in my pocket wherever I went. What took place just now only proves that I am a lucky fellow in having such a clever wife."

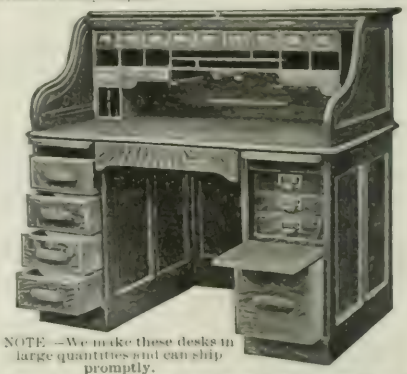
Aubrey de Vere and an Irishman.—In his "Recollections," says the San Francisco *Argonaut*, Aubrey de Vere tells of an Irishman he met in Switzerland, who was so patriotic that every word in praise of the scenery about him seemed a distinct aspersion on the land of his birth.

"What can you compare here?" he demanded, "with the mountains of Wicklow?" "Perhaps," said a traveler, "one might name the mountains of the Mont Blanc range." "Oh," he replied, scornfully, "they're out of all reason! I am after walking along the Chamouni Valley for three days, and I only saw four of those mountains. Sure, in Wicklow I'd have counted as many as eight of them in three hours!" "Have you seen this wonderful waterfall within half a mile of us?" "I have not seen it, and I am not going to see it. Look; I see the O'Sullivan Cascade at Killarney. Down it comes from such a height that you don't know where it comes from. Down it plunges, thundering and bellowing, sometimes black as ink, and sometimes white as milk, dashing itself against the right-hand rocks, and smashing itself

$24.00 BUYS THIS GENUINE OAK "MACEY"

desk, No. 25A, *exactly as illustrated*, direct from our factory at Grand Rapids, Mich., **Freight Prepaid** east of the Mississippi, and north of Tennessee (points beyond equalized), sent "On Approval," to be returned at our expense if it is not the best roll-top desk ever sold at the price. (Ask for complete description.)

THIS DESK is 50 inches long, 30 inches wide and 48 inches high; it has quartered oak front, closed back, front base mould, 22 pigeon holes, 9 oak front box boxes, 2 arm rests, large center drawer (with lock) *ball-bearing* casters, 2 ink wells, 5 large *anti-friction* pedestal drawers, 2 pen racks, 2 stamp drawers, **1 card index drawer, 8 letter files** with indexes *complete* (with locks—Macey-Pascal patent curtain lock, no-see and dust-proof bottoms. It is made with our **sectional** construction by which it can be quickly taken apart and put together, and the entire desk has our special **velvet polish finish.** It is strictly high-grade in every respect.



NOTE.—We make these desks in large quantities and can ship promptly.

Never in the history of the entire desk business has a HIGH roll-top desk, *so complete, of equal size*, and *strictly* **high grade** in every detail, both of *material* and *finish*, been sold direct to the user by a factory at any time, on such **liberal terms** and at **so low a price.** This is a strong statement but the desk itself merits it.

against the left-hand rocks. What is your Handeck Fall compared to that?" "Some persons would say," was the reply, that the waterfall here is about ten times as high and six times as broad." "Ah, then," said he, with an added note of scorn, "then the O'Sullivan Cascade is not big enough for you? And tell me this now: Couldn't you take a magnifying-glass to it?"

Called Kitchener Down.—Lord Kitchener is celebrated for his stern and exacting manner. On one occasion, says the London *Tatler*, the conqueror of the Sudan met his match and proved the fine quality of his nature by acknowledging the fact.

It was in the days when the railway was being driven across the desert to Khartoum. A young Canadian officer of engineers was in charge of the work, which was progressing satisfactorily, when one morning the sirdar (as Kitchener then was) appeared on the scene and expressed his disapproval of certain features of the work with his usual scathing brevity. The young officer listened until his chief had finished, and then quietly inquired: "Am I bossing this railway, sir, or are you?" Kitchener looked at him, recognized the breed as one after his own heart, nodded approval, and went away.

MORE OR LESS PUNGENT

Depressing.—"Were there laughter and cheers during your speech?" "Well," answered the youthful statesman, "there weren't many cheers, but now and then people in the audience looked at one another and laughed."—*Washington Star.*

Ominous.

O, men, an omen oft you see,
But do not let one trouble you,
Unless the omen chance to be
Preceded by a W.

In that case it is wo, men say,—
Or women; and the trick of them
Is just to wait and have their way
Until you take your pick of them.

—FELIX CARMEN in *Life.*

"Puck's" Philosophy.—Jokes when you see the point are always much funnier than those where you feel it.

When doctors disagree, they call each other quacks, and often they are right.

From "The Lyre."—

BOBBY BINGO: "How long did it take you to learn how to swim?"

WILLIE WISE: "I learned in fourteen lickings."

IDA: "Before the wedding she used to say he was a 'lion.' Does she call him that now?"

SUE: "No; she just calls him a plain beast."

stone erected by a widow to her loving husband, bearing this inscription: "Rest in peace—until we meet again."

TRAMP: "Have you anything to do in my line to-day, madam?"

LADY: "What is your business?"

TRAMP: "I'm a dentist, ma'am. I'll put a good set of teeth in a mince-pie for you, free of charge."

AUNTIE (to little Tommy, who has returned from his first day at school): "What did you learn?"

TOMMY: "Didn't learn anything."

AUNTIE: "What did you do?"

TOMMY: "Didn't do anything. There was a woman there who wanted to know how to spell 'cat' and I told her."

Schedule for an Up-to-Date New Yorker.—8:00 A.M. Jump out of bed.

8:04. Bath and shave.

8:08. Dressed.

8:10. Bound downstairs to breakfast.

8:15. Bolt breakfast and read headlines. Say "Yes" and "No" to wife four or five times.

8.21. Sprint to Elevated.

8.25. Wait one minute for train, and swear at delay.

8.50. Rush into office. Dock three clerks for being three minutes behind.

9:00 to 12:30. Do a great business. Telephone eight times, write four hundred letters, see ten men.

12:34. Hurry to restaurant.

12:36. After waiting nearly fifty seconds to get waited on, cram down a sandwich, a piece of pie, and a cup of hot coffee. Time wasted in doing so, one minute and thirty seconds.

12:42. Back at office.

12:50 to 6:00. More business, Telephone twelve times, see eighteen men, answer four telegrams, and write one hundred and fifty more letters.

6:15. Rush to Elevated to get express. See it coming in distance and jump up four steps at a time. Last man in.

6:45. Run upstairs to room. Strip off business clothes in three minutes. Pull on evening clothes in three minutes more.

6:52. Fume because dinner is two minutes late.

6:54. One hour at dinner. Awful bore. Fidget all the time. Guests.

7:53. Smoke.

8:00. Theater. Leave wife at second act to go to club.

9:40. Hearts at club.

10:15. Hearts too slow. Change to Bridge.

12:00. Home and meet wife on stairs. Kiss her good-night and jump into bed. Dead to the world.—*Life.*

Opposed to Modern Bank Methods.—One of the first adjuncts to civilization when it first reached Pine Hill City, on the western frontier, was a bank—an institution with the workings of which some of the residents were not familiar. One of its first depositors was an old man named Johnson. A few days after making his deposit he wanted money and entered the place with a gun in his hand.

"Want some money to-day?" queried the president. "Well, it's ready for you."

YOUR ACCOUNTS ARE CLASSIFIED

The Ledger or Current Record contains a thing but live, active open accounts—accounts that are subject to constant reference.

The Transfer Ledger contains all closed, passed and dormant accounts—all accounts that are not subject to constant reference—in fact, the deadwood. Do you see the advantages? They are ready reference, easy posting, prompt statements and balances.

HOW ABOUT THE PRICE

$18.35 buys a complete outfit consisting of Ledger, Transfer Ledger, two index sets and 500 best quality, heavy ruled three forms.)

SYSTEMATIC ACCOUNTING

is the title of our 36-page booklet, telling all about the system and how it can be applied to your Ledger and other records. It also describes the superior features of Razall construction. Send for Edition—Free.

THE CITY OF NEW YORK,
DEPARTMENT OF TAXES AND ASSESSMENTS,
MAIN OFFICE, BOROUGH OF MANHATTAN,
NO. 280 BROADWAY, STEWART BUILDING.
January 12, 1903.

NOTICE IS HEREBY GIVEN, AS REQUIRED by the Greater New York Charter, that the books called "The Annual Record of the Assessed Valuation of Real and Personal Estate of the Boroughs of Manhattan, The Bronx, Brooklyn, Queens and Richmond, comprising The City of New York," will be open for examination and correction on the second Monday of January, and will remain open until the

1ST DAY OF APRIL, 1903.

During the time that the books are open to public inspection, application may be made by any person or corporation claiming to be aggrieved by the assessed valuation of real or personal estate to have the same corrected.

In the Borough of Manhattan, at the main office of the Department of Taxes and Assessments, No. 280 Broadway.

In the Borough of The Bronx, at the office of the Department, Municipal Building, One Hundred and Seventy-Seventh Street and Third Avenue.

In the Borough of Brooklyn, at the office of the Department, Municipal Building.

In the Borough of Queens, at the office of the Department, Hackett Building, Jackson Avenue and Fifth Street, Long Island City.

In the Borough of Richmond, at the office of the Department, Masonic Building, Stapleton.

Corporations in all the Boroughs must make applications only at the main office in the Borough of Manhattan.

Applications in relation to the assessed valuation of personal estate must be made by the person assessed at the office of the Department in the Borough where such person resides, and in the case of a non-resident carrying on business in The City of New York, at the office of the Department of the Borough where such place of business is located, between the hours of 10 A. M. and 2 P. M., except on Saturday when all applications must be made between 10 A. M. and 12 noon.

JAMES L. WELLS, President,
WILLIAM S. COGSWELL, GEORGE J. GILLESPIE,
SAMUEL STRASBOURGER, RUFUS L. SCOTT,
Commissioners of Taxes and Assessments.

LEARN TO WRITE ADVERTISEMENTS

The knowledge of Advertising is daily proving to scores of ambitious men and women a big help in their present position and a help to better positions—it is the new education by mail. PAGE-DAVIS CO.

A PLAIN BUSINESS TALK ABOUT THE BEST TYPEWRITER IN THE WORLD

In order to make a typewriter that can be sold in competition with other high-class machines, without cutting the price, it stands to reason we must make one that has points of merit that make it *better* than any other.

That is what we have done in the Fox Typewriter. It is a basket type machine with ball bearing carriage, two or key tension (instead of 4 or 6) half inch key dip, aluminum finger levers with individual tension, adjustable type bars insuring perfect alignment even after years of service, line lock, automatic line spacer and automatic ribbon movement. It is the easiest to operate, most durable, has highest speed and combines all the desirable features of the standard machines, with decided improvements.

We can demonstrate its superiority over any other typewriter to any business man who will make a careful examination and test.

We are making a special proposition to Clergymen, Lawyers, Medical Men and Bankers, which it will pay to investigate.

A Fox Typewriter will be sent to any responsible firm or person in the market for a typewriter, on *ten days' trial free,* and no obligation to purchase will be incurred.

One Michigan manufacturer recently replaced 30 well-known typewriters with Fox machines, because we proved to him that the Fox was the best he could buy. Send for new 1903 Catalogue.

Fox Typewriter Co., Ltd., 550 N. Front St., Grand Rapids, Mich.

H. H. BALLARD, 327, Pittsfield, Mass.

"Say, I don't understand," exclaimed the old man as he backed off. "I'm here to hold this bank up for $2."

"But you don't have to. Just sign this check and I'll hand you your money."

"And I don't yell or shoot?"

"No."

"And the sheriff don't come after me?"

"No. Put your name to this."

"I can't do it—can't do it, nohow," said the old man, with a choke in his voice. "If that's the new way of doin' things I'm out of it. I want my money, but I want it in the old way."

"Well, have it the old way, then."

The old man tramped forward to the cashier's window, rested the muzzle of his gun on the ledge and yelled out:

"Come down or you are a dead man!"

"Certainly. Here's thirty."

"And—and is that all there is to it?"

"That's all."

"Then I'll be hanged if I want it," he said, and he threw the money back and went out-doors and sat down on a barrel of sugar in front of a grocery and shed tears.—*Chicago Chronicle.*

Current Events.

Foreign.

February 23.—The Sultan of Turkey agrees to adopt the scheme for reforms in Macedonia.

The Dominican Government agrees to pay the Ros claims.

February 24.—Russia asks the United States and other Powers to cooperate to stop the illegal importation of arms into China.

A bill to extend the right of suffrage to every man and woman over twenty-one years old is proposed in Holland.

IMPORTANT CHANGES

Have recently been made in the political geography of both the Eastern and Western hemispheres. The maps in

THE RAND-McNALLY

New Indexed Atlas of the World

show them. Old Atlases do not. Besides the new boundaries, new towns are shown, also the new railroads, waterways and recent discoveries in uncivilized countries, and in the circumpolar regions.

A Unique Feature

Is the special physical maps of each State and the continents. They show the approximate elevation of mountains, the location of table lands, prairies, deserts, river valleys, etc. Large scale colored maps are given of each State and every country of the world—and over two hundred inset maps of cities, islands, harbors, and strategic points.

Descriptive Text

relates to extent and physical features of every State and country, giving full information in regard to their climate, flora and fauna, their industries, principal towns, their government, and educational and State institutions.

Published in two volumes, one containing the foreign countries (250 pages), and the other United States (300 pages). Size, opened, 28 x 22 inches. Cloth binding, $20.00; Half Morocco, $25.00; Full Morocco, $30.00.

DESCRIPTIVE CIRCULAR SENT ON APPLICATION.

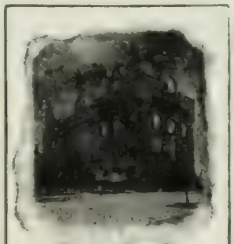
THE
ENGINEER
IS THE MASTER
OF TO-MORROW

An opportunity of obtaining, by correspondence, many of the advantages of a resident technical school, is now placed within your reach.



Main Building, Armour Institute of Technology.

INSTRUCTION DIRECTED BY MEMBERS OF THE FACULTY OF ARMOUR INSTITUTE OF TECHNOLOGY.

Courses offered by correspondence in Electrical, Mechanical, Stationary, Locomotive, Marine and Civil

ENGINEERING

Mechanical Drawing, Perspective Drawing, Sheet Metal Pattern Drafting, Heating, Ventilation and Plumbing, Telegraphy and Telephony. Also forty short special classes.

The instruction papers have been especially prepared for the School by men of wide practical experience, based on broad theoretical training.

The courses are in no way intended to replace resident school courses, but are intended to offer ambitious young men who have not the means or time to attend a resident school an opportunity for self-improvement.

In addition to their regular instruction papers, students in full Engineering courses are provided with a Technical Reference Library (in ten volumes) as a help in their studies.

Catalogue describing courses, methods and terms may be had upon request.

February 24.—The President signs an agreement whereby the United States requires two naval stations in Cuba.

Minister Bowen proposes to the allies that the Czar be asked to name the arbitrators to pass on the Venezuelan question at The Hague.

February 26.—The protocol for the settlement of Mexico's claims against Venezuela is signed at Washington.

President Roosevelt speaks in New York at

THE FLIGHT OF THE HEBREWS.
By Calvin Dill Wilson and James Knapp Reeve.

The old story of the Hebrews is not only made new because of the manner in which it is told, but its truths are well established by laying at the reader's feet relics recently recovered from their long hiding-places amid the ruins of their ancient cities. It is that wonderful, **that dramatic story** of a great and good people, so modernized and so told as to charm the reader and greatly aid in understanding these people. The difficulty will not be a want of interest in this book when once open for perusal, but in an effort to lay it down or close before it is finished.

188 Pages. Cloth Bound. Price, $1.00.

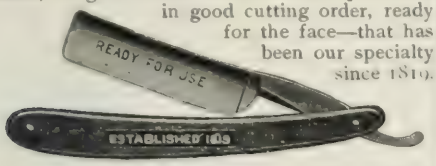
SHAVING WITH PLEASURE

is enjoyed only by those who possess good razors. Our Masterpiece Razor, the razor of the new century, is worth its weight in gold and fully represents what it is marked. We sell a pair of our Masterpiece Razors for $5.00, or a single razor for $2.50, with round or square ends. We sell razors exclusively; we make them, we grind them, we hone them, put them in good cutting order, ready for the face—that has been our specialty since 1810.



We use the best material money can buy. Every man in our employ is "an artist in his line." The work comes as near perfection as human ingenuity can make it.

We have no agents, we sell direct to consumer; we deliver free; we warrant every razor to be precisely what we say it is, and have but one price. Our Pamphlet "*All About Good Razors*" will be mailed to any address upon request.

MARIE JEANNE DU BARRY

SPECIAL OFFER

French Court Memoirs

FROM Henry of Navarre to and through the reign of Du Barry (whose personal memoirs occupy four of the volumes) this set of books covers the back-stairs-and-kitchen-gossip side of French Court history, much as Guizot covers its outward manifestations. And where so much was set afoot with secret and obscure design, where so little was open and above-board, where boudoir councils dictated treaties and the wounded vanity of favorites instigated campaigns, where a low-born woman's caprice could send forth the torch to lay waste the half of Europe, it is impossible to comprehend the curious events of history without knowing the intimate details of those underlying causes. It is characteristic of these Memoirs that in dealing with the peculiar affairs which are associated in everyone's mind with French Court history of the period, their very simplicity and frankness purges them of all offense.

The undersigned controls a few sets of these personal French Court Memoirs (translated with fidelity into English) which can be secured, in complete sets only, at a very low price and on small monthly payments, if preferred, provided application be made at once.

These few copies are from a limited numbered and registered *de luxe* edition, bound up to sell at $10 a volume. But through a binder's error the leather of the volumes is imperfectly matched; consequently it becomes advisable to dispose of them outside of regular subscription channels, and at a price about equal to the value of the unbound sheets.

A booklet fully describing the edition will be sent, together with price particulars, if you sign and send the inquiry slip below *at once.* Address

J. B. Chadbourne, 11 East 16th St., New York

Annual Tournaments.

The New York State Chess-Association held its Annual Tournament on February 1-3. In the general tournament there were twenty-eight players; in the Championship class twelve experts competed. Roething and Rosen tied for first and second prizes, and will play a match of ten games up to decide who is champion.

The Pennsylvania Chess-Association Tourney was played in the rooms of the Franklin Chess Club, Philadelphia. There were thirty-six players, including two ladies, Mrs. H. de Hyslop and Madam von Helden. S. W. Bampton won first prize and the championship of the State by the score of 4 wins. H. G. Voigt, A. Koch, and W. J. Ferris divided second honors with the score of 3½ to ½. M. Morgan, J. H. Smythe, Jr., S. Mlotkowski, H. Groots, J. Young, and W. P. Thomas were in the third class, with the score of 3 to 1.

In the solving-contest, Mr. Bampton's 2-mover was solved by Dr. J. T. Wright, and G. Reichhelm's end-game by Mordecai Morgan.

MR. S. W. BAMPTON, Champion of Pennsylvania, has been invited to play on the American team in the great Cable-Match between Great Britain and the United States. Owing to business engagements, Mr. Bampton is compelled to decline the invitation. Not only his friends and admirers regret his inability to play, but all those who desire the success of the American Team will recognize the fact that his place is hard to fill.

The Barry-Lasker Game.

The most interesting game played by Lasker in his recent visit to Boston was with J. F. Barry, probably the strongest player in New England. Reichhelm says that "Mr. Barry is supposed to know more about the Ruy Lopez opening than the old Spanish bishop who invented it."

J. F. BARRY. *White.*	DR. LASKER. *Black.*	J. F. BARRY. *White.*	DR. LASKER. *Black.*

Comments by Reichhelm.

(a) This, the old Morphy move, Mr. Barry recommends as being stronger than the usual fourth move, "Castles."

(b) The whole point of this new Barryesque variation was to have Lasker take this Pawn, so that the Boston man could move behind with Queen and jeopardize one of the black Knights.

(c) Springing the trap at last; but, strange to say, Lasker had also looked a move or two ahead himself.

(d) What's this—more trouble?

(e) Seeing that if he plays Knight away he must block one of his own squares, and the Bishop on Knight's fifth will become an orphan.

(f) Lasker has now the call, with the better developed game.

(g) The best move under the circumstances. If Black will only be kind enough to take the Pawn, then Barry may have hopes.

(h) White hoped for Q x P ch, which would have

TO CURE A COLD IN ONE DAY

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box.

Oxygen Hunger

The worst starvation is Oxygen hunger.

It is a disease when your blood is deficient in red corpuscles.

It ends in Consumption and death.

Its signs are weakness, loss of flesh, pale skin, transparent complexion, loss of ambition, and proneness to "catch cold."

The only cure is

Ozomulsion

It is a medicinal emulsion of cod liver oil, containing principles which vitalize and oxygenate the blood and thereby gives fresh life and energy to the tissues.

Ozomulsion is the good food, the easy food, the universal food, for all who are sick or in need of *strength*. To be had at all druggists. Try it.

In order that you may test the merits of Ozomulsion, send you name and full address to

THE OZOMULSION CO.

mentioning this paper, and a large sample **free bottle** will at once be sent you by mail prepaid.

DR. FRANCIS E. SMITH,
306 West Fifty-fifth Street,
NEW YORK, February 2, 1903.

The Ozomulsion Company, 34 De Peyster St.

GENTLEMEN—For a number of years I have prescribed Ozomulsion in preference to other emulsions of Cod Liver Oil, because the results I have obtained from its use have been more uniformly satisfactory. I consider it an ideal combination of essential ingredients indicated in those diseases requiring reconstructive and tissue builders. In my experience it has been invariably well borne by children and those who have delicate digestive organs. Yours truly,

F. E. SMITH.

Lasker on the New and Old Schools.

Dr. Emanuel Lasker gave a most successful exhibition before the Germania Männerchor Chess-club, Chicago. In his preliminary remarks, Dr. Lasker drew an interesting and novel distinction between the old and new schools of Chess:

It has been the custom of Chess mediocrity, which includes nearly all the writers on the game, to refer in glowing terms to the brilliancy of earlier players and decry the present masters as playing a stupidly sound and analytically accurate game, Dr. Lasker pointed out that the Chess-masters of Staunton's day depended on the deception of their adversaries for victory, whereas to-day, the best exponents of the game are open in their maneuvers. No attempt at feinting is made, the attack is built on lines that he who runs may read—and foil if he can. The best variation is played rather than; as in former days, one in which there is a catch-line of play into which the second player may, and then again may not be ensnared.—*Chicago Tribune.*

THE eighth annual cable Chess-match for the Newnes trophy, between Great Britain and America, will be played on April 3 and 4.

PERSONALS.

The Richest Man in the World.—The late Cecil Rhodes cut so colossal a figure in the affairs of South Africa that he quite overshadowed in public attention his partner in a great enterprise that made both of them immensely wealthy, says *Leslie's Weekly.* This obscurer man was Alfred Beit, who was connected with Rhodes in the working of the fabulously rich diamond mines of Kimberley, which have yielded $10,000,000 a year. Mr. Beit, who has been dangerously ill at Johannesburg with an apoplectic attack, from which, it is believed, he will entirely recover, is thought by many to be the richest man in the world. His wealth is estimated as high as nearly a billion dollars, while even a conservative reckoning makes it at least $300,000,000. He owns most of the Kimberley diamond field, controls the cutting industry in Hamburg, and is interested in many other enterprises paying large profits. He is the most successful promoter in the Old World.

While Rhodes was the forceful and aggressive partner, Beit was always careful and touched no investment that did not bring in good returns. Tho a quieter and less ostentatious man than Rhodes, he had greater influence in South Africa than the "Colossus." Born in Hamburg forty-eight years ago, Mr. Beit first went to Africa at the age of twenty-two. He worked long enough in the diamond field to see his opportunity, and then returned home and got his father to aid him in buying mines. Rhodes, backed by the Rothschilds, contested fiercely with him for a time, but they finally made peace and joined forces. Mr. Beit has a magnificent palace in London, but he is unmarried, and has shown no desire to enter society.

There isn't a lamp chimney made that isn't ashamed of its maker except MACBETH'S.

My name on every one.

If you'll send your address, I'll send you the Index to Lamps and their Chimneys, to tell you what number to get for your lamp.

MACBETH, Pittsburgh.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

THE WABASH INJUNCTION.

MARCH 3, 1903, will stand as an important date in the industrial history of this country (such is the prevailing view), in case the injunction issued in St. Louis on that day by Judge Elmer B. Adams (of the Circuit Court of the United States for the Eighth Circuit in the Eastern District of Missouri) is sustained by the higher courts. "There will be no more railway strikes in this country" if the injunction is so sustained, says the New York *Commercial Advertiser;* and P. H. Morrissey, grand master of the Brotherhood of Railway Trainmen, agrees that "if Judge Adams's order is written into the laws of our country, organization of labor, which is to-day the hope and protection of those who toil, can no longer contribute its beneficent influences in bettering the condition of the working people." The trainmen and firemen on the Wabash road, it appears, had authorized the officials of their unions to make certain demands of the company, and to order a strike if the demands were refused. No agreement was reached, and the company was notified that if the demands were not granted, a strike would be ordered at 5 P.M. on March 3. The company, however, applied to the United States court for an injunction to restrain the men from striking, and Judge Adams granted it. There was no strike, and it is not thought likely that there will be one until the injunction is dissolved. Proceedings for and against such dissolution are now on. The restraining order reads, in part, as follows:

"Whereas, It has been represented to the judges of the Circuit Court of the United States for the Eighth Circuit in the Eastern District of Missouri, in chancery sitting, on the part of the Wabash Railroad Company by its certain complaint against you and each of you, that you are combining and confederating together to order and cause a strike on the part of the employees of the said railroad company, engaged in and about the operation of its trains, as brakemen, switchmen, and firemen, and in interfering with, hindering, obstructing and stopping the business of said railroad company as a common carrier in the United States.

"We, therefore, in consideration thereof and the particular matters in said bill set forth, do strictly command you and each and every one of you, individually and as representatives of the Order of Brotherhood of Railway Trainmen and Brotherhood of Locomotive Firemen, you, and said organizations, representatives, clerks, agents, and attorneys and all others who may be aiding and abetting you or them, or acting in concert with you or them, and under your or their direction, until the further order of this court, absolutely to desist and refrain from in any way or manner ordering, coercing, persuading, inducing, or otherwise causing, directly or indirectly, the employees of the said the Wabash Railroad Company, engaged in or about the operation of its trains within the United States, and brakemen, switchmen, or locomotive firemen to strike or quit the service of said company; and from in any way molesting or interfering with said railroad company's said employees, or with the operation of its trains, or the conduct of its business as a common carrier."

"I do not believe any such injunction can hold," says Senator Depew (for many years attorney, and later president of the New York Central Railroad, and now chairman of the boards of directors of the New York Central, Lake Shore, and Michigan Central Railroads), in a newspaper interview; and Judge M. F. Tuley, of the Appellate Court of Illinois, says:

"Issuing such writs of injunction brings the administration of justice into contempt. It breeds discontent and we will reap the whirlwind some day from the seeds so sown.

"The day may come in the not distant future when the working classes will have political control and will appoint judges who will also issue writs of injunction—in their favor. I see no reason why a writ of injunction should not as well issue against a railroad, enjoining it from discharging an employee or from failing to pay such employees a certain fixed rate of wages.

"We judges are approaching a condition in which the governing power will be exercised by the judges with the executives and legislators as mere figureheads."

W. M. Springer, of Washington, formerly chief justice of the United States Court of Appeals in the Indian Territory, says:

"It has been settled by the highest courts in the country by numerous decisions, and the doctrine is no longer controverted, that workmen or employees possess the right to quit work singly or in a body by preconcert of agreement, provided only that they do not interfere with the rights of others, whether co-employees, employers, or the public.

"They have a right to seek an increase in wages by all peaceable means, and meetings and combinations to that end, if unaccompanied by threats, violence, disorder, or attempts to coerce, are not unlawful. They may agree in a body that they will not work below certain rates, and a strike to this end, unaccompanied by any of the foregoing elements, is not an offense.

"The doctrine laid down by the New York courts is this: 'The law permits workmen at least with a limited territory to combine together and by peaceable means to seek any legitimate advantage in their trade. The increase of wages is such an advantage. The right to combine involves of necessity the right to persuade all colaborers to join in the action.

"This right to persuade colaborers involves the right to persuade new employees to join the combination. This is but a corollary of the 'right of combination.' It is a well-recognized doctrine that the right to issue temporary injunctions should be exercised with great caution, and never except in case of urgent necessity, and where the acts enjoined are unlawful or amount to a nuisance.

"Applying the law as above stated to the language of the injunction issued by Judge Adams, it clearly appears that he has exceeded his authority. The parties against whom the injunction was directed were the authorized representatives of the firemen and trainmen of the railroad company. They had a right as such agents to order a strike. In doing this they were

merely exercising the authority conferred on them by their colaborers.

"They also had the right to persuade their colaborers to desist from work, and they had the lawful right to induce their colaborers and new employees by all peaceable means to desist from work. Hence, in so far as Judge Adams sought by injunction to prevent such acts, he exceeded his authority."

The Chicago *Evening Post* says, in a very positive editorial:

"Involuntary servitude can not be restored in the United States. Even the black man has only been disfranchised, not reenslaved. Labor is free and will remain free, and neither malevolent nor benevolent feudalism will ever be established in this republic. The freedom of labor, among other things, implies the right to strike for any reason whatever, just as the freedom of enterprise implies the right to dismiss employees for any reason or without any reason or explanation. What legislation has not done and will never attempt courts of equity will hardly be permitted to accomplish by indirection. . . . . .

"As to the alleged grievances of the men, the reasonableness or unreasonableness of their demands, it is unnecessary to express any opinion at this time. The essential point is that they had a perfect legal right to vote as they did, to resolve upon a strike, and to delegate to committees and to officers of their organizations the power to conduct negotiations and to call the strike in the event of failure to reach a settlement. The court steps in and forbids the agents and representatives of the men to do what they were expressly authorized to do by the principals in the case! Is this law? Is this sense? Is this Americanism? . . . The injunction will not stand. It is arbitrary and unwarranted."

The New York *Sun*, however, regards the injunction as entirely proper and reasonable. It says:

"The injunction order as it reads does not interfere with the right of the mechanics or laborers of the Wabash Railway to strike; it only restrains the heads of the Trainmen's Union from coercing, persuading, or inducing the railway employees to strike or quit the service of the company. It leaves, of course, the individual workmen or any number of the workmen to act on their own volition, but it very properly directs outside conspirators to refrain from aiding or abetting a movement of which the intent is to paralyze a great common carrier."

And the New York *Evening Post* takes a similar view. To quote:

"It can not be affirmed that the court in taking this step has infringed or curtailed the right of the company's employees to desist from work, or their right to act through the Trainmen's Union. It has merely sought to protect the public, including the employees themselves, against a great and sudden calamity —the cessation of traffic on some thousands of miles of railway —until the reasons for it shall have been heard and opportunity given for an adjustment of differences between the company and its operatives. There was a time in the history of labor troubles and labor organization in this country when it was possible for the employees of a railway to desist from work without any warning whatever, and leave passengers stranded midway between stations, or to abandon a cattle-train in a snow-storm, leaving the animals to perish from hunger and cold. The courts put a stop to that kind of strike, and organized labor itself acknowledged the justice of the proceeding, or at all events made no protest against it. No authority was assumed to curtail the liberties of workingmen to demand and enforce their rights in an orderly way, not inconsistent with the rights of other members of the community, but merely to postpone hasty action which might work irreparable injury to persons having no share or interest in the dispute. Judge Adams, as we infer, has merely applied this rule to the threatened strike on the Wabash Railway. At all events, his injunction is only temporary, and can not work any serious harm, while it will probably be beneficial even to the leaders of the Trainmen's Union. . . .

"It is most likely that Judge Adams has rendered a valuable service to the Wabash trainmen and firemen by causing a delay in their intended strike. The president of the company says that he is now paying higher wages for firing engines than his competitors pay. If this is the fact, a strike would be an attempt to accomplish the impossible."

Mr. Wells M. Blodgett, vice-president and general counselor of the Wabash road, says:

"The court proceedings are based on the provisions of the interstate commerce law. That act makes it the duty of the railroad companies to receive and transport all kinds of interstate traffic, and requires them to interchange such traffic with each other at connecting points, and any conspiracy on the part of any number of persons to defeat that act, or the provisions of any federal act, is wrong, and renders the parties liable, criminally and civilly. This is not a mere theory; it is the settled law, and the injunction only goes to that extent. Should the order be violated, it will be for the court to say what steps it will take to enforce the order, but we have no reason to believe that any one intends to violate it."

"BUT A COMRADE KNELT BESIDE HIM, WHILE THE LIFE-BLOOD EBBED AWAY."

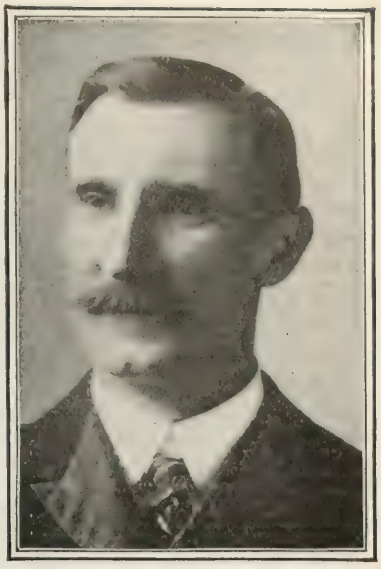
THE KIDS: "Papa! Papa!"
SENATOR QUAY: "I'm not your papa." —*The Minneapolis Journal.*

STATEHOOD FAILURE IN CARTOON.

SENATOR J. FRANK ALLEE (Rep.),
Of Delaware.

MR. J. EDWARD ADDICKS.



SENATOR L. HEISLER BALL (Rep.),
Of Delaware.

THE DELAWARE ELECTION AND MR. ADDICKS.

J. EDWARD ADDICKS is still treated as the central figure in all the comment on the Delaware senatorial situation, and his prospect of election to the Senate at some future time is the main topic of speculation. James Frank Allee, Mr. Addicks's lieutenant, and Congressman Lewis Heisler Ball (anti-Addicks Republican) were elected to the Senate last week for the long and short terms, respectively, and the Associated Press despatch from Dover announcing the result said that "the election is regarded here as an Addicks victory." It was rumored at first that after the legislature adjourned Senator Allee would resign, and Governor Hunn would appoint Mr. Addicks to fill the vacancy; but all concerned have denied emphatically that such a plan is contemplated. Mr. Addicks says that his next attempt to reach the Senate will be two years hence, when Senator Ball's term will expire. He said to a Philadelphia *Ledger* reporter that he felt sure Senator Allee would resign if he asked him to, and the Senator remarked, "I sincerely regret that I have to fill the place that belongs to Mr. Addicks"; but it appears that Mr. Addicks prefers to wait and get a full term. "I shall aim to elect a legislature two years from now favorable to me," he said. Senator Ball ventured the remark that the present election would bring peace and harmony to the Republican party in Delaware, but Mr. Addicks, upon hearing of it, exclaimed:

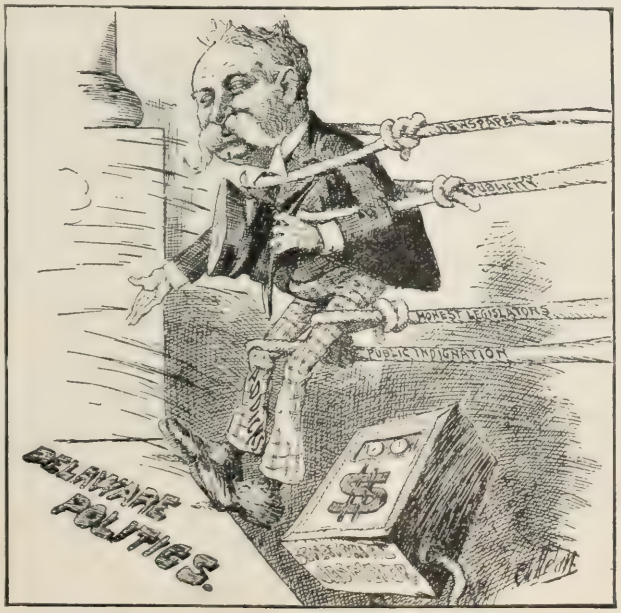
"It does not mean peace in the Republican party. It means war to the knife. I am in the fight two years from now, with the advantage of having one of my close friends in the four-year term, and being myself national committeeman.

"Mr. Ball and his friends could not affect the situation for an instant; they can not carry the State. The fight in the State will be kept up unless they (the Regulars) coalesce. We will not be fooled again. This is the last dividend for the Regular Republicans. They haven't any popular vote left. Hereafter they will not have the advantage of federal appointments to help the Democrats. Ball will be just a mere figurehead. He has been practically a Democrat the last two years."

Many papers believe that Mr. Addicks will realize his expectation two years hence. The Philadelphia *Inquirer* (Rep.), which has kept in close touch with the Delaware situation, says:

"The bolters have been fighting for years to clean out Addicks. They have failed to do so. He has not been elected to a seat in the Senate in person, but there can be little doubt that with the advantage he has gained he will be by the Legislature of two years hence. His close friend and follower, Mr. Allee, was forced upon the bolting Republicans. They have been obliged to accept him, and to the so-called 'regulars' he is in every way as obnoxious as Addicks himself.

"From a strategical point the Unionists have won a great victory. Mr. Ball, whom the bolters have selected, will have but two years, and meanwhile the Unionists, with added power, will no doubt organize as never before in the expectation of turning his seat over to Mr. Addicks on the 4th of March, 1905. The Unionists are in the saddle at Washington for four years in any event."



THE GASMAN: "Understand, tho, I withdraw voluntarily."
—*The Philadelphia North American.*

Altho the Republican party gains two Senators by this elec-

tion, many Republican papers grieve that the anti-Addicks Republican members of the Delaware legislature united with the Addicks members as they did. It would have been better to unite with the Democrats in the election of one anti-Addicks Republican and one Democrat, according to the New York *Press* (Rep.) and the Buffalo *Express* (Rep.); and several other papers recall that the Democratic members had just announced their willingness to vote for two anti-Addicks Republicans, which would have obviated the necessity of voting for either a Democrat or an Addicks man. It is "impossible to congratulate Delaware greatly" on the result, thinks the New York *Sun* (Rep.), and the Hartford *Times* (Ind. Dem.) can see "no substantial gain for the cause of decent and honest government" in it. "The anti-Addickses," it declares, "might as well have capitulated to Addicks and his machine two years ago, as to have carried on their contest with so little practical result to themselves or to the ideas which they pretend to represent." The outcome is credited to Senator Hanna's influence and efforts by a number of well-informed papers, including the Boston *Transcript* (Rep.), which calls it "a victory that puts him on the defensive before the country."

Delaware is only one illustration of a tendency that is becoming apparent in our senatorial elections, thinks the Springfield *Republican* (Ind.). After remarking that Mr. Addicks "practically owns the State, and has made of it as rotten a pocket borough as can be found in the list of American commonwealths," it goes on to say:

"It is plain that a Rockefeller or Morgan or Carnegie could, if he chose, pick Delaware up and put it in his pocket, where it would rattle around like a silver quarter.

"And why may not this ownership of American commonwealths by individual millionaires extend? It has certainly gained considerable headway. We do not need to go to Nevada with its Stewarts and Joneses, or to Montana with its Clarks, or even to Rhode Island with its Aldrich and his lieutenant Brayton, to obtain examples of what seems to be a general tendency. The two largest States of the Union in point of population and wealth are to-day owned, for political purposes, if not by one rich man, then by several acting for themselves and general corporation interests, who prefer to exercise their power through agents like Platt and Quay rather than directly as members of the Senate. Michigan has become almost as thoroughly plutocratized as Pennsylvania. Ohio is making marked progress in that direction. New Jersey is already near the goal. Maryland can not be far behind. Massachusetts and other New England States, barring Rhode Island, and Iowa almost alone of Northern States manifest any very noteworthy ability to resist the influences which are commercializing the politics of the nation."

There are some exceptions, however, to all this unfavorable comment. The election "is the most satisfactory outcome that was possible in the existing situation," thinks the Philadelphia *Press* (Rep.), and the New York *Tribune* (Rep.) says:

"When the facts are duly considered the outcome does not appear unsatisfactory or unworthy of the men who have been professing to stand for a principle during the last eight years. In all that time Addicks has never withdrawn his original threat of 'Addicks or nobody.' According to the best evidence it was withdrawn over his head, to his astonishment and chagrin, by his lieutenants at their conference on Sunday. They are believed to have told him that they could not leave their votes at his absolute disposal any longer; that a combination between the regular Republicans and the Democrats which would completely control the situation was on the verge of being formed; that the vacancies must be filled; that they could not be filled by Republicans until he had been eliminated, and that it had consequently been resolved to eliminate him. That was a final repudiation of the 'Addicks or nobody' creed. It was essentially a surrender.

"If the regular Republicans should be accused of compromising with their opponents and their own convictions they could justly answer that they had made no compromise, but had merely fulfilled a long-standing promise. They have repeatedly proposed in previous years to join with the Addicks men in electing one of their number, not Addicks, and a regular Republican, and they renewed their offer only a fortnight ago. They have considered, and seemed likely to form, a combination with the Democrats only because no alternative method of filling the vacant Senate seats, while excluding Addicks, appeared to be open to them. As the complicated situation stood for weeks, or as it was understood, Republican sentiment throughout the country would have abundantly justified their adoption of that course, and a great majority of honorable men of all parties would have rejoiced to see an utterly selfish and corrupt ambition defeated even at a sacrifice of party feeling. If, as now seems clear, the knowledge that such an arrangement was about to be consummated in obedience to a sense of duty led the followers of Addicks to override his authority and accept the offer which he had always contemptuously rejected, the moral victory is not impaired, while perhaps the political outlook is improved."

UNFINISHED BUSINESS IN THE SENATE.

FOR more than a year, the sentiment of the country, as expressed in the newspapers, has been in favor of concluding a treaty with Colombia for the construction of a canal at Panama, and has been overwhelmingly in favor of a treaty of reciprocity with Cuba. The United States Senate is still deliberating on these matters; and it is the hope of the President and of most of the press that it will in the present special session feel inclined to act favorably upon them. The appointments of Dr. Crum, colored, to be collector of the port of Charleston, and of William M. Byrne (Addicks Republican) to be federal district attorney of Delaware, are also still pending before the Senate for action.

The Washington *Star* understands that "there is a majority in the Senate in favor of both the canal treaty and the Cuban treaty," and, indeed, that the Cuban treaty "requires only a roll-call"; but nobody seems to think that either treaty will escape with any such easy treatment as that. Senator Morgan, of Alabama, who occupied the time of the Senate for several weeks during the recent session in talking against the Panama treaty, told a Washington correspondent last week that it will now be necessary for him to begin at the beginning and go over all the ground again for the benefit of the newly elected Senators who have not heard his arguments. But there is no time limit to this session, and many papers take comfort in the thought that the Senator must eventually bring his remarks to a close. Says the Boston *Transcript*:

"Even Morgan is mortal and almost eighty years of age. He can not exploit forever the extraordinary privileges which the custom of the body to which he belongs gives him. By compelling the close of the Fifty-seventh Congress with no action on the Panama treaty, he doubtless hoped that by sparring for time something might happen that would thwart the republic of the United States in one of the great endeavors of its history. The obstinate twelfth juryman who stands out against the other eleven is not a circumstance for contumacy compared with the man who has been so viciously blocking the way of progress to seventy millions of people.

"We can hardly understand the temper of a man with Morgan's standing who so obstinately makes himself an obstruction and a nuisance, to the delay and detriment of such important interests as are involved in this question. We can understand it in an Addicks, who has been without reputation of any but the malodorous kind for a long time, and is only a vulgar adventurer anyway; but Morgan lays claim to statesmanship, and in some respects has shown statesmanlike qualities. Charity suggests that it is to be accounted for by senility that has taken the form of stubbornness. He is living in the past and can not understand why the country should have moved forward since the days when a different, tho as it now appears an inferior, scheme commanded its attention.

"The new pact between the United States and the French

company must be a severe disappointment to Senator Morgan. The conditions are now right for the new Senate to have it out with him. The bargain holds until the treaty is ratified or until there is a definite refusal on the part of the Senate to ratify it, a contingency which no one expects. So the fight which this octogenarian must now put up seems to be more against fate than ever before. What he is to gain, unless it is the gratification of personal spleen, we are unable to see. His career is almost over, and it is strange that he should try to end it by a losing fight against his Government and his country."

A. C. LATIMER (Dem.),
New Senator from South Carolina.

LEE S. OVERMAN (Dem.),
New Senator from North Carolina.

The Cuban treaty situation is complicated by the contention that action by the House will be necessary to make the treaty valid. As the measure will affect the tariff revenue, some claim that the House must pass upon it. In case the Senate shall ratify the treaty, and the Administration shall put it into force without waiting for action by the House, this interesting point may be settled by the courts. The editorials favoring the treaty are much the same as those which have been quoted many times in these columns. About the only journals that oppose it are those interested in the sugar industry. The New Orleans *Sugar Planters' Journal* says:

"The Brussels conference agreements between European sugar countries will go into effect next September, with benefit to Cuban sugar producers, and the prosperity of the island so assured that the treaty can not be ratified on the ground of being done in order to give Cuba necessary aid. In the mean time, work is quietly being done by representatives of European sugar-producing countries with the idea of showing that the ratification of the treaty will violate the favored-nation clause, and it is not unlikely that their protests against the adoption of the treaty may contribute much to its defeat. It is hard to understand why the Administration will insist on endeavoring to force through this treaty that is objectionable to the Cubans at large. It can do no great good and may do much harm. May it never pass."

WORK OF THE FIFTY-SEVENTH CONGRESS.

IN spite of protracted filibustering in both houses of Congress toward the end of the session and an amount of unfinished business that is, in the opinion of the Philadelphia *Telegraph* (Rep.), "probably unprecedented in the history of our national legislature," many papers declare that the work of the Fifty-seventh Congress was decidedly creditable. Its work "has been great and important, notwithstanding its failures," says the Brooklyn *Times* (Rep.); and the Buffalo *News* (Ind.) thinks that this Congress is "one of the most notable in several years for the good work accomplished." President Roosevelt, just before the close of the session, sent a letter of congratulation to Speaker Henderson, in which he remarked that, "taken as a whole, no other Congress of recent years has to its credit a record of more substantial achievement for the public good." The Congress will be chiefly remembered, it is believed, for providing civil government in the Philippines, creating the new Department of Commerce and Labor, providing for the building of the Isthmian canal, giving Government irrigation to the arid lands of the West, and for its trust program, which includes the Elkins anti-rebate law, the act to expedite suits brought under the Sherman anti-trust law, and provision for two assistant attorneys-general. It broke the record for the amount of money appropriated, making it a little over $1,500,000,000. A general staff was created for the army, and the law establishing a national militia was enacted. A permanent census bureau was provided for, the bar against Chinese immigration was maintained, and a new immigration act and a law aimed against oleomargarine were passed. The Spanish war-revenue taxes were repealed, the duty on anthracite was removed, and a new bankruptcy law was adopted. The gold standard was extended to the Philippines, a system of currency there was provided for,

EXTRA SESSION IDEAS ILLUSTRATED.

and $3,000,000 was given to relieve distress in the islands. Increased pensions were granted to those who lost limbs in the service of the United States, and the laws were amended so as to discourage young women from marrying aged ex-soldiers for the purpose of receiving the widow's pension after their deaths. The personnel of the navy was increased and five battle-ships were provided for. The Alaskan treaty was ratified and the law requiring the use of automatic couplers on railroads was enacted.

The unfinished work includes the Panama canal and Cuban reciprocity treaties, and Congress is severely criticized for making an extra session necessary for their ratification. Many papers regret the failure to pass the Philippine tariff reduction bill and the Aldrich bill for the safe-keeping of public funds, while the failure of the statehood and the ship-subsidy bills arouses usually just the opposite feeling. Some of the other measures that failed are the Newfoundland reciprocity treaty, the bill for the protection of the President, the Fowler currency bill, the eight-hour labor bill, the Littlefield anti-trust bill, customs tariff revision, New York post-office appropriation, the pure food bill, diplomatic and consular reform bill, and the appointment of delegates from Alaska and the Philippines. The nomination of Dr. William D. Crum to be collector of the port of Charleston was not confirmed.

The Boston *Transcript* (Ind.) has the following to say regarding the anti-trust laws:

"Whether this group of laws mark the end or the beginning of anti-trust legislation, time and events only can show. They do not go either as far or as fast as the 'trust-busters' desired, but they go farther if not faster than the conservative element of the Senate intended any legislation should go when the session of Congress opened. Together they constitute a compromise between an aggressive Administration and a reluctant Senate. It is a reasonable conclusion that if the Republicans continue in control of the country after 1904 any extensions of federal power over corporate capital will be made very gradually and with due regard to the delicacy of the question. At first glance it seems inevitable that the Democracy should, in event of its electing its candidate for President next year, go on a wild hunt for the 'Octopus' and indulge in promiscuous 'trust-busting,' but it is very doubtful if its performance would equal its promise."

The Philadelphia *Public Ledger* (Ind.) comments on the failure to reduce the tariff, except on anthracite. It says:

"Congress has also left undone the things that it most urgently ought to have done, with no compensating record of achievement. It is no credit to the majority that the minority proved unequal to the opportunity of shaping these issues plainly, on broad and patriotic lines. The tenderness of the majority for the tariff, which both shields monopoly and piles up an unneeded and dangerous hoard of money in the Treasury, to the popular loss and the peril of all sound financial interests, offered the point of attack. The enforced repeal of the duty upon coal made the vulnerability of the system evident. The reduction of taxation, the reform of the currency, the promotion of commerce, justice to dependent people under our protection, all these were denied in blind subservience to the fetich of Dingleyism. The patriotic promptings of the President were disregarded and the fair promises of party platforms proved but idle words. But the minority produced no leader capable of driving the truth home. The record of the session is but a record of inertia, obstruction, incapacity, and neither party is exempt from the discredit with which the Fifty-seventh Congress of the United States has passed into history."

The majority of the past Congress was Republican, but what have the minority, the Democrats, "done to reestablish the Democratic party in the confidence of the country?" asks the New York *World* (Ind. Dem.). It answers the question thus:

"Very little, it must be admitted. The party in Congress has lacked both leadership and a policy. In both houses the Democrats voted almost unanimously for the Littlefield anti-trust bill, which whatever its good provisions was assuredly the most centralizing measure and the most absolutely destructive of the traditional Democratic doctrine of state rights of any ever introduced in Congress with a serious purpose of passing it.

"In addition to this it was a Democratic Senator—Patterson, of Colorado—who opposed and helped to defeat the Philippine tariff relief bill, on the express ground that it might hurt the incubated infant sugar-beet industry of his State!

"Worse still, the Democratic Senators helped to block the ratification of the Cuban reciprocity treaty—a Democratic measure so far as it goes, if justice and decency and fair trade are Democratic—for no other apparent purpose than to 'play politics.'

"And it was a Democratic Senator who by insensate filibustering against the Panama treaty delayed the beginning of a great work which the country with practical unanimity demands and which nine-tenths of the Senate stood ready to ratify.

"Still further to illustrate their partizanship and their indifference to principle and to the public needs, a coterie of Democratic Senators prevented the passage—avowedly an act of retaliation for Senator Aldrich's opposition to the omnibus Statehood bill—of a conservative measure to avoid a congestion of currency in the Treasury and to secure interest upon government deposits.

"When it is added that Democrats voted as greedily as Republicans for the river and harbor, the public buildings, and other 'pork-barrel' bills that went to swell the total appropriations to the highest sum ever reached, it can not be claimed that they have done much to induce the voters to turn the Government over to them."

"ON TO BATTLE."

TRUST LEGISLATION CARICATURED.

FAMINE IN FINLAND, NORWAY, SWEDEN, AND LAPLAND.

THOSE who decide what European news shall be cabled to this country seem to think it highly important that the American people be kept minutely informed of the daily movements and words of every foolish princess that furnishes food for gossip, and that the starving condition of some hundreds of thousands in the Scandinavian countries be treated, in comparison, as a small matter. The death of a few hundred or thousand peasants is dismissed with a paragraph, while a royal burst of tears or the stamp of a royal foot is good for at least a column. Some may be interested to know, however, that over 400,000 Finns, 200,000 Swedes, and many thousand Norwegians and Lapps are perishing of hunger. The situation seems to be worse in Finland than in the other afflicted countries. The St. Petersburg correspondent of the London *Times* reports that the Finnish peasants have been eating bark and unripe, frost-spoiled rye and barley made into bitter cakes that even the animals refuse to eat. So terrible is the dearth of vegetation, according to another account, that even the birds have died by thousands in the forests. An appeal from one of the famine provinces in Finland says:

"The rain prevented both the oats and the rye from producing sufficient for seed, and blight and frost made even this almost useless. Many have sought to make bread from the rye. It is scarcely possible to believe that it is bread. It is quite green, and hardly holds together, and is so bitter that one can not well swallow a morsel of it. Yet it is all many have to live on. And even this will not last many weeks. There are places where the people have not even such bread, but have to live on bread made from the bark of trees. With milk one might eat bark bread, but many have not this. They must kill their only cow. The failure of the hay harvest and the potato crop has been followed by an almost entire failure of the oats and rye.

"Those who have the opportunity of traveling in these parts and of visiting one of the little homes, and of seeing the sad faces of the mothers, and the white faces of the almost naked children, and of hearing their cries for bread, and seeing how many cry in vain, realize how great and how pressing is the need."

The Christian Herald (New York), which is receiving and forwarding money to relieve the famine, has investigated the situation in Finland through correspondents there. It summarizes the conditions as follows:

"Last year's crops were a total failure, owing to the unprecedented rains, which rotted the grain in the ground. Besides, the fisheries, which supply the means of existence to a very large proportion of the people, also failed through the same cause. Peas, beans, and potatoes grew sodden and rotted in the soil, like the grain. The hay, too, then went through rot and flood. Spring was late; then came a long succession of chilly rains and early frost, killing off the last hopes of the farmers. In the provinces mentioned, there were not more than half a dozen dry days the whole summer. It was altogether the most utter crop failure in half a century, and has brought the people of one hundred and ninety-four parishes to a condition of destitution.

"Finland's average grain crop is easily $12,000,000 short of the preceding year; and this, together with the loss in sea and lake fishing, means ruin to thousands of industrious peasant families. Hunger, with all its terrors, has invaded the northern provinces, and multitudes are to-day living upon bread made from unripe rye and barley, which even the horses reject. Loaves of barley husks and straw are all that stand between them and starvation, and there are thousands who have not even a morsel of that wretched compost to stay their hunger, and who are compelled to live upon the kindness of their neighbors. In the last great famine of 1867, when the crops failed, 100,000 were said to have died of starvation. This winter the situation is even more serious, and the authorities are alarmed for the fate of the sufferers. Four hundred thousand, or one-sixth of the entire population of the country, are reported as literally on the verge of starvation."

The Russian Government has spent $3,500,000 or more in relieving the famine in Finland, European Russia, and Siberia, and expects to spend much more. The more fortunate of the provinces and cities in Finland have contributed $500,000, and smaller sums have been sent in from this and other countries. Emigration is increasing rapidly.

TOPICS IN BRIEF.

WE have resolved to deny ourself the pleasure of reading *The Congressional Record* during Lent.—*The Atlanta Journal.*

THE papers have room for an item about Kipling's latest poem, but not for the poem itself.—*The Brooklyn Standard Union.*

A PLEBISCITE of posterity, on the question whether it wants to be born or not, seems to be called for.—*The New York Mail and Express.*

LETTERS AND ART.

THE "CHIEF LITERARY MAN" OF AMERICA.

IN calling Mr. William Dean Howells "our chief literary man," Mr. Hamlin Garland probably means, tho he does not say so explicitly, chief of our living writers. He devotes twelve pages in the current *North American Review* to establishing this claim, and the gist of his argument lies in his title, "Sanity in Fiction," which sanity Mr. Howells is taken to represent as no other living American writer represents it.

Max Nordau has said, "The literature of fiction is an enormous collection of tales of disease," and he includes in this characterization naturalistic fiction. The reason for this Mr. Garland finds in the fondness of novel-readers for sensations, and the life which has by familiarity become commonplace to us does not furnish the desired sensations. "The near at hand remains squalid and prosaic." It requires a higher art to do what Whitman calls "teaching the average man the glory of his daily walk and trade." This higher art is Mr. Howells's, and he "more than any other of our writers" has shown that a public exists for a sane and wholesome novel. Says Mr. Garland:

A NEW PORTRAIT OF WILLIAM DEAN HOWELLS.
Courtesy of Harper & Brothers, New York.

"Mr. Howells's development has been steady and consistent. 'Their Wedding Journey' and 'A Chance Acquaintance' were hardly more than sketches of travel; but each succeeding book broadened in scope, till, in 'The Undiscovered Country,' he reached the full stature of a novelist. This beautiful story was easily the finest novel of New-England life of its time; but with the publication of 'A Modern Instance' Mr. Howells took his place among the wisest and best of the world's novelists. 'Silas Lapham' and 'Lemuel Barker' followed, dealing as no other novels had dealt with American social life, and Lowell's predictions concerning 'that young man Howells' were fulfilled. From that day to this he has remained a master spirit in our literature, and a study of his methods of appeal and the success he has had becomes of prime importance in considering the trend of our fiction. He stands for sound workmanship and for the permanent rather than for the ephemeral. He is a man of unswerving ideals, and remains unmoved by the rush along cheap and easy routes to success."

Mr. Howells's realism, moreover, is very far from being the naturalism of Zola. There is no kinship between them. Zola treated of the abnormally developed, the criminal, while Howells seeks his characters among the average and the usual. We quote again:

"In his war upon the romantic school, with their superhuman and ideal characters, Zola swept to the opposite pole. He proceeded upon the supposition that the public could not be interested in average personalities and in decent lives. As a result millions read his books for their brutal plainness of speech rather than for their tragic breadth and bitter comment.

"Not till Howells came did any considerable public in America appreciate the regular, the average, the near at hand. In a very high sense he *is* 'the evangel of the commonplace.'

"It must be inserted at this point that many of our young novelists soon feel Zola's distrust, and fail in their attempt to depict in the realistic manner the life of some special locality, because of their fear of being dull. Whitman once complained to me that the local novel (which I was advocating) was too sensational, too bizarre. The cowboy novel was to him a sort of delirium-tremens novel, because it flowed with liquor and was hazy with the smoke of gunpowder. He asked for a literature of the decent and decorous men of the West. He said in substance:

"'Writers of this type comb together the unusual happenings of thirty years, in order to fill their books with odd or mysterious or picturesque characters. If they see in the paper a most singular account of a miser, or of a man living a double life, or of a man falling dead of heart-disease in a court-room, or of a horrible and mysterious murder, they clip it "to work into" their novels. "Are these not real facts?" they say. "Do they not belong in a realistic study of an American town?" After being sufficiently spiced in this manner, stuffed with such sugar-plums, these novels are sent out as accurate studies of life in Pueblo or Omaha, when, as a matter of fact, they are as false to life as a city newspaper which ignores the law-abiding and quiet citizens, and deals only with the criminal, the abnormal.'

"I was obliged to admit that there was much truth in his statement."

It is not true, Mr. Garland thinks, that a sane novel lacks readers. Mr. Howells is not neglected. He lives very well and his high position in literature is unquestioned. He admits that sensation pays better dividends, but an enduring literature can not be founded on it. "Suppose every writer in America were to turn next year to writing love romances of medieval France; what an absurd spectacle we would present to the world!"

A very important feature of Mr. Howells's art is his humorous and analytical study of women and the variety of his types of women. The lovelorn heroines of the Middle-Age literature, always young and ravishingly beautiful, all with "trembling white bosoms," and "tender limbs" and "silvery voices," no more represented the women of their day than a circle and three dots represent an individual face." Such wraiths could not exist for a moment on the deck of the *Arcostook*, or in Silas Lapham's household. Mr. Garland observes further:

"This is of more importance than will at once appear, for the influence of fiction upon feminine character is very great. Girls get their knowledge of the world in large measure from novels, and it is of the utmost importance that their ideas of courtship should be sane and wholesome at least. The women in America read in far greater proportion than the women of other lands, and they read more fiction than the American man; and while their influence on fiction is admitted, fiction unquestionably has a corresponding effect upon them. The humorous exposition of feminine as well as male excesses and follies is likely to have a beneficent influence on the nation's life, by giving comparative ideas of life and love to 'the mothers of men.'

"They certainly receive the most painstaking consideration from both Mr. Howells and Mr. James, many of whose books are most elaborate and serious studies of women, from the girl of nine to the grandmother of ninety, not confined, as were the old novelists, to those of a marriageable age and of extraordinary beauty. . . . . .

"He does not rhapsodize over his heroines, it is true; he is not a passionate wooer of their favors; but he is always kind, always sweet and manly in his treatment of them. His humor is corrective; it is never bitter. He is interested in all silent heroisms. War and crime, the abnormal, the furious, are left out of his books. He is interested, not in what men and women

do in times of fire and murder and other exceptional circumstances, but in their quiet sacrifices, their every-day lives, in their calm moments. His love-stories are pure and sane and self-contained; the erotic maniac is not to be found in the very best of his volumes."

Mr. Garland admits that he can not always follow Mr. Howells, and that many of the latter's warm personal friends do not like his books. But this does not prove that his books lack art; it often means that the author is fresher in perception and sweeter in sympathies than his neighbors. The fault found with his alleged "useless particularities" is dismissed with the question, *are* they useless particularities, or do these details help to give individuality and vitality to the picture? In conclusion:

"When his volumes are finally bound together, they will present a study thus far unequaled by any delineator of American society. In such a final view it is possible that the apparent lack of large aim, which is now the most pertinent criticism of his stories, will have less cogency. When his plan is all under the eye, it may appear that the present is to be represented, not as the age of colossal personalities, but of high average personality."

DRAMATIZATIONS OF TOLSTOY'S "RESURRECTION."

PLAYS based upon Tolstoy's much-discussed novel, "Resurrection," have recently been produced in Paris, London and New York; and at least two more dramatizations of the same book are already announced in this country. The Paris version is the work of M. Henri Bataille, a young French disciple of Tolstoy. The version presented in England and the United States is Mr. Michael Morton's adaptation of the French play.

The plot is substantially the same in the three plays, and is summarized as follows by *The Theatre* (New York):

"The scene of the drama is laid in Russia at the present time. The central figure is Katusha, a girl of humble parentage, who, at the time the play begins, has long been a favorite servant in the aristocratic household of Prince Nekhludov's aunts. The Prince returns home after a long absence, and becomes enamored of Katusha, who falls a ready victim to the libertine. The first tableau, which is really a prolog, closes with the scene of the seduction. The second tableau shows the jury-room in the law courts. Katusha (now known as Maslova, a notoriously immoral woman) is accused of poisoning a client in order to rob him. Maslova protests her innocence, and declares she was but the passive instrument of the real criminals. The jury has retired to deliberate, and this is said to be one of the most novel and striking scenes ever seen on the stage—the jurymen chattering and joking among themselves and giving only minor attention to the fate of the wretched prisoner. Among the jurymen is Prince Nekhludov, who has recognized in Maslova the unhappy girl he has ruined. The audience learns from his lips how Katusha, driven from his aunt's house when she was about to become a mother, was reduced to the vilest prostitution until, finally, she faces the charge of crime. He knows she is innocent, and tries to convince his fellow jurymen. They shrug their shoulders, and agree upon a verdict of guilty. Nekhludov feels that he alone is the real culprit. His duty is to save her.

MISS LENA ASHWELL,
Playing the part of "Maslova" in the London production of "Resurrection."

Next is seen the interior of the female prison at Moscow. Nekhludov has obtained permission to visit Maslova in prison. He finds her a moral and physical wreck amid a lot of wretched women who are quarreling and drinking. Maslova refuses to speak of what she has been—she wants to forget. Her memories are the cherished relics of an existence now gone. At first she does not recognize Nekhludov. When she remembers, she insults him; she detests him, and drives him from her. Then she faints in his arms, murmuring her undying love. In the next act Maslova has once more become Katusha. Her spiritual redemption has taken place gradually. She refuses the sacrifice Nekhludov would make, and the final tableau shows the halt in Siberia, where they bid each other an eternal farewell."

MISS BLANCHE WALSH,
Playing the part of "Maslova" in the New York production of "Resurrection."

The Paris correspondent of the New York *Tribune* declares that M. Bataille has most successfully overcome the difficulties of the dramatization, and, while "avoiding the long nihilist disquisitions of the novel," has "condensed the essential theatrical elements of the story in a prolog and five acts, which are admirably mounted and acted at the Odéon Theater." He says further:

"It is indeed remarkable to see how thoroughly Parisians have become aroused and electrified with Tolstoy's idea, and with what earnestness they followed the tale from the love idyl of the prolog to the purification or 'resurrection' of the closing scene. The action moves swiftly and logically, and leading critics can detect no flaw in the dramatic workmanship of the play, which is regarded as by all odds the most successful drama produced at the Odéon for many a year. . . . The part of Maslova is acted to perfection by Mme. Berthe Bady, an actress who has suddenly taken rank among the foremost artists of Paris. Mme. Bady has a warm, sonorous, magnetic voice, and her rendering of the fallen woman is a most truthful and most human conception, acted with that force and absolute simplicity that form the secret of the art of an actress like Mme. Duse."

The London production of "Resurrection," in which Mr. Beerbohm Tree and Miss Lena Ashwell take the leading parts, has not received so cordial a greeting. Mr. E. K. Chambers, of *The Academy and Literature*, while conceding that the play is "a triumph of adroit stage-generalship," finds it "wholly devoid of literary style." Mr. Arthur Symons, writing in *The Saturday Review*, declares:

"The play is a melodrama with one good scene, the scene in the prison; and this is good only to a certain point. There is another scene which is amusing, the scene of the jury, but the humor is little more than clowning, and the tragic note, which should strike through it, is only there in a parody of itself. Indeed the word parody is the only word which can be used about

the greater part of the play, and it seems to me a pity that the name of Tolstoy should be brought into such dangerous companionship with the vulgarities and sentimentalities of the London stage. I heard people around me confessing that they had not read the book. How terrible must have been the disillusion of those people, if they had ever expected anything of Tolstoy, and if they really believed that this demagog Prince, who stands in nice poses in the middle of drawing-rooms and of prison cells, talking nonsense with a convincing disbelief, was in any sense a mouthpiece for Tolstoy's poor simple little gospel. . . . Tolstoy has been hardly treated by some translators and by many critics; in his own country, if you mention his name, you are as likely as not to be met by a shrug and an 'Ah, monsieur, il divague un peu!' In his own country he has the censor always against him; some of his books he has never been able to print in full in Russian. But in the new play at His Majesty's Theater we have, in what is boldly called Tolstoy's 'Resurrection,' something which is not Tolstoy at all. There is M. Bataille, who might take the responsibility of it, or there is Mr. Morton, who may have done more than merely translate M. Bataille, or there is Mr. Tree, who may have exercised the supervision of an actor-manager; but Tolstoy, might not the great name of Tolstoy be left well alone?"

The New York version was first presented on February 18—the same evening as the London play—with Miss Blanche Walsh as "Maslova." In the judgment of the New York *Times* critic, it "was interpreted by a company of actors of no great original power, who are unaccustomed to sincere realistic acting, and who for the lack of able and artistic stage management missed most of the literary and artistic values remaining in the text." The same writer continues:

"That in the stage version the outlines of this story should be sharpened and emphasized was inevitable. Even when reduced to a prolog and four acts it lasted last night until toward midnight. It was probably necessary to make Dimitri Nekhludhov really in love with his intended Princess and formally betrothed to her, even tho this with one fell blow alters Dimitri from Tolstoy's impersonal apostle of regeneration to the familiar type of stage hero, who delights in sacrificing everything in sight except duty. It may even have been necessary at the end to make Maslova, on the heights of her spiritual exaltation, send Dimitri back, as it were, into the waiting arms of his Princess, tho this was at once to detract somewhat from the grandeur of the moment as Tolstoy conceived it, and to make what last night (in spite of an evident intention to the contrary) was felt to be an unpopular and an unhappy ending. . . . . Among all the hands that have passed on the play from Russia to New York, its literary value has been gravely impaired, without, it is to be feared, adding greatly to its popular appeal."

PRESIDENT HADLEY ON ACADEMIC FREEDOM.

NUMEROUS sensational differences have occurred of late years between the governing bodies and professors of some of our large institutions of learning as to the degree of freedom the latter should possess in teaching certain doctrines of political economy, theology, or science. Special interest attaches, therefore, to two articles written by President Hadley, of Yale, on "Academic Freedom in Theory and in Practise," and published in successive numbers (February, March) of *The Atlantic Monthly*. President Hadley, however, handles his rather warm subject in an academic rather than a journalistic manner, and approaches it from afar off. The liberty of teaching, he thinks, connects itself with other problems of civil liberty, and these can be properly analyzed only by historical study. Accordingly, he starts with the beginnings of history, and traces the progress of religious and civil liberty down through the ages, spending a little time over the differences between prophets and priests in Old Testament times; rehearsing, in a manner distinctly unfavorable to Socrates, the charges against that ancient philosopher that resulted in his death; dwelling at considerable length on the college songs of medieval days; and then, having conducted his readers through this long and interesting journey, he approaches and his readers approach the danger-signals that lie about the subject to-day in a very calm and philosophic frame of mind.

President Hadley emphasizes the distinction between liberty of thought and liberty of teaching. "Teaching is more than a theory; it is an act." It is not a subjective or individual affair, but a course of conduct which creates important social relations and social obligations. The expediency of teaching certain thoughts which any one should have liberty to think, can only be decided by a careful examination of the circumstances of each particular case. It is on this ground that he maintains that the accusers of Socrates may, after all, have had a very good case. Judging from the careers of some of his pupils, Alcibiades and Critias, for example, the liberty of teaching which he exercised was creating dangerous conditions in Athenian society. The defense of Socrates was a "defense of freedom of thought rather than of freedom of teaching." In similar manner, the early Christians were persecuted by the Roman authorities not primarily for their religious views, for "different religions could exist side by side in the empire, and in Rome itself, without provoking so much as a suspicion of hostility"; but for "their habit of holding irresponsible assemblies, of which the Roman law was profoundly jealous, and of enunciating theories of sovereignty which seemed to conflict with that law itself." A further shock to many preconceived ideas is found in President Hadley's conclusions on the effect of the Reformation upon freedom of thought and of teaching. "The Reformation," he writes, "by the violence of the religious wars which it aroused, tended to obliterate the distinction between law and morals, and made not only Catholic and Protestant churches, but Catholic and Protestant sovereigns for the time being, intolerant of that liberty which a few centuries previous would have been taken as a matter of course." Again: "Neither the continental nor the English [university] system was in any wise favorable to freedom of teaching during the three centuries which followed the Reformation."

ARTHUR TWINING HADLEY,
President of Yale University.

Coming down to the present-day question of faculty reorganization in American institutions, President Hadley divides the "somewhat incongruous functions" which our faculties exercise into three classes: (1) those for determining the nature and scope of examinations and the granting of degrees; (2) the nomination of teachers; (3) administrative and disciplinary measures. He writes:

"I can not see that, if we were once started on the road, there would be any great difficulty in separating the disciplinary function from the other two and putting it into different hands. Of course there is a convenience in the present practise; the man who is judging of the scholarship of any particular student has certain obvious advantages for supervising his conduct. But I believe that the disadvantages of the combination outweigh these

advantages—that the discipline hurts the teaching more than the teaching helps the discipline; and that no small part of the alleged infringements of student freedom could be avoided if these two matters were kept entirely separate.

"It will be remembered that perhaps before faculties existed at all, the students of Bologna were organized by *nations*—bodies of students and graduates charged with protection of scholastic rights and enforcement of good order. I can see no good reason against the attempt to reintroduce this arrangement in the United States. I should like to see the whole control of discipline, of athletics, of public student functions, and of intercollegiate relations of the undergraduates—in short, of all things outside of the sphere of study and examination—in the hands of a committee chosen either by the graduates alone, or, probably better, by students and graduates together. For the initial point in such an organization our alumni associations form admirable centers. Were the graduates thus given a regular organized place in the daily life of the universities, it would not only help to solve some of the problems of freedom of teaching by removing a disturbing element, but would tend to emphasize that community of interests and standards among college men which it is so important to preserve as a bulwark against some of the disintegrating tendencies of the day."

He would also have the functions of examination and teaching divided, tho this, he thinks, is a more difficult matter. "The teaching should be provided by the university rather than by the several faculties thereof." He says further:

"If this distinction could once be made, it would avoid most of the complaints of faculty interference on the part of the professors as completely as the graduate control of discipline would avoid similar complaints on the part of the students. The individual professor would see that if students were discouraged from coming to him by the arrangement of the course, it was because a certain faculty had its views as to the proper requirements for a certain degree rather than as to the proper teaching of a certain subject. He might differ from the members of that faculty in their opinion; but the difference would come in such a domain that it would not be an infringement of his liberty as a teacher, and would lose the element of personal bitterness which is now so prominent. The man who was unable to teach students in arts as well as he could teach students in philosophy would see the true reason for his non-employment in the former capacity far more clearly, if the arts faculty, as a *faculty*, were concerned solely with the requirements of the student and not with the qualifications of the professor."

The change from control of universities by rich donors to control by the state would not, he thinks, remedy matters much, as political control does not by any means mean educational freedom. The question is not so much one of the form of corporate control as of the general habit or standard of a community concerning toleration:

"A locality in which theological universities turn away professors for their views on points of doctrine is apt to be one where state universities turn them away for their views on matters of party politics. . . . The worship of the creed as a fetich and the worship of the platform as a fetich are both survivals of an earlier stage of civilization where the necessity of securing coherence of public sentiment was paramount to the necessity of securing free and progressive thought, or business-like execution of that thought. The more fully developed community tends to regard the creed not as an essential to salvation, but as a working hypothesis to secure an efficient basis of action—and it regards the platform in the same way. Under such circumstances, it is generally possible to secure enlightened administration, even of a pretty rigid deed of trust; and to secure proper regard for the future, even among those legislators and administrators who in politics are strong party men."

A "Poet's Trust" in Germany.—The lyrical poets of Germany, to the number of about seventy, have been considering the matter of remuneration, and have come to the conclusion that prevailing rates for German poetry are too low. They recently entered into a compact not to accept less than half a mark (12 cents) a line for their work. This price, remarks the New York *Independent*, "seems no more than fair pay. It would be rather small here, but then German verse may well be cheaper." The Baltimore *Sun* comments:

"A great many new questions are raised by the organization in Berlin of a 'Lyrical Poets' Union' to restrict production and maintain prices. Competition has put down prices of poems in Berlin to such an extent that its seventy geniuses must combine to exact of their soulless employers a living wage. They demand a minimum wage of 12 cents a line, in order to be able to maintain the standard of living of self-respecting German poets. If capitalist publishers, lacking in humanity, ignore poets' rights, a strike will teach them a lesson, and the corners of the daily and weekly journals will be forced to content themselves with 'ads.' Where there are strikes there must be 'scabs,' boycotts, lockouts, picketing, etc. This opens a new prospect. Are lyrical scabs to be stabbed with shafts of wit and murderous epigrams? And will the union adopt the usual rule to limit the number of apprentices learning the business, so as to prevent excessive production? Many advantages must accrue from organizing the poetic trade on modern business principles and having a walking delegate. The trouble with the business heretofore has been want of regulation, the result being that the supply of product has exceeded demand."

The London *Academy and Literature* extends its sympathy not only to "the gentlemen whose lyric fervors were rewarded with less than sixpence a line," but also to "the editors whose hands are to be forced, if the forcing comes about." It adds: "To have seventy poets in a country each of whom writes verses worth sixpence a line must be a sore trial."

POE'S PLACE AS A CRITIC.

"POE is the most sublime poet since Milton"; but he "had not the breadth of view or the knowledge necessary for a great critic." So we are informed in an article in the Chicago *Dial* (February 16) by Mr. Charles Leonard Moore, a Philadelphia author. Mr. Moore's opening arguments supporting this conclusion are as follows:

AN ENGLISH "IMPRESSION" OF POE.
—From *The Protest.*

"In the world's literature there are only two absolutely great critics—Aristotle and Lessing. The 'Poetics' of the one and the 'Laocoön' and 'Dramaturgerie' of the other are the fountains at which all secondary critics must fill their pitchers. Aristotle is limited in certain directions by a lack of material to work upon; and, similarly, Lessing is circumscribed by dealing too exclusively with Latin and French authors. But they have the genius of divination, and their work is final. Amongst the ancients, Longinus was an inspired appreciator. He felt so fully the greatness and charm of literature that he communicates a like thrill and fervor to his readers. He is exalting and stimulating to the last degree. But except a few oracular utterances about style, and some dry remarks on grammatical forms, he gives us no information as to the underlying principles of art. English literature can boast of a long succession of critics only inferior to the great Greek and German—giant planets to that double sun. Dryden, Johnson, Coler-

ridge, Hazlitt, Arnold, Lowell—these and others have left us a body of criticism more varied and weighty than any other modern nation, save Germany, possesses. Does Poe deserve to rank with these men?

"Poe unquestionably performed one of the most difficult feats of criticism. With almost unerring instinct, he separated the wheat from the chaff of his contemporary literature. Hawthorne, Dickens, Tennyson, Mrs. Browning, and others received from him some of their earliest and most valuable appreciation. If he erred, it was on the side of enthusiasm. His position was analogous to that of an expert in precious stones, who can pick out by instinct the real and perfect gems from a mass of flawed stones or paste imitations. But such an expert is not necessarily a practised mineralogist or chemist, acquainted with the composition of minerals and capable of reproducing them in the laboratory. And the literature which Poe practised upon is certainly not of the first importance. His few casual utterances about really great books are wrong. His attempts to postulate principles of poetry are ludicrously wrong."

Mr. Moore proceeds to cite, as an instance of his author's "pseudo-poetic principles," Poe's brilliant essay on "The Rationale of Verse." It is vitiated, we are told, by "the assumption that verse is founded on quantity." "It would be a hard thing," says Mr. Moore, "to say that there is no quantity in English poetry—but it certainly does not perform the office that Poe imagined it did. I doubt whether any great English poet ever thought of quantity when writing his lines, or, save in exceptional cases, scanned them after they were written."

Poe was wont to assert that beauty is the sole province and object of poetry. "It is curious," observes Mr. Moore, "that his own work is lacking in just the quality he deemed all-important—beauty. Even in diction his phrase has seldom the perfect grace and haunting charm and massy weight which are almost habitual with Keats and Coleridge and Tennyson, and of which Wordsworth and Arnold and Emerson have such frequent use." We quote, in conclusion:

"Poe is the most sublime poet since Milton. Sublimity stirs even in his most grotesque and fanciful sketch—like Milton's lion 'pawing to get free his hinder parts.' It rears full-fronted in the concluding pages of 'The Narrative of A. Gordon Pym'—in the sentences which describe the enormous bulk and battle-lanterns of the ever-living ship in 'The MSS. Found in a Bottle.' It is predominant in the mighty sweep, the ordered disorder, of 'The Descent into the Maelstrom.' It thrills us in the many-colored chambers of 'The Masque of the Red Death.' It overwhelms us with horror in 'The Murders of the Rue Morgue.' It is solemn and awe-inspiring in 'Berenice,' 'Ligeia,' and 'The Fall of the House of Usher'—in 'Ulalume' and 'The Raven.' Metaphysic, which Poe derided—the great problems of life, death, and the universe, wherein sublimity most resides—haunted his mind continuously. He reaches his climax of almost too profound thought in the colloquy of 'Moras and Una,' 'The Power of Words,' and 'Eureka.' No poet has so continuously tried to outreach the possibilities of human experience; none has so assiduously avoided the ordinary facts of human life. His sublimity accounts for his fate with the American public. A true democracy, it abhors greatness and ridicules sublimity. Yet Poe fascinates it with antipathetic attraction. It follows him very much as Sancho Panza flounders after Don Quixote.

"In spite of its sublimity, Poe's theater of tragic abstractions is of course inferior to the flesh-and-blood theater of the great creators. They include him—they are as high as he, and they have many times his breadth and weight. But he is very great even in his one-sidedness—his silhouettedness. One-sidedness may indeed make an artist more intense and affective. But it is a crime in a critic. Despite his fine instinct for what was good, Poe had not the breadth of view or the knowledge necessary for a great critic. It is better that a critic should err in judgment in a concrete case than that he should lay down princesipw lhich are probably wrong."

KING VICTOR EMMANUEL has conferred on Signor Mascagni the title of Chevalier of the Order of Savoy. The conferring of the title is attributed to the King's desire to show sympathy with the composer as a result of his tribulations in the United States.

SCIENCE AND INVENTION.

ARE RAILWAY COLLISIONS ABSOLUTELY PREVENTABLE?

IN fifteen months not a single passenger has been killed on British railroads; in this country seventy-seven have perished in fifteen days. Why should this be? asks *The Scientific American*, editorially. Not because of the number of passengers, for British railways carry more passengers than ours; not on account of crowding, for the British traffic is handled on one-eighth as many miles of track as ours; not because their signalling systems are better, for many of the roads on which our accidents have happened have more perfect systems than the British roads. An eminent American engineer says that the difference is one of national temperament. "Here," he says, "we take chances." *The Scientific American* accepts this explanation and goes on to say that the remedy must evidently lie in automatic devices that will not allow the engineer to "take chances." Such devices there are, it says, that will make collisions practically impossible, and our appalling railroad accidents are therefore absolutely preventable, the only obstacle to putting them in operation being one of expense. In this connection the writer asks the question which he places at the head of his editorial—a quotation from Matthew's Gospel: "How much, then, is a man better than a sheep?" Here is *The Scientific American's* method of preventing collisions:

"Let us place two levers on the engine and two corresponding trips on the track, one within sighting distance of the green and the other within sighting distance of the red signal. Let the green trip register with a lever that shuts an auxiliary throttle-valve near the smokebox; let the red trip register with another that will set the emergency-brake. Then should the engineer fail to shut off steam and let his engine coast on approaching the distant green signal, it will be shut off for him; and if he fail to set the brakes on sighting the home or red signal, the trip will open the train-pipe. The levers could be so arranged that if the engineer manipulated his throttle and brakes in accordance with the signals, there would be no connection made between the trips and the engine. The suggestion as to automatic air-brake connections with the red signal was made several years ago, and it is excellent; the green light trip acting on the throttle is a logical extension of the idea.

"'But,' says the railroad official, 'by the use of an absolutely automatic system you would destroy that element of watchfulness which it is our desire to cultivate in our engineers. They would become careless and would cease to watch for the signals. Then, should the signals fail, the chances of accident would be greater than before.' Very good; then let the roundhouse foreman set a seal upon the automatic levers on the locomotive before it starts on its trip; and let it be a cast-iron law of the railroad that if an engineer come back with the green signal seal broken, he will be fined thirty days' pay, and that if the red seal be broken he will lose his job, and be blacklisted from Maine to Florida and from New York to the Pacific coast.

"Here is a system that would prove an almost absolute preventive of collision, and that, incidentally, would produce in the first brief month of its operation a set of engineers who for alert vigilance would be hard to match."

To extend this method to all the block-systems would be enormously costly, but the writer suggests that it will be still more costly to keep on killing seventy-seven passengers in fifteen days; especially if, as recent jury verdicts are suggesting, the value of a human life is being estimated at a higher rate than it used to be. A man, he says, used to be worth about 1,000 times as much as a sheep; but the ratio is getting to be greater. He goes on:

"Furthermore, we must remember that, to-day, of our 200,000 miles of tracks, only 25,000 miles, or one-eighth, is equipped with a block-signal system of any kind. And here we find another potent cause of our perpetually recurring railroad horrors. Train

despatching by telegraphic orders assists in keeping up the frightfully high average of railroad disasters. Take note of Accident Bulletin No. 5 just issued by the Interstate Commerce Commission, which records that in the three months ending September 30, 1902, 263 persons were killed and 2,613 injured in railroad disasters. At that rate, in the fifteen months of which we have spoken, the total number of killed would run up to 1,315 and the injured to over 13,000.

"And to think that it is all preventable! Moreover, just as soon as we really understand how infinitely much a man is worth more than a sheep, it *will* be prevented—if not by the initiative of the railroads, then by legislative act compelling the application of a direct, engine-controlled, block-signal system to every one of the 200,000 miles of track."

THEORY AND FACT.

THAT a theory accords with the facts does not necessarily prove it true, altho, until some discordant fact is observed, it may serve a useful purpose. Some such theories have thus served for scores of years, only to be cast aside at last. According to Poincaré, the eminent French mathematician, an infinite number of theories, only one of which is actually true, may be devised to account for any given state of facts. Says an editorial writer in *Engineering* (London, February 13), discussing this statement:

"Poincaré has stated that, given any series of phenomena, an infinite number of mechanisms can be devised, the working of which will give rise to the phenomena actually observed. To each of these mechanisms will correspond a different theory, of which, even in the most favorable case, only one can really represent things as they are. Such a representation is, however, he remarks, not the principal aim of a theory, the main object of which is rather to facilitate prediction; and in the case cited, any one of the wrong theories above referred to would do this as well as the single correct one, so long as no new phenomena were introduced into the series to be coordinated. In the practical work of the world an imperfect theory is much better than none at all. No known gas accurately observes Boyle's law [that volume is inversely proportional to pressure], but the utility of the concept is but little affected thereby. And to take a more modern instance, there are considerable difficulties still unexplained in the theory of the ionization of electrolytes due to Arrhenius. On this theory the mere solution of most mineral salts in water splits up the molecules of the salt into ions, which may either be atoms or atomic groups. This splitting up is, however, accompanied by no absorption of heat, tho much heat may have been liberated in the original formation of the molecule. It is true that each ion bears an enormous electric charge, but the charges, being of opposite sign, should tend to keep the ions constituting the molecule together, whereas they appear free. Nevertheless, and in spite of these difficulties, the theory has led to remarkable predictions, which experiment has confirmed, and has greatly facilitated the grouping together of a number of phenomena which at first sight seem in no way closely allied. That it has attained its final form, however, is unlikely, and it may well be profoundly modified in the future. Indeed, as time goes, almost all old theories are superseded by new ones, but their skeletons are often incorporated into the ultimate constitution of the science, as that of a coral is into the substance of the reef on which it grew. The very terms which originated in the days of more imperfect knowledge are often retained and used in much the same way as when first introduced. The expression 'latent heat' is itself a legacy from the days when heat was considered a substance; and as commonly used, no one ever stops to remember that the heat which has disappeared is no longer heat, latent or otherwise, but is represented by an equivalent quantity of internal and external work.

"The object of a theory being to facilitate prediction, it is natural to adopt that which most readily lends itself to arithmetical and algebraical calculations. Mathematicians tell us that the positions of the heavenly bodies could be predicted with equal accuracy on the Ptolemaic hypothesis of a geocentric universe as on that of the modified Copernican theory, which has replaced it, only the arithmetical work would be much more tedious and involved. Nevertheless, from the mathematical point of view, there is no reason for assuming the one hypothesis to be more correct than the other. The Ptolemaic cycles and epicycles used to predict the future positions of the planets are merely analogous to Fourier's trigonometric series; and it thus follows that by taking a sufficient number of terms astronomical calculations could on this system be made to any degree of accuracy desired. We are reminded here that amongst the hypotheses put forward to account for the erratic behavior of Uranus prior to the discovery of Neptune was the suggestion that at such an enormous distance from the sun Newton's laws were no longer exact. The brilliant rehabilitation of these laws subsequently is a hopeful augury for the ultimate result of the careful investigation now being made into the doctrine of conservation of mass with which we have dealt above."

FARM MACHINES THAT SEEM TO THINK.

HUMAN control is reduced to a minimum in some of the latest examples of improved farm machinery. The machine performs its various operations automatically, almost as if it had a mind of its own. All the operator has to do is to feed it and steer it. Says *The American Exporter*, describing some of these ingenious devices:

"For planting, there is a machine for every kind of seed, cunningly designed, well built, and perfectly adapted to the work for which it is intended. It makes no mistakes, never skips an inch, sows no more thickly in one place than in another, and does its work with an intelligence which the average farm-hand could not be expected to display.

"For grain and grass the 'broadcast-seeder' is used. This is attached to an ordinary wagon, and the only human cooperation it requires is keeping its hopper full. It will also distribute all kinds of dry commercial fertilizers, and put them just where they will do the most good.

"A mechanical grain-drill is provided for such grains as need to be planted systematically in rows or hills. It is infallible in its operation, and would plant corn, for example, in the middle of a macadam road, if this was required of it. Among other attachments it has a land measurer, something like a cyclometer, which records the acreage planted. To cover the seed it has planted, it is provided with a system of hoes which are adjusted to work straight or zigzag.

"A variant of this apparatus weeds as well as sows. Still another is the bean-planter, which is quite remarkable in its intelligence, so to speak. It drills the hole in the ground, plants the beans, covers them, and marks the position of the next row at one operation. It will even alternate corn with beans, turn and turn about, or plant corn or beans, distribute fertilizer, and cover everything impartially. In fact, it will do anything for which the farmer has the intelligence to adjust it.

"The potato-planter would make a farmer of a generation ago sit up and rub his eyes. It requires that the potatoes be supplied, but will do all the rest of its own initiative. It picks the potato up and looks it over—or seems to—cuts it into halves, quarters, or any desired number of parts, separates the eyes, and removes the seed ends. It plants whole potatoes or parts thereof as desired, as near together or as far apart as the judgment of the farmer on the driving-seat suggests. Having dropped the seed it covers it, fertilizes it, tucks it in like a child put to bed, and paces off the next row with mathematical accuracy.

"Certain vegetables, notably tomatoes, cabbages, cauliflower, celery, lettuce, and some others, need to be started in cold frames, and transplanted for the practical business of growing. For this purpose there is a plant-setting machine, which will handle a sprout as if it loved it, establish it in its new environment, gather the earth tenderly about its roots, give it a copious drink of water from a tank it carries, and cover from four to six acres in a day.

"The various operations generically known as 'cultivating' were once the bane of the farmer's existence. Now he has a machine for each and every operation of crop tending, with a driver's seat as comfortable as that of a buckboard. These machines seem to know a weed from a crop plant intuitively, and while they will snatch the former out by the roots without compunction, they pass the plant unharmed—provided, of course, it is growing in its proper place. These machines have been

highly specialized, and for every operation connected with the tending of every kind of crop, there is some one machine which performs it a little better than any other.

"When the crop is ready for gathering, mechanism is seen at its best. The perfection of the modern reaper and binder is illustrated by an incident which is said to have occurred this year in Illinois. A farmer had driven his reaper into the edge of a field ready for cutting, and dismounted from his seat to get a drink of cider. While thus occupied the horses took fright and ran away. They tore round and round the field, cutting a full swath with every jump, gathering up the grain, binding it with twine, and tossing the bundles to one side. Before the team was caught it had covered six and a half acres, leaving only patches here and there to be gone over. This was accomplished in something less than twenty-four minutes."

SAWDUST AS AN ALIMENT.

THE comic paragrapher is accustomed to liken various kinds of breakfast-foods to shavings or door-mats, and to compare the lot of him who eats them with that of the horse condemned to feed on dry hay. Articles on food-adulteration, which are not intended to be funny and certainly are not so to the consumer of cereals, give grounds for the belief that in some cases the likeness is more than an apparent one. A recent account of "Some Falsifications" contributed to *Cosmos* (Paris, February 14) by Paul Combes, informs us that ordinary sawdust has for several years been a favorite ingredient of certain cheap flours and cereal foods, and he gives a recipe for detecting it. Says M. Combes:

"Very fine sawdust is sometimes mixed with cereal foods, and has at least one advantage—it is not a poison. It even constitutes a sufficient food for the larvæ of certain insects, but it is quite insufficient for the nourishment of man. It was shown several years ago (1898) that certain suspected cereals contained no less than forty per cent. of wood-sawdust.

"This adulteration is found especially in wheat flours of inferior quality and also in oat or rye flours, which normally contain cellulose débris coming from the grain itself. Thus it is somewhat difficult to detect.

"Nevertheless M. Le Roy has attempted to apply to the test the color reactions produced in cellulose by different substances, such as orcin and amidol—well-known reactions, but not hitherto used in this special manner.

"He has obtained excellent results by using a reagent that shows in a few seconds the presence of wood-sawdust in meal. This has the following composition:

Ethyl or methyl alcohol of commerce	150 cubic centimeters.
Distilled water	150 " "
Sirupy phosphoric acid	100 " "
Phloroglucin	10 grams.

"It suffices to throw a pinch of the suspected cereal in some of the liquid and to heat it gently. If the flour contains wood, the particles of sawdust will assume a brilliant carmine color—the coloration produced on the cellulose particles coming from the grain itself is absent or slight, at least for some time; as for the starch particles, they remain colorless. The observation may be made with the naked eye or with a strong lens.

"A solution of phloroglucin in hydrochloric acid acts too energetically under the same conditions; the difference of color between the particles of wood-cellulose and grain-cellulose is less marked.

"Of course M. Le Roy's rapid and sure reagent does not enable us to measure the proportion of sawdust in the flour, but it reveals the adulteration, which can afterward be studied more carefully with the microscope."—*Translation made for* THE LITERARY DIGEST.

Reported Discovery in Shipbuilding.—What is stated to be "an impending revolution in shipbuilding" is announced from Germany in a special message to *The Times* (New York). The correspondent tells us that Professor Kretschmar, of the imperial navy, has a radically new plan for the construction of vessels, by which the traditional shape of the hull is entirely altered. He says of this invention:

"It completely rejects the traditional type of ship patterned on the form of fishes and substitutes that of aquatic birds by giving vessels the outlines of a tetrahedron—that is, a figure inclosed by triangles. By minimizing the wave resistance the new form augments the propelling capacity of the screws of a ship of the present type 50 per cent., thus producing a corresponding acceleration of speed without any increase of power. Kretschmar's theory rests on the proposition that a vessel should be built in the shape of an animal which moves on the surface of the water like a boat instead of in the shape of a fish, which moves through the water. His type does not produce bow, stern, nor side waves nor commotion of any kind in sliding or gliding through the sea."

Commenting on this, *The American Machinist* says:

"We are not quite certain about German ducks, geese, and swans swimming in German waters, but any one who has observed them here in America knows that the 'bow-wave' is a prominent feature of their progress over the water, and we must say that the report seems to promise entirely too much. We do not believe that a boat has been, and we doubt very much if one ever will be, made that can go through the water at any considerable speed without producing 'commotion of any kind' in the water."

JAPANESE DWARF TREES.

THE method by which the Japanese succeed in growing dwarf trees that seem miniature copies of the large natural forms was long a mystery. It is now known that this is done by a skilful and long-continued course of pruning and regulation of nutrition. In a pamphlet on the subject, M. Albert Maumené tells us that this method ought not to be called unnatural and artificial, since it is but an extension and systemization of what nature herself does to the vegetation on high mountains, bleak shores, and other barren spots. The *Revue Scientifique*, speaking of M. Maumené's brochure, says:

"It is well known that the art of dwarfing the largest trees is part of the education of the Japanese upper classes; that it has its schools and its celebrities. Young persons of fortune devote to it the time that our young women give to the piano, which shows a comprehension of the things of the artistic life quite different from ours.

"For the Japanese, in fact, the garden is the outside parlor; the parlor, the inside garden. They always wish to produce the illusion of a natural landscape, with the same prodigality that nature uses to adorn rural spots, and as they join a rare imitative talent with a fine observing mind, they have become a nation of artists in this particular.

"So the skill of their gardeners consist not in making beautiful flowers simply grow and flourish. Their ambition is greater: trees grown in pots should recall by their appearance those that grow on the mountain sides, on the edges of ravines; and while remaining small, their majestic forms and original outlines must be preserved. The cultivation of these trees is a work both of time and of patience. This dwarfing, or, to speak more exactly, this atrophy of plants is the result of physiological causes which are themselves the consequence either of the processes of culture employed or of the environment of the plants. We must take account of these two influences at once in the formation of the liliputian trees of Japan, for the Japanese climate plays a preponderant part in predisposing vegetation to remain dwarfed.

"Great altitude, dry heat, persistent cold, insufficience of nourishment, cramping of the roots, lack of food in the youth of the plants, winds that bend or break the stem—these are some of the elements that determine the arrest of development of the plants that every one has observed in excursions to the mountains, among the rocks of the coast, and in arid places in general. 'A conifer whose top is cut off,' remarks M. Vallot, 'is arrested for a time; if this operation is performed anew every time the tree begins to recover, the time of arrest will become longer and longer, and the tree will remain knotty, deformed, and dwarfed.'

"All the cultural operations, whether on the subject or on its

nourishment—such as continued trimming, twisting, and turning of the branches, transplanting to small pots, cutting away roots, etc.—that can paralyze the vital functions, obstruct the circulation of the sap, or lessen nutrition, will provoke a stoppage of growth, showing their effects in a very noticeable reduction in height and sometimes in deformation of the plant, and thus prepare it for dwarfing. This would be merely a matter of time and perseverance, if the Japanese did not also use esthetic feeling and a certain art in the making of their pygmy trees. The same subjects, tho less dwarfed in their branches, may be met at each step on mountain sides, in the fissures of rocks, and in all situations where plants struggle for existence against the elements. The processes employed by the Japanese are thus not so unnatural as some have affirmed.

"The conifers are the plants that are chosen preferably for the formation of these pygmies; besides these, the oak, the plum, the bamboo, and the cherry are species that take kindly to dwarfing.

"In 1878 was seen for the first time in France a collection of Japanese trees; in 1889 another collection was shown, but in 1900 only a few examples were seen in the Japanese garden at the Trocadéro. A cedar, aged 250 years, according to the catalog of the Paris Horticultural Exhibition, was sold for 1,300 francs [$260].

"The English seem to be very fond of these trees, which are not yet in the fashion with us. They are considered unfit for use indoors, and are generally for the open air, to be placed in a partially shaded spot, as in a garden or on a terrace."—*Translation made for* THE LITERARY DIGEST.

ARE THE SWISS GLACIERS DISAPPEARING?

A GOOD deal has been written in Europe lately, and especially in France, about "white coal" as a source of energy. By this figurative phrase is denoted the glacier ice of the high mountains, which, melting gradually, gives rise to streams that never fail. These mountain torrents are being more and more used for generating power, and thus glaciers may be looked upon as mines of stored-up energy. The idea has been that, while the exhaustion of the coal supply is only a matter of time, here are mines of "white coal" that are inexhaustible because continually renewed. But now comes M. P. Delahaye, who, in a communication to the *Revue Industrielle* (Paris), points out that we have evidence that the Alpine and other glaciers are shrinking, so that the white coal may not be any more reliable in the end than the black. Says this writer:

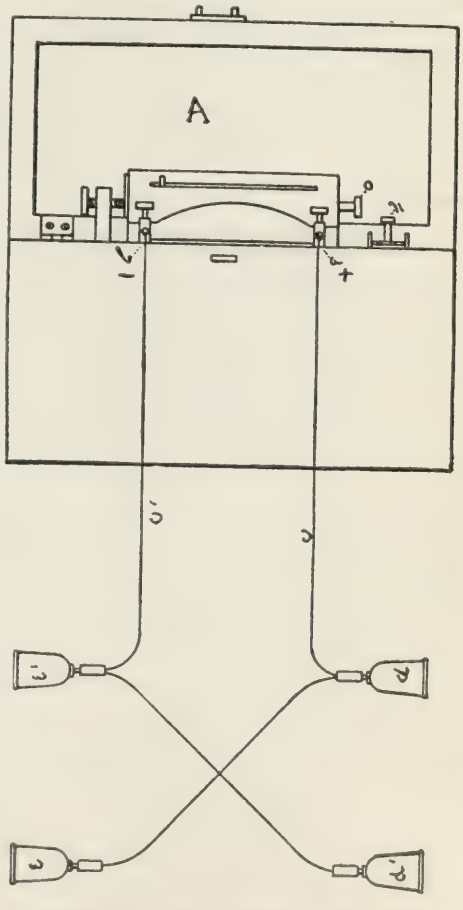
"Until recently, no one concerned himself much about the life of glaciers; geologists knew perfectly well that they were not immovable and that there were variations in their mass and form; but isolated observations did not enable us to formulate general conclusions regarding the glacial system of any particular region. It was necessary for this purpose to subject a certain number of glaciers to systematic observation, after surveying the region exactly, and to assure ourselves by annual verification whether there was advance or recession, augmentation of the mass or diminution. In 1874 the Alpine Club of Switzerland made a chart of the Rhone glacier; in 1881 a Swiss naturalist, M. Forel, published an essay on the periodic variations of glaciers; later the German and Austrian Alpine Clubs began to map the glaciers of their countries, and for some little time the Tourists' Society of Dauphiny has been watching constantly the glaciers of the French Alpine region. M. Kilian, professor in Grenoble University, has devoted himself to this study, and the observations that he has been making personally for the last ten years show us that a number of the glaciers of Dauphiny are disappearing with unsuspected rapidity.

"M. H. de Varigny has recently discussed the data furnished not only by M. Kilian in his observations on the variations of glaciers, but by Messrs. Forel, Finsterwander, and Murat, and Messrs. Richter and Porro, in the reports devoted to Switzerland and the Eastern and Italian Alps. The phenomenon of decrease is manifested everywhere, if we credit the proofs collected in Sweden, the Caucasus, Kilimanjaro, the Altai, the Himalayas, etc., and reproduced by the *Revue de Glaciologie*.

"Because of the small number of years during which the scientific study of the subject has been carried on, it would be premature to say that the present glaciers are destined to disappear from our land, altho some of them are diminishing almost to the naked eye. It is possible that they are passing through a crisis due to the persistence of winters with little snow or of warm summers. But still the constancy of the glacier is a hypothesis that is not confirmed by known facts; and when we speak of the utilization of the energy of 'white coal,' when it is predicted that this will be substituted sooner or later for black coal, we ought not to forget that when the time comes when we have no more coal, it may be that we shall be also lacking in part of the natural resources on which we are now relying to replace it."—*Translation made for* THE LITERARY DIGEST.

TELEGRAPHY BY ELECTRICAL SENSATION.

A COMPLETE telegraph in which the messages are read by slight electrical shocks communicated to the finger-tips has been devised by a Pennsylvanian, who claims that it will find a wide use among deaf-mutes and perhaps among others. A correspondent of *The Western Electrician*, who describes the method, says that by it "deaf-mutes and blind mutes are enabled to dispense with the finger-and-lip service, as well as the raised-letter method, and converse freely, as well in the dark as in the light." He goes on to say:



TRANSMITTING INTELLIGENCE BY ELECTRICAL SENSATION.

"The invention consists in establishing communication by electric impulses through a circuit in which a source of electricity and a person or persons receiving the impulses form a part, with apparatus under the control of such person or persons for making the impulses with rapidity and facility.

"The accompanying drawing is a plan view of an ordinary battery having electrical conductors provided in accordance with the invention. Referring to the drawing, (*a*) indicates a binding-post for attaching the positive wire, and (*b*) a post for attaching the negative wire. Bifurcated wire conductors (*c*) and (*c'*) are attached at their upper ends to the posts (*a*) and (*b*). To the free end of these conductors and their bifurcated points are attached metallic finger thimbles which form contact-members.

"The key of the battery is indicated by (*n*). Now, when one person incases the thumb in (*d*) and the forefinger in (*d'*) of one set of conductors, and another person incases the thumb in (*e*)

and the forefinger in (*e'*) of the other set, and the key end is closed, each of the thimbles becomes electrified and both persons are impulsed; but when the thimbles (*e*) and (*e'*) are touched the current is short-circuited and neither party feels the impulse, and if (*e*) and (*e'*) are left open and thimbles (*d*) and (*d'*) are made to touch, the current is short-circuited, and there is no impulse to either party. Thus the impulses may be sent from one to the other with instant rapidity by means of touching and opening the thumb and forefinger thimbles.

"'Now, by using the Morse code,' says Mr. Reese, 'two persons within this circuit can converse together as rapidly, as distinctly, and as accurately as a person can now telegraph a message. There need be no mistakes, as both persons feel the same impulses. The strength of the impulses may be made lighter or stronger by adjusting the regulator (*o*). When the current is not required, it should be shut off by opening the key (*n*).

"'By the use of my improved method persons may carry pocket batteries and converse with each other while walking on the street or while on the cars or other mode of transit. They can talk in the dark as well as in the light, and where the house is properly wired persons in different rooms or in different beds may commune together. The blind-mutes can throw their cumbrous fingerboards away and receive and send their impulses by electricity with as great rapidity as can be done by telegraphing to-day. The schoolhouses can be wired, so that the teacher can speak to any one or to every scholar in the class-room at the same time and can call any one or class to the office at any time. The great advantage of the bifurcated wires is that they bring both parties in when the circuit is open and throw them both out when either side is shunted. When two parties hold the thimbles, a third party may send a message to them by using key (*n*); but he could only receive the answer through the thimbles. The thimbles are such as ordinarily used by women in sewing. They have an opening in the end, so as to receive the wire, which may be easily separated, so as to attach a thimble of the desired size.'"

"WHAT IS ELECTRICITY" AGAIN.

ACCORDING to the theory advanced by Prof. J. J. Thomson, which has gained so many adherents, and has so deeply modified scientific thought in the past few years, atoms may be further subdivided into "chips," each of which constitutes a negative charge of electricity. An interesting modification of this theory by Sir Oliver Lodge is noted in *The Electrical World and Engineer* (February 21). According to Sir Oliver's theory, all matter is electric in nature. Says the writer:

"In the paper under consideration, the electronic charge carried by the corpuscle is regarded as the corpuscle itself. That is to say, instead of assuming a nucleus or core of matter to carry the electronic charge, the charge . . . is regarded as the corpuscle. All matter is assumed to be built up of these electronic charges or electrons, which are both negative and positive. A hydrogen atom is supposed to contain about 700 of these electrons. A mercury atom is reckoned to have 200 x 700 or 140,000 electrons all stowed away inside. . . . One might suppose that they are tightly packed. But, on the contrary, since the diameter of the electron, to account for its inertia, has to be 10.15 meters, or the millionth of a bicron, there is so much elbow-room for the 140,000 supposed inhabitants of the mercury atom that they are roughly as distant from each other, relatively to their size, as are the planets in our solar system. . . . . .

"The electrons perform orbits inside these little spheres, but the place which our sun occupies in our visible planetary system seems to be vacant in these atomic systems. According to the hypothesis, the electrons do not swing about a grand central electron, but about one another. The difference between one kind of matter and another lies in the physical and chemical properties of the atoms; but the difference between the atoms is merely due to the difference in groupings of electrons. . . . . .

"All chemical affinity is traced to aggregations of electrons, or atoms, with odd or unbalanced electrons either positive or negative. Chemical union is the result of the attraction of such unsatisfied electric charges on different atoms for one another. Cohesion is a less locally powerful, but more extended, electric attraction of groups of electrons in mutual linkage or satisfaction. Cohesion, in the electric sense, as in wireless telegraphy, is the artificially enhanced molecular attraction due to electric stimulus and the momentary inductive displacement of groups of electrons. . . . . .

"The Lodge theory of the electron appears to differ then from the Thomson theory mainly in postulating that there is no matter in an electron or corpuscle, and that this little fundamental unit is all electric. Thomson's theory means that negative electricity is matter. Lodge's theory means that all matter down to the ultimate corpuscle is electricity. The difference in thought between the two theories is quite appreciable; but there is so little matter in an electron that it matters little to which we pin our faith."

It will be noted that in both these theories it is the relationship between matter and electricity that is explained. Thus they answer the question "What is matter?" quite as truly as What is electricity?" Tho in a sense they answer neither, they certainly form a basis on which we can acquire a vast amount of additional knowledge about both.

White Light for Photographic Work.—To many amateur photographers the dim red light used in the ordinary dark room is very disagreeable. All such will be glad to know that it is possible to use a liquid filter that will strain out the sensitive rays of light without altering its color, so that developing and fixing may be done in white light. This fact, according to *Cosmos* (February 7) was discovered by a French photographer, M. Liesang, and has been known for several years. Says that paper:

"A solution of three parts of nickel chlorid (green) and one part of cobalt chlorid (red) is colorless by transmitted light and at a certain dilution becomes clear like water. As the light that traverses each liquid separately is inactinic it must also be so after having passed through their mixture, and thus can have no action on silver salts. To absorb the ultra-violet, the vessel containing the solution is covered with collodion mixed with sulfate of quinin, feebly acidulated with sulfuric acid. Sensitive paper exposed for a week to this light undergoes no alteration."—*Translation made for* THE LITERARY DIGEST.

Rapid Growth of Fish.—Experiments recently made in England furnish interesting information regarding the rapidity of growth of fish of the salmon family during their stay in the sea. Says a writer in the *Revue Scientifique* (February 14):

"A sea-trout weighing 3 pounds when captured and marked July 8, 1901, weighed 6 pounds when retaken in July, 1902, having thus doubled in weight in one year. A 13-pound salmon taken and marked in January, 1901, weighed 21 pounds in July, 1902, and another salmon weighing 16 pounds in August, 1901, reached the weight of 22 pounds when retaken in July, 1902. An example of still more extraordinary growth has been reported. A male salmon caught at Castle Connell on February 24 of last year, by Mr. S. C. Vansittart, weighed 19 pounds. It was marked by one of the tags used by the Department of Agriculture, bearing the number 1,502, and replaced in the water. On March 26 following the same fish was retaken at O'Brien's Bridge, five miles from Castle Connell, and it then weighed 33 pounds. Its weight had increased by 14 pounds in one month and two days. The fact may seem incredible, but it is indubitable, having been established by a naval certificate."—*Translation made for* THE LITERARY DIGEST.

COUNT ZEPPELIN, according to the Geneva correspondent of *The Daily Mail*, London, has just completed an automobile-launch "which possesses the peculiarity of having its propellers in the air. According to the inventor, the launch will be of the greatest use in tropical lakes and rivers encumbered with aquatic plants, which, obstructing the screw, render an ordinary steam-launch useless. The launch is extremely light, has a draft of only ten inches, and it skims the water at a rate varying from fourteen to sixteen miles an hour."

THE RELIGIOUS WORLD.

CAN PALESTINE AGAIN BECOME A FERTILE LAND?

IN view of the contradictory reports concerning the Jewish agricultural colonies established by the Rothschilds and Montefioris in Palestine, and of the program of the Zionists to reestablish Jewish nationality in the land of their fathers, it is of interest to hear what specialists say as to the possibility of making Palestine again a land flowing with milk and honey, changing it from a country that now barely supports 600,000 to one that will sustain between 2,000,000 or 3,000,000, as in the days of Joshua, or between 5,000,000 and 6,000,000, as in the times of King David. A most valuable contribution on this subject, entitled "Die Niederschlagsverhältnisse Palästinas in alter und neuer Zeit," by Dr. Heinrich Hilderscheide, fills two entire numbers (Nos. 1 and 2) of the *Zeitschrift des Deutscher Palästina-Vereins* (Leipsic). It gives a wealth of statistical data on the meteorology and climatology of the Holy Land, and then, on the basis of these data, the writer has this to say:

"The question whether Palestine can not again be made as productive a country as it was two thousand years ago can only be answered if the causes are examined that have led to its present degenerated condition. If these lie in permanent changes in the climate, in a decreased average of annual rains, and other factors not under the control of mankind, then it is useless to hope that money or energy will restore the pristine productiveness of the land. If, on the other hand, the causes lie in historical and political changes, chief among which is the mismanagement of the country by the Turkish authorities, then there can be no reasons why such a restoration should not take place. Both of these views have had ardent champions among the specialists, among the advocates of the former view being Hull, Franz, Fischer, and Zumoffen, while Condor, Lartet, Ankel, and others are equally decided in their defense of the second opinion.

"A candid examination of the facts in the case shows that they are decidedly in favor of this latter position. The former view is really based upon a *petitio principii*. It is presupposed that there have been radical changes in the climate of Palestine in historic time, and that these changes have been produced by the ruthless destruction of the forests. Now the fact in the case is that we have no proofs whatever that the forests of Palestine were in the Biblical times any more extensive than they are now. We have no evidence from any author of note that there ever has been such a ruthless destruction of forests. No passage in either the Bible or the Talmud permits us to draw the conclusion that in former times the average of rainfall was any greater than it is at present. Ever since meteorological observations have been scientifically taken in Palestine (and in some cases, as in that of Jerusalem, these go back for decades), the climatic conditions have remained practically the same. In fact, the rain-producing causes, such as the near Mediterranean Sea, are the same as they were in Biblical times.

"There is accordingly no evidence of history or science to show that the climate of Palestine has changed materially from the time when the land flowed with milk and honey, to the present age when so much of the country is a stony and barren waste. Other causes have been operative, and these have been chiefly direful and destructive political conditions that began as early as the period of the decline of the Roman empire, and have reached their acme in the corrupt Turkish rule of the last four centuries, the oppression of the officials, the management of the taxes, and the like. The people have in the course of time become indifferent to all progress, as progress only signified new oppression. There can be no doubt that this historic land, if put under proper care and correctly managed, can be restored to its former flourishing condition. The ocular proof of this can be seen in the very flourishing condition of the Württemberg Temple colonies, which were established in 1868 near Jerusalem, Sharon, and Haifa, and which are veritable garden spots in the land, and that, too, in localities that before the days of these colonies were virtually desert land. The fact that the Jewish agricultural colonies can not make equally good reports is to be explained partly on the ground of mismanagement and partly because the colonists have not the good-will and enterprise necessary for the work."—*Translation made for* THE LITERARY DIGEST.

THEOLOGICAL VIEWS OF EMPEROR WILLIAM.

IT is very easy for a journal in America to attain distinction just now. All it has to do is to abstain from saying anything about Emperor William's utterances on revelation and inspiration, called forth by Professor Delitzsch's recent address on the Babylonian origin of the Old Testament and by the storm of protests which it evoked. The fact that Professor Delitzsch is president of an Assyriological society of which the Emperor is a patron, and the further fact that not only his recent address but the one delivered a year ago on "Babel und Bibel" were given before the Emperor, led to the conclusion that the latter, who by virtue of his office is *summus episcopus* of the Lutheran Church, the state church of Prussia, indorsed the learned professor's alleged "atheistic" conclusions. The Emperor's statement of belief is said to have composed the orthodox critics and to have satisfied them as to his theological position, while at the same time it has pleased the free-thinkers of Germany because it upholds the scholar's right to freedom of research.

The Emperor's statement has been so widely copied that we here reproduce only the more important paragraphs. After rebuking Delitzsch for abandoning the standpoint of the strict historian, and "going into religious and theological conclusions which are quite nebulous and bold," the Kaiser says:

"I distinguish between two different kinds of revelation—one progressive and, as it were, historical; the other purely religious, as preparing the way for the future Messiah.

"Regarding the former it must be said—for me, it does not admit of a doubt, not even the slightest—that God revealed Himself continuously in the race of men created by Him. He blew into man the breath of His life, and follows with fatherly love and interest the development of the human race. In order to lead it forward and develop it he reveals Himself in this or that great sage, whether priest or king, whether among the heathen, Jews, or Christians. Hammurabi was one; so was Moses, Abraham, Homer, Charlemagne, Luther, Shakespeare, Goethe, Kant, and Emperor William the Great. . . . . .

"The second form of revelation, the more religious, is that which leads to the manifestation of our Lord. It was introduced with Abraham, slow but forward-looking and omniscient, for humanity was lost without it. . . . . .

"Christ is God—God in human form. He redeemed us and inspires us, entices us to follow him. We feel his fire burning in us. His sympathy strengthens us. His discontent destroys us. But, also, his intercession saves us. Conscious of victory, building solely upon his word, we go through labor, ridicule, sorrow, misery, and death, for we have in him God's revealed word, and He never lies.

"That is my view of these matters. It is to me self-evident that the Old Testament contains many sections which are of a purely human and historical nature, and are not God's revealed word. These are merely historical descriptions of incidents of all kinds which happen in the political, religious, moral, and intellectual life of this people. The legislative act on Sinai, for example, can be only regarded as symbolically inspired of God. . . . . .

"First, I believe in one only God; second, we men need a form in order to teach His existence, especially for our children, and third, this form has hitherto been the Old Testament in its present version. This form will be positively and substantially modified under the influence of research and inscriptions and excavations. That does not matter."

Professor Delitzsch has not accepted his sovereign's rebuke with silence. He replies as follows, according to a special cablegram from the Berlin correspondent of the Philadelphia *Public Ledger:*

"His Majesty, like myself, is not an orthodox Christian. His views are almost the same as mine. To his statement that I

should not have discussed religion before the laity, my reply is that my audience consisted of intellectual, highly cultured men. The educated people of the whole world are now fully prepared for new scientific knowledge, when it is presented to them in proper form."

Professor Harnack, of Berlin, according to a special to the New York *Sun*, defends Professor Delitzsch, saying that he deserves gratitude for having rectified the prevailing opinion of the Old Testament, and inasmuch as the Kaiser admits that the traditional forms regarding the Old Testament need revision, Professor Delitzsch gained his main object.

Abundant as is the comment on the matter in this country, there is not, as yet, much that is of more than passing interest. The Philadelphia *Catholic Standard and Times* thinks that "the Kaiser has found that meddling in theology is not a bit safer than trying experiments on the Monroe Doctrine, and his way out of the trouble is not a bit more graceful in the one case than the other."

The Louisville *Christian Observer* (Presb.) thinks that the influence of the declaration "is obviously for serious evil." Referring to the list of leaders in whom the Kaiser thinks God has revealed himself, *The Observer* says:

"According to this, the idolatry of Khammurabi, the piety of Moses, the superstitions of Charlemagne, the reformation of Luther, the rationalism of Kant, are all equally developments of God's working in man. Could anything be more confusing than this? These men and their deeds are indeed included in the providential arrangements of God, and their acts permitted by Him. But their conduct is in no sense the result of His indwelling or a revelation of Himself. Can idolatry, superstition, and rationalism be the product of God's inworking? . . . . . .

"But the Emperor continues with an expression of his opinion that many sections of the Old Testament 'are not God's revealed word,' and that the legislative act on Sinai 'can be only regarded as symbolically inspired by God.' And this he puts forth as satisfactory evidence of his orthodoxy!'"

On the other hand, the Pittsburg *Presbyterian Banner* thinks that the Emperor has expressed himself admirably and that "his line of thought is the true and safe one to follow." The Chicago *Standard* (Baptist) thinks it will be "not without influence in restraining the extremes of German rationalism," and *Zion's Herald* (Meth. Episc., Boston) also sees in it a force to "arrest the dangerous inferences and conclusions which were extending the publication of the destructive views of Professor Delitzsch." The New York *Outlook* and *Independent* (undenom.) comment but little and that favorably, while criticizing Delitzsch for going to extremes unwarranted by science.

In Germany, Professor Hilprecht, of Philadelphia, who is visiting in that country, has been called to the front to offset Professor Delitzsch's views. Hilprecht is quoted in the German press as follows:

"Recently the attempt has been made to demonstrate that the purely monotheistic religion of Israel was derived from Babylonia. On the basis of my researches covering a period of fifteen years I must declare that this is an absolute impossibility. The faith of the Israelites could never have had its origin in the Babylonian mountain of the gods, which is full of death and the savor of death."

This has started another controversy, as to Professor Hilprecht's share in the discoveries at Niffer (or Nippur), some of the German scholars depreciating his work in that connection. *The Independent* (New York) enters into a detailed statement of his connection with the excavations, concluding that "while it is true that the toil and responsibility of exploration belong only in a very slight degree to him, but chiefly to Dr. Peters and Mr. Haynes, yet the entire credit for the decipherment of the inscriptions found belongs wholly to Dr. Hilprecht."

THE MOST RECENT PAINTING OF THE POPE, BY MADAME LA MARQUISE CECILE DE WENTWORTH, OF NEW YORK.

"His Holiness Pope Leo XIII., in order to show Mrs. Cecile Wentworth his high appreciation of her beautiful portrait presenting His Holiness in full figure, has been pleased to send to her a souvenir gold medal bearing the date of the year of his Episcopal Jubilee.

Rome, March 5th, 1903. LUIGI CARD. MACCHI."

Courtesy of *The Catholic World* (New York).

THE POPE'S SILVER JUBILEE.

THE impressive ceremonies in Rome commemorating the twenty-fifth anniversary of Pope Leo's coronation have attracted world-wide attention. They mark, as is pointed out by the New York *Sun*, the celebration of a triple event. Leo XIII. has been sixty years a bishop, nearly fifty years a cardinal, and now twenty-five years a Pope. Should he live until May 10, he will have attained to the traditional "years of St. Peter." He is ninety-three years old, and has governed the church longer than any of his predecessors, with the single exception of Pius IX.

The New York *Catholic World* (March) publishes a leading article on "The Great White Shepherd of Christendom." It says, in part:

"He has, first of all, shown that the Church of Christ is independent of human government or human forms of government. Its welfare is not necessarily one with either monarchism or republicanism. Leo XIII. has been foreign to no country, and has been the friend and supporter of every legitimate form of government. But he has gone further, and positively advised those who opposed their legal government at home to support it heart and soul, and make it work for the welfare of the church.

"He has proved to the world, which obstinately refused to believe it, that Catholicity is an intellectual religion; not alone intellectual, but that the speculative reason, dwelling upon the positive, revealed truths, may find more than ample exercise for

every one of its powers. Science has prospered under his encouragement, but he has always shown that science—restricted to the material and the sensible—is but a narrowing of the scope of human reason and a debasing of the soul.

"Again, in Scriptural study, which was causing havoc without the church and uneasiness within, which has not yet been altogether arrested, Leo recognized the gravity of the questions which modern Biblical study presents; the legitimate side to higher criticism; encouraged Catholics to keep abreast of modern science and scholarship; and yet he stands to-day as the representative of the church that alone champions the divine authorship and inspiration of the entire Scripture. . . . . .

"In the matter that is perhaps most practical of all, and for the whole world just now, in the social problems of labor and of capita Leo has stood particularly as a most prominent, heroic figure, with kindness and love in his eyes for all, with words of wisdom on his lips, warning the rich and the powerful that 'he who deprives a laborer of his just wages commits a sin that cries to heaven for vengeance'; warning the laborer, again, not to preach anarchy nor to rob his employers; with prudence, with a sagacity that has won for him the admiration of all, giving to the world the solution of the problem that vexes it most and is big now with evil portent for the future. So by becoming all things to all men Leo would draw all to Christ."

A typical Protestant comment is this from the Chicago *Interior* (Presb.):

"Amiable interest marked with kindly personal congratulations to the aged pontiff, denotes the attitude of the Protestant world toward the celebration of Leo XIII.'s quarter-centennial on the papal throne. Protestantism offers no religious reverence toward the ceremony with which this jubilee has been kept and none toward its central figure; but on the other hand it has no theologic odium to vent against the man or the occasion. It is not necessary to attribute sanctity to the papal office before one recognizes in Leo a man of outstanding eminence and influence in this complex time, or content that his remarkable tenure of a dignity assumed at the verge of threescore years and ten is an episode of current history worthy to have commemoration.

"There have been other papal reigns in which the gravest doubt of exegesis would scarcely have persuaded Presbyterians to take 'Antichrist' out of their confessional polemics against the papacy. More than any other pope of modern times the present resident at the Vatican has escaped in his personality the derogating tendencies of his enormously presumptuous station. Officially committed to an arrogance of claims unequaled elsewhere among men, Leo has yet been a good enough Christian to retain much of the meekness and gentleness of Christ beneath his hierarchal robes. The thunders which he has been obliged to hurl hither and thither, in order that the noisy precedents of popish history may be duly kept in face, he has hurled with a loath hand, having evidently little heart for the rôle of Jupiter Tonans in which most of his predecessors have so reveled. He has never made a thoroughgoing hater either—not even against Italian royalty, which Pius IX. bequeathed him a commission to hate as a high Christian duty. He has found it easier to love—a second sign that Christ has not been a stranger in the penetralia of the Vatican during the last twenty-five years."

Several of the Roman Catholic journals in this country publish special issues in honor of the jubilee. Among the many services held in various cities to commemorate the event may be mentioned that in St. Patrick's Cathedral, New York, at which solemn pontifical mass was celebrated by Mgr. Falconio, apostolic delegate to the United States, and by Archbishop Farley.

JOHN WESLEY, AT THE AGE OF SIXTY-THREE.

From a rare print by Bland, published in the year 1765 and approved by Mr. Wesley.

Courtesy of Fleming H. Revell Company (New York).

THE JOHN WESLEY BICENTENNIAL.

MACAULAY said of John Wesley that he was "a man whose eloquence and logical acuteness might have made him eminent in literature, whose genius for government was not inferior to that of Richelieu, and who, whatever his errors may have been, devoted all his powers, in defiance of obloquy and derision, to what he sincerely considered the highest good of his species." A eulogy such as this is recalled at the present time on account of the revived interest in Wesley, arising in connection with the intended celebration next June of the two hundredth anniversary of his birth. Naturally the Methodists are taking the lead in forwarding this revival of interest in the great founder of their sect. As appropriate to the anniversary, there has appeared a volume of extracts from John Wesley's journal by Percy Livingston Parker, to which the late Hugh Price Hughes furnishes a most readable introduction and Augustine Birrell, K.C., a biographical appreciation. Mr. Hughes says that "Wesley has demonstrated that a true prophet of God has more influence than all the politicians and soldiers and millionaires put together." Proceeding to contrast the influence of Wesley and John Henry Newman, he declares that "the whole future of the British empire depends upon this question of questions—will George Fox and John Wesley on the one hand, or John Henry Newman on the other, ultimately prevail?"

The unparalleled industry and perseverance of Wesley is graphically described by Mr. Birrell in the following passage:

"John Wesley contested the three kingdoms in the cause of Christ during a campaign which lasted forty years. He did it for the most part on horseback. He paid more turnpikes than any man who ever bestrode a beast. Eight thousand miles was his annual record for many a long year, during which he seldom preached less frequently than five thousand times. Had he preserved his scores at all the inns where he lodged, they would have made by them-

selves a history of prices. And throughout it all he never knew what a depression of spirits meant, tho he had much to try him, suits in chancery, and a jealous wife."

The extracts from Wesley's journal are of vital interest, and read like a strenuous romance of his time. He was mobbed, stoned, insulted, and driven out from this place and that; yet finally he won recognition from even the greatest people of the realm. He preached to miners, merchants, sailors, and to the people of the fields and streets, until he had made Methodism in England, if not acceptable to the higher classes, at least a force to be reckoned with. Take him all in all, affirms Mr. Birrell, he was "the greatest force of the eighteenth century in England. . . . No single figure influenced so many minds, no single voice touched so many hearts. No other man did such a life's work for England."

On the evening of February 26 there was a great celebration of the bicentenary of Methodism in Carnegie Hall, New York, the chief interest centering about the presence and address of President Roosevelt, who was surrounded on the stage by many dignitaries of the Methodist Church. The President's speech was largely devoted to the Methodist Church and the men who built its early history. He noted that the pioneer preachers, among whom the Methodist preachers were most conspicuous, laid the foundations for the moral qualities of the nation. The President said in part:

"Wesley said he did not intend to leave all the good tunes to the service of the devil. He accomplished so much for mankind because he also refused to leave the stronger, manlier qualities to be availed of only in the interest of evil. The church he founded has throughout its career been a church for the poor as well as for the rich, and has known no distinction of persons. It has been a church whose members, if true to the teachings of its founder, have sought for no greater privilege than to spend and be spent in the interest of the higher life, who have prided themselves, not on shirking rough duty, but on undertaking it and carrying it to a successful conclusion."

Estimates of Wesley, mingled to a considerable extent with comments upon the growth and conditions of Methodism, abound in both the religious and the secular press. *Zion's Herald*, the leading Methodist organ of New England, says:

"We are prepared to affirm, for we thoroughly believe, that no one in all the world's history surpasses, and very few, if any, have equaled John Wesley in the completeness with which he dedicated himself to God, in his unselfish, unswerving, whole-hearted devotion to duty. He was simply a consistent Christian, all for Christ and naught for self. His conscientiousness, his benevolence, his industry, leave nothing to be desired in those directions; and the more they are copied by his followers the better for them and for the world. Neither is there danger of laying too much stress on his skill as an organizer, his sagacity as a statesman, his fervor and success as an evangelist, his strength as a theologian, his power as a preacher, and his high attainments in the Christian life. In all these respects his example is to be unstintedly commended. He was filled with an all-consuming zeal to do good. He had a passion for God's glory. He lived for eternity."

THE PULPIT IN THE NEW CENTURY.

IT has been said that the ministry is losing its old-time prestige, and that the divinity schools are the only schools in the United States in which the attendance is either at a standstill or on a positive decline. "Young men of nerve and of broad culture," observes the Rev. Jenkin Lloyd Jones, of Chicago, "distrust the ministerial profession; and the 'theolog' is exposed to banter, perhaps ridicule, on the university campus." Mr. Jones writes further (in *The Cosmopolitan*, February):

"And still there never was a time when the great postulates of religion, the fundamental ethical and spiritual principles emphasized by Christianity and the other great religious systems of the world, were more confidently enforced by the thinkers of the world. Science, instead of limiting, has enlarged the circle of human reverence; history, instead of denying, has reenforced the great Scriptural texts of humanity, and the ethics of the great Nazarene, as set forth in the Sermon on the Mount, and in his great parables, are becoming more and more embodied in state enactments, civic ideals, and economic requirements."

If our preachers have lost their influence, continues Mr. Jones, it is because they have failed "to bring the religious thinking of the world down to date; to formulate religion in the present tense." We quote again:

"Every community waits with more or less conscious restlessness for the voice of the man in the pulpit who will discuss with high impartiality the distractions of the street, who will emphasize the humanities that underlie all the sects, the unities that join tramp and millionaire, coal-digger and coal-baron. There is not a town of five thousand or more in this country where the voice of the reconciler in the pulpit, the one unflinching democrat of the town, would not be heard gladly; and as soon as he convinces that town that he always means what he says, and is always ready to say what he means, he will find a support in that town that will be adequate to the self-denying needs of a public servant. This young man, when he appears, may find himself in a Methodist, Presbyterian, Baptist, Unitarian, Episcopal, or other pulpit; but the label, whatever it is, will not cut much figure. He will stand in that town as a living illustration of the palpable truth to-day that in religion all labels are libels, for they misrepresent more than they represent; they exclude more than they include, of what is near, dear, and essential to the wearer himself. . . . . .

"A new catholicism is imminent in religion. Not the 'Catholic Church of Rome,' tho that is the most benignant achievement in human organization thus far reached, but the catholic church of humanity which will include the great mother church of Christendom, and as much outside and beyond as represents the conclusions of science, the organized experience of states, and the longings and humiliations of the human heart."

A similar view is expressed by the Rev. George Chalmers Richmond, of Syracuse, N. Y., in a recent address now printed in pamphlet form "at the request of Bishop Huntington." Mr. Richmond says:

"The power to preach in reality is not given us by any man; it comes, if it comes at all, 'like the outbursting of a fountain from the earth or of the breaking forth of volcanic fires, with spontaneous, original, native force.' It comes as a result of long efforts in school, college, and university to master the elements of our native speech, to put ourselves into contact with the great forces of men and institutions which have shaped the course of history, to make one with our best manhood the true, masterful, and controlling thoughts which have given life and energy to the world, and which as an intellectual increment form our true basis for preaching with authority.

"A man is not ready to preach before he is twenty-five. People do not value what he has to say before that period, and this is about the age when a young student should be ready for his ordination. The mind of a man is hardly open and prepared to grapple with the problems of the universe before that time. No matter how spiritual the fellow may be, no matter how urgent certain women may be in some country parish where the fluency and appearance of the candidate have been magnetic, no matter how eager the youth may be to do the work of his Master and serve his church, his first duty is to study and think, to meditate and discuss upon the great subjects which every preacher must meet and decide in the course of a parish ministry. The first question to be settled to-day is not, 'Do the women like the young minister?' but this, 'How do the young men like him?' 'Has he the qualities which a man admires?' I am making a plea for scholarship in the ministry which, I am well aware, is not the first question to be considered. But it is the question of the age, and of that I am speaking. Service will not do. Social qualities are not sufficient. A good voice is no recommendation. Some men think they can sing the Gospel just as well as preach it. Churches are not built on song. A parish grows to-day because the man who leads it is known to be a man of deep learning in the arts of life and whose ability is unquestioned by the men of the world."

FOREIGN TOPICS.

DECLINE OF GERMAN INFLUENCE.

VARIOUS distinguished Frenchmen and Italians and one no less eminent Dane have come to the conclusion that Germany's influence over the civilized world is waning. They have settled this whole matter among themselves in the columns of the *Mercure de France* (Paris). The editor of that able publication conceived the idea of propounding two questions: "What do you think of German influence from a general intellectual point of view? Does this influence still exist, and is it justified by its results?" The replies were very interesting both on account of their intrinsic value and because the writers of them are well qualified to speak. They are prefaced by these observations of the Paris paper:

"In a recent speech Emperor William proclaimed anew the pretensions of the Germanic spirit to world-supremacy. It appears nevertheless that there has come a reaction against the German intellectual influence that was so powerful over masters like Renan and even Taine in France and over the majority of minds during the second half of the nineteenth century. The victories of 1870 won a universal ascendency for Germany. The French, conquered themselves, practically recognized this preponderance, and thought it incumbent upon them to take instruction from their masters. Recrossing the Rhine, young Frenchmen congratulated themselves upon fruitful methods of work acquired in the German universities. But many of them confess to having been mistaken. Numerous symptoms indicate a decline in the authority conceded to German culture."

To consider, now, the views of the distinguished gentlemen to whom reference has been made. One of them, Maurice Barries, is very influential as a thinker, writer, and leader of public opinion in matters intellectual. He complains that German thought is so abstract, misunderstanding the personal element in life and proving generally barren:

"In German thought everything is rules and exceptions, facts, data, formulas—never the life of things. There is a vast and learned apparatus, but the heart and the imagination do not thrill. The masters are specialists, classifiers. The patience and accuracy of German critics are beyond dispute, but they lose sight of the sense of proportion in things. German teaching, now predominant in history as in philology, can not yield fruit."

The sway of militarism and utilitarianism in Germany is deplored by Alfred Fouillée, of the Institute, a French thinker of much force and originality. Theodore Ribot, the eminent psychologist and man of science, points out that German influence to-day is expended upon the commercially practical. Thought and research for their own sakes have been abandoned. The economist Anatole Leroy-Beaulieu has no faith in the looked-for world-supremacy of Germany or German thought. "The Germans who proclaim German culture deceive themselves." Nor are these views peculiar to Frenchmen, for Max Nordau also thinks German influence upon the world at large is waning. The idea of the supremacy of any one nation he thinks "out of date." He writes:

"It is great men who wield influence, and that not because of their nationality but as a result of their originality. Did Voltaire and Rousseau dominate the thought of the eighteenth century because they were French? No, but because they wrote the 'Philosophical Dictionary' and the 'Social Contract.' The intellectual guides of the nineteenth century were Hegel, Feuerbach, and Humboldt, Comte and Pasteur, Spencer and Darwin. Not one of these great minds could have identified itself with a people asking 'What is your nationality?' Such a question would be worthy of a police official filling out a passport, but not of any one studying the evolution of mankind."

Cesare Lombroso thinks England has to-day more great thinkers and leaders of world-opinion than Germany, while the United States is striding rapidly forward in the same general way. He thinks Germany is threatened with a loss of force in every direction. The *Nuova Antologia* (Rome) takes the same subject up exhaustively and reaches the conclusion that Germany is not in a position to realize her proud dream of being the dictator of the world's civilization.—*Translations made for* THE LITERARY DIGEST.

BRITAIN'S WAR ON THE LONG JUJU.

THE long Juju, we regret to learn from a contemporary, is an "obscene idol." They think very highly of it in Nigeria, where bands of natives addict themselves to head-hunting in order to maintain a suitable supply of offerings to the god of their idolatry. When Great Britain a few years ago succeeded to the rights of the chartered company that had been administering the vast African region known as Nigeria, the worship of the long Juju was condemned to suppression. That led to a "war" that received little notice because the Boer contest and the Mad Mullah in turn absorbed attention. But events are now coming to a head in this neglected portion of Africa. In southern Nigeria the stronghold of the long Juju has been taken and the idol itself blown into the air. Head-hunting has been checked and the slave trade put down. In northern Nigeria, where the long Juju has never been orthodox, the British authorities in London have had occasion to wonder at the unwillingness of their commander in the field to communicate with them. He was telegraphed five times in a single day without the extraction of a reply. That nettled the people in London, who sent one more message telling the commander in effect to reply or resign. Sir Frederick Lugard, the gentleman addressed, did not resign. He moved against the Emir of Kano, a powerful Nigerian potentate, captured his capital, and is master of the situation. Says *Public Opinion* (London):

"The capture of Kano, the principal town of northern Nigeria, by a British force under Colonel Morland without the loss of a single man, is a particularly smart piece of work, especially as the punishment inflicted on the enemy seems to have been severe. Kano latterly has fallen on evil days, and lost much of its ancient reputation as the mart of the great state of Sokoto. It had become mainly a center of turbulence and outrage, and as it lies within the British protectorate of Nigeria, not very far from the French sphere, it was necessary to read the recalcitrant Fulani ruler a sharp lesson. Sir Frederick Lugard will see that the new Emir whom he will place upon the throne does not follow in the footsteps of him who has just been driven out. The importance of the capture, apart from the humanitarian side, is twofold. It will give Kano an opportunity of reviving the native commerce and industry for which it was famous throughout the Sudan, and it will rob France of further ground of complaint at the condition of things prevailing within the British border line. The imperial Government complains that Sir Frederick Lugard acted without consulting them, but they admit that the expedition was inevitable, and, so far as we at home can judge, it may, we think, be said that the High Commissioner has saved the situation by his ready assumption of responsibility."

Can the Government in London afford to tolerate the cool indifference to its orders shown by Sir Frederick Lugard? This is the question put by the Paris *Temps*, which further observes:

"Sir Frederick Lugard considered that the security of the garrison he had placed in the advanced post of Zaria and the safety of his new capital of Zungeroy, and finally the prestige that constitutes his principal and indeed his only strength, alike depended upon teaching the Emir of Kano a severe lesson. With such notions in his head it was not likely that a man of his temperament and disposition would pay much attention to the timid observations of the [Colonial] department that is without a head in the absence of [Joseph Chamberlain] its chief. Hence he did not hesitate to advance without taking the trouble to obtain the approval of the home Government. It was useless for the official superiors of Sir Frederick Lugard to maintain an air

of good humor, to forgive offenses, even to turn the left cheek after the right, particularly to a strong man's hand. Even an under-secretary of state revolts at last. Lord Onslow took up his best pen and dipped it in his strongest ink to inflict—too late—a fine—but ineffective—reprimand upon his refractory subordinate."

"But Sir Frederick is at Kano," concludes our Parisian contemporary. "That is a brilliant personal triumph."—*Translation made for* THE LITERARY DIGEST.

DIPLOMACY—EUROPEAN AND AMERICAN.

THE old school of European diplomacy with its dynastic considerations and aristocratic traditions, seems unable to hold its own against the new and so-called "American" school of diplomacy which looks mainly to economic considerations and practical interests. It is the *Indépendance Belge* (Brussels) which arrives at this conclusion. Germany, it thinks, will stand by the old school. She is a military autocracy, not amenable to popular influence, and her diplomatic corps must continue to be inspired by the Bismarckian tradition. Count von Wolff-Metternich, German Ambassador in London, is a diplomatist of this stamp. But the system will be modified in aspect, if not in principle. "Germany realizes the tremendous blunder she made in arousing American public opinion by her violence," and her Washington representative will act accordingly: "We are none the less convinced," says the Belgian organ, "that Germany is the only European Power now whose influence is dangerous to the peace of the world."

The London *Spectator* frankly accepts the new diplomacy and seems rather pleased by it. It refers to the British Ambassador in Paris, Sir E. J. Monson, as a favorable specimen of the new order. He makes frank, genial speeches, can take the public into his confidence when the time has come to do so, and does not pretend to be subtle. All this, we are told, is good. The world has no use for Machiavellis. This optimistic tone—so far as British diplomacy is concerned—does not prevail among London organs generally. The consensus of English opinion at the moment is that British diplomacy is at a low ebb, while American diplomacy has attained a high level of capacity and achievement. It is odd to find the London *Times*, *News*, and *Telegraph* practically agreed on this point. *The Times* is not so blunt as *The News*, but it is fairly blunt, especially with reference to Venezuela. There is a decided tendency among London organs to make a scapegoat of Lord Lansdowne, head of the British Foreign Office. *The National Review* (London), which is most conspicuous in attacking Lord Lansdowne as a diplomatic incapable, observes:

"Lord Lansdowne completed the 'ironclad agreement' with Count Metternich which has done more injury to our prestige abroad than any number of 'regrettable incidents' in South Africa. The press' action in the matter was simply limited to a warning which was not listened to, and it really surpasses the license which is permissible even to a Lord Chancellor to try and make our newspapers responsible for the fatuity of the cabinet. The press's real offense on this question, as on so many others, is not that it thwarts statesmanship or diplomacy—there is little enough of that, heaven knows, to thwart—but that when some ghastly blunder becomes public property it *exposes* the incapacity of certain high and mighty personages—most of whom speak greatly above their ability."

Lord Lansdowne is a serious handicap to British diplomacy, according to Sidney Brooks, who handles the noble lord without gloves in *The Fortnightly Review* (London):

"Englishmen had nothing whatever against Lord Lansdowne up to the time of the Boer War. They thought of him, if I may adopt that caustic aside in which Lord Rosebery in his 'Napoleon' dismisses Lord Bathurst, as 'one of those strange children of our political system who fill the most dazzling offices with the most complete obscurity'; and had there been no war, their opinion of him would probably have remained unchanged. Unfortunately there was a war, and Lord Lansdowne entirely failed to satisfy the country that he was the man for the crisis. True, the system was probably as much to blame as the minister. True, again, that an unsuccessful war minister may quite easily prove a competent foreign secretary. Nevertheless, Lord Lansdowne's promotion greatly shocked the sense of the people, who could not see why a minister who, by universal assent, had failed in one office, should immediately be given another and better one. It almost led them to question the propriety of that excellent principle by which, if you are an Englishman born in the purple, you simply can not be got rid of."

The German press does not share the admiration of the British for recent American diplomacy. According to the *Kreuz Zeitung* (Berlin), American diplomacy has too much "shirt-sleeves" in it, the most conspicuous example being Mr. Bowen, to whom it refers shortly as "Bowen." "Bowen" was "loaned" to Venezuela, and that seems most irregular to the agrarian organ. The *Hamburger Nachrichten* thinks American diplom-

THE CHARACTER OF CRIME IN MACEDONIA.

NO woman's honor can be safe in Macedonia, or else all Europe is in a conspiracy to malign the Turk. Torture and outrage in specially hideous forms are daily inflicted upon mothers and maids whose names and wrongs, vouched for by witnesses, have been widely printed. The men are overpowered by numbers, burned or impaled or mutilated, while their wives, sisters, and daughters are violated before their eyes. *The Daily News* (London) announces that the details of some cases in its possession can not be printed even for the sake of rousing humanity to action. What it does print is blood-stirring enough, as the extract following indicates:

"'I knew them; I buried them in the same grave,' said Costadin Savoff, one of the priests, in reference to five Macedonians, alleged, by one of the newly arrived, to have been robbed and killed by Turkish soldiers. The five were returning home with money earned in Rumania. Stoian Ivanoff, another priest, declared that in his own village of Batchevo, in the Rasluck district, he knew six women who had been criminally assaulted. To come to a more recent date: On the 17th of January, said Ivan Nikoloff, one of the new arrivals, 'eight men were massacred in my village; I saw their bodies.' The same man charges a Turkish officer, Mehemet Effendi, and his soldiers, with having assaulted a number of women, of whom he mentioned the following by name—Elea Ivanova, Maria Giorgeva, Susanna Stoinoff. I can make no more than a general allusion to a species of insult—parading women in a state of semi-nudity—to which many refugees from other villages besides the above-named two have testified."

Individual cases in Macedonia present themselves in a way which defy the resources in delicacy of our blunt Saxon speech. One pitiable story is thus put by the same authority:

"The most pitiable story told us by fugitives in this little group was that of two women, one from Bistritza, the other from Strumskichilik village. The former had only just arrived at Rilo. She had been three days and nights in the mountains. This had not been her first attempt at escape into Bulgaria. Two months earlier she had fled with her husband and two children. They were separated. The father and the children succeeded in crossing the border. She now rejoined them. To the statement of the latter, who carried her sick child in her arms, I care to make no more than a general allusion. Separated from her husband, she had fallen a victim to a number of Turkish ruffians. She is one of the more recent arrivals, having reached Rilo three weeks ago. I may here add that the particulars of the abominable kind of crime to which I have alluded, and the commission of which is affirmed in most of the allegations I have taken down, are recorded in the reports drawn up for the relief committee by its secretary, Mr. Schaprachikov, who accompanied the president of the committee, Madame Bakhmeteff, during her journeys to Dubnitza, Rilo, and other places."

Commenting editorially upon all these things, *The Daily News* (London) says:

"The Turk in Macedonia works in the minor key. He pillages, robs, violates, and perpetrates the brutish tortures which he,

COLONEL YANKOFF, Noted as a leader of "irregular" revolutionary bands in Macedonia.

BORIS SARAFOFF, Pronounced "the most notorious" of Macedonian leaders.

"BRIGANDS" OF THE BALKANS.

alone among European peoples, has handed down from the Middle Ages, and from remoter days of barbarism. His officials and soldiery are not paid, and so they quarter themselves on the population. Reinforcing the acts of the Turks are Albanian troops and brigands, who are to the Macedonians what the Kurds are to the Armenians. Albanian lawlessness has developed of late years; and, indeed, Albania is at once the victim and the avenger on the Christian races of the inveterate misrule of the predominant partner in this ill-assorted empire. The reports before us show that neither life, nor women's honor, nor private property is respected in Macedonia, and that the nominal toleration accorded to Christians disappears when the military are given their head. This is the situation."

A most gloomy view of the situation is taken by the *Reichswehr* (Vienna), which predicts the failure of the reform measures undertaken by Austria and Russia. This view is shared by other observers, who insist that the Powers are concerned not so much about reforming Macedonia as about the political consequences of that undertaking. The Powers are mutually suspicious. Thus the *Sviet* (Odessa) says Italy is preparing to make a descent upon Tripoli the moment a conflict breaks out between the Balkan Slav states and Turkey. The *Popolo Romano* says Italy has nothing in particular to do with the Macedonian question:

"As long as the Powers concerned with Macedonia remain within the limits prescribed by the Berlin treaty, public opinion in Italy has not the slightest reason for anxiety. . . . Even a repetition of the Bulgarian atrocities and a revolutionary movement in Macedonia need involve no risk to Italy's foreign policy. This is due to the oft-mentioned agreement between Austria-Hungary and Italy with reference to Albania—that is, the portion of the Balkan peninsula with which Italy's commercial and political relations are principally concerned."

Macedonia will succeed in throwing off the Turkish yoke, according to a well-informed but anonymous writer in the *Neue Freie Presse* (Vienna):

"No influence can withhold the aroused Macedonians from revolt. Every effort has been made by them to this end for years past, and it will come to pass if something more than sham reform be not undertaken in Macedonia this spring."

The *Siècle* (Paris) denies all these assertions through another anonymous writer, who says the Sultan will remain master of Macedonia. "Nothing will be changed. There will be only one more plan of reform."—*Translations made for* THE LITERARY DIGEST.

PRESIDENT LOUBET AND THE POPE.

THE dative plural of a Latin pronoun has caused a serious difference between France and the Vatican, and the relations between church and state have entered a critical phase. The Roman curia is much concerned at the refusal of the French Government to permit two bishops, appointed nearly a year ago, to take possession of their sees. The delay is the result of an objection made by the French Government to the wording of the "bulls," or documents instituting the bishops, which are issued by the Pope. In these bulls of institution the Pope employs the formula: "Æmilius Loubet, Præses Reipublicæ Gallorum, nominavit nobis." Hitherto this formula has been accepted without demur. Now, however, the French Premier, M. Combes, wants the word "nobis" stricken out. If the word stands, the Latin formula means: "Emile Loubet, President of the French Republic, has named *to us*." By leaving out the Latin pronoun the President is made to do the "naming" absolutely. According to the Concordat, the head of the French Government "will name the archbishops and bishops of every see" in France. *The Daily News* (London) observes:

"Pius the Ninth slipped in an unexpected dative pronoun 'nobis.' The wording used by Leo XIII. is: 'Præses Gallorum nominavit nobis,' which dog-Latin means: 'The President of France named *to us*.' Napoleon the Third spotted the trick, which tends to whittle down the Government nomination to a mere introduction to the Pope, and he replied by gazetting his bishops without waiting for the investiture. Pius the Ninth ignored them, and the Bishop of Agen, to cite a case, was still unconfirmed when the war broke out. Under the Republic the Council of State registered the 'nobis' bulls under protest, expressing a hope that such an 'irregularity' would not be repeated. Tired of waiting, the Council of State decided in 1901 that it would decline to register bulls not worded according to the Concordat treaty. It has kept its word, and the bishops of Annecy and Carcassonne have not been allowed by Government to take possession of their sees."

On behalf of the Vatican, it is pointed out that as a matter of actual fact the bishops in France are named "to" the Pope by the head of the state. To ignore this fact would be tantamount to conferring upon the head of the French Government a privilege liable to grave abuse, because, in recognizing an absolute right of nomination in him, he would be invested in a sense with the power of canonical institution. One Vatican prelate of great influence, eager to avoid unseemly controversy and to meet every point of view, suggests the formula: "Emile Loubet, President of the French Republic, in accordance with the treaty made with the First Consul in 1801, has named. . . ." But there are political considerations which operate just now to compel the French Government to insist upon its point. "No French Government," says the London *News*, "not even one ruled by the Duke of Orleans, could yield on that word *nobis*." The *Univers* (Paris), however, organ of the French Clericals, warns all priests not to accept nominations to bishoprics offered by the Government. It is evident that such a deadlock, if continued, might produce a curious situation in time, as bishoprics fell vacant. It is believed, by competent observers, that the difficulty will be got over. The *Journal des Débats* (Paris) says:

"Nominations of bishops and archbishops by the French Government have hitherto been preceded by an official understanding between it and the Holy See. There was first an agreement as to the choice. After that, nomination by the Government and investiture by the Pope were scarcely more than formalities. M. Combes wants to change this method. The council of ministers recently called to the bishoprics of Bayonne, Constantine, and St. Jean de Maurienne three ecclesiastics whose designation had not been the subject of previous negotiation with Rome. In proceeding thus, our Government was within its strict rights under the terms of the Concordat. But as nothing compels the Holy See to confer investiture upon prelates it does not approve of, the Pope is also within his strict rights in not delivering the bulls. Between these two equally certain rights, the three dioceses are deprived of bishops."—*Translations made for* THE LITERARY DIGEST.

POINTS OF VIEW.

RUSSIA AND THE PERSIAN GULF.—Russia intends to reduce Persia to a position of subjection to herself, insists M. A. Vambéry, in a strong article in the *Szemle* (Budapest). Hence she is endeavoring to make the Persian Gulf a Russian lake. The task is difficult, but the Czar's navy is growing.

ORIGIN OF THE DANES.—The people of Denmark constitute an ancient race, avers Axel Obrik in the *Dansk Tidsskrift* (Copenhagen). Their history can be traced back to the sixth century of our era. If they resisted absorption for so long, they may be expected to resist it for ages to come.

CHINESE WOMEN.—The women of China are not advancing with the rest of the world, concludes the *Quinzaine* (Paris). "As a child, the woman of China is maltreated. Her birth gives sorrow. She is married without being consulted. She is the slave of her husband. Only when she gives birth to a son or becomes a widow does she receive a certain consideration."

DID WILLIAM II APES[illegible] EDWARD VII.?—Some little time ago a story was published by *The National Review* (London) to the effect that William II. went aboard an American yacht and told the owner that Great Britain was "decadent," while Edward VII. himself was "abused in language which it is not possible for us to reproduce." The *Norddeutsche Allgemeine Zeitung* (Berlin) thereupon branded this story as "an impertinent falsehood." Now *The National Review* insists that its story was true and that "the Kaiser did perpetrate the appalling indiscretion we have described."

NOTABLE BOOKS OF THE DAY.

A NEW IRISH WRITER.

THE CIRCLE. By Katherine Cecil Thurston. Cloth, 5 x 7½ in., 310 pp. Price, $1.50. Dodd, Mead & Co., New York.

THE only uninteresting thing about this new novel is its name. It suggests, little and that little is banal. But the story supplies *le mot de l'enigme*. It starts out briskly, and does not flag for a moment through the three parts into which it is divided. The author, Mrs. Thurston, is an Irish woman, born in Cork, and her maiden name was Madden. This is her first serious work in fiction, altho she has had stories printed in the London magazines, her first appearance in print being in 1891.

But if Mrs. Thurston is a newcomer, she is an artist from the start. In this story, beside the unfaltering craftmanship with which she works out her theme, her way of putting a scene before you or painting a character is remarkably lucid, convincing, and engaging. There are only seven or eight characters in the book, but there is not one of them that is not sharply drawn, and of individual force.

KATHERINE CECIL THURSTON.

There is a slight melodramatic quality in some of the pages, but Mrs. Thurston never loses dignity, and the way she puts a thing, not startling or novel in itself, impresses the reader with all the charm of something new and fresh.

A young girl lives with her father, a Russian Jew, in the East End. He is an antiquary, and keeps a curio shop. Anne Volny's mother is dead, and she and her father lead a life somewhat stifling to Anne. The young girl, vegetating in that sodden environment, has that strange force which is called "genius." She is a "born actress," without any notion of this fact. The quiet, ingenuous way in which Mrs. Thurston leads to the development of this gift is admirable.

Can new things be done, in art or life, at this old stage of the world? Whether or not they may, the fresh charm and seeming novelty of the few novels which stir are generally only the old things in a new way, *non nova sed nove*. The skeleton of the story and the types employed are not new, and are not even melodramatic. It is the breezy, warm, artistic handling of her elements which make Mrs. Thurston loom as a new and powerful factor in the literary world. Perhaps it is the Keltic strain in her, the impassioned, primitive, eager activity of her Irish blood-corpuscles, which give her the innate power to "dream right." Art there is in her painting of the canvas, for there is no touch of crudity, no faltering in her "method." She is realistic, but not bonily so; idealistic, but not anemically so; earnest, but not self-conscious or aggressive.

In the last analysis it is her touch, her personal grasp and sympathy, that invest her work with its chief attraction. The young man who is the lover, for instance, is really only a more or less conventional Englishman, with nothing pronounced about him in any way; good-looking, not particularly clever, not rich, not distinguished socially; and yet despite his bunch of negatives, what a live, true, wholesome man he is, and what a stunning lover! It is the same with the other characters. There is the old Russian Jew, soul-sore from persecution, and a ruminative scholar; a worldly woman, clever and masterful; a poor, wretched man, cowardly, deformed, a mere straw in humanity's jetsam and flotsam; and the throbbing Hebrew daughter of the antiquary, who suggests lack of balance and neurotic extravagation. Behold the *dramatis personæ*, not too promising to one who has seen these "types" go through their exercises by battalions on the literary "campus." But Mrs. Thurston gives each an "otherness" which redeems and individualizes the type.

A HELPFUL BOOK ON A DELICATE THEME.

THE LOVER'S WORLD. A WHEEL OF LIFE. By Alice B. Stockham, M.D. Cloth, 5½ x 8 in., 470 pp. Price, $2.25. Stockham Company, Chicago, 1903.

THAT the author of this work has an inborn power to perceive and the gift to express concerning the themes she handles, must be admitted by any fair-minded reader of her book. She is bold, searching, outspoken, yet handles her subject with tact. Doubtless, however, many will differ from some of her judgments anent the laying bare of the most hidden instincts of life, and even resent her attitude toward what she looks upon as mawkish modesty, for it is a deeply rooted conviction in average humanity that this very mawkishness is a precious safeguard to youth. The preface claims that the whole work is the outcome of "experience and philosophy." The book quite supports the claim, for every page gives evidence that its author is a thoroughly trained physician; and this latter fact again supports its philosophy, to which some readers might otherwise take exception, for the philosophy is emphatically of the New-Thought cult.

As a medical practitioner, Dr. Stockham must have been the recipient of a prodigious number of private and personal confessions. She found "men and women digging their own graves with the spade of ignorance." Hence her self-imposed missionary work, and the complex array of formulas she lays bare toward a higher and happier existence, together with recipes toward the improvement of lives yet unborn. One feels bound to take the book seriously, and certainly the practical sense underlying "New-Thought" theories was never more clearly and convincingly presented. Things that have too often been made to appear confusing and absurd by the medicated minds so prone to handle and air them, are made as clear as daylight by Dr. Stockham.

A little treatise she gives on the woful results brought about through the fear engendered by the misunderstood germ theory of science is worth the price of the book to those who stand in need of such counsel. Lucidly and convincingly the author counteracts this ignorant fear, by showing how the body is kept alive by the workings of myriads of micro-organisms, and that for one inimical germ there are millions of friendly bacteria, which fear alone can transmute into enemies. In short, she does her utmost toward proving—what is now being accepted as an axiom by open-minded people—that fear and worry, not specific disease, are the master-slayers of humanity.

A RELIGIOUS TRIBUNE OF THE PEOPLE.

THE LIFE OF JOSEPH PARKER, PASTOR OF THE CITY TEMPLE, LONDON. By William Adamson, D.D. With portraits and illustrations. Cloth, 5¾ x 9 in., 386 pp. Price, $1.85 net. Fleming H. Revell Company.

THE religious life of England has owed much of its vitality to the labors of a ministry which is outside of the great and predominating Establishment. The working of the Established Church runs in well-oiled grooves; prescript and precedence have secured its ministers from the toil and hazard of initiative ventures. They fight in well-drilled and thoroughly officered battalions, and their controversial energy is mostly spent in the discussion of such questions as relate to internal discipline, to ecclesiastical ceremony, and the interpretation of doctrinal codes. But there have always appeared in the mother country teachers and leaders outside of the Church of England who, discarding conventionality, have appealed directly to the masses. These men, whose predecessors were Wesley and Whitfield, have been champions of religious liberty, of personal faith, and individual responsibility. If we may borrow an illustration from the annals of ancient Rome, we might call them religious tribunes of the people.

The greatest of these in recent times, who took upon himself a very much ampler investiture than the mantle of Spurgeon, was the late Joseph Parker. He was born of a sturdy north England stock in 1830. His father was a builder and mason who worked among his own hired men. The son was destined for his father's trade, but early experienced that excess of profound enthusiasm for religion which is styled conversion. He began laboriously to shape himself for a preacher. When asked in after years, "What is your hobby?" he answered, "Preaching." "What hobby occupies your time of leisure?" "I have no hobby but preparing for or delivering sermons; they occupy my whole time, and engage the energies of my whole soul."

REV. DR. JOSEPH PARKER.

This was true. He toiled incessantly in this one work, and he succeeded. Any young minister who wishes to learn one great secret of success in preaching should read the third chapter of this life of Dr Parker, where we will find the answer—sleepless toil and the solicitation of severest criticism.

Joseph Parker's first important charge was at Banbury. In 1852 he was called to Cavendish church, the richest independent church in Manchester, and in his letter of acceptance made that stipulation which ever afterward became the rule of his life:

"As a minister I claim the most perfect freedom of action. With regard to my conduct in the pulpit, I must be the sole human arbiter. Under a profound sense of my accountability to the great head of the church, I must adopt such modes of appealing to the people as may appear to my own judgment and conscience best adapted to promote the interests of truth. I promise no deference to usages or precedence; what appears to me right I shall do, and what appears to me wrong and insufficient I shall unequivocally reject."

Dr. Parker has been called the English Beecher. The comparison is

somewhat unfair, altho the pastor of the City Temple sometimes approached the ideal which he has described in justly characterizing the sermons of the American preacher. Such a sermon "was an amazing combination of philosophy, poetry, emotion, and human enthusiasm—all centered in Christ, and all intended to bring men in right relations to the Father."

The secret of Parker's power lay indeed in his evangelical directness and simplicity. He was alternately witty, epigrammatic, and sometimes personal, but his influence with the masses lay in his strong and manly claim for authority among them, as one who accepted the Bible, abhorred sin, felt the love of God, acknowledged the work of the Spirit in men's hearts, and believed in Christ. That he had no time, and perhaps no taste, for criticism, is shown by his "Ecce Deus," a work which in some quarters might counteract, but could never be said to controvert, Professor Seeley's "Ecce Homo," which suggested its publication. But it was not the vocation of Parker to face the philosophic and scientific problems of religion.

The excellent biography which Dr. Adamson has given us is in many ways to be commended to preachers of the Gospel of every denomination. The author is Boswellian in the presentation of his theme; he makes Dr. Parker speak for himself, and he brings a multitude of other men whose words heighten the clearness of the picture. The book is free from exaggerated eulogy, and notable for the calm and judicious estimate which it makes of a man in many ways remarkable, and in some points even great. Young preachers, we repeat, can derive a world of knowledge from this biography.

The illustrations are utterly unworthy of the text.

THE "ARTISTIC TEMPERAMENT" AGAIN.

What Manner of Man. By Edna Kenton. Cloth, 5⅛ x 7⅝ in., 292 pp. Price, $1.50. The Bowen-Merrill Company.

THERE is a class of hysterical novels that a reviewer with a limited space at his command usually passes by. Now and again such a book has certain qualities which entitle it to critical notice in spite of the many points against it. "What Manner of Man" is such a book. The theme is an absurd one—the unwholesome wanderings of an overstrained imagination. It is very obvious that the authoress has been diligently reading her Kipling; but in spite of the almost laughable material she has chosen to treat, she has the gift of story-telling. If we had a school for authors, and young men and young women were required to study life before they ventured to write about it, we might have many good stories in the place of immature tales like "What Manner of Man." It is another of the absurdities written around what is known as "the artistic temperament." The author, besides having the gift of story-telling, grasps the picturesque aspect of any scene, and has a certain power of characterization. In consequence the book escapes belonging to the class of fiction contemptuously designated as "trash," and to which the quality of material chosen for the story would otherwise relegate it.

EDNA KENTON.

THE COUNTER-CHECK QUARRELSOME.

The Egregious English. By Angus McNeill. Cloth, 7¼ x 5¼ in., 210 pp. Price, $1.25. G. P. Putnam's Sons.

BEHOLD two of the families of our kin across the sea hanging up, as it were, on the literary clothes-line each other's unwashed linen, and gesticulating toward it for the benefit of nice clean nations like the Yankees, and the Germans, and the Russians, and whatever French may have learned the language. It is not an enticing spectacle for us Americans, who are supposed to be strained close in the embrace of kinship with Great Britain, these revelations in the books of Mr. Crossland and Mr. Angus McNeill, of the dirty spots in the character of the Scotch and the English. There must be some weight in the burden of guilt laid by Mr. Crossland (who wrote "The Unspeakable Scot") upon Scotland, else why does the galled jade lash out so with her heels, in the shape of a book called "The Egregious English"?

This protest, like that of the majority of galled jades, is a little too indiscriminate. It hits not only the Englishman, but most of the spectators. That is to say, the sins of which Mr. McNeill accuses the English are common to all nations—the desire for money, rather loose habits, and general bad taste. A rather interesting suggestion which the book furnishes is that if one were making an attack on the French, or the Germans, or the Russians, or the Turks, one could easily pick out weaker spots for assault than Mr. McNeill has been able to find in the English, or indeed than Mr. Crossland has been able to find in the Scotch. A particularly weak point in the English character, Mr. McNeill has, however, thumped in his chapter on the English soldier—which is by far the best chapter in his book—and that is the Englishman's conventionality. As exemplified in the army, it took the form, before the Boer war, of a stereotyped system of attack. This plan of attack failed before the maneuvers of the Boers, and consequently the English army tactics are in process of reorganization—a reorganization designed to meet Boer tactics. "It does not seem to occur to the poor body," says Mr. McNeill, "that his next great trial is not likely to overtake him in South Africa . . . . yet wherever his next large fighting has to be done, he will sail into it in his good, old, infantile English way, armed cap-a-pie for the special destruction of the Boers."

There are other valid objections to the English character which have been pointed out by Mr. McNeill, and there are plenty of amusing phrases which have started up at the author's command, but in the main his criticism of the English loses force because of its exaggeration.

"THE SPLENDOR AND THE HAVOC OF THE EAST."

Medieval India Under Mohammedan Rule (712-1764). By Stanley Lane-Poole, Professor of Arabic at Trinity College, Dublin. Illustrated. Cloth, 5¼ x 8¼ in., xvii + 449 pp. Price, $1.35. G. P. Putnam's Sons.

GIBBON sums up the story of Asiatic dynasties as "one unceasing round of valor, greatness, discord, degeneracy, and decay"; and Kinglake, in "Eothen," crossing the border at historic Belgrade, says: "I had come, as it were, to the end of this wheel-going Europe, and now my eyes would see the splendor and the havoc of the East." So shall the reader, passing the portals of enchantment which these pages open to him, behold the long-drawn procession, pageant, and spectacle of splendors and havocs which go to the making of the story of Mahmud of Ghazni, and Firoz Shah, and Queen Raziya, Tamerlane and Babar and Akbar, Jahanghir and Shah Jahan, Ala-ad-din and Aurangzib. True, there had been an Arab invasion of Sind, early in the eighth century—invited by the dazzling pictures of adventurers, and their wild stories of gold and diamonds, jeweled idols, gorgeous rites, and a marvelous civilization. Daibul was stormed and taken, and Multan fell; but when a foul and false story reached the ears of the Calif, that his young general had made free with the captive daughters of Dahir before presenting them to the Calif's harem, that splendid boy was sewn up in a raw cowhide and sent to Damascus. The Arabs had conquered Sind, but the triumph was but a barren episode, bearing no lasting fruit.

We hear no more of Arabs as conquerors of India. When the Mohammedan empire, from Mahmud to Aurangzib, is named, it is Turkish empire that is meant; and with the arrival of the Turks under Mahmud the Iconoclast, at the beginning of the eleventh century, India entered upon her Middle Age. The history of this period is necessarily rather a chronicle of kings and courts and conquests than a national growth. "The people" of India enjoy the doubtful happiness of having no history; they are the same yesterday, to-day, and forever. But in the characters and lives of the rulers there is infinite variety. "Such contrasted figures as those of Ala-ad-din, Babar, Akbar, and Aurangzib may rival any gallery of portraits that could be brought together in Europe in the same four centuries." In the lives and policies, the wars and schemes, the pageants and the ceremonials of such leaders of men, the imagination finds ample scope for visions of strangely vivid and dramatic situations. As for "the people," the townsfolk and the peasants, give them a king, an absolute king, and they are content. "Every Eastern people, if left to itself, sets up a despot"; only let him be strong and masterful, and he may do as he will. His most shameless excesses, his most implacable cruelties, are to be accepted, as plague and famine are. Whatever king may rule, there will still be the old familiar plague and famine to reckon with; and so long as the rice and millet grow, and salt is not too dear, and a man can go unnoticed, life goes much the same and the gods will not meddle.

Moreover, even despotism has its compensations; in the very wilfulness and wantonness of its fantastic caprices and freaks, it includes possibilities of assertion for the humane and the gracious.

Babar is perhaps the most captivating personality in Oriental story; he is the link between predatory hordes and imperial government, between Timur and Akbar. Yet Babar, soldier of fortune as he was, was not the less a man of fine literary taste and fastidious critical faculty. In his native tongue, and in the Persian, he was accomplished in prose and verse; "his battles, and even his orgies, were humanized by the breath of poetry."

"Nine centuries of intimate association have produced no sensible fusion between the Mulim and the Hindu; any more than two centuries of intercourse have blended either with the dominant English." The conquerors have come in hordes, again and again; but they have scarcely touched the soul of the people of India:

> "She let the legions thunder past—
> And sank in thought again."

These are a few of many houses recently built on our properties and constitute one of many reasons

Why 4,000 Investors Bought

$3,461,000

Worth of Our New York Lots During the Past Year

Corner of Linden and Schenectady Aves.

Albany Ave., near Church Ave.

Corner East 18th St. and Avenue Q.

Nearly three and a half million dollars!—that's the forceful story of our real estate sales during the year just ended. We ask *you* to dwell on these figures long enough to realize—to understand what they really mean. These three and a half million dollars actually represent the confidence which the thousands who have invested in our New York City lots have in us. *You*, perhaps, have not yet invested—not even investigated. This advertisement is written to induce you to let us tell you the great story of our proposition:—

$10 Secures a $510 Lot in Greater New York

Within 35 Minutes of These Skyscrapers, by Trolley, 5c.

This carries a free trip to New York (east of Chicago or like distance); a free deed to your heirs in case you die before you have paid in full for your property; the highest class improvements free of cost, etc.; in short, everything that will make a cash payment of $10, and a monthly payment of $6 until you have paid us $510, develop into a life's income.

This is a high-class and strictly honest proposition, or you may be sure this magazine would not permit our announcement to appear. Nor would we have the privilege of referring to twenty odd National Banks, the Commercial Agencies and 30,000 customers all over the United States.

You have absolutely nothing to lose by writing at once for full particulars, or better still—mail us $10, the first payment on a lot, **with the distinct understanding that we must return it to you if we have misrepresented our proposition in the slightest particular. Write under all circumstances.** You would not be fair to yourself if you failed to look into this matter.

CURRENT POETRY.

The Little Hand.

By ZONA GALE.

O moon-pale blossom that ruffles and dips
And ripples in wind that is sweet with your lips,
I have come to you, hot for the truth about truth.
I have come to find God. If I look in the dew
And the depths of your silk shall I find him in you?

How it stirs—little rose! How it stirs and is still!
How it blows, and is sweet, and is terribly still!

Little child, little child—with me here by the rose,
I can find you no truth. What the moon-blossom knows
Is its secret, for God; and they shut us away.
Take my hand. Let us search for the truth and the work.
Of the truth through the dead hush of earth.

How it clings—little hand! How it clings to my own!
Here is Truth! Ah, the little hand clings to my own!

—In the March *Bookman*.

The Teamster.

By H. H. BASHFORD.

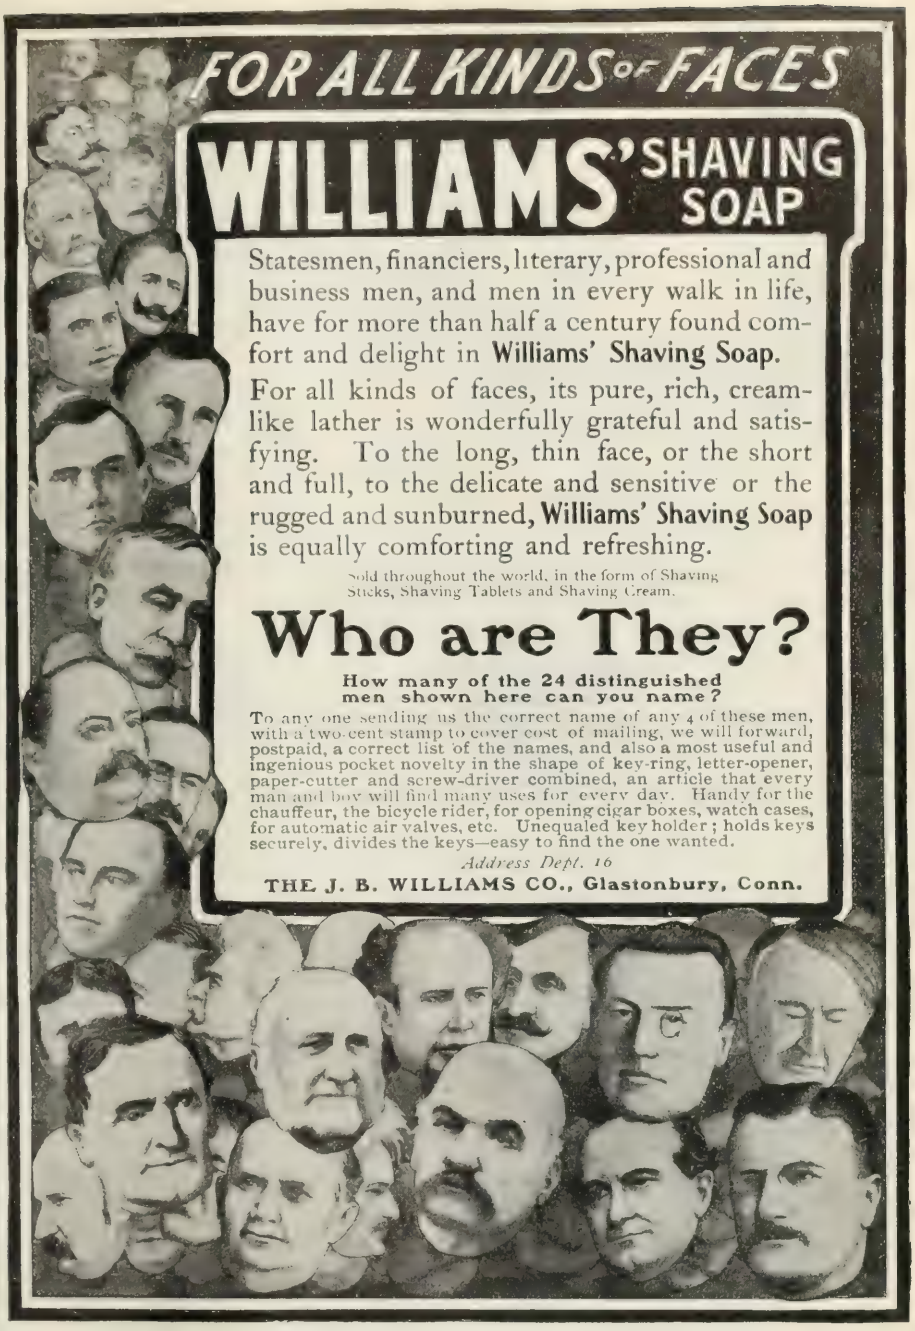
Ah, who'd go teaming wood on such a morning,
Go swinging on the bob-sleighs, through the frost,
Take any trail, before God's day is dawning,
With twenty miles of prairie to be crossed?
The colts are huddled sadly round the building,
The bitter wind creeps wailing down the plain,
No streak of dawn the starless east is gilding,
And I must rise and take the trail again.

O bride of mine, rest calm—the miles are lonely;
O bairn of mine, sleep sweet—the day is long,
The plains are wide and empty, and I, only,
Go forth at night to travel with a song,
Go forth alone to journey in the greatness
God spread, long since—a russet, tideless sea,
All shrouded now beneath the stars' sedateness,
The battle-ground of life for you and me.

Yet hark, the runners down the trail are ringing,
And see the team is getting into stride,
And slow, and far, the mighty dawn comes singing,
Comes singing to the conquest of his bride,
Comes singing to the prairie's shy unfolding,
Treads softly, spreading roses on the snow,
Stays never, brooks no secret or withholding,
Till I, too, pay him homage as I go.

And I, too, sing the song of all creation,
A brave sky and a glad wind blowing by,
A clear trail and an hour for meditation,
A long day and the joy to make it fly,
A hard task and the muscle to achieve it,
A fierce noon and a well-contented gloam,
A good strife and no great regret to leave it,
A still night—and the far red lights of home.

—In London *Outlook*.



FOR ALL KINDS OF FACES
WILLIAMS' SHAVING SOAP
Statesmen, financiers, literary, professional and business men, and men in every walk in life, have for more than half a century found comfort and delight in Williams' Shaving Soap.
For all kinds of faces, its pure, rich, cream-like lather is wonderfully grateful and satisfying. To the long, thin face, or the short and full, to the delicate and sensitive or the rugged and sunburned, Williams' Shaving Soap is equally comforting and refreshing.
Sold throughout the world, in the form of Shaving Sticks, Shaving Tablets and Shaving Cream.
Who are They?
How many of the 24 distinguished men shown here can you name?
To any one sending us the correct name of any 4 of these men, with a two-cent stamp to cover cost of mailing, we will forward, postpaid, a correct list of the names, and also a most useful and ingenious pocket novelty in the shape of key-ring, letter-opener, paper-cutter and screw-driver combined, an article that every man and boy will find many uses for every day. Handy for the chauffeur, the bicycle rider, for opening cigar boxes, watch cases, for automatic air valves, etc. Unequaled key holder; holds keys securely, divides the keys—easy to find the one wanted.

PERSONALS.

Reminiscences of Prince Bismarck.

[Sidney Whitman's latest book, "Personal Reminiscences of Prince Bismarck" (D. Appleton & Co.), sets forth, as its title indicates, the personal side of Bismarck as seen through the eyes of an intimate friend. Mr. Whitman knew the Iron Chancellor for a number of years and visited him several times. We select the following incidents from the book:]

BISMARCK'S AMERICAN FRIENDS.—It appears that the Prince was especially fond of Americans, for, according to Mr. Whitman, there were apparently more portraits of Americans in his possession than men of any other nationality. Among the portraits were those of General Grant; Mr. Phelps, and Bancroft. Says Mr. Whitman:

He was also particularly attached to George Bancroft, so that when it became a question of Bancroft's being recalled from his post of United States Minister at Berlin, Bismarck wrote specially to his friend Motley and begged him to intercede with the President to allow Bancroft to remain; and he did remain. Bismarck told me that when General Grant came to Berlin he accompanied him to see one of the reviews at the Tempelhofer Feld. Grant was not well that day, and they had to drive out in a closed carriage. Grant looked downcast, and told Bismarck that it worried him to think that he was to meet the Prussian soldiers sitting coddled up in a carriage like any ordinary civilian. "Never you mind that, General Grant," Bismarck said, "you may sit here hidden from view, but our soldiers are well aware what sort of fighting-man is in this closed carriage."

WHY BISMARCK NEVER LIKED GERMAN CHAMPAGNE.—At one time, while at lunch, Bismarck remarked that he had never liked German champagne, and to illustrate this he told the following story:

"On one occasion I was dining with His Gracious Majesty (the present Emperor). I had some champagne in my glass, the taste of which made me suspicious. When the butler again passed the table I tried to get a look at the label on the bottle, but this was impossible, for a napkin was wrapped round it. I then turned to the Emperor to inquire the name of the particular brand, when His Majesty blurted out that it was indeed German champagne. 'Yes,' the Emperor said, 'I drink it from motives of economy, as I have a large family, and I have strongly recommended it to my officers for the same reason. Then, again, I also drink it from patriotic motives.' Thereupon I said to the Emperor, 'With me, Your Majesty, patriotism stops short at the region of my stomach.'"

BISMARCK IN COURT.—Concerning the more harmless incidents of German Court life, says Mr. Whitman, Bismarck related the following:

"It was occasionally one of my functions to present all sorts of people to the King, and it now and then happened that my head was so full of more important matters that the very name of the person I was about to present slipped from my memory. When that was the case I used to put a bold face upon it, and, there being no time to inquire after names, I bluntly presented a man I did not know as Count Solms. You see, there are so many Count Solms that the King could not pos-

sibly know them all by sight. On the other hand, a man whose name might be Müller or Schulze was not likely to take it very much amiss if he were presented as Count Solms, which, after all, is a good family name. I got out of my difficulty in this manner on more than one occasion, and it never failed."

BISMARCK'S INTENSE MELANCHOLY.—One of the strongest impressions Mr. Whitman obtained of Bismarck was of his "solitude, his intense melancholy." He says:

Bismarck had suffered from fits of depression, as is well authenticated, right through life. Melancholy is an essentially German trait of character, and may not be unconnected with the state of the stomach, as Hamlet said dreams are. In every case it is often met with in highly developed natures, a form of morose pessimism which affects them at times. . . . Bismarck, with the consciousness of having altered the map of Europe and revised the German empire, could scarcely exist outside his own four walls. . . . . .

Bismarck had moments between 1890-91 when the idea of suicide may possibly have been present to his mind. His religious faith, added to his strong sense of personal dignity, probably prevented the thought obtaining complete possession of him. Lord Clive—a rare exception among great Englishmen—committed suicide. Bismarck was not without affinity to Clive in more respects than one, notably in his insensibility to the meaning of fear.

Mark Twain's Faithful Servant.—One evening last year, while Mark Twain was spending some time at his summer home, says *The Saturday Evening Post*, he prepared to take a drive, expecting to remain out until late.

He therefore told his hostler that he need not wait for him, instructing him when he had finished his work to lock the stable and place the key under a stone, the location of which Mr. Clemens described with much exactness.

When Mr. Clemens reached home after his drive he was surprised to find that the key was not in its place. When his patience had been exhausted he awoke the hostler and received this explanation:

"Mr. Clemens, I found a better place."

Archbishop Ireland's Retort.—A real estate dealer, who had charge of considerable real estate belonging to Archbishop Ireland, says the New York *Times*, tells this story about the distinguished divine, which illustrates the quick wit of the gentleman in turning a corner when in a tight place.

The real estate agent was caught short on some

The Greatest Test of Power

in an automobile, as in mankind, is the ability to climb to higher levels. There would not be so much enjoyment in automobile touring if you were obliged to feel a little doubtful about the way your car would respond when called upon to conquer steep and rugged grades. Doubts are cast to the wind when you drive the

Winton

It will not only master any grades open to traffic, but do it with the pleasing dash possible only where there is an abundance of power always available. The Winton Touring Car has won quite as many laurels for hill-climbing as for speed and endurance, and, of course, there are reasons for it. One is that it has more horse-power for each hundred pounds of weight than any other car upon the market. Again, all of its power is available, not being absorbed by a cumbersome transmission.

The new 20 horse-power, double opposed cylinder, Winton Touring Car, with one filling of gasoline, lubricating oil and water, will travel, at a 30 to 40 mile per hour clip if desired, over 150 miles. There are a great many other features about this 1903 automobile triumph to interest those contemplating the purchase of a high-grade car.

The price, complete with detachable tonneau, two full-brass side lamps, tools, etc., is $2,500. Visit any of our branch or agency depots in two score leading cities and the many features of Winton excellence will be fully demonstrated.

investments of his own and his friends', and it was decided that he and the Archbishop must hasten at once to New York, where they had moneyed friends who they expected would help them out. The reverend gentleman suggested that they go the next day, which was Sunday. The real estate man was somewhat shocked at this suggestion coming from the source it did, and said that he never traveled on the Sabbath, as it was contrary to the Scriptures. The Bishop saw the point, and rubbing his hands together, replied that he, too, had a text that might apply: "'If thy ass fall into the ditch on the Sabbath day you must straightway take him out,' and as there are two asses in this case we had better be lively."

It is perhaps needless to say that they left for New York on Sunday.

Doctor Parker's Rugged Kindness.—The late Rev. Dr. Joseph Parker, of London, was once approached in the City Temple by a country clergyman, says *The Youth's Companion*, and asked to preach in his village on any day and at any hour that might suit his convenience.

"It is impossible," replied Dr. Parker. "I have already more engagements than I can fulfil."

Mrs. Parker, who was present, saw the minister's look of disappointment. "My dear," she said to her husband, "you must go. This gentleman has come a long distance to see you, and you must make it possible."

"Well," said he, looking into the face of his rural brother, "you see I must go. Fix your day, and I will be there at twelve o'clock."

The village pastor returned his thanks, and went his way with a radiant countenance. The day came, the church was crowded. Doctor Parker preached in his usual telling manner, and pleaded for a generous offering as he alone could plead. At the conclusion of the service the pastor came into the vestry, and expressed his indebtedness to Doctor Parker and the gratitude of the church for his valuable services, asking at the end:

"How much, doctor, are we in your debt?"

"Forty-nine pounds, nine shillings and sixpence," promptly returned Doctor Parker.

This staggered the minister, who managed to stammer out, "It will take a little time to pay it all."

"Well, I will not take less," said Doctor Parker. "And meantime, as you have been out of pocket through coming up to see me in London, take this"—placing two sovereigns in the minister's hand—"to cover your outlay. Mind, not a halfpenny less to me than the sum named—but you can take eternity to pay it."

Doctor Parker would accept nothing but third-class fares when he visited poor parishes, but wo to the church that had a reputation for meanness in money matters.

Venezuela's Irresponsible President.—Spending many weeks in Venezuela recently, William Thorp had opportunity to study President Castro in his palace at Caracas and during his holiday festivities at La Victoria, when he threw off his official responsibilities and revealed clearly his personal characteristics. In an interesting article in *Harper's Weekly* Mr. Thorp writes:

It is impossible to conceive a more irresponsible person. He knows nothing of the obligations of statemanship or the power of foreign countries. When I spent Christmas with him at La Victoria he told me that he was profoundly disappointed at his inability to fight the warships of the Germans, the British, and the Italians. "If Venezuela had a navy, however feeble," he said, "we would soon settle this matter one way or the other. We would sally out and attack them. If they had the courage to land troops, I would lead my brave soldiers against them, and rout them with terrible slaughter." On another occasion I met him at La Victoria in the middle of an open-air fiesta. He was dancing under the trees in a very lively and frolicsome fashion with the peasants of the neigh-

System Doesn't Mean a "Scheme"

Probably no word in the English Language is more persistently mis-used than the term **"System."** Every man with a plan for handling a part of office routine calls it "A System." There are venders of so-called "systems" all the way from printers to furniture manufacturers.

A Baker-Vawter System Means "Something Complete"

— rounded out, providing for every contingency, reducing every factor to a **known quantity.** There is no such thing as a perfect "ready-made" system; just as **no** two business houses face exactly the same problems.

If we provide a complete **Baker-Vawter System** for your business it will not be a one-day task, like choosing some furniture. It will take time and study; but when we have finished, your institution will be so organized that all work will be assigned to those employees best fitted to care for it. **The greatest economy will prevail.** You can lay your finger any moment on the pulse of your business and gauge every feature exactly. We have a series of leaflets telling about it. Shall we send them?

borhood and some ladies he had brought with him from Caracas. I had to ask him whether he would apologize to the allies if they demanded an apology. I asked his factotum, General Linares Alcantara, to procure me an opportunity of speaking with the President, and showed him a cablegram which I had just received from Washington. "It is impossible," said Alcantara, with a gesture of despair; "the President dances. He does not do business. He has done no business for a week. He may do no business for another week. Perceive! I have here fifty telegrams from Mr. Bowen, from Washington, and from our government officials in Caracas. They are unopened. The President would not thank me to show them to him while he dances, and he has danced for a week."

Presently Castro perceived me, with an open cablegram in my hand, and he walked over to me, his partner hanging on his arm, and asked what it was about. I told him that the allies were reported to have demanded an apology from him.

Immediately he struck a Napoleonic attitude, waved his arms excitedly in the air, and declaimed: "General Castro never apologizes. He will not apologize. He has nothing to apologize for. He demands an apology from the allies."

The girl, still hanging on his arm, clapped him on the back, exclaiming, hysterically: "Viva Castro! Viva Venezuela! Bravissima Cipriano!" The crowd took up the cry, whirling around their partners in an excited fandango, and beating the empty bottles from which they had been drinking on the little iron tables which stood around.

When Kubelik Played in an Insane Asy- The approaching marriage of Jan Kubelik, the violinist, to the Countess Marianne Csaky, recalls the following incident which he recently told, which is reprinted in the New York *Times:*

"I was asked to play before the inmates of an insane asylum by an alienist," said Kubelik, "the doctor believing that music was a fine medicine for unbalanced minds. I accordingly accompanied him to the institution, where he introduced me, and I said I would favor my hearers with something gay and happy.

"I hadn't intended to do this, but following his suggestion, I played a brilliant Slav composition, which I hoped would be joyous enough. The crazy folk were all seated about the platform in chairs and seemed to be intensely interested. As I finished, a very pretty young woman rose and beckoned to me. I thought, artist-like, that she wanted an encore, and so said to the doctor:

"Ask her what she desires."

"He rose to his feet and was about to question her, when she exclaimed:

"'To think of the likes of me being in here and he being at large in the wurrld!'

"That was the last time I ever played in an insane asylum."

The Statesmen's Daily Parade.—With his slouch hat pulled down rakishly over his eyes and a half-burned cigar in his mouth, "Uncle Joe" Cannon, the Speaker of the next House, rides to the Capitol each morning on the tail end of a

street car, says the Washington correspondent of the St. Louis *Post-Dispatch*. He adds:

His hands are jammed down in his overcoat pockets, and "Uncle Joe" is willing to, and does, argue religion, politics, or almost anything else with whomsoever braves the cold winds and rides on the platform with him.

Representative Cannon's early morning ride to the Capitol is an event. Colleagues wanting special favors from the Committee on Appropriations, of which he is chairman, wait to find him alone on the car, and talk matters over quietly with him. Generally they get what they want, as "Uncle Joe" is usually in a cheerful frame of mind before the harassments of a legislative day begin.

Speaker Henderson rides to the House in his own carriage. Occasionally he has a companion, but generally he is alone. He leaves the Capitol in the same way. Senator W. A. Clark, of Montana, and Representatives Sibley, Joy and Belmont go to work each day in automobiles. If Senator Clark does not ride up in his big red automobile, he drives up in what is known as a "night-liner." This is a ramshackle old cab. Senator Clark seldom walks in the morning, but at night he frequently wanders about the streets alone.

The Southerners, a majority of whom live in the downtown hotels, walk to the Capitol each morning. They do not keep carriages, and as one of the oldest statesmen of the South once said: "I'm afeared of them kyars." Generally they leave the Metropolis and National Hotels about the same hour, and start out in single file, gradually getting together as they approach the Capitol. Sometimes a party of ten or twelve members file solemnly into a saloon on Pennsylvania avenue on the way to the Capitol, as solemnly take a drink, and then all walk out in the same formation as that in which they entered.

The Western men, accustomed to early rising, get up early, make trips about the various Government departments looking for something of interest to their constituents, and then drop up to the Capitol much as tho they were going to their offices. Senators Hanna, Depew, Spooner, and Platt of Connecticut ride up on the street cars. Both Senators Hanna and Depew have had unfortunate experiences with street-car conductors because they got aboard without money enough to pay fare.

But no matter how the statesmen get to the Capitol, all in the afternoon walk to their homes and hotels. When the gavel falls for the adjournment, they leave in groups of twos and three, and go swinging down Pennsylvania avenue. The late Speaker Reed used to head the delegation coming up the avenue. The procession is now led by Representative Cooper, of Wisconsin, chairman of the Committee on Insular Affairs, and the Western contingent. Following them come the New Englanders and the members from the Middle West. Bringing up the rear are always the Southerners. They stop and look in the windows, and apparently enjoy their stroll.

Even the Justices of the United States Supreme Court join in the parade of statesmen. Unlike the Senators and Representatives, the Associate Justices invariably walk up the south side of the avenue. In this way they are not jostled by the pedestrians, but many a dignified Associate Justice has had to skip nimbly out of the way of a teamster rolling down a skid, a barrel of kerosene or sugar.

MORE OR LESS PUNGENT.

In Boston.—LITTLE TOMMY: "Can I eat another piece of pie?"

MAMMA (witheringly): "I suppose you can."

TOMMY: "Well, *may* I!"

MAMMA: "No dear, you may not."

TOMMY: "Darn grammar, anyway."

—S. J. Brock in *Lippincott's*.

Accuracy.—"See here," remarked the head-waiter, "you are getting entirely too careless. That gentleman says you spilled consommé on him as you passed his table just now." "I beg ze gentleman's pardonne," replied the polite French

ASTHMA
TAKEN FROM THE SYSTEM
Nothing remains which can produce an attack. You can eat, sleep and travel anywhere without slightest return of symptoms. Appetite improved, blood enriched, nerves strengthened, whole system built up, health permanently restored, life made enjoyable.
Book 25 A Free. DR. HAYES, Buffalo, N. Y.

A Failing Memory

is the first evidence of mental decay. No matter what your position in life may be, a good memory can not fail to be of inestimable value to you. It is absolutely necessary to success. The poorest memory may be developed and strengthened by proper training, just as the muscles of the body are developed and strengthened by a proper course of physical exercise. A poor memory may be made good, and a good one better, by

The Pelman System of MEMORY TRAINING

Taught in six languages. Requires only a few minutes daily, and is so simple a child can master it. Mr. Pelman's books, **"Memory Training; Its Laws and Their Application to Practical Life,"** and **"The Natural Way to Learn a Language"** sent FREE by mail, postpaid.

TO INVESTORS

Money invested in Sheep and Cattle in Montana is safe and pays 30 per cent. A small investment now grows into a large flock in a few years. Over 300 Men, Women and Children now have Cattle and Sheep on our Ranches. Write for Annual Report, a most interesting document.

Montana Co-Operative Ranch Co., Great Falls, Montana

serving-man, "but he ees mistaken; eet was no consommé, eet was bouillon!"—E. J. APPLETON in *Lippincott's.*

Inquisitive.—"As old Robinson was walking along the principal street of his native town something new struck his eye in the window of the watchmaker's shop.

It was a large handsome clock, and from it was suspended a card bearing the words:

"Goes 300 days without winding!"

Suddenly an idea struck him, and he went into the shop.

"That's an interesting clock of yours," he said; "but there's one thing I should like to know."

"What's that?"

"How long it would go if it was wound up?"—*Answers.*

An Unfortunate Joke.—Leoncavallo tells a very amusing story of himself. One day when visiting a town in Italy, he heard that his opera, "Pagliacci," was to be produced and decided to hear it incognito.

It was not generally known that the young composer was in town.

It happened that his seat was beside a bright-eyed and enthusiastic young lady, who, noticing that he did not join in the general applause, but remained quiet, turned to him and asked:

"Why do you not applaud? Does it not suit you?"

Leoncavallo, much amused, answered:

"No; on the contrary, it displeases me. It is the work of a mere beginner, not to call him anything worse."

"Then you are ignorant of music," she said.

"Oh, no," replied the composer.

Then he proceeded to enlighten her on the subject, proving the music worthless and entirely without originality.

"See," said he, "this motif is——" and he hummed lightly a short melody; "this aria is stolen from Bizet, and that is from Beethoven." In short, he tore the whole opera into pieces.

His neighbor sat in silence, but with an air of pity on her countenance. At the close she turned to him and said, "Is what you have said to me your honest opinion?"

"Entirely so," was the reply.

"Good," said she, and with a malicious gleam in her eyes left the theater.

Next morning, glancing over the paper, his eye fell upon the heading, "Leoncavallo on His Pagliacci,'" and reading further was somewhat startled to find the conversation of the evening before fully reported and accredited to the proper source.

He had, unfortunately, played his little joke on a reporter, who had proved too smart for him.—London *Tit-Bits.*

Signs of the Times.—In a Montana hotel there is a notice which reads:

"Boarders taken by the day, week, or month. Those who do not pay promptly will be taken by the neck."—London *Tit-Bits.*

Princeton "Tiger" Roars.—FIRST TOWN URCHIN: "How'd ye fall in the canal?"

SECOND T. U.: "Who told ye?"

FIRST T. U.: "Yuh look clean."

In joke I called her a lemon nice,
And said I'd be the squeezer,
But I felt more like a lemon ice
And she—well she was the freezer.

For Example.—PERKINS, JR.: "Why don't ye buy that horse of Seth's, pop? He's got a fine pedigree."

PERKINS, SR.: "Pedigree be gol darned! The question is, is he wuth anything? Why, boy, them sassiety folks what comes here in the summer has pedigrees."—*Brooklyn Life.*

My Mother's Good Old Times —

By LOWELL OTUS REESE.

On my head the frost is gath'ring with the limning of the years;
On my features are the records of a thousand hopes and fears;
In my check-book there is written that which forty years ago
Would have made my being tingle with a wild exultant glow;
But alas! within my spirit there's an ever-present ache
For the old corn-beef and cabbage that my mother used to make.

I remember when I wandered o'er the hills in boyish glee;
And the dinner horn's loud echo brought no boding thoughts to me;
I was young and I was happy; and my stomach ne'er went back
On a single proposition that my teeth would dare attack!
Never thought I of dyspepsia as I charged the jelly-cake
And the old corn-beef and cabbage that my mother used to make.

But the years have brought prosperity. The servants in my halls
Keep their straining ears a-quiver for the faintest of my calls;
I have eaten of the fattest; I have drunk the richest cup—
Just to realize at last that these have used my stomach up;
And I'd give my last possessions to be able to partake
Of the old corn-beef and cabbage that my mother used to make.

All the years I've sought the dollar, struggled upward slow and sure,
With my pocket growing wealthy and my stomach growing poor;
Every year I find my table more with luxuries replete;
Every year I find that fewer are the things that I can eat!
Till the pathway back to childhood oftentimes I yearn to take
To the old corn-beef and cabbage that my mother used to make.

And sometimes in blissful moments I will fall asleep and dream
Of the russet buckwheat steaming and the sorghum syrup's gleam—
Dream that once more I am living where Welsh rarebits are unknown
And the noon hour unacquainted with the sad dyspeptic moan;
Then I jeer at pepsin tablets and forget my stomach-ache
In the old corn-beef and cabbage that my mother used to make.

—In *Leslie's Weekly*.

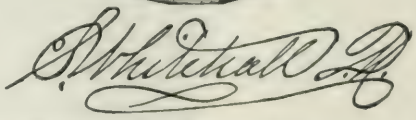
Quite True.—SHE (estatically): "How kind of nature to bestow upon the blind the faculty of distinguishing colors by the sense of touch!"

HE (philosophically): "Yes; but it's not altogether confined to the sightless. A fellow needn't be blind to feel blue."—S. R. J. in *Lippincott's*.

Pears'

the soap which began its sale in the 18th century, sold all through the 19th and is selling in the 20th.

Sells all over the world.



The Physician's Gazette said of him in 1892:

"An astute student and sturdy character of Indiana, who reflects credit upon the medical science of that progressive state."

A physician who really conquered

RHEUMATISM.

FREE TEST TREATMENT

It is difficult to realize that a single preparation will conquer the worst cases of chronic and acute rheumatism. *But this is true.* Dr. Whitehall's Rheumatic Remedy, sold by druggists everywhere at 50 cents, is doing this in 75 cases out of 100. The doctor says: "*I pledge my word there is not one iota of exaggeration in this estimate; and to help you realize that this is true, I will forward on application, a free proof treatment, I do not guarantee a free cure, but I do guarantee to convince you that this remedy will conquer rheumatism.*" The free proof treatment will make you feel like a new being at once. No cost, remember, to be convinced of the realness of this grand fact that your rheumatismcan be cured at home, easily, simply, pleasantly and at trifling cost.

A large practice, yielding from $100 to $500 each, for guaranteed cures, was brought to an end by success obtained i combining all the elements of this formerly expensive treatment into one single formula now selling to the public in drug stores everywhere at fifty cents a box.

Do right and write right **now.**

Maybe You're Wrong

when you think you know a thing or two about Illumination. Did it ever strike you that a light that is brilliant and nothing more is just about the poorest light for your home? Take

THE ANGLE LAMP

for example. It's more brilliant than gas or electricity, but it has **quality.** It has the peculiarly beautiful softness which comes from oil **properly** combusted. When you see the Angle Lamp at work once you will understand why it is now used in thousands of the best American homes. It is ideal for all places as it requires little or no attention, never smokes, smells or gives any trouble, is absolutely safe and as for economy—well it burns just eighteen cents worth of oil a month. This light is worth knowing all about. You can read the story of good light by sending for our Catalogue "W," which shows all styles from $1.80 up. Send to-day.

THE ANGLE LAMP CO — **76 PARK PLACE NEW YORK**

Dust-tight.

Don't carry hot ashes in open pans or pails. Scatters dust, is difficult, unsafe. Carry them in **Witt's Corrugated Pail,** empty into **Witt's Corrugated Can.** Close fitting lids. Dust-tight; fire-proof. Very strong.

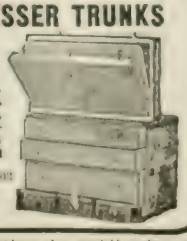
Sold by house furnishing and hardware dealers and **The Witt Cornice Co., Dept. K, Cincinnati, O.**

STANLEY Straight Back Trunks $4.00

The New Kind. Saves space. Sets close up to wall. Can throw back top without sticking wood work or plaster. Has outer straps. Strong and durable. **Finely made.** Latest and best styles and sizes. Costs less than old styles. **Sent direct from factory.**

DRESSER TRUNKS

A Bureau and Trunk Combined



Everything within easy reach. **No rumaging for clothing.** No heavy trays to lift. Light, smooth sliding drawers. Perfectly durable. Holds as much as any other trunk. **Sent privilege of examination.** Write for Trunk Booklet A 202

The Homer Young Co. Ltd., Toledo, Ohio.

THE LOCKE ADJUSTABLE TABLE

Only $3.00

Labor Saving. Comfort Giving. For Reading, Writing, Drawing, Sewing, Playing Games. Invalid's Table, Desk Extension, Typewriter, etc. Requires no floor space. Light, strong and handsome.

RAZALL LOOSE LEAF SYSTEM

Write for our book, Systematic Accounting, which explains and illustrates the system. **H. G. Razall Mfg. Co., 413-415 E. Water St., Milwaukee, Wis.**

His Name Wouldn't Come. It was recently in a well-known country club and one of those rare occasions of conviviality in which the best of men like to indulge. The party numbered a dozen, all prominent locally and some whose fame is more than local. A good spirit prevailed, and the feeling manifested itself in a brilliancy of speech that bubbled from every one present to such an extent that an impromptu toastmaster was chosen to keep it in curb by having each speak in turn.

So up rose Mr. Toastmaster and, casting his eye about the board, let it rest upon the man the fountain of whose eloquence was first to be let loose.

"Gentlemen," said the toastmaster, "as becomes the occasion I will introduce the wittiest man first, Mr. ——" (pause).

"Gentlemen, I take pleasure in introducing to you one whose name is a household word——" (pause and embarrassment).

"Gentlemen, it affords me great pleasure to introduce a man whose name stands for civic pride and all that is best in this community ——" (pause and embarrassment).

"Gentlemen, the man I am about to call upon first is known to me for the past twenty years, and to some of you perhaps longer. I will not dwell upon his qualities, his talent. They have made him famous. You all know to whom I refer. The man whose name rushes to all our lips——" a long pause. "I refer to the third gentleman to my right"; and as the toastmaster sat down amid uproar he said to his neighbor, "I'll be hanged but his name wouldn't come."—London *Tit-Bits*.

As He Liked It.—"George," said Mrs. Ferguson, "it's too bad about that lot of mechanical toys you gave Willie for a birthday gift. Every one of them went to pieces in less than twenty-four hours." "Yes," replied Mr. Ferguson; "the chap I bought them of promised they would."—London *Tit-Bits*.

Where There's a Will, There's a Shall.—MONSIEUR MOUTON: "I vould of Mademoiselle beg to know ze rule grammaire ven shall I say I vill, and ven will I say I shall."

MISS KLEVVER (graciously): "Why, that will be very simple, Monsieur Mouton. Wherever you now say I shall, you should say I will, and wherever you say I will, say I shall instead."—*Life*.

More to the Point.—THE PARSON: "I intend to pray that you may forgive Casey for having thrown that brick at you."

THE PATIENT: "Mebbe yer Riv'rence 'ud be saving toime if ye'd just wait till oi get well, an' then pray fer Casey."—*Brooklyn Life*.

Misunderstood.—MR. ROY (giving directions): "Are you sure you have it all down pat?"

NEW GROOM: "Me name's Barey, sor."—*Princeton Tiger*.

The Way to be Polite.—SMITH (in the Union): "Will you get some more ice-water?"

BOY: "If what?"

SMITH: "Oh,—if you please.

BOY: "If you please what?"

SMITH: "Will you kindly get some ice-water, if you please, sir?"

BOY: "That's better. No, I won't."—*Harvard Lampoon*.

His Worry.—"Percy, ma boy, I'm worwid to death about something." "What in the world are you worwid about, old chap?" "That's the twobble—for the life of me I cawn't wemember."—*Life*.

Dramatic Truths.—You can't tell a theatrical manager by the company he keeps.

Altho building-contractors are not actors, yet we often see them "bringing down the house."

The farmer in the rustic play is liked; the hero receives applause; but no one takes as well as the pickpocket.

Because an actress, on the stage, has wings on either side of her, does not prove that she's an angel.—*Smart Set*.

"Wonderland 1903"

Will be Ready about MARCH FIRST

In it the Northern Pacific furnishes this entirely new series of articles, descriptive of the Northwest.

Priest and Explorer

Relates the travels and captivity of Father Hennepin, the Franciscan Priest, among the Indians in the Minnesota country in 1680. Hennepin wrote the first description of Niagara falls and discovered St. Anthony fall.

The Last of the Mandans

Describes a visit to the tribe of Mandan Indians, memorable in the annals of Lewis & Clark, and some of whom still live on the upper Missouri river.

Nature's Masterpiece

Which is Yellowstone Park, is newly described and illustrated. The Government is spending large sums in improving the roads in this WONDERLAND.

Irrigation in the Northwest

Shows the great progress made in irrigation in the far Northwest, and its adaptability to this region.

One Hundred and Fifty Miles with a Pack Train

Recounts an experience in the rough mountains of the Clearwater country, Idaho, with a pack train, while engaged in exploration.

In the Shadow of the Olympics

Describes that part of the Puget Sound region lying west of the Sound and in the vicinity of Port Townsend—an ideal health resort.

Columbia River and Mount Hood

Tells of the finest river and river scenery in the United States and one of its grandest snow capped mountains.

THE BOOK IS APPROPRIATELY ILLUSTRATED, ALSO HAS MAPS AND GIVES TOURIST RATES TO ALL POINTS IN THE NORTHWEST.

Send SIX CENTS for the Book to CHAS. S. FEE, Gen'l Passenger Agent Saint Paul, Minnesota.

SAVE HALF YOUR CIGAR MONEY

AND GET A BETTER SMOKE

We are making a great success of selling direct from our factory to the smoker exclusively at half retail prices, the highest satisfactory cigars, all time-tested brands, not one blend, but many, guaranteed to suit every possible taste. We have made a reputation for quality during the years we manufactured for dealers. Now we are making a reputation for saving in price as well, selling

DIRECT FROM OUR FACTORY TO YOU

The saving in price does not come out of the cigars—they are the same as ever. It comes from saving you the jobbers', the salesmen's and the retailers' profits—three profits in your pocket. The saving in price is clear to all. You can prove, without risk, how we'll please you in quality and critically satisfy your taste, for if you don't get as good a cigar or a better one from us for less money than you pay now—if you are not altogether pleased, you get

YOUR MONEY BACK

Why throw away one-half your cigar money on many "in-between men" in the face of a "no risk" guarantee like this?

Write for our booklet "Rolled Reveries," explaining everything, or to hasten matters, for $1.00 we will send a trial package of 25 assorted sizes and blends, for 75 cents twelve regular 10 cent and two-for-a-quarter cigars; for 50 cents twelve assorted fives and tens, each cigar separately wrapped and described and showing you how two-for-a-quarter and 10 cent cigars can be bought in boxes of 25, 50 or 100 for from 4 cents to 6 cents each, others from 2 cents to 3 cents each. All transportation charges prepaid.

Your own procrastination is all that prevents your becoming our steady customer and saving money.

mentioning this paper, and a large sample free bottle will at once be sent you by mail prepaid.

J. CAMBRIDGE WHARTON, M.D.
102 West 89th Street,
NEW YORK, February 3, 1903.

Ozomulsion Company, N. Y. City:

GENTLEMEN—I feel I must write you about the wonderful success I have had with your Ozomulsion.

Particularly in one case of incipient consumption. This patient came to my office in November, 1902. He was emaciated, had a constant cough, with night sweats, and all the symptoms of Phthisis Pulmonalis. A microscopical examination of the sputum showed the characteristic tubercle-bacilli.

I prescribed Ozomulsion, telling the patient when I did so, that I thought I could not help him any. Much to my surprise, the first bottle was of marked benefit to him. He has taken in all six bottles and has gained ten pounds. His cough is very slight and he feels so much better that he has gone back to his work as salesman.

I can endorse your Ozomulsion in every way. I have prescribed it in many cases of Bronchitis and in wasting diseases, where a real food was needed. One thing that impressed me was the fact that Ozomulsion did not interfere with digestion, as so many preparations of Cod Liver Oil do.

Yours truly,
J. CAMBRIDGE WHARTON, M.D.

Cooked Starch

CAUSES OBESITY, CATARRH AND CONSUMPTION

Natural Food Cures these Conditions

Below you will find my reason for this statement

My Dear Friend:—You have often heard it stated that human beings cannot digest raw starch. This statement is based upon experiments performed in the laboratories by chemists with artificial digestive juices. The chemist takes these juices and puts them into his little glass and then adds raw starch to them, and of course the starch is not digested. He therefore loudly proclaims to the world that human beings cannot digest raw starch. The same experiment would go to prove that animals cannot digest it in spite of the fact that we know they are digesting it. This is not only true of animals, for I, together with thousands of others, have been doing this for several years. Even my baby digests starch with ease.

Poor Chemist! If he had only experimented with his own stomach in the place of experimenting with artificial juices he would have come to an entirely different conclusion, and thus saved the world much misery.

To take a weak stomach and say that it should digest large quantities of the raw material is very much like expecting a man with neglected and flabby muscles to lift a heavy weight, but surely a man's stomach will never become strong unless he allows all of its functions to develop by proper exercise.

Therefore, in the place of continuing to make the stomach weaker by the use of cooked starches how much wiser it would be to adopt a diet properly suited to the requirements of the individual and allow the individual's organism to do its own work. From a practical standpoint I find that raw starch is easily digested by the human stomach in quantities sufficient to fill every requirement of the human system. On the other hand, if you make the starch abnormally soluble by cooking it, it soon weakens our digestive organs by depriving them of their natural work, and abnormal quantities of starch enter the blood, without being thoroughly prepared. In some cases the system has the power of storing this extra starchy material in the shape of fat, thus causing Obesity, but, in most cases, this material circulates in the blood, and overheats the organism, irritating every cell in the body. As soon as the cells are irritated they throw out a viscid secretion to protect themselves. This secretion when cast out through the mucous membranes lining the nose, throat, chest, stomach, alimentary organs, etc., is called Catarrh, which is the foundation of over half the diseases to which the human system is heir. If it is cast out through the mucous membranes of the head, it is called catarrh of the nose and throat; if through the stomach, we have indigestion and dyspepsia; if through the kidneys, we have Bright's disease; if through the genital organs of the female, we have the various complications common to women; if through the genital organs of the male, we have a long list of troubles, winding up in the destruction of these organs. If the general system is affected, we have a condition of general mal-assimilation. If catarrh of the chest is added to this latter condition, there ensues that most dreaded of all diseases, Consumption, which is directly traceable to this cause—that we have taken into our systems abnormally large quantities of over-soluble starch. It is utterly impossible for the lungs to oxidize this product, no matter how fine they are, therefore the lungs soon become over-worked and devitalized, making it easy for bacteria to multiply in them and cause their disintegration. One of Nature's laws has been violated and payment must be rendered. Any one in this condition who dares to use pre-digested food is doomed beyond the shadow of a doubt.

OBESITY

CATARRH

CONSUMPTION

How much better it would be to take foods as Nature has prepared them. All Physical Culturists know that it is very important to cultivate each muscle, but sometimes they do not realize the importance of cultivating each internal function, that the body may become strong even in its weakest parts. As long as one continues to lead an artificial life, he cannot conscientiously say that he is a rational Physical Culturist (*copyright applied for*).

Any one doubting the ability of the human being to digest raw starch is invited to call at my office on one of my office days and listen to the experiences of hundreds of patients, who after they had been made miserable by cooked foods, now digest with ease the natural starch, while at the same time they find their systems working harmoniously, manifesting mental, physical and genital vigor. My office hours are: 10 A. M. to 2 P. M. on Tuesdays, Thursdays and Saturdays, and from 6 P. M. to 8 P. M. on Tuesdays and Fridays.

In a future article I will show you how cooking destroys the vital principle in food, thus destroying your vitality.

Dr. Thomas' Uncooked Bread

ATLANTIC CITY

A Unique City by-the-Sea

Atlantic City has no season. It is perennial. It has broken a tradition: that a seashore resort is necessarily a summer resort. It took daring and imagination on the part of the first man who decided to spend his winter vacation at a famed summer place, and even more of the same qualities on the part of the hotel keeper who decided to keep his house open and provide lodgings for whose might follow in the trail blazed by the daring innovator. The experiment succeeded a decade ago. The Gulf Stream made it so. Geographically, Atlantic City is the most favored resort on the North Atlantic coast. Its great temperature regulator is the Gulf Stream, which approaches the land nearer at this point than at any other place north of the Carolina coast. Thus the ocean winds that come breezing out of the east are tempered to the winter sojourner and made almost balmy and free from chill.

Put a pipe in your mouth, jam your hands snugly into your pockets, and take a turn along the board-walk and notice the crowds. But for the absence of the light summer dresses, duck trousers, and straw hats, it might be a cool morning in early summer. Business men, University of Pennsylvania undergraduates, trim young women in light furs and smart wraps, invalids in roller chairs, convalescents making slow progress on the arm of an attendant—all taking advantage of the invigorating ocean breezes.

There are fun and amusement a-plenty for the person who is seeking recreation and not health. The Casino has an excellent ballroom, and a commodious white marble swimming pool of sea water, warmed to a comfortable temperature for bathing, no matter what the season. There are bowling alleys and sun parlors with commanding views of the ocean and esplanade. Three long ocean piers are additional places of resort and amusement. They are kept comfortably heated when the temperature demands. For the large contingent who devote their time to outdoor sports there are the golf links, of which Harry Vardon, the English champion, spoke so highly. The course is owned by the Country Club, but its courtesies are extended to hotel guests. A well-equipped club-house is on the grounds of the club. Fishing is kept up throughout the winter. The Horse Show draws thousands of visitors. To speak of the hotels is hardly necessary. They range from hugh structures equipped with every convenience that luxury can command to quiet villas and boarding-houses. They stand to satisfy the vagaries and demands of any applicant.—*New York Post.*

The New Jersey Central has a double daily service to Atlantic City from New York, leaving the latter city from foot of Liberty Street at 9.40 a.m., 3 40 p.m. Send to C. M. Burt, General Passenger Agent, New York, for Illustrated Booklet and Time Table. It's free for the asking.

MEDICAL OPINIONS OF

Buffalo Lithia Water

"NOTHING TO COMPARE WITH IT IN PREVENTING URIC ACID DEPOSITS IN THE BODY."

Dr. P. B. Barringer, *Prof. Physiology and Surgery, University of Virginia:* "After more than twenty years' of practice, I have no hesitation in stating that for prompt results I have found nothing to compare with **BUFFALO LITHIA WATER** IN PREVENTING URIC ACID DEPOSITS IN THE BODY."

"MAY BE RELIED UPON TO GIVE MOST SATISFACTORY RESULTS."

Dr. Alexander B. Mott, *of New York, Professor of Surgery, Bellevue Hospital Medical College, Surgeon Bellevue Hospital:* "I have made sufficient use of the **BUFFALO LITHIA WATER** to be satisfied that it **possesses very valuable therapeutic properties.** In the **Gouty Diathesis, Chronic Inflammation** of the **Bladder,** and other diseases affecting the urinary organs, it may be relied upon to give most satisfactory results."

"THE MOST VALUABLE MINERAL WATER IN USE."

Dr. Graeme M. Hammond, *of New York, Professor of Diseases of the Mind and Nervous System in the New York Post-Graduate Medical School and Hospital:* "In **all** cases of **BRIGHT'S DISEASE** I have found **BUFFALO LITHIA WATER** of the **greatest service in increasing** the **quantity of urine and in ELIMINATING** the **ALBUMEN.** In certain cases of **Melancholia,** accompanied by **excessive elimination of URATES** and **URIC ACID, it is often** the **only remedy necessary.** In **GOUT** and **RHEUMATISM** it is highly beneficial. **I have long regarded BUFFALO LITHIA WATER as the most valuable mineral water in use."**

BUFFALO LITHIA WATER is for sale by Grocers and Druggists generally.

RHEUMATISM

Cured

Without Medicine

Trial Pair of Magic Foot Drafts FREE ON APPROVAL to anybody.

TRY THEM.

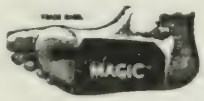
Don't take drugs—most medicine isn't fit for the stomach—but try a modern adaptation of a very old principle, and cure yourself.

Almost everyone has soaked his feet in hot water to cure a cold in the head. Magic Foot Drafts open the pores of the feet, the largest in the body, in the same way, stimulating the excretory functions of the skin, and enabling it to throw off the acid impurities from the system through these large pores.

Magic Foot Drafts cure rheumatism in every part of the body. Here is the reason.

Every drop of blood in the body passes every so often through the feet, where the circulatory and nervous systems are exceedingly susceptible.

The Drafts have great power to absorb acid poisons from the blood. Each time a contaminated drop of blood passes through the foot the Drafts absorb a portion of the acid poison, gradually but surely purifying the blood—the only way to permanently cure rheumatism.



If you have rheumatism write us to-day and we will send you a pair of Magic Foot Drafts on free trial. If they relieve you, send us One Dollar. If they don't, keep your money—the risk is ours. We **know** that they cure to stay cured. Write to-day to the MAGIC FOOT DRAFT COMPANY, R U 14 Oliver Building, Jackson, Mich. Send no money—only your name.

DEAFNESS CURED

Louisville Man Originates a Simple Little Device That Instantly Restores the Hearing—Fits Perfectly, Comfortably, and Does Not Show.

190-PAGE BOOK FREE TELLS ALL ABOUT IT.

Since the discovery of a Louisville man it is no longer necessary for any deaf person to carry a trumpet, a tube, or any such old-fashioned device, for it is now possible for any one to hear perfectly by a simple invention that fits in the ear and cannot be detected. The honor belongs to Mr. George H. Wilson of Louisville, who was himself deaf, and now hears as well as any one. He calls it Wilson's Common Sense Ear Drum, is built on the strictest scientific principles, containing no metal of any kind, and is entirely new in every respect. It is so small that no one can see it, but, nevertheless, it collects all sound waves and diverts them against the drum head, causing you to hear perfectly. It will do this even when the natural ear drums are partially or entirely destroyed, perforated, scarred, relaxed, or thickened. It fits any ear from childhood to old age, and, aside from the fact that it does not show, it never causes the hearer irritation, and can be used with comfort day or night.

It will cure deafness in any person, no matter how acquired, whether from catarrh, scarlet fever, typhoid or brain fever, measles, whooping cough, gathering in the ear, shocks from artillery, or through accidents. It not only cures but stays the progress of deafness and all roaring and buzzing noises. It does this in a simple, sure, and scientific way. The effect is immediate.

Let every person who needs this at once send to the company for its 190 page book, which you can have free. It describes and illustrates Wilson's Common Sense Ear Drums and contains many bonafide letters from numerous users in the United States, Canada, Mexico, England, Scotland, Ireland, Wales, Australia, New Zealand, Tasmania, India. These letters are from people in every station of life—clergymen, physicians, lawyers, merchants, society ladies, etc.—and tell the truth about the benefits to be derived from the use of this wonderful little device; you will find among them the names of people in your own town or state, and you are at liberty to write to any of them you wish and secure their opinion as restoring the hearing to its normal condition.

Write to-day and it will not be long before you are again hearing. Address, for the free book and convincing evidence, Wilson Ear Drum Co., 781 Todd Building, Louisville, Ky., U. S. A.

VOL. XXVI., NO. 12 NEW YORK, MARCH 21, 1903. WHOLE NUMBER, 674

Published Weekly by
FUNK & WAGNALLS COMPANY,
30 Lafayette Place, New York. 44 Fleet Street, London.
Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE. Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents. Foreign postage, $1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

MORE FREEDOM IN RUSSIA.

"A UNIVERSAL feeling of joyful excitement," so a despatch from St. Petersburg tells us, pervades Russia as a result of the Czar's proclamation of March 12, declaring his intention to secure freedom of worship for his subjects and to promote the prosperity and liberty of the small property-holders and peasants. "It is not too much to say," so another despatch runs, "that the ukase raises more solid hopes and causes more widespread joy than any domestic political event since the emancipation of the serfs in 1861." Here are the most important paragraphs of the decree:

"We are irrevocably decided to satisfy the needs for which the state has become ripe, and have deemed it expedient to strengthen and decree the undeviating observance of the principles of tolerance laid down by the fundamental laws of the Russian empire, which, recognizing the Orthodox Church as the ruling one, grant to all our subjects of other religions and to all foreign persuasions freedom of creed and worship in accordance with other rites; and we are further resolved to continue the active carrying out of measures for the improvement of the material position of the Orthodox rural clergy, while enabling them to take a larger share in intellectual and public life.

"In accordance with impending measures for the consolidation of the national economy, the efforts of the state credit institutions, and especially the nobles' and peasants' banks, should be directed to strengthening and developing the welfare and fundamental pillars of Russian village life, and that of the local nobility and peasantry. These principles marked out by us for the revision of the laws of the rural population are, when formulated, to be referred to the Provincial Government Councils, so that with the assistance of persons enjoying the public's confidence they may be further developed and adapted to the special conditions of individual localities. In this work the fundamental principle of the inviolability of communal property is to be maintained, while at the same time means are to be found to render it easier for the individual to sever connections with the community to which he belongs, if he so desires.

"Without delay, measures must be taken to release the peasants from the present burdensome liability of forced labor."

The St. Petersburg correspondent of the New York *Sun* says:

"One of the most welcome of the promised innovations is permission for peasants to leave their commune and take up another occupation than the one in which they have been reared. Hitherto, altho a commune was entitled to expel an obnoxious member, even if he was law-abiding, the member himself did not enjoy the corresponding right to leave his commune unless the latter chose to grant him a passport. The refusal of a passport, which is at present a common practise, prevents a man from obtaining lucrative employment outside his commune, the system consequently operating to compel the people to stay in their native villages.

"Politicians regard as the kernel of the ukase the reform in the rural laws, it being held that this is a step in the direction of constitutional government. Altho it is not imagined that constitutionalism in any form is at present intended, it is hoped that this clause contains the germ of representative government, which, however, it is foreseen will not develop for many decades into constitutionalism even as it exists in Austria and Germany.

The "joyful excitement" that at first greeted this proclamation was somewhat allayed when it was seen that the manifesto is "a general expression of kindly intention rather than a program of definite reforms," as one St. Petersburg correspondent puts it, and that no sweeping changes are likely to follow immediately. It is well known that M. de Plehve, Minister of the Interior, who will have charge of carrying out some of these reforms, is unalterably opposed to them, and as he heads a powerful reactionary party, the reforms may be delayed. Finance Minister de Witte, however, is a strong advocate of moderate reforms, and much is expected from his influence. Procurator-General Pobiedonostseff, one of the strongest reactionaries Russia has known in recent years, resigned last summer. Oscar S. Straus, formerly our minister to Turkey, calls Pobiedonostseff "a Torquemada," and declares that the deaths caused by his persecutions "far outnumber the losses in the Napoleonic wars." He may still have some influence, but he is out of the Government.

Little good is expected from this decree by some of the American press. Ignorance and poverty are Russia's chief afflictions, in the opinion of the New York *Mail and Express*, and these can not be cured by proclamations. And the Philadelphia *Ledger* recalls Finland:

"Finland also had fair words. Until four years ago Finland had been for centuries a self-governing nation, tho owning loyalty to a Muscovite prince as its Grand Duke. At his coronation Nicholas swore to uphold its constitution and respect its independence. Afterward he repeatedly declared his good intentions toward his Finnish subjects. And yet to-day Finland has been obliterated from the map; its Government has been overthrown and its ancient liberties denied; censorship, espionage, conscription, summary banishment, and the whole machinery of tyranny has been set up. Famine, following the ruin which persecution has wrought, has now fallen upon the unhappy land, and thousands are dying on a diet of spoiled grain mixed with bark and sawdust, while the author of their misery proclaims his 'indefatigable solicitude' for his subjects.

"It may really be that Russia is about to enter upon a new era, and in any event there is a certain gratification in hearing even a profession of the good intentions of a sovereign toward his people, but there is little basis for believing that these will pass into early realization."

Other papers view the situation more hopefully. Thus the New York *Evening Post* says:

"A careful examination of the decree will show that it is not an emergency measure, but the announcement of a new and permanent policy. It is not the answer to the industrial strikes

or the student riots of last year, for the reforms will affect chiefly the peasants and the rural nobility. It goes deep below the thin strata of discontent to the bedrock of national life. It is not precisely a response to the recent conferences of the provincial councils held by the Emperor's order, for it appears that the Minister of the Interior, M. Plehve, did everything in his power to make these reform conferences meaningless, and to divert the conferees from real issues. The Emperor has apparently gone over the head of his own minister, and has faced the problem of local government on general principles of fair dealing. It seems equally certain that the proclamation of religious toleration must be distasteful to M. Pobiedonostseff, the procurator-general of the Holy Synod. It is like Nicholas III. to cherish generous imaginings, but it is not like him to cross two of his most prominent advisers. For this reason, many will ask who encouraged the Czar not only to imagine but to take so bold a step; and many will conjecture that M. Witte, the Minister of Finance, has seen in the Czar's beneficent plan an opportunity for fiscal reorganization.

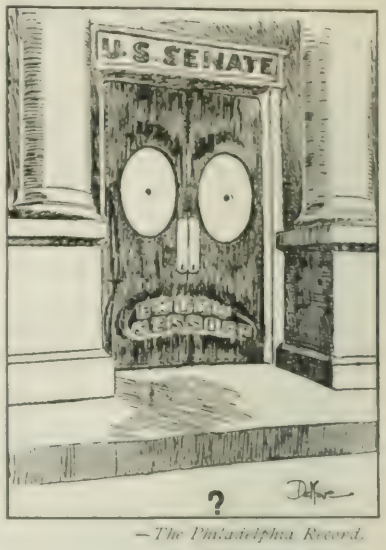
"Whatever may be the actual outcome of the Czar's decree, it will remain a most honorable monument to his memory. The warmth of the phrasing comes unquestionably from his own heart. Hundreds of interested voices must have told him that the step was a dangerous one, and that his sentimentality would mean the ultimate destruction of the empire itself. To all such his answer, through this decree, has been, 'I choose liberty, tho perilous.' *Malo periculosam libertatem*)."

CUBAN RECIPROCITY DEFERRED AGAIN.

THE news from Washington that the Senate leaders, at the instance of the Democratic members, have agreed to ratify the Cuban reciprocity treaty with an amendment providing that "this treaty shall not take effect until the same shall have been approved by the Congress," has stirred up considerable feeling, for it means that the reciprocity arrangements must await the action of the House, which will not meet until next December, unless called in special session by the President. The President is not likely to call such a special session before the November elections, at the earliest, the Washington correspondents inform us, so that Cuba will not get reciprocity for eight months or more, and perhaps not at all. The reason given for the amendment is the fact that the treaty will make a change in the customs revenue, and such a change can not properly be made, it is held, without action by the House of Representatives.

CHEER UP; IT MAY NOT BE TRUE.
—*The Minneapolis Tribune.*

Many papers, however, consider the amendment merely a trick to postpone Cuban reciprocity. It is "a good deal like ratification by burial," remarks the New York *Evening Post;* and the Philadelphia *Ledger* declares its belief that "the real object of the Senate is to postpone the ratification of the Cuban treaty as long as possible, and eventually to defeat it—if it can do that by indirect methods." The New York *Journal of Commerce* regards the Senate performance as "devoid of the spirit of statesmanship or of patriotism." And the New York *Times* says:



—*The Philadelphia Record.*

"It is a shameful chapter of pure selfishness and greed, and not the least shameful part of it is the stupid course of the Democrats. The Senators from the sugar-producing States of the South may be excused for their devotion to local interest and opinion. But the Democratic Senators as a whole should have been moved by every consideration of party interest to support the treaty and compel its Republican opponents to fight it 'in the open.' If this is one of the fruits of Mr. Gorman's leadership, it may be said at once that it in no wise enhances his reputation. But the shame of the postponement falls upon neither party alone, it belongs to the country. The Senate has made it hard for an American citizen to look a Cuban in the face."

But about as many other journals consider the Senate action wise and necessary. So think the Baltimore *Herald*, the Washington *Post*, and the Pittsburg *Post*. The New York *Sun* explains the logic of the matter as follows:

"The seventh section of Article I. of the Constitution provides that 'all bills for raising revenue shall originate in the House of Representatives; but the Senate may propose or concur with amendments as on other bills.'

"On the theory that the Senate and the President, without the participation of the House, or without the approval of Congress as a legislative body, may enact a tariff by treaty in the case of a single foreign nation, they can do the same thing in the case of all foreign nations with which we have commercial relations. By a series of reciprocity treaties the President and Senate can arrange the whole business of raising revenue by duties on imports, refusing the House any voice whatever in the matter.

"This supposition, of course, is absurd. It deprives the House of its constitutional right of initiative in revenue measures, and it upsets the entire system of concurrent legislation on questions of ways and means."

The Beet Sugar Gazette (Chicago) regards the fight against reciprocity as not yet lost. It says:

"Sometimes the tide of battle is turned at the last moment. Incidents apparently insignificant in themselves often decide momentous questions. It may be so in this case. Perhaps a little statement that slipped into the report of the committee on foreign relations of the Cuban Senate on the proposed treaty will be enough to decide the contest in favor of protection. After the President has stated that a 20-per-cent. reduction of the duty will not hurt domestic beet sugar, after prominent Senators have declared that protection is safe in their hands, after the bureau of publicity of the sugar trust has scattered broadcast over the country the assertion that no harm is intended to the domestic sugar producer, the committee of the Cuban senate says in its report: 'The effect of the treaty on sugar will be to enable Cuban sugar to win out in the long struggle with beet sugar.'

"That is as plain a statement as any one can desire. Surely, these men do not speak unadvisedly or hastily. They represent Cuban sugar, and they know what Cuban sugar expects and

hopes from this proposed treaty. And they speak their minds freely, for the purpose of securing the ratification of the treaty by the Cuban senate.

"If Cuban sugar is to win in its struggle with beet sugar, it follows that beet sugar must lose. Cuban sugar against American beet sugar. The issue has been defined. Naturally, the Cuban wants Cuban sugar to win. Oddly enough, it has looked heretofore as tho the American people were of the same mind and also wanted Cuban sugar to win and American beet sugar to lose. Certainly, that is the plain effect of the policy proposed by the Administration. Is it patriotic? Is it rational? The Cuban is patriotic. Is the American less so? If not, he must help American beet sugar to win, not from hostility to Cuba, but in defense of domestic industries. Be just to Cuba, certainly! Nay, more; be generous to Cuba. But it is neither just nor generous, but simply foolish, to go to a tropical climate and give a man your coat and vest and shirt, and then come back to a northern winter and freeze to death."

MR. GORMAN'S RETURN TO POWER IN THE SENATE.

EVERYBODY concedes Senator Gorman's ability to lead the Democrats, but some of the papers of his own party lack confidence in him, and regard him as more of a politician than a statesman. "Senator Gorman does not enjoy the unanimous and implicit confidence of all Democrats," says the Chicago *Chronicle* (Dem.). "His ability and honesty are conceded, but he is regarded as too much of a politician to be a statesman of any high rank." Altho his influence as a statesman may not be great, we are told by the same paper, he "will, as a politician, make himself and his party respectable." These statements are brought out by the fact that the week before last, at a party caucus, at the opening of the extra session, the despatches tell us, Senator Gorman was received with open arms, and chosen again as the Democratic leader of the Senate. Senator Gorman "will fill a long-felt want in the Democratic equation at the Capitol," in the opinion of the Washington *Post* (Ind.), while to the Buffalo *News* (Ind.) it seems a "great gain to his party and in some degree an advantage to the country, to have a man of

A MOSES.

—*The Minneapolis Journal.*

Mr. Gorman's training and temperament at the head of the opposition." Most of the press, Democratic included, feel that the Democratic outlook is improved by this change.

Senator Gorman is from Maryland and was a member of the Senate for eighteen years, from 1881 to 1899. He was nominated a fourth time in 1898, but because of alleged treachery on his part, says the Rochester *Post Express* (Rep.), during the struggle for the Presidential nomination in 1892, he was defeated. He was nominated again last year and elected. Just what this alleged treachery was is explained by *The Post Express* as follows:

"In 1892 Senator Gorman was the most powerful Democrat in the United States, the President alone excepted. But in the struggle for the Democratic Presidential nomination in that year he displayed treachery or timidity almost without parallel in national politics. In the early months of that year he announced himself as unalterably opposed to the renomination of President Cleveland; he encouraged the efforts of Senator Hill to disintegrate the Democracy of New York, the efforts of Senator Brice to break up the Cleveland movement in the West, and the efforts of Southern Democrats to arouse opposition to Cleveland in that section, and he caused delegates to be elected in Maryland favorable to his own nomination. In Democratic conventions candidates can not be nominated except by a two-thirds vote, and when the National Democratic convention of 1892 assembled the anti-Cleveland men, led by Hill and Gorman, controlled considerably more than one-third of the delegates. By standing firm, they could prevent Cleveland's renomination. When the critical moment came, however, Gorman deserted his allies and Cleveland's friends triumphed. Some of those who were then associated with Gorman wondered what inducements or arguments were offered by the wealthy and generous faction of which Whitney was the head to bring about this startling change, but no revelations have ever been made. Gorman's statement was that Cleveland's renomination was inevitable, and it was bad politics to oppose it; but the nomination was not inevitable—indeed, it was impossible, if the allies stood by their guns—and Gorman had opposed it bitterly for many months. Gorman's treachery to his associates was vigorously denounced by Democrats from all parts of the country, and especially by Hill of New York, and when Gorman was defeated for reelection to the Senate no Democrat rejoiced more than Mr. Hill."

SENATOR ARTHUR PUE GORMAN,
Of Maryland.

Many of the Republican papers see something significant in the selection of Senator Gorman, who stood for sound money, coincident with the retirement from the Senate of Senator Jones, of Arkansas, who stood for Mr. Bryan. It strikes the Cleveland *Leader* (Rep.) that the "Senate is willing to break away from the lines laid down at the Chicago and Kansas City conventions"; and the Pittsburg *Gazette* (Rep.) remarks that "the restoration of Gorman to active party leadership is undoubtedly a long step toward the final extinction of Bryan's power and influence." On the Democratic side, the Pittsburg *Post* (Dem.) declares that while Senator Gorman is "undoubtedly in the important place of Democratic leader" in the Senate, it does not imply "that his control and leadership extend to the party throughout the United States and in national or state conventions." "There is no intention anywhere," it adds, "to place Mr. Gorman on the throne as party czar. By the wisdom and fruits of his policy we will know and understand him. The past

does not warrant unlimited confidence." The Philadelphia *Record* (Ind. Dem.), however, takes a different view. It refers to Senator Gorman as "the right man in the right place," and adds:

"No further proof of the disarray among the Democrats in the last session of the Senate was needed than in their putting themselves under the leadership of Senator Quay on the Statehood bill. Senator Gorman has given more than one signal proof of his great capacity as a leader and organizer. Under his skilful and patient conduct the Democrats gained a brilliant victory over the supporters of the Force bill in 1881. To his abilities as an organizer was largely due the election of President Cleveland both in 1884 and 1892. It has been complained that he yielded too much in the struggle over the Wilson tariff in 1894, but to that the answer has been that he got all that could be expected, and more, under the conditions that prevailed in the Senate. The return of the Senator from Maryland to the scene of his former activities and triumphs affords an augury of the restoration of the prestige and power of the Democracy."

POLITICAL CORRUPTION IN RHODE ISLAND.

AN extraordinary message sent to the Rhode Island legislature on Tuesday of last week by Governor Garvin, calling for power to appoint a special commissioner to investigate bribery at elections, and intimating that some of the members of the legislature to whom the message was addressed owe their seats to political corruption, has drawn attention to political and moral conditions in that State. "There is high local authority," says the Springfield *Republican*, "for the statement that legislators who heard the message read ought to be in jail for violating the laws against bribery in elections." The governor says, in this message:

"That bribery exists to a great extent in the elections of this State is a matter of common knowledge. No general election passes without in some section of the State the purchase of votes by one or both of the great political parties. It is true that the results of the election may not often be changed so far as the candidates on the state ticket are concerned, but many assemblymen occupy the seats they do by means of purchased votes.

"In a considerable number of our towns bribery is so common and has existed for so many years that the awful nature of the crime has ceased to impress. In some towns the bribery takes place openly, is not called bribery nor considered a serious matter. The money paid to the voter, whether $2, $5, or $20, is spoken of as a payment for his time.

"The claim that the money given to the elector is not for the purpose of influencing his vote, but in compensation for time lost in visiting the polls, is the merest sophistry, and should not deceive any adult citizen of ordinary intelligence. It is well known that in such towns, when one political party is supplied with a corruption fund and the other is without, the party so provided invariably elects its assembly ticket, thus affording positive proof that the votes are bought and the voters bribed. Not only does such corruption of voters destroy their usefulness as citizens and sap the very foundations of popular government, but it is clearly criminal."

As the governor is a Democrat and the legislature is Republican, there seems to be little expectation that the legislature will do anything. Some of the Republican papers intimate that the governor is merely playing to the galleries. The Providence *Journal* (Ind.), however, declares that the message "is full of truth," and adds: "What is most deplorable is that so many educated and influential citizens are not in the least disturbed by such corruption, and never even raise their voices against it. Both parties pay voters, and many men who ought to be self-respecting furnish the money and take the offices." The Wickford (R. I.) *Standard* also admits that political corruption is widely prevalent. It says: "Every one knows that it exists here. Men who would not be guilty of a dishonest transaction in their regular business seem to think nothing of purchasing, either directly or indirectly, enough votes to insure their election to some coveted office. The statute provides severe enough penalties, but, like some other laws on the books, is practically a dead letter." And similar testimony is given by the editor of the Woonsocket *Call*, who says, in a communication to the New York *Tribune*:

"Governor Garvin's accusation, that bribery is practised to a large extent in the towns of Rhode Island whenever an election for members of the legislature is held, is not a new one, nor can it be said that the majority of citizens of this State have entertained any doubt that money is used frequently, openly, and in great quantities to carry certain elections. Governor Garvin, in his recent message on the subject, draws an exceedingly con-

SOME "SCIENTIFIC SIDELIGHTS."

servative indictment. The extent of the crime, however, is something that should be known, and adequate steps ought to be taken to repress the practise and punish those who are guilty, both the briber and the bribed. It is admitted that unless such measures are taken as Governor Garvin advocates in his message, the traffic in votes will go on in the same old way, boldly and openly.

"The man who sinks so low as to sell his vote, after he has once felt the vote-money in his hand, as a rule, remains away from the polls thereafter until the friends of the candidates have made their promises. It is no exaggeration to state that candidates for the general assembly from some of the country towns not far from this city, who, if elected, would receive not over $300 in salary, have on election days put out as high as $800 or $1,000 to bring about their election. They do not fear the law.

"It is stated that one rural legislator, just previous to an election not long ago, laid in a box of blue poker chips which his lieutenants distributed among the voters. He was elected, and the next day each blue chip had a face value of $10. If he had been defeated the chips would have been valueless, and nobody would have bothered to collect them. It is too well known that there are plenty of men in Rhode Isand willing to sell their votes. The essential thing is to stop it short and sharp, and that can be accomplished in no other way than that pointed out by Governor Garvin in his recent message."

THE WATERBURY MURDER.

IF newspaper comment is any indication of public feeling, the man who sent a bullet through the heart of Special Officer Paul Mendelsohn in Waterbury on the night of Sunday, March 8, injured the cause of labor-unionism far more than the slain officer ever could have done. The murder is considered the logical result of the assaults, boycotts, and damage to property that have marked the progress of the street-railway strike in Waterbury, and all this disorder is considered characteristic of our present-day, American, labor-union strike. The Washington *Post* even goes so far as to declare that "the proceedings at Waterbury are calculated to make the country resigned to the process of suppressing strikes by injunction." The car on which Officer Mendelsohn was riding as a guard was attacked by masked men in a lonely spot in the suburbs of Waterbury, the officer was shot, the conductor badly beaten, and the motorman chased into a near-by swamp, where he eluded his pursuers. The strikers have disclaimed all complicity in the affair, and the Central Labor Union has offered a reward of $250 for the apprehension of the murderer. Other rewards bring the total to nearly $20,000. A large number of Waterbury citizens have formed an alliance, pledging themselves to ride on the street-cars, in defiance of the threatened boycott, and thus break the strike, which has been on for more than two months. Judge Elmer, of the Superior Court, has issued an injunction against fourteen labor-unions in Waterbury, their officers and members, and all others concerned, restraining them from interfering with the street-railway company or its employees, and from boycotting those who patronize the company. The company has brought suits for damages against the unions in the sum of $20,000; and the funds in bank to the credit of the unions and individuals named in the suit have been attached. "The matter thus assumes many of the aspects of the Taff Vale case," remarks the New York *Times*.

The Waterbury *American* says:

"What is needed is a revival of civic patriotism and personal courage. Our city is becoming a by word everywhere for cowardly surrender to lawlessness through fear of financial loss. We are represented as cowering before a boycott that threatens the pockets of all who defy it. Every man in trade is afraid of his business competitor—lest by some turn in the game the latter shall gain an unfair advantage of him and profit by his defiance. This is partly true, but it is largely due to the lack of some central organizing body to bind them together. We believe that a force of citizen volunteers could be raised, if called for, to patrol the tracks from end to end. Such an undertaking would not be necessary, if the spirit to make it possible could be manifested."

This murder may not have been the work of strikers, says the Boston *Herald*, but "it is another instance of the disposition to crime and anarchy which appears to be the certain consequence of strikes by organized labor as they are now conducted." And a similar line of thought is seen running through the comment of many journals. Thus the Brooklyn *Eagle* observes:

"A strange blight has come upon the intellects of the labor leaders, and upon some of the laborers, that they submit to such a leading. We shall not see the French Revolution repeated here; that would be impossible among a people in whom the Anglo-Saxon is still dominant, but the same forces for mischief are in operation in our land that unlocked the floodgates of blood and passion in the chief republic of Europe, only, instead of warring on rank and privilege, the rebels of to-day are fighting against thrift, order, the habit of industry, the practice of commercial honor, and the right of the citizen to his place, his liberty, and his life. We are menaced by an oligarchy of men who preach socialism and practise anarchy. Conditions intolerable to the mass of men have been established by labor-unions, and it is time for the real workers of the country to assert themselves."

And the New York *American*, whose sympathy with the labor-union movement can not be doubted, calls upon the strikers to abandon methods of violence. It says:

"There is no sympathy anywhere in America for black masks and loaded revolvers. Crime and lawlessness win no strikes and better no workmen. No better service can be rendered to other workingmen than for the strikers of Waterbury to give the authorities every aid in their power to bring the masked murderers to justice. If the men who committed that crime thought for a moment that they were helping the cause of the strikers they knew very little of the feelings of the American people. They could not have dealt the strikers a more staggering blow. They have put upon the union trolley men of Waterbury the duty of having them punished, that they may demonstrate, as their brethren in Pennsylvania and Missouri have demonstrated, that murder and lawlessness are no part of any trade-union's plans for the bettering of its members."

WOMAN-SUFFRAGE REJECTED IN NEW HAMPSHIRE.

LITTLE surprise is shown in the press over the failure, by popular vote in New Hampshire, of the woman-suffrage amendment to the state constitution. This amendment, with nine others, was submitted to the voters last week, and was lost by a vote of nearly two to one, in spite of a very active campaign carried on by its supporters. The vote is reckoned at about 15,000 in its favor, to about 26,000 against it. "Some prejudices are as rock-rooted as the granite hills," says the Boston *Transcript*, "and that against admitting our women to their civic rights and responsibilities is apparently one of them." "New Hampshire is certainly a conservative State," remarks the Rochester *Democrat and Chronicle*, "and it is surprising that a vote on woman-suffrage was permitted." The Chicago *Post* thinks that the New Hampshire women did not want the ballot. It says:

"This is no small defeat for the suffragists. They have carried on an aggressive campaign in New Hampshire for several months; some of the most brilliant advocates of woman-suffrage in the country have done missionary work there, but for all this the movement seems to have made little if any headway. And the chief reason for this in all probability is that the women of New Hampshire were not deeply interested in the proposition. If they had been it is easily conceivable that they would have persuaded more of their husbands, brothers, fathers, and sweethearts to vote for the amendment.

"This is not a vital matter with the average man. He does not care a great deal to see women at the polls or in politics, but

if they wish to vote, and he can help them along, he is most likely to do so, providing he feels sufficient pressure. The suffragists' task is not so much to convince men as to enlist the support of the indifferent women."

Woman-suffragists met in New York recently and discussed their defeat in New Hampshire. Mrs. Stanton Blatch, president of the Equal Suffrage League, was present. She remarked that the women of New Hampshire were little better than barbarous,

"SHOO!"

— *The New York Herald.*

and gave a description of the conditions surrounding the women there. She said:

"Nowhere are the conditions of women so barbaric as in this staid old New England State. This is due to the introduction of the factory system. The New Hampshire woman has no more incentive to individual development than the women of barbarous tribes, whose interests never go beyond the cooking of food and tilling of the soil.

"Farm work is largely in the hands of the women of the State, altho they are physically weak as a rule. Statistics of our recent war showed that our largest soldiers came from New Hampshire, but the native women are abnormally small, as a result of their hard lives.

"The New Hampshire woman lives in most cases on a rocky, unproductive farm, and her employments in her primitive home are as ephemeral as those of any savage. She bakes pies and doughnuts, washes her clothes and cleans house. The old industries of spinning and weaving and preserving and soap-making have passed out of her hands. So long as she had these things to do she had an outlet for her energies. She had an incentive to organize and systematize her household work."

Of the ten amendments submitted, three were rejected. Another of these three was an amendment seeking to strike out from the bill of rights the words "evangelical" and "Protestant" and insert in their places the word "Christian." The third rejected amendment was one to divide the State into smaller voting-precincts. A majority of the votes cast on these last two amendments was in their favor, but both failed to secure the necessary two-thirds vote. The Boston *Transcript* has this to say regarding the failure of the religious amendment:

"The refusal to drop the religious test was much more surprising. There was not even a compromise with ancient narrowness in this expression of public opinion. That 'all religious sects and denominations' should enjoy equal privileges as well as equal protection under the law was perhaps too stiff a proposition for the average New Hampshire voter, but that he should balk at the term 'Christian' and insist upon the retention of 'Protestant' and 'Evangelical' casts a doubt upon the genuineness of his own Christianity and certainly establishes his intolerance beyond a peradventure. There is need of enlightenment and liberalization in a commonwealth that makes a distinction of creed in the bestowal of its favors. There are some favors which had better not be granted at all by the State, but if that is done then no distinction should be made. The cause of woman-suffrage has hardly lost prestige by going down before a public opinion that has given so anachronistic an expression of itself."

On the other hand, the anti-trust amendment, granting to the legislature "all just powers possessed by the State to enact laws to prevent the operations within the State of all persons and associations, trusts, and corporations that endeavor to raise the price of any article of commerce or to destroy free and fair competition in the trades and industries through combination, conspiracy, monopoly, or any other unfair means," was accepted by a vote of about 29,000 against 10,000. The amendment receiving the largest majority is the one requiring an educational test in order to vote. It was accepted by a vote of about three to one.

PRIZES FOR LARGE FAMILIES IN PENNSYLVANIA.

ALL sorts of suggestions, wise and otherwise, have been offered on the subject of "race suicide" since the utterances of President Roosevelt, President Eliot, and Dr. Shrady started the discussion. Many of the colleges have been overhauling their alumni chronicles to see how their cradle records compare with Harvard's, and in most cases they have found the inventory equally discouraging. Yet the first serious attempt to remedy the situation is treated by the newspapers in a light and flippant manner. The Hon. Frank X. Blumle, who represents Cameron County in the Pennsylvania House of Representatives, introduced into the legislature on March 5, in the forenoon, "an act to subsidize large families and provide for gold medals for mothers of large families," to quote the bill by title. Mr. Blumle is a Democrat and is the father of eleven children, and one paper suggests that he is trying to wrest from the Republican Administration the credit that it has won in this discussion, and at the same time wrest a subsidy from the Pennsylvania treasury, which is also Republican. The Democratic journals, however, fail to rally to Mr. Blumle's support. Most of them maintain an attitude of silence on the matter, while the Atlanta *Constitution* (Dem.) assumes a critical air and remarks that there are other things that might be more useful to mothers of large families than gold medals. The provisions of the bill are outlined and illuminated with comment as follows by the Chicago *Evening Post* (Ind.):

"The expected has happened. Sooner or later all this more or less doleful talk about 'race suicide,' small families, dodging our duties as citizens and parents, was bound to bore its way through the skull of some backwoods legislator and there plant the seed of a bill calculated to keep the census bureau working day and night.

"For to the legislator from the outlying districts—and now and then, by the way, to one from districts which do not outlie—the enactment of a law has a potency somewhat akin to that which is so simply yet forcefully set forth in the first chapter of Genesis. Mr. Blumle, of Cameron County, Pennsylvania, is of this sort of lawmaker. He is the proud father of eleven children himself, and therefore he knows all about large families. He knows that what is needed to encourage them is state aid. He would have the State subsidize large families, ranging say from nine to fifteen. He would have the State give prizes of from $10 to $50, present every mother of nine or more olive branches with a $50 gold medal, and educate at public expense, not to exceed $500, every seventh son or daughter. Unfortunately, he appears to have overlooked the advantage of placing the entire treasury at the disposal of the seventh son of a seventh son.

"The act would not apply to any woman who has been legally divorced or separated from her husband. Therefore it is clear

that Mr. Blumle is consistently opposed to combinations in the winning of prizes. He would not do anything to help the formation of a family trust. But how about widows? Should the industrious and persistent widow be allowed to compete with the mother who struggles along valiantly to win State prizes and medals under a system of non-cumulative husbands? If Mr. Blumle will revise his bill in such particulars as this it should go through with a whoop. This is the sort of legislation the country needs. Save us from suicide!"

THE BRYAN-CLEVELAND JAR.

WEEK by week Mr. Bryan's strictures on the leaders who are trying to "reorganize" the Democratic party have grown more and more severe until the newspapers have come to look upon the quarrel as one of the most serious features of the political situation. Mr. Bryan's part in the affray takes the form of personal reflections upon ex-President Cleveland, who is one of the chief "reorganizers." The other side studiously ignore Mr. Bryan, and seem to be conducting the reorganization in such a manner as to place him, in next year's campaign, on the exterior of the party councils. Mr. Bryan recently refused to attend a "harmony dinner" where Mr. Cleveland was to be present, but in *The Commoner* of two weeks ago he says:

"I have about made up my mind to accept the next invitation that I receive to a harmony banquet where Mr. Cleveland is to be present, but I shall make my acceptance conditional upon being allowed to take as my toast 'Grover Cleveland and His Democracy.' I think I can handle that subject in such a way that he and I will not be present at any more harmony banquets. And I have a right to speak of Grover Cleveland's Democracy—for I have borne his sins in two national campaigns."

And in a speech before the Michigan State Democratic convention in Detroit on March 10 Mr. Bryan declared:

"I have been accused of preventing harmony. No man wants harmony more than I do, and no one has suffered more for lack of it than I have. But you can't keep in one organization men who want to cut each others' throats. They accuse me of saying hard things about Cleveland. I never said anything about him so hard as did President McKinley, who said: 'Cleveland is trying to make money the master and things else the servant.'

"I am not ashamed of any humble part I may have had in driving out of the Democratic party a man who tried to make money the master and anything else the servant. I want him in some other party than ours. I would be glad to help organize one for his exclusive use."

Beside Mr. Cleveland, the reorganization leaders include such men as David B. Hill, William C. Whitney, Senator Gorman, and ex-Secretary Olney. It is said that the reorganizers are conducting a quiet campaign in the South and West, even in Nebraska, for the election of delegates to the next National Democratic convention unfavorable to Mr. Bryan. The New York *American* thinks, however, that any such attempt to crush the Nebraska leader will have an opposite effect. To quote:

"If Senator Hill and the other gentlemen credited with harboring these warlike intentions against Mr. Bryan desire to increase his popularity with the Democratic masses, they could not set about accomplishing that result in a more efficacious way.

"Mr. Bryan has a right as an American citizen and a Democrat to give voice to his opinions about what is good and what is bad for the Democratic party. No one can accuse him of not being honorably open in his expression of his views. He has announced that he will NOT ask the convention of 1904 for the Presidential nomination, and as a private citizen he publishes a newspaper and talks to the interviewers. There are millions of Americans who read with interest and respect what he has to say.

"The kind of campaign against Mr. Bryan which the 'reorganizers' are said to be planning must inevitably be more disastrous to them than to him. Were they to pour emissaries and money into Nebraska with the object of crushing him, they would arouse from one end of the country to the other among the rank and file of Democrats the sympathy which manly men always give to one who is persecuted.

"We trust that Judge Parker will take an early opportunity to cause it to be authoritatively made known that he has no part in or approval for a vindictive war upon William Jennings Bryan in his own State. Judge Parker owes this disclaimer to himself and to the Democratic party, which has had enough of internal division and quarreling and stabbing."

Most of the Democratic papers say very little about the matter. The Columbus *Citizen* thinks that when the campaign arrives, everything will be harmonious:

"We do not believe that there is to-day anywhere in the country a serious movement menacing true Democratic interests. It would be a miracle if all Democrats or all Republicans were agreed among themselves upon all questions, but surely there can be some differences of opinion in either party without making the charge necessary that somebody is attempting to betray or ruin the political organization with which he has heretofore been identified.

"In the Democratic party, at least, there is far more occasion for harmony than for factionalism. The questions upon which Democrats are agreed vastly outnumber those in respect to which they are disagreed. Even in 1900, when there was much division over the financial plank of the Kansas City platform, the Democracy had a paramount issue in respect to which all Democrats were agreed, and it was so proclaimed in the resolutions. To-day this paramount issue still remains and the same agreement in regard to it is still evident. Other issues have arisen and old ones have been emphasized, in advocacy of which the Democratic party of to-day is practically a unit. Under such circumstances it is monstrous to assume that the party is about to commit political suicide by ignoring the issues on which it is united and raising only minor questions destined to split it in twain.

"What is needed is less talk about factions, divisions, schisms, and isms. Seven million Democrats who supported Mr. Bryan in 1900 are ready to become the nucleus of a victorious Democratic army in 1904. They ask only that they shall be given candidates to rally around and principles to advocate that will invite the solid support of the Democracy itself. The remaining elements of strength certain to elect a Democratic President in 1904 will logically proceed from such a union of Democrats. We have faith that no man appreciates the situation better than William J. Bryan, and that when the time comes he will be found in the front rank of the party again fighting its battles

STOP THIS "RACE SUICIDE."
—*The Brooklyn Eagle.*

with his accustomed vigor and enthusiasm. There is no need to worry about 1904."

The Republican papers, however, have no hesitation in discussing the quarrel with the utmost freedom. The St. Louis *Globe-Democrat* (Rep.) expects to see Mr. Bryan wreck his party's chances next year. It remarks:

"Bryan can destroy the chance, the very slight chance, that any of his Democratic enemies have of being able to carry the country next year. He is in a position to get even with the men who bolted his candidacy in 1896 and 1900, and he will utilize it. He would prefer to vote for a Republican rather than give his support to any of the Cleveland or Hill element of the Democracy. Moreover, his antipathies have a wide range, and include such anti-Cleveland and anti-Hill men as Gorman. Whether he would support Olney is not known, but probably he would not.

"Here is a peril which confronts the Democracy. Having a giant's strength, Bryan is going to use it like a giant. If a man personally distasteful to him gets the candidacy in 1904—and the probability is that some such a man will be put up—Bryan will undoubtedly lead a bolt against him, as the Clevelandites did against him in the two recent elections. Probably Bryan does not expect any more favors from the national Democracy. He will never be put up for President again by the regular Democratic convention. He has a future, however, in his own section, provided his party ever again comes to the front. In all the States west of the Mississippi Bryan's is still a name to conjure by. He can be elected governor of Nebraska or sent to the Senate from that State, if his party regains power during his lifetime. Meanwhile, he will take revenge by striking his Democratic enemies as savagely as they hit him in 1900 and 1896."

ARGENTINA'S PROPOSAL.

THE "Calvo doctrine," that private debts due from citizens of one country to citizens of another can not rightly be collected by military force, is brought more prominently to the attention of the people of this country than it ever has been before by the proposal of Argentina that it be engrafted upon the Monroe Doctrine. Argentina sent a communication to our Government a few days ago declaring her adherence to the Monroe Doctrine, and inviting us, in turn, to adopt the Calvo Doctrine. Secretary Hay, in reply, referred the Argentine minister to the President's words on the Monroe Doctrine in his messages, and observed that our Government would be glad to see all international claims settled by arbitration. This is regarded as a polite way of declining to adopt the Calvo principle. Most of our papers think that it would be unwise for our Government to extend the Monroe Doctrine in this way to cover bad debtors in South America, but they welcome Argentina's action as an indication that the South American nations are beginning to appreciate our friendship.

Mr. Garcia Merou, the Argentine minister at Washington, says in a statement to the press:

"One of the more important features of the Argentine note is the recognition and indorsement given by the Government of that republic to the Monroe Doctrine, which for the first time is acknowledged and accepted as a principle of American public law by a nation of South America.

"That is the direct result of the proceedings of the Powers against Venezuela and proves that the Latin-American states begin to realize the unselfishness of American policy and the advantages of making closer and stronger the ties which bind them to the United States.

"Similar manifestations will come very soon from other quarters of our continent, and the Venezuelan incident will mark the inauguration of a new era in the commercial and political relations of the United States and its sister nations of the South."

The reason why Argentina is so anxious to add to the Monroe Doctrine an amendment against bill-collectors seems clear to the New York *Commercial Advertiser*, which makes this interesting statement:

"Argentina's finances have long been in a most precarious condition; and, in fact, the financial history of that republic is most extraordinary. In 1880 its total budget amounted, in round numbers, to no more than $16,000,000. In 1900 the budget had swollen to the relatively enormous sum of $194,000,000, an increase in twenty years of some 500 per cent., and with a population which, at the last census, amounted barely to 4,000,000 people. To meet the government expenses great sums have been borrowed, especially in England and Germany. The people of Argentina, in fact, have plunged recklessly into all sorts of public improvements, very much as the new Italian kingdom did between 1860 and 1867. The result is that the country is burdened with debt and may find itself face to face at any moment with a serious crisis. One such crisis has already occurred, in 1890, when the Government took the extreme step of proclaiming a general *moratorium*, or suspension of payment of all obligations, not only public but private. It was this act which brought the great London house of Baring to the brink of ruin and led to its reorganization. A repetition of this measure at the present time would undoubtedly produce very serious difficulties in the relations of several of the foreign Powers toward Argentina, and it is the ever-present possibility of this which has led to the despatch of Dr. Drago's note to Secretary Hay. It is a document which, when read between the lines, gives evidence of keen apprehension; but the only possible answer to it is to be found in the old adage to the effect that those who dance must pay the piper."

LETTERS AND ART.

THE AMERICAN NOVEL IN ENGLAND.

MR. RICHARD WHITEING, the novelist, in a recent address in London, spoke in part as follows:

"I should say that the dominant fact of American literature to-day is its gradual, but sure, emancipation from purely English influences. It stands quite by itself already, and is English only in so far as it is pleased to be so, and not from any sense of filial duty or of literary homage. American style, with its extreme precision, with its highly cultivated sense of the value of the phrase, is anything but English. It aims at delicacy, and not at the rugged vigor of our best men. Henry James is as un-English as he can be. Mr. Harland himself is French rather than English in the admirable little story by which he won his fame."

Taking this utterance for a text, Mr. J. M. Bulloch writes from London discussing the flattering question whether the American novel will seriously menace the English novel in England itself. Mr. Bulloch writes for an American journal (*The Lamp*, formerly *The Book Buyer*, February), and presents not only his own views but the views of Mr. Pinero and Thomas Hardy, neither of whom, however, professes to know very much about recent American fiction.

Mr. Bulloch himself says "there can be no doubt whatever that the American novel has come to stay in England," and in considering the reason for this, he comments as follows on the fact that American fiction "has taken the whole world into its survey," intellectually as well as geographically:

"Time was when we regarded the American novel rather as a picture of American life than as an exposition of the abstract art of fiction. One thought of the American novel as illustrated, say, by 'The Luck of Roaring Camp' or 'Marjory Daw.' That an American writer should approach a subject of universal interest was almost unthought of. But that has completely changed. We find the American traveling to the uttermost ends of the earth, and seeing life and history from the vantage-ground of his own intense individuality. The art of story-telling knows no geographical boundaries. Thus it is that the American is able to tell all the old stories over again, not as a dull, recurring decimal, but from the point of view of the keen observer who comes to the art of letters from the energizing spring-board of the world of affairs. I take it that this is the explanation of the success in this country of the novel written by Americans."

Mr. Bulloch has an interesting word or two to say about the American historical novel as compared with the same sort in England:

"In one sphere, I think the American novel will hold its own to the detriment of English fiction—I mean the historical story. The reason is obvious: the American is looking on the past with new eyes and a new method. For the man from the new country the old régime is, theoretically at least, full of fascination which is practically lost upon observers living actually within its influence. By way of illustration, one has only to think of our attitudes as two peoples to our heroes. In England, we have only one historical character, Nelson, who has the slightest magnetism for the man in the street; the rest are myths. Compare with this the attitude of the American toward even the minor figures in the war between North and South. The difference is largely one between the people; in this respect alone the American strikes one as a man hungering for a history; and this attitude has formed a vast asset for him as a writer of fiction."

An endeavor to procure the views of English writers on this subject did not yield much result. Austin Dobson confesses that he is "absolutely ignorant of modern American fiction," saying in extenuation, "at my age one does not read further; one rereads." Thomas Hardy is conscious of still greater ignorance. He not only knows too little of American fiction (not even qualifying it with the word modern) to express any opinion of its tendencies, but "since the dead-set on English fiction by the press some years ago, which paralyzed it to its present condition," he has "taken little interest in new novels at home or in America." Mr. Pinero, it is gratifying to learn, does know something about modern American fiction. He speaks as follows:

"What little, however, I know of the American novel inclines me to say, in all modesty, that I do think it owes much of its science to continental influences, while its matter is purely American. As an instance of this I would cite that fine work, 'The Octopus,' by the—how sad it is to have to write the word! late Frank Norris. Here is a tale apparently treating a certain aspect of American life with the closest fidelity, which yet belongs to the school of Zola.

"I would pass a similar criticism upon those two clever books by Edith Wharton, called 'A Gift from the Grave' and 'Crucial Instances'—here again we seem to have American life most carefully observed, but written upon paper bearing a French water-mark. In 'The Valley of Decision' this talented lady appears to be shaping a new course, and one which promises a more distinct individuality.

"As to the future of American fiction, I would rather hazard no view. But I can not help expressing the hope that it may come to be composed with a pen less fine and under the stress of somewhat warmer circumstances."

One unnamed author who has very big sales in England expresses an opinion that "the American novel is going to give the English writer 'beans.'" Apparently his view of American novels is limited to those produced in Boston.

SUDERMANN ON THE "BRUTALITY" OF GERMAN CRITICS.

THE old battle between author and critic has again been to the front in Germany. Mr. Herman Sudermann in four successive feuilletons, which appeared in the *Berliner Tageblatt* and have since been reprinted in pamphlet form, makes an exhaustive and damaging examination of the present status of dramatic criticism in Germany, its shortcomings, and its effect on contemporary drama. According to Mr. Sudermann, the attitude of critics has never been more unsympathetic than at the present moment; the scathing satires which were so much dreaded by authors a score of years ago were "mere trifling" in comparison with the brutality of the criticism of to-day.

An article in *Das Litterarische Echo*, called "The Case of Sudermann," gives both Sudermann's point of view and the responses which his attacks have elicited from various critics. We quote from it as follows:

"The beginning of the present critical brutality occurred, in Mr. Sudermann's opinion, toward the end of the eighties, with the rise of the modern school, of which Young Karl Bleibtreu and young Konrad Alberti were the leaders. The necessity of preparing the way for the new turn of taste toward naturalism, which has just ended its triumphal progress of ten years' duration, brought about a climax of this tone of universal hate and contempt. With a clear reference to the disciples of Sherer (of the University of Berlin), Mr. Sudermann speaks of the second source of the degeneration of criticism: 'At the same time a spirit of literary self-conceit was developed in those who thought that by paying tribute to some distinguished man they could deflect some of his glory to themselves.' But a treasure-trove was in store for these young scholars who went forth to battle with the idea of reconstructing German literature according to their own theories. The discovery and encouragement of Gerhart Hauptmann will be remembered for all time to their credit.

"By way of exercising their power these 'esthetic tyrants' invented as catch-words 'unliterary' and 'theatrical,' concerning which Mr. Suderman expresses himself as follows: 'From this time forth, everything was considered unliterary which did not originate in the intimate circle of those who held the same opinions which they themselves held, or which was not Scandinavian, or anything that had any relation to the older literature of

France. . . . Again all was theatrical which did not occur in the sad patter, patter of a dialog without action; construction, climax, and catastrophe were all theatrical."

Sudermann further holds that the later followers of this destructive school of criticism are even worse than its progenitors. It is only lately, he claims, that the absolute degeneration of literary manners has obtained. To-day this school of critics are "fanatical and without scruple." Nor does Sudermann hesitate to name these "fanatics." According to him, the foremost among them is the editor of *Die Zukunft*, Maximilian Harden, of whom Sudermann says that "in the history of all literature and pamphleteering it would be difficult to find an author of more diabolical force and with a more insatiable desire for destruction." He also names as offenders an editor of *Die Gegenwart*, Siegfried Jacobsohn of *Die Welt Am Montag*, and Alfred Kerr, dramatic critic of *Der Tag*. The last named, in an article in that paper called "Criticism and Herr Sudermann," replies as follows:

"For a period of ten years, I have been making fun of Sudermann as a literary fraud with humorous peculiarities; as one pernicious to the art of our country; as an operetta general; as a shallow individual who found trivial the important, who confounded the new movements of the day with the work of Marlitt. I was not the only one of this opinion, merely the one who could most conveniently express himself. Because he was so much in the public eye, he appeared to me as an important tendency. 'It is like a war against a chess king,' I once wrote—'less a war against the king than against those whom he represents.'"

The German press throughout the country has given much attention to Sudermann's assertion that German dramatic criticism has become brutalized. The general feeling seems to be, however, that while there is a certain truth in his charge, it applies to the Berlin press only, and to but a part of that.

Ernst Heilborn remarks in the *Frankfurter Zeitung:* "Our dramatic criticism as a whole did not become brutalized at the beginning of the naturalistic movement. It was the Berlin critics, and they alone, who seemed at that time to become short-sighted and narrow. How true this is, and how much we have suffered by it, we do not need Herr Sudermann to tell us." The *Kölnische Volks-Zeitung* asserts that "Herr Sudermann himself is in no sense fine-grained. At the Goethebund he insulted the Obscurantists frightfully." The opinion held by the *Hanoverische Courier*, that Sudermann's articles are of a personal nature, attacking individual critics, rather than a research into the tendencies of criticism, is generally agreed to by other papers. Such, too, is naturally the opinion of those critics whom Sudermann has named as the awful examples of latter-day criticism. Maximilian Harden in *Die Zukunft* calls attention to the fact that Sudermann names the end of the eighties as the beginning of the degeneration of criticism, while his first play was performed in 1889. Harden remarks that it was natural that the criticism prior to that date should appear to Sudermann as "harmless trifling." Harden goes on to state his creed concerning the function of criticism as follows:

"He [Sudermann] complains that our theatrical feuilletons 'are consumed with satire and contempt.' But satire and contempt, let me here inform him, are the honorable and recognized weapons of critics throughout the civilized world. Because a writer fights with such weapons he does not deserve to be damned without further examination. The question that is of importance is, whether the work or the individual deserves to be treated with satire and contempt. And even the answer to this question touches only those critics who have not a certain individual life; not those who have either a strong will, or strong personality, or a strong way of writing. When a critic has a personal meaning, a human touch, an artistic attitude, when people listen to him when he speaks apart from the subject of which he is speaking, then the former question as to the objective justice of his judgment is of no moment. Was Aristophanes just to Socrates or Euripides? Jesus to the priests or Pharisees of Israel? Luther, Savonarola, Bruno, to the then boundless influence of the papistry? Lessing to Corneille or even to Voltaire? . . . Herr Sudermann does not check his rhetorical flight for an instant before such questions as these. He does not pause a second to consider whether satire or even contempt had not been earned by the person criticized; or if the work of the critic, even tho in the end many might find his opinions unjust, might not have a personal worth over and above its merit as a piece of criticism."—*Translations made for* THE LITERARY DIGEST.

A NEWLY DISCOVERED PORTRAIT OF DANTE?

IN the Strozzi chapel of the Church of Santa Maria Novella, at Florence, are two ancient frescoes. They represent Paradise and the Inferno, and were made by artists who obviously drew their inspiration from the works of Dante. An Italian art critic, M. Chiapelli, who has been making a study of these

PORTRAIT OF DANTE DISCOVERED IN FLORENCE.

This portrait, which occurs in a fresco of the "Paradiso" in the Church of Santa Maria Novella, is considered by M. Chiapelli to be an authentic likeness. It differs considerably from the accepted likenesses of the poet.

frescoes, believes that he has discovered, in the picture of Paradise, an actual portrait of Dante himself. If his surmise is correct, the find is of some importance for there is no authentic portrait of Dante in existence, except the one painted by his friend Giotto. Says *L'Illustration* (Paris):

"Neither Ary Scheffer nor Eugene Delacroix, in their depiction of incidents from the 'Divine Comedy,' claimed to represent accurately the features of Dante. They painted this legendary figure in a conventional way, each one of them according to his temperament, his imagination, and his own personal conception of the genius and character of the poet. This newly discovered portrait of Dante differs widely, as may be seen, from most of the other portraits. In fact, it has nothing in common with them except the traditional head-dress.

"The frescoes in the chapel of the Strozzi are the work of two masters of the Renaissance, the brothers Bernardo and Andrea Orcagna. Andrea was born in 1329, eight years after the death of Dante. It is therefore probable that the picture of Paradise, containing the supposed head of Dante, was made by Bernardo, the elder brother.

"M. Chiapelli's theory is a most interesting one, and is worthy of the thorough investigation of the commission of savants and

artists which has been appointed to pronounce authoritatively upon the question."—*Translation made for* THE LITERARY DIGEST.

WHAT A PAINTER ADMIRES IN A PAINTING.

THE much-mooted question, why the "painter and the public seem ever at swords' points" in their opinions about pictures is discussed by Prof. J. C. Van Dyke, in his recent book, "The Meaning of Pictures." He explains how this old quarrel first arose, and states the case of both contestants, the public and the artists, summing up the grounds of disagreement as follows:

"His [the painter's] most persistent assertion is that the picture should be something decorative in form or color—be something beautiful to look at, rather than something moral, intellectual, or narrative. But the public, being differently minded, keeps insisting that the picture should be something in subject or have some literary meaning; and, consequently, it often misses the decorative altogether. So it is that there is plenty of material for disagreement."

Professor Van Dyke then considers the attitude of the average person toward pictures and what such a person looks for in them, as compared with what the artist hopes to find:

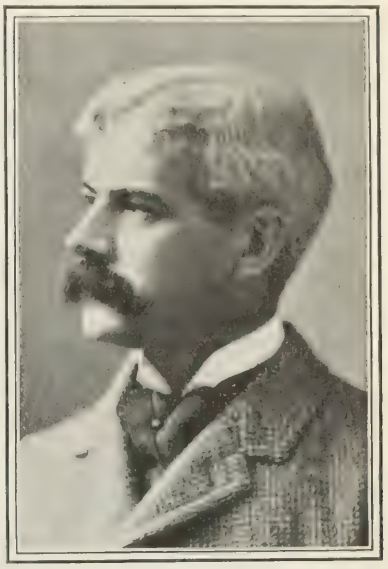
"He starts [the average person] wrong by devoting too much attention to pictures that have pretty faces and tell pretty stories. He is over-fond of heroes and heroines, plots and tales, dramatic scenes from history, or familiar characters in fiction. The ideal, whether in figure, face, or landscape, pleases him; and he does not object to a laugh over the comic or the ludicrous. . . . Of course, he does not care for portraits by Velasquez with their outlandish dress, or large Flemish women by Rubens, or the 'splashy' painting of Dutch burghers by Frans Hals. In short, the average person is devoted to the pleasant subject in art, and is continually asking of the picture: What does it mean?

"The view of the painter is very different from all this. He is not interested in the pretty face. The Madonnas and saints, whether Dutch, French, German, or Italian, do not interest him as Madonnas and saints. A figure, whether sacred or profane, is to him only a figure. As for the pretty story, the ideal, the correct costume, he usually turns up his nose at them. He is not always interested in what a picture means. Too often perhaps he cares not a rap whether it means anything or not. His question is first of all: What does it look? He wishes to know whether that figure is well drawn, rightly placed, beautiful as form solely and simply. . . . Finally, what is the result of the workmanship as a whole? Has the painter handled his materials artistically, has he drawn his figures effectively, has he arranged them compactly, has he brought his lights and shades together truthfully, and has he fused his color-masses harmoniously? If so, he has produced a work of art, whether its subject means much or means little."

What grounds the artist has for his point of view the writer explains. In a brief summary of art from its early days, he shows how the artist has been necessarily occupied with decorative effects and the problems of successfully filling a given space with appropriate designs. He sums up as follows:

"Have you noticed that the rise of that greatest school of all, the Italian, can be adequately explained on purely decorative grounds? Art was great in Italy primarily because the Italians were great technicians, great decorators, great space-fillers. If you will turn back and read their lives, their adventures, and their quarrels among themselves you will discover that they were not wholly absorbed by the Madonnas and Holy Families and the religious sentiment of art. . . . Even the pietists like Fra Angelico were not free of obligation to the decorative. Nor did a single one of them ever wish to be free. Whether they believed in religion or not, whether they had pietistic sentiment or not, they all believed in the beauty of good form and good color. If you will look again at Andrea del Sarto's Holy Families you will see little holiness about them or in them. They are only Florentine people posed in traditional attitude, with Andrea's wife enacting the part of the Madonna. But they are not wanting in decorative charm. Andrea knew how to fill space if not how to paint soul, and it was because he did fill space beautifully in the convent of the Annunziata that his townspeople called him 'the faultless painter.' No one ever referred to him as 'the faultless thinker,' or 'the faultless sentimentalist,' or 'the pietistic painter.'"

In the pictures of Titian, says Professor Van Dyke further, you will see no figures whose brows are burdened with Christian ecstasy or furrowed with classic thought—little but fine form and fine color—handsome, richly robed Venetians. Yet he considers Titian as, all in all, "the greatest painter known to history."



JOHN C. VAN DYKE,
Professor of the History of Art in Rutgers College.

To further elucidate the painter's point of view, the author borrows an analogy from literature:

"Materials, craftsmanship, the decorative sense which requires that a man's work shall be interesting in itself, are the very bases of art; and we often go astray in our judgments by not considering them. We have with us to-day one of the best literary technicians of the nineteenth century—Mr. James the novelist. It can hardly be contended that he is a very popular novelist. We sometimes read outbreaks in newspaper or magazine columns to the effect that he is not much of a story-teller, has not much of a plot. That is the complaint of the average person in the picture-gallery when he stands face to face with a Whistler nocturne. He wants what the artist does not care to paint. Mr. Whistler and Mr. James are both very well acquainted with the pretty face and the romantic story, but they choose to ignore them. The average person may read a novel by Mr. James, and keep asking, What does it mean? but if Mr. James were at his elbow and disposed to ask questions he would certainly inquire: How does it read? . . . . . .

"And this decorative motive, which was the first consideration, remains to the last the most enduring feature of art. The history of a marble or a picture may be lost; its subject or theme may be forgotten; what it meant or signified to a past generation may be incomprehensible to a present generation; but what it *looks* is substantially the same for all times and peoples. What, I wonder, makes the glory of the 'Venus of Milo'—the fact that she is a Venus? It has been gravely questioned, is still questioned, just what character that figure is intended to personify; but it has never been doubted that it is a wonderful piece of line and form—something beautiful to look upon. What makes the glory of Titian's 'Sacred and Profane Love'? There is nothing either sacred or profane about it: the title is a misnomer—something attached to the picture long after the painter's death—and no one knows what Titian intended to say in the picture. But is the picture less beautiful for that?"

In all the preceding, Professor Van Dyke has been presenting the painter's view; he proceeds in his next chapter to plead the case of the public. His own conclusion is that the public as well as the painter is entitled to consideration. "Why is it necessary," he asks, "to let the sense out of everything before it becomes artistic?" Whistler's contention that "the subject-matter has nothing to do with harmony of color or sound" he likens "to the extravagance of those who tell us that in writing nothing which teaches, argues, or expounds is 'literature.'" Whistler may call one of his small canvases of the sea a symphony in blue or gray; but the fact is, it suggests, and was meant to suggest, the

sea. It is not simply a canvas with a medley of pigment, but an illustrative canvas. In short: "Expressive painting can not get on without a thought and a theme. It must represent or illustrate something. And if we should cast out all the pictures that have an expressive meaning, we should do away with almost all the art of the past."

SHAKESPEARE'S EARLY TRAGEDIES.

SHAKESPEARE has always afforded a tempting field to speculative criticism. So many theories of authorship, indeed, have been put forward, and so many "amendments" and "revisions" offered, that it would be strange if the faith of the average reader of Shakespeare were not somewhat unsettled. "If destruction advances at this pace," observes Mr. John Churton Collins, the well-known English critic, "Shakespeare will become in a few years almost as mythical as Homer." He says further (in *The National Magazine*, London):

"In no poet are there so many different characteristics of style, of color, of sentiment, of thought discernible, and in no poet, with the exception, perhaps, of Byron, are there such striking inequalities. The consequence has been that speculative criticism has absolutely reveled in the dissolution of these dramas. In some, we are informed, there is no trace of his hand at all, and they must go in their entirety; from many, whole scenes, from others whole acts have been torn. . . . The object of this paper is to put in a plea for the arrest of this process, and I have selected the instance of 'Titus Andronicus' for three reasons: first, because it comprehensively illustrates the methods employed by these iconoclasts for the attainment of their paradoxical purposes, their indifference to evidence, to probability, to reason; secondly, because it illustrates how easily and lightly a baseless theory passes by dint of mere repetition into an article of belief; and thirdly, because the assumption of the spuriousness of this play affects very materially the important question of Shakespeare's early education and the development of his genius."

"Titus Andronicus" has been dismissed by Prof. Edward Dowden as "the work of an anonymous writer," and several eminent Shakespearian scholars wish to exclude it from the collection of Shakespeare's writings. Its incidents are so ghastly and revolting that Mr. Gerald Massey once said that he found it "a perfect slaughter-house. . . . It reeks blood; it smells of blood; we almost feel that we have handled blood, it is so gross. It is tragedy only in the coarsest relationship, the tragedy of horror." And yet Mr. Churton Collins deems the play "the most interesting and important illustration we have of the work of Shakespeare's apprenticeship," and he supplies a mass of evidence, both external and internal, in proof of its authenticity. We quote again:

"'Titus Andronicus' was most probably Shakespeare's first attempt at tragedy. To a young novice on his probation as a playwright the first consideration would be popularity. He found the plays to which we have referred highest in favor, and he took them as his prototypes, overdoing, as a tyro would be likely to do, the appeals to the depraved taste to which he forced himself to pander. He had probably never written blank verse before, so he took that of Marlowe, Greene, and Peele as his models, and with what success he has imitated that blank verse may be judged from the fact that the drama has been attributed to those poets; but the blank verse bears a closer resemblance to that of Greene and Peele than to that of Marlowe. The play is full of reminiscences of the plays on which it is founded, recalling particularly 'The Spanish Tragedy,' 'Selimus,' and 'The Jew of Malta.' . . . . . .

"It is not with his mature works that 'Titus' is to be compared, but with the dramas on which it was modeled and which it aspired to rival, and the moment such a comparison is instituted the immeasurable superiority to all of them becomes instantly apparent. Compare, for instance, its admirably proportioned, closely woven plot with the rambling, shambling skimble-skamble of 'The Spanish Tragedy' and 'The Jew of Malta,' its measured and dignified rhetoric with the boisterous fanarado of the worst parts of 'Tamburlaine'; its fine touches of nature and occasionally piercing pathos with anything which had appeared on the English stage before. Who but Shakespeare could have placed in the mouth of Titus, when heart-crushing horrors are accumulating on horrors,

> When will this fearful slumber have an end?

or condensed what is condensed in

> Where life hath no more interest but to breathe?

In what other mint could be coined such a couplet as

> O brother, speak with possibilities,
> And do not break into these deep extremes?

How noble, too, are the lines:

> King, be thy thoughts imperious, like thy name;
> Is the sun dimmed that gnats do fly at it?
> The eagle suffers little birds to sing,
> And is not careful what they mean thereby,
> Knowing that with the shadow of his wings
> He can at pleasure stint their melody.

If anything more simply pathetic exists in dramatic poetry than the following, where can it be found?

> LUCIUS. O take this warm kiss on thy pale cold lips,
> These sorrowful drops upon thy blood-stain'd face,
> The last sad duties of thy noble son.
> MARCUS. Tear for tear and loving kiss for kiss
> Thy brother Marcus tenders on thy lips.
> LUCIUS. Come hither, boy; come, come and learn of us
> To melt in showers; thy grandsire lov'd thee well:
> Many a time he danc'd thee on his knee,
> Sung thee asleep, his loving breast thy pillow;
> Many a matter hath he told to thee,
> Meet and agreeing with thine infancy:
> In that respect, then, like a loving child
> Shed yet some small drops from thy tender spring,
> Because kind nature doth require it so."

Mr. Algernon Swinburne, in an article in *Harper's Magazine* (March), treats "King Richard II.," rather than "Titus Andronicus," as Shakespeare's first attempt at tragedy. He writes:

"Of the three lines on which the greatest genius that ever made earth more splendid, and the name of man more glorious, than without the passage of its presence they could have been, chose alternately or successively to work, the line of tragedy was that on which its promise or assurance of future supremacy was first made manifest. The earliest comedies of Shakespeare, overflowing with fancies and exuberant in beauties as they are, gave no sign of inimitable power: their joyous humor and their sunbright poetry were charming rather than promising qualities. The imperfections of his first historic play ['King Richard II.'], on which I trust I have not touched with any semblance of even the most unwilling or unconscious irreverence, are surely more serious, more obvious, more obtrusive, than the doubtless undeniable andi ndisputable imperfections of 'Romeo and Juliet.' If the style of love-making in that loveliest of all youthful poems is fantastically unlike the actual courtship of modern lovers, it is not unliker than is the style of love-making in favor with Dante and his fellow poets of juvenile and fanciful passion. Setting aside this objection, the first of Shakespeare's tragedies is not more beautiful than blameless. There is no incoherence of character, no inconsistency of action. Aumerle is hardly so living a figure as Tybalt: Capulet is as indisputably probable as York is obviously impossible in the part of a headstrong tyrant. There is little feminine interest in the earliest comedies: there is less in the first history. In the first tragedy there is nothing else, or nothing but what is so subservient and subordinate as simply to bring it out and throw it into relief. In the work of a young poet this difference would or should be enough to establish and explain the fact that tho he might be greater than all other men in history and comedy, he was still greater in tragedy."

NOTES.

A LIFE-SIZED bust of Sidney Lanier was unveiled at Tulane University, New Orleans, a few days ago.

MR. JOHN HENRY BONER, poet, editor, and encyclopedist, died in the City of Washington a few days ago. His most notable poem was "Poe's Cottage at Fordham." He was at one time on the staff of the "Standard Dictionary," the "Century Dictionary," and the "Library of American Literature," and for several years was on the editorial staff of THE LITERARY DIGEST, where his work was of uniformly high grade.

SCIENCE AND INVENTION.

THE UNIVERSE FOR MAN AFTER ALL?

THE earth and its inhabitants, which held such a proud position in the Ptolemaic cosmogony, have not fared so well with modern science. We have been taught to look upon our planet merely as one of the smaller satellites of a low-class sun, and upon ourselves, at least from an astronomical point of view, as something less than grasshoppers. Now, however, Prof. Alfred Russell Wallace bids humanity take heart. In an article in *The Fortnightly Review* (London, March) entitled "Man's Place in the Universe," he tells us that we are on top after all. The veteran English biologist regards it as proved that our solar system is practically in the center of the universe, which is certainly limited in extent, and that the earth is in the most favorable position in that system for the development of life. Hence, in a biological sense, we are in the center of things after all. Professor Wallace believes that we are the only intelligent living beings in existence and that the creation of the universe has culminated in our appearance, which was its end and aim. This is practically the old theological view, but Dr. Wallace here bases it on scientific considerations. In discussing our position in space the writer says:

"The result so far reached by astronomers as the direct, logical conclusion from the whole mass of facts accumulated by means of powerful instruments of research, which have given us the new astronomy, is that our sun is one of the central orbs of a globular star cluster, and that this star cluster occupies nearly the central position in the exact plane of the Milky Way; but I am not aware that any writer has taken the next step and, combining these two conclusions, has stated definitely that our sun is thus shown to occupy a position very near if not actually at the center of the whole visible universe, and therefore, in all probability, in the center of the whole material universe.

"This conclusion no doubt is a startling one, and all kinds of objections will be made against it, yet I am not acquainted with any great inductive result of modern science that has been arrived at so gradually, so legitimately, by means of so vast a mass of precise measurements and observations and by such wholly unprejudiced workers. It may not be proved with minute accuracy as regards the actual mathematical center. That is not of the least importance; but that it is substantially correct there seems to be no good reason to doubt, and I therefore hold it right and proper to have it so stated and provisionally accepted until further accumulations of evidence may show to what extent it requires modification.

"This completes the first part of our inquiry, but an equally important part remains to be considered: our position in the solar system itself as regards adaptability for organic life. Here, too, I am not aware that the whole facts have been sufficiently considered, yet there are facts that indicate our position in this respect to be as central and unique as that of the sun in the stellar universe."

The materialistic argument, that man as a culminating point of the vastness of the universe is a ridiculous anticlimax, the means being out of all proportion to the end achieved, is met by Dr. Wallace with the reminder that with infinite space and infinite time proportions cease to exist. If the end be worthy, we may presume that the means used to attain it were the best or possibly the only ones. Here is Dr. Wallace's conclusion:

"The three startling facts that we are in the center of a cluster of suns, and that that cluster is situated not only precisely in the plane of the Milky Way, but also centrally in that plane, can hardly now be looked upon as chance coincidences without any significance in relation to the culminating facts that the planet so situated has developed humanity. Of course, the relation here pointed out may be a true relation of cause and effect, and yet have arisen as the result of one in a thousand million chances occurring during almost infinite time; but, on the other hand, those thinkers may be right who, holding that the universe is a manifestation of mind and that the orderly development of living souls supplies an adequate reason why such a universe should have been called into existence, believe that we ourselves are its sole and sufficient result, and that nowhere else than near the central position in the universe which we occupy could that result have been attained."

EVILS OF THE ATHLETIC HABIT.

THE training habit may be as hard to break as the habitual use of narcotics or alcohol, says a physician, writing in *American Medicine*. By this he means that when the athlete ceases training, it may require months for the system to adapt itself to the new conditions. The athlete must, however, give it all up sooner or later, and the results, we are told, are often disastrous. Hence the writer condemns not so much athletics as what he calls the athletic habit. He says:

"Prolonged observation has convinced me that the muscles of the professional athlete or the blacksmith are not only unnecessary to men whose daily occupation requires no high degree of muscular development, but are absolutely injurious. Not only is this true so far as exaggerated muscular development is concerned, but it applies with special force to the structural and functional visceral capacity of the large-muscled man, a capacity which has developed *pari passu* with the growth of muscle. Large muscles unused are pernicious, it is true, but an immense unused visceral capacity is still more so. Muscular degeneracy does not necessarily produce serious results, save in the case of the heart; but visceral degeneracy is a much more serious matter. A big arm with a fine biceps, triceps, and deltoid development may be very pretty to look at, but such arms have ofttimes cost their owners their lives.

"An important point to which attention has not been called, so far as I know, is this: Individuals in hard training necessarily demand more food, and food richer in proteids, than those who do not train. Proper digestion, assimilation, metabolism, and elimination depend here upon the maintenance of a large amount of muscular exercise. . . . The demand for nitrogenized food and food in large quantity does not subside immediately upon cessation of the usual amount of exercise. The accumulation of crude products of tissue metabolism is an inevitable result when the athlete goes out of training, if he does not markedly modify the quality and diminish the quantity of his diet.

"Independently of the question of overstrain, a high degree of physical development is often fatal, if for any reason the subject is compelled to cease his muscular work and adopt a sedentary life. One of the greatest pugilists that America ever produced, John Dwyer, of Brooklyn, quit his regular occupation to enter the counting-room—he died within a year of tuberculosis. The explanation in this case was simple enough: the immense lungs which were necessarily an advantage in the prize-ring fell into disuse in the counting-room. Disuse meant degeneration, and degeneration meant a lack of resistance of which tubercle bacillus was not slow to take advantage. I have had under my professional observation several lesser lights among professional athletes, in whom a similar result occurred from the cessation of training.

"In my own experience—and I have often trained to excess—the training habit has been as hard to break, when necessity has compelled me to do so, as the habitual use of narcotics and alcohol seems to be in most individuals. On several occasions when I have been compelled to cease training for one reason or another it has required many months for my system to become adapted to the new conditions. The time arrives in the lives of all athletes when the exigencies of one's occupation, or advancing years, associated with the lack of enthusiasm incidental to the middle period of life, bring about a cessation of active training. In many instances the result is disastrous, and while, in common with a number of others whom I have known, I have seen no particularly disastrous results in my own person, the instances in which the opposite is true have been so numerous in my experience that I am convinced of the correctness of my position. Every physician athlete with whom I have been associated in

the past twenty-five years has coincided with me in the foregoing views.

"One of the marked evils of systematic training is the fact that . . . the digestive function is very much disturbed, in many instances, by the cessation of the hard, systematic muscular work. Functional disturbance of the liver is very often met in athletes out of training. I have noted in certain individuals some particular form of athletics was absolutely necessary to maintain the normal hepatic function; thus, in one case the individual was compelled to indulge vigorously in boxing to avoid hepatic torpor. The movements involved in excessive sparring seemed to have an especially stimulating action upon the liver, and a few days' cessation of the violent exercise produced considerable disturbance."

IS MOTION THE CHIEF FUNCTION OF LIFE?

SOME of the more recent physiological psychologists have restricted their investigations of the mind's action almost exclusively to its motor function, that is, its ability to produce movement of some sort. This is deprecated by M. Charles Rolland, who, in the *Revue Scientifique* (Paris, February 14), endeavors to show that in the theories and methods of physiological psychology a place of too high importance has been given to the phenomena of motion. This position, he alleges, does not correspond to the place occupied by the motor function in life. The result is, he says, that the attention of investigators has been directed too exclusively to the outside or peripheric phenomena of the body, to the neglect of the inner phenomena, and that the problem of consciousness—the essential feature of psychology—has not been grasped. He says:

"What is physiologic movement? It is one of the forms of energy by which the living being responds to the action of cosmic medium in which it is plunged. The living creature is nothing else than a transformer of energy. The actions exerted on it by the cosmic medium are what we call excitations. Each mode of energy is a specific excitant—heat, light, electricity, movement, sound, chemical excitants. To these excitations the living being responds in its turn by the production of some mode of energy—heat, light, electricity, sound, movement, nervous energy. The living being receives and stores energy under its different forms and restores it to the surrounding medium, frees it under different forms. Thus we may define general physiology as the study of the transformations of energy effected in special conditions by the creatures called living. It is the determination of these special conditions that is the great problem of life, and the work of biology. . . . . .

"I wish to remark that physiological movement is only one of the manifestations by which the living being responds to the action of the medium. . . . The functioning of the living substance does not result in the production of movement only, but in varied manifestations of energy of which movement is only one mode. . . . . .

"But granted that motor phenomena are not the whole of physiology, are they not the most numerous and the most important? The cases of the firefly and the electric fish are exceptional, and in the immense majority of living beings, especially of animals, the motor function is manifestly preponderant."

To this M. Rolland replies that the different modes of energy with which the organism responds to stimulation are not of the same degree of importance all through the biological scale. The motor function is of less importance, for instance, in vegetables than in animals; the nervous function is more so in man than in the lower animals. M. Rolland believes that movement plays a less part in man than in the other animals. In a curious book on "The Superiority of Animals to Man," M. P. Maréchal has held that in locomotion man is inferior to other animals, and M. Rolland believes that he has proved his point. Theory shows, too, that the motor function would become of less importance as the nervous function increased in value. He goes on to say:

"In other words, if the motor function is less important in man than in animals, it is because the intellectual development of the former is the higher. . . . In the evolution of the different biological functions . . . most of them, and probably all, have varied in importance; especially has the nervous function, and with it the so-called psychic function, increased at the expense of all the others, particularly of the motor function. . . . In the presence of this result is it legitimate to accord to the motor function a preponderant rôle, almost an exclusive one, in human psychology?"

The question, "What is consciousness?" which some psychologists of the highest repute think it unnecessary to discuss, while others regard it as insoluble, will never be answered, M. Rolland asserts, so long as our attention is directed so exclusively, in the study of pscyhology, to the various motions of the human body and their significance. In saying this he is not advocating, he asserts, a return to the old psychological methods which ignored physiological phenomena altogether. The nerve-function is physiological as well as that of movement; but the nervous phenomena, as they are more important, are, he thinks, the ones to study; and he believes that the results of such study will be far-reaching.—*Translation made for* THE LITERARY DIGEST.

WHERE SOLOMON GOT HIS GOLD.

THE question of the whereabouts of the Biblical Ophir, where the Hebrew monarchs got their gold, has been a vexed one for centuries. "Every ancient digging," says a writer in *The Engineering and Mining Journal*, "in the countries tributary to the Indian Ocean or the Red Sea has, at different times, been put forward as a claimant for the honor," including the Mysore, the ruined cities in Mashonaland, and the prehistoric remains in the Nubian mountains, besides more vague suggestions of other countries and places, from the highlands of Abyssinia to the Mountains of the Moon. Now, however, it appears certain that Solomon's mines were in the Zambesi region. Says the writer quoted above:

"Between that great river and the Sabi, in the modern Rhodesia, there are many thousand old mines, two hundred and forty of which afforded the beginnings of undertakings now in course of actual exploitation. This extensive series of old workings reaches from north of the Zambesi to the Murchison Range in the Transvaal. Messrs. Hall and Nea, who have also written a book about it, estimate that the area covered is 750,000 square miles. Within this area there are ruins of entire cities, fortresses, and temples, bearing plentiful evidence of the ancient worship of Baal-Ashera and the civilization which characterized the Himyarites of Southern Arabia.

"The discussion of this fascinating problem presents three features of particular interest; in the first place, all the old legends impute the gold of Ophir to Arabia, where gold, in quantity, has not been found, the idea of rich resources having grown from the fact that the gold of the ancient world passed through the hands of the Arabians, who were the great traders and pirates of antiquity, and of a much later historic period also. The 'gold of Arabia' therefore obviously belongs to the category of the Greek Kalends. Secondly, the African negro, as we know him and find him, never could have done this work save under the compulsion of a higher race. Moreover, if we accept literally the Biblical statistics, the output of Ophir must have been colossal. In 1 Chron. xxix 4., we read that King David contributed to the building of the Temple no less than 'three thousand talents of gold, of the gold of Ophir.' A talent being 114 pounds Troy, these three thousand talents would be worth over eighty million dollars of our money. These must have been 'powerful' diggings from which such tribute could come to the Hebrew monarch. No such scanty gophering as has been seen in Nubia will explain the wealth of the Semitic kings nor that of the Ptolemies, all of whom obtained great stores of gold from an unknown El Dorado.

"It appears likely that Solomon's treasure-vaults have been uncovered. It is still a fascinating subject of conjecture how the ore was treated and shipped from the interior to the Red Sea,

altho the methods of the Arab traders serve as a connecting-link between the transport systems of widely separated periods. Historic sentiment is not lacking in the consideration of the fact that if the Hebrews did indeed direct the work of this ancient Ophir in the Zambesi country, their descendants, in Hamburg, Berlin, and London are to-day the active promoters of the great era of mining development which has reopened this very tract to the industry of the modern world."

TO CLIMB THE WORLD'S HIGHEST PEAK.

A SERIOUS attempt is to be made to scale the highest mountain in the world, Mount Everest, in the Himalayas. The climber, if he succeeds, will have broken the record by over 5,000 feet, for the highest point yet reached—Aconcagua in the Andes—is 23,080 feet above sea-level, while Everest is 29,000. Mr. Herbert C. Fyte, who writes an article on the subject in *The Scientific American* (March 7), tells us that this attempt is under the direction of a Mr. Eckenstein, but that few details of his plans can be ascertained. Mr. Fyfe quotes the opinions of several skilled mountain climbers to show that success is by no means impossible, altho its attainment will be difficult. He says:

"Some day or other a mountaineer will succeed in scaling Mount Everest. There is nothing impossible in it. Two things are wanted, time and money; and provided these are forthcoming, success may very well be looked for.

"Most of the great climbers of to-day agree in affirming that man could exist at an altitude of 29,000 feet, provided of course that careful precautions were taken and all the details of the expedition were worked out in a thoroughly practical manner. The climber must not attempt to ascend Mount Everest right off. He will have to take some years over it, climbing each year to a certain height and resting weeks here and there on the road in order to accustom his body to the unwonted altitudes. Supplies will be a great problem, but if he can manage to insure food, clothing, and other necessaries reaching him at the various camps at which he will be forced to remain for some little time, and if he is strong enough to withstand the cold and the rarefied atmosphere, it is possible that one day his ambition will be satisfied and that he will be able to take his stand on the highest point of the earth's surface and to rejoice in the fact that he has accomplished something which no one else has ever done since the world began. Let us see what the experts have to say respecting the possibility of scaling Mount Everest.

"Quite recently a paper was read before the Alpine Club by Dr. Malcolm L. Hepburn on 'The Influence of High Altitudes in Mountaineering.' Summing up his remarks as to the ascent of Mount Everest, Dr. Hepburn said: 'Provided he has plenty of time, plenty of suitable food, and fine weather, I see nothing unavoidable in the conditions of the atmosphere at high altitudes to prevent a man with healthy organs from ascending the highest point on the earth's surface.'

"Among the speakers at Dr. Hepburn's lecture was Sir Martin Conway, who spoke as follows: 'On the two occasions when I have been close on 23,000 feet I have felt that I could have climbed farther, and that if I could have slept there I might have climbed much farther. The problem of climbing Mount Everest will be composed of two main difficulties—politics and finance. If the governor of India would persuade the government of Nepal to let the Alpine Club try, and if about £10,000 was forthcoming, and a good party, with an ample supply of porters, could devote two or three consecutive years to the attempt, there would be some chance of conquering the peak."

"If Everest were only in England," said Mr. Dent, another expert climber, "the problem would have been solved long ago." Mr. Fyfe goes on to say:

"It is agreed that the easiest side for the ascent is from the north, but the Government of India does not care about travelers penetrating into Tibet, and it is possible, after Mr. H. Henry Savage Landor's reputed experiences, that the travelers themselves would fight shy of the Tibetans, who are not a kindly race as far as strangers are concerned."

WHY DO INSECTS VISIT FLOWERS?

FLOWERS of course are sought by insects on account of the honey or pollen that they contain; but it has hitherto been generally accepted that the bright colors of the petals are the primary means of attraction. It has even been supposed that the evolution of the colored flower was dependent on the fact that it attracted insect visitors and so facilitated pollenization. But if we are to accept the conclusions of Professor Plateau, of the University of Ghent, this must be all wrong, and insects are not attracted by the brilliant colors of the blossoms, but rather by the perception in some other way—probably by scent—that there is honey or pollen. The experiments of Professor Plateau, which were reported by him to the Belgian Royal Academy last

THE HIGHEST MOUNTAIN PEAKS IN THE WORLD.
Mount Everest seen from Darjeeling—height 29,000 feet.
Courtesy of *The Scientific American* (New York).

November, are thus described in *Nature* (London, February 5) by G. W. Bulman:

"Flowers of *Papaver Orientale* [a species of poppy] were deprived of these petals, and the number of insects visiting the remaining parts carefully noted and compared with the number of those visiting neighboring intact flowers.

"Now it seems evident that the question, Are insects attracted by the brilliant colors of flowers? should be decisively answered by such experiments. If they are thus attracted, then we should expect them to neglect these petal-less flowers while visiting the others. In removing the petals, Professor Plateau took certain precautions. The unopened flower was carefully enclosed in a sort of cage, so as to preclude insect visits. When it expanded, the petals were carefully removed by means of a pair of scissors kept specially for this purpose. Great care was taken to avoid touching any of the remaining parts of the flower with the fingers. Professor Plateau lays special stress on this, as he thinks that certain previous experiments of a similar nature have been vitiated by neglecting such a precaution. The experimenter in removing the corolla has left on the remaining parts the scent of human fingers. Its keen sense of smell enabling the insect to perceive this, it has consequently avoided the flower.

"The poppy flowers thus carefully prepared were watched, and the number and kind of insects visiting them noted. At the same time, a number of intact flowers were similarly watched. . . .

"Taking the average, each of the 30 petal-less flowers received 4.5 visits, each of the 70 normal flowers received 2.4 visits.

"So great, indeed, appeared to be the attraction of these petalless flowers that on many occasions Professor Plateau has seen more than one bee in a single flower."

MOVING TRICK-PICTURES.

TRICK photographs are almost as old as the art of photography itself, and pictures of animals with the heads of well-known persons, or of the same man seated around a table in different attitudes, are mysterious only to those who do not know how they are made. The purveyors of moving pictures, which, tho capable of such extensive use in instruction, seem lately to have degenerated into a rather mediocre form of amusement, have not been slow to realize the possibilities that are offered in this direction. Some instances of these, with explanations, are thus given in *The Times* (Philadelphia):

"One of the latest mystery pictures is 'The Human Incubator.' A man is represented standing before a table on which there are six eggs and a plate. He takes up one egg, breaks it about a foot above the plate, and, as the contents strike the latter, a little chick picks itself up and runs over the table.

"This he does with each egg in succession. When the six chicks are running about, he holds the last broken shell above the plate, a chicken runs back and apparently jumps into one of the shells, which is placed on the table again whole.

"This is one of the simplest of all the pictures. In reality the man stands before the camera and breaks an egg into the plate. He then reaches out for a little chicken, which is handed to him, and puts it on the plate. Naturally, it immediately runs off on the table. The same thing is done with each of the six eggs, until the same number of chickens have actually been put on the plate.

"When the film is developed ten or fifteen feet of it represent the man reaching out and putting the chicken on the plate. This part is cut out of the main strip, and the section of the film representing the contents of the egg striking the plate is attached to that showing the chicken picking itself up from the center of the plate, where it had been placed in the interval. The apparent impossibility of the tiny fowl returning to the egg is accomplished merely by reversing the course of the film—that is, making the picture operate backward.

"Two similar pictures are 'The Tramp's Miraculous Escape' and 'The Photographer's Mishap.' In the first one two tramps meet on a railroad track and exchange embraces. One produces a bottle and goes on, leaving it with his colleague of the road.

"The tramp who received the bottle sits down on a railroad tie, takes several good 'pulls' at it, and finally goes to sleep. Suddenly a fast express makes its appearance, and being unable to stop in such a short distance, strikes the unfortunate man and scatters 'fragments of him' in every direction. The train is stopped, and train hands return to gather up the remains. After carrying them for a short distance on a stretcher the tramp jumps up alive and makes a dive for his bottle, which has been left behind. . . . . .

"An invariable groan of horror comes from in front of the canvas when the train strikes the body, for it seems impossible that it is not a reproduction of an actual catastrophe. A man is really photographed on the tracks until the locomotive gets near.

"Then the camera is stopped, and the man steps out of harm's way. Another picture is taken with a dummy in the same position, and this time the locomotive is permitted to mangle it. The camera is again stopped, the real man substituted for the remains of the dummy, and the third picture represents the marvelous resurrection. When the three films are adjusted so they run continuously, the affair is extremely realistic.

"One of the most humorous of the mysterious pictures is 'The Mysterious Doctor.' A cripple enters the doctor's office, hobbling along on his hands, both legs having been taken off just below the hips. The doctor places the man on the table, and taking two legs from a closet places them in the proper position on the patient.

"The latter finds to his delight that the new legs adhere firmly and he jumps from the table and dances around the room. The doctor then places a sheet around him, and, with the idea of bettering his countenance, takes a huge saw and saws the man's head off. He takes another head from a nearby table and puts it on the patient. This also works to perfection.

"The man who really enters the doctor's office is really a cripple without legs. After the wonderful surgeon brings out the two legs, and apparently affixes them to his unfortunate patient's body, the lens is closed, while a man with two sound legs is substituted. Of course, only the substitution of a dummy is required before the doctor saws off the head, and then a restitution to show the live man with the new head."

SCIENCE BREVITIES.

"FRESH-AIR tablets are a preparation discovered by a French scientist," says *The Medical Times*. "It was while investigating acetylene that he discovered that he could combine certain chemicals into a tablet which, on being dropped into water, dissolved and gave forth pure oxygen. These tablets will be exceedingly useful in a closed carriage, a submarine boat, a mine, or anywhere else where the air has become vitiated."

A GERMAN photographer, Kunwald, says *Photography*, when taking a picture of a lady of doubtful age, "places sheets of celluloid between the negative and the printing-paper, thus producing a very softening effect, which hides the discrepancies of age. Does Herr Kunwald interpose a certain number of celluloid sheets according to age? If such methods become popular, we may perhaps see the Royal Photographic Society recommending standards of this kind:

Lady's age, 60, sheets interposed, 20
" " 70, " " 30

and so on."

"It is strange that with all our empirical knowledge of malaria," says an editorial writer in *The Medical News*, "the dangers of being out after dark on summer nights, of living near marshes, or newly broken ground, of sleeping out of doors, that we should never have suspected that the teasing mosquito, omnipresent under such conditions, should be the cause of the greater trouble. We are not so clever as we have commonly supposed ourselves to be. Indeed, a hill tribe of Africans showed more wit in their limited observations than scientists from Aristotle down. They noted that when they went down to the plains they were bitten by mosquitoes which they called *Mbu*, and with the bites came the sickness which they also called *Mbu*, the sickness being no other than malaria. Now that the marvelous relation of the malarial plasmodium to its winged host is worked out, we hope that the American people will take upon themselves regularly the spring-time task of cleaning up their mosquito-breeding lands."

"THE northern belt [of forests] is perhaps greater in extent than all the other timber belts and reserves of Canada combined," says a writer in *The National Geographic Magazine*. "According to the best authority, it extends from the eastern coast of Labrador north of the fiftieth parallel in a northwesterly direction to Alaska, a distance of some 3,000 miles, with an average width of perhaps 500 miles. This vast strip of timber land, if placed upon the territory of the United States, would extend from Maine to California and from the southern shore of Lake Erie to the northern boundary line of Georgia. It is known as the spruce forest of the Dominion, the great bulk of the timber being of that species, black and white, the other important trees being larch and poplar. Altho this belt has been but partially explored, it is claimed that many of the trees in the southern portion are of a lumber-producing size, but the greater portion is fit only for pulp. When it is considered that spruce is distributed in vast quantities through all the forests of Canada, and that an almost incalculable amount will be produced in this great northern belt, it is hardly exaggeration to say that the Dominion possesses an inexhaustible supply of pulp-wood."

THE RELIGIOUS WORLD.

MEN'S CLUBS AND THE CHURCHES.

THE "club idea," as applied to churches, appears to be in the ascendent. Almost every city parish nowadays is regarded as incomplete unless it contains a men's club. In New York the clubs associated with the church of the Paulist Fathers, and with the Pro-Cathedral, St. George's Church, and St. Bartholomew's Church have reached large proportions, and the influence they exert is generally regarded as in the widest sense beneficial. It is somewhat surprising, therefore, to find a clergyman who has had wide experience in the organization of men's clubs assuming toward them the attitude of a hostile critic. Writing anonymously in *The Independent* (New York), he declares:

"When the church takes up this enterprise its object is, whether consciously or unconsciously, one alone of two things; either to minister to persons in its own membership or to minister to those outside. For example, a church has among its members a number of men who because of limited resources and meager accomplishments are subject to temptation, in danger of enticement, and in need of some safe place of recreation. So that church opens a room in its church-house, which 'house' is nowadays almost invariably a part of its parish machinery, and expects that club-room to serve as a sort of safe retreat. Either this or it reverses that order, and instead of furnishing to men already members these accommodations, furnishes the accommodations to men not members of the church at all.

"If a church does this, its aim, in turn, is again one of two things: either, in order, by furnishing such advantages, to enlist the interest of those men in that church to the intent that the church will finally draw them into some more close affiliation; or else, ignoring even this, to do for those men outside the church something which in itself is intrinsically advantageous.

"The quarters furnished for any one of these clubs, organized for any of these three purposes, are much the same. The buildings, rooms, appointments, etc., are in the regulation fashion, and the activities are about the same as those of well-conducted men's clubs anywhere. Membership may range from one to two or three or even half a dozen hundred men. There is always a gymnasium; there is a library filled with books and magazines; entertainments are held, perhaps, monthly throughout the winter, while besides all this there may be lectures, smokers, concerts, exhibitions, tournaments, etc. An annual report of the doings of such a club will contain such familiar expressions as these: 'The pool tournament was the cause of much friendly rivalry.' 'The annual excursion was the event of the summer, nearly 3,000 persons being carried on three barges chartered by the club, while the profits from the sale of tickets after all expenses had been paid were $700.' 'Ladies'' evenings continue to be popular.' 'Entertainments are conducted frequently, and the dancing-class is well attended.'"

The writer is in entire sympathy with the church's endeavor to provide a place of "safe retreat"; and he leaves the impression that he does not regard as insurmountable the numerous difficulties of club management. But he thinks that as a "feeder for the church" the men's club is an utter failure. He writes on this point:

"The theory upon which the church club is founded is that men will find their physical comfort ministered to, and that this will induce them to enter the church for their more vital welfare. Well, in theory this is pleasing, and at first sight plausible, but in point of fact it simply does not work. Men will follow just so far along that line, and then will stop. They will take just what you have to give; but when, in turn, you ask that they shall give themselves, they refuse—courteously, to be sure, but none the less emphatically.

"For example, in one club in which there were 130 members, throughout a whole year, the entrance to the building being next door to the entrance of the church, just one lone man crossed the threshold from the former to the latter during all the year. This can not be answered by the criticism that the preaching in that church was poor, or that the clergy were remiss in any duty; such was not the case. In another similar men's club during two years not one man joined the church. This not because that club was not 'successful' from every other point of view; in fact, it was phenomenally so, the membership increasing during that same period from seven men to one hundred and seven. In the largest men's club in New York attached to any church—an Episcopal church—a club with six hundred members and a waiting list of two hundred more, only one man has been confirmed in three years."

The very leaders of this movement, we are told, are to-day "questioning the validity of the whole process with the most searching earnestness," and several important New York churches are closing up their parish-houses on the East Side and offering the use of them to the school board. We quote, in conclusion:

"It must begin to be apparent then that, while many features of this work are good, there are certain points at which its success seems to be at least doubtful; certain things pertaining to the movement as a whole regarding which grave questions may be asked. It must begin to appear wise also that some of these things should be pointed out in order that the questions thus arising may be taken under consideration—especially by those who contemplate building new houses and starting in upon such enterprises in the new. It is entirely possible that the time has come when those who have the largest interests of the church at heart would do well to think twice before building more men's club-houses, if they would not have those houses stand some day as monuments of their enthusiasm, but as witnesses as well to their mistakes."

The Boston *Congregationalist* comments on this article as follows:

"Conditions in New York are so peculiar that even if this movement is not gaining ground there, it may still be possible to find successful embodiments of the idea in smaller cities. We have several conspicuous instances in our Congregational churches, as at Appleton, Wis., and Peoria, Ill. We know also of a number of other clubs that are enlisting the support of men heretofore not at all identified with the church. We doubt whether so much is done in the way of conducting Sunday-evening services as was the case a few years ago. Yet there is a revival of interest in that phase of the movement, as shown in the meeting in this city [Boston] this week, out of which there is likely to grow a federation of clubs in Massachusetts. Within certain limitations we believe the club idea may be effectively worked out in almost any church. It falls in with the spirit of the age, and it often secures for the church the sympathy and to some degree the activity of earnest, well-meaning men who have been disposed to hold aloof from participation in any kind of church work."

Forty Bibles a Minute.—The Oxford Bible is widely known, but few few are aware of the tremendous scale on which it is produced. From *The Caxton Magazine* we glean the following data:

The Bible publications of the Oxford University Press have been issued for three hundred years and can be published in 150 languages and dialects. Every year fully 600 tons of paper are used for this purpose alone. Orders for 100,000 Bibles are quite common, and the supply of printed sheets is so great that an order for half a million copies can be readily filled. On an average, from 30 to 40 Bibles are furnished every minute, and this number can readily be doubled. There are no fewer than 110 different editions of the Oxford Bibles in English, varying from the magnificent folio edition for pulpit use to the "brilliant" Bible, the smallest edition of the Scriptures in the world. Of the Revised Version, fourteen editions are published. More than a million copies of the revised New Testament had been ordered before the day of publication in May of 1881, and it is claimed that the workingmen of the establishment refused a bribe of some four thousand pounds to furnish a copy of the book before the day of issue. At the banquet held at the four hundredth celebration of the beginning of the art of printing in England by Caxton, Gladstone took into his hands and exhibited to those present a copy of the Bible which had been printed and bound entirely since midnight of the preceding day. The

preparation of the "India paper" used by the Oxford University press is a business secret of great value. Altho frequently imitated it has never been equaled. The largest folio Bible printed in Oxford measures 19 by 12 inches, and no erratum has as yet been found in it. The "Brilliant Text Bible" measures 3¾ by 2⅛ inches and is ¾ of an inch thick, and bound weighs less than three ounces. In the seventeen years since the Press has been under the management of Horace Hart, the number of employees has increased from 278 to 650.

REVIVAL OF CONSERVATIVE BIBLICAL CRITICISM IN GERMANY.

ENCROACHMENTS of the radical Biblical critics in Germany are nowadays met with more vigorous opposition than has been customary for a series of years. Commenting on this, the *Beweis des Glaubens* (Gütersloh), the leading apologetical journal in the Protestant church of Europe, presents the following facts and opinions:

The new controversy inaugurated by the publication of Delitzsch's "Babel und Bibel" [one year ago], and which has called forth discussions from a large number of specialists, mostly university professors, shows how much stronger conservative theology has become in recent years. It not only boldly takes up the challenge hurled by negative criticism, but even becomes aggressive and puts its opponents on the defensive. It is a singular phenomenon that of all the brochures, pamphlets, and magazine articles that have appeared on this new Babylonian problem, there is probably not a single one that throughout agrees with Delitzsch in maintaining that the Biblical stories of Creation, of Paradise, of the Deluge, of the Patriarchs, etc., are borrowed from Babylonian sources, and are accordingly of secondary importance and throughout mythical in character. This opposition to radical criticism comes not only from such conservative men as Professors Koenig, Oettli, Kittel, and others, but from advanced theologians such as Merx of Heidelberg, Cornill of Königsberg, Gunckel of Berlin, and others.

FRIEDRICH DELITZSCH,

He is just now the center of theological interest in Europe.

Courtesy of *The Open Court* (Chicago).

The fact observed during the debate that followed the remarkable work of Harnack on the "Essence of Christianity," namely, that the great majority of resultant books and pamphlets were directed against the brilliant Berlin savant, and that even Jewish writers, such as Boeck, sharply antagonized his position, has been repeated, only on a larger scale, in this new form of radical criticism. There has been an agreement between the conservative and the advanced critics, in opposition to Delitzsch, on this, namely: that while the author of the Pentateuch does make use of material on the subjects of Creation, Paradise, the Deluge, and the like that was common property of the Oriental and Semitic peoples, yet the existence of such parallels, far from demonstrating that Israel borrowed its religious views from Babylonian culture, only emphasizes the uniqueness of the stories found in Genesis, since no other people made these stories the center of such deep religious teachings. Not what Israel had in common with its neighbors on these important points, but that which it possessed above and beyond the Babylonian ideas, constitutes the essence of the Biblical stories. Or, as it is put by Dr. Köberle, of the University of Erlangen: "Babel may be of interest to us on account of the Bible, but the significance of the Bible does not lie in what comes from Babylon, but in that which is independent of Babel, that which goes beyond Babel, and which is directed against Babel."

Cornill, himself a critic of critics, declares that Delitzsch's view is "an exaggeration of the importance of Babel at the expense of the Bible, and theologians should vigorously protest against this position."

Catholic as well as Protestant scholars are participating in this debate and are vigorously defending the original character of Genesis. The most important contribution from Catholic sources is that of Dornstetter, found in Bardenheuer's *Bible Studien* for 1902 (Nos. 1–3), in which the historical character of Abraham and the early records of Genesis are defended with great learning.

The same revival of conservative criticism is also to be observed in the New-Testament department. The special occasion has been the publication by the neo-Hegelian philosopher, J. Kreyenbühl, of Zurich, of a work in which he seeks to revive the old heretical view of the fourth Gospel as the product of the Gnosticism of the second century, and of the Valentinian "Gospel of Wisdom" as the writing of the Samaritan Gnostic Menander. The title of Dr. Kreyenbühl's book is, "Das Evangelium der Wahrheit." His radical views have met with determined opposition all along the line, the most important of the replies being from Professor Barth, of Bern (*Literatur-Bericht*). Here, again, several Catholic theologians deserve special mention for their defense of conservative views, especially Camerlyngk, of the University of Louvain, and his Latin work entitled "De Quarti Evangelii Auctore."—*Translation made for* THE LITERARY DIGEST.

THE FRENCH REPUBLIC AND THE RELIGIOUS ORDERS.

THE law of associations and the disturbances attending its enforcement still furnish the burning topic of the day in France. Under the provisions of this law, which went into effect last June, between 2,000 and 3,000 religious establishments have already been closed. Roman Catholics in all countries are greatly incensed by what they deem the injustice of this policy, which they interpret as an attack of free-thinkers upon religious liberty. M. Ferdinand Brunetière, the editor of the *Revue des Deux Mondes*, in an article published in his magazine and reprinted by *The Messenger* (Rom. Catholic, New York) declares:

"What we claim, and what is being denied us, is the right to teach such ideas as we believe to be just. Of the different systems imbibed by the minds of men and consequently swaying humanity, we demand the right to make our choice, to assign reasons therefor, and, through either verbal or written instruction, to make these reasons prevail. It is this right which, for years past, has daily been outrageously violated, and if there be none more essential to liberty of thought, surely it is this right which we must obstinately defend. Other rights are no less precious, other liberties are no less necessary, but they do not interest us so directly. It might be said that liberty of the press concerns none but journalists, and liberty of speech none save orators or holders of conferences; but to say so would be wrong. Nevertheless, it could be, in fact it has been, said, and I have known men who thought it and whom it was difficult to make realize that they were at fault. But there is not a father, a mother, nor a son who is not directly and personally interested in the question of liberty of education. There is not one of them who would not feel his rights infringed upon, his liberty encroached upon, and his personality slighted if he could not choose his school, his masters, and his guides. There is not one of them but understands what tyranny would be exercised over thought, if ever teaching were to become the monopoly of the state and consequently of a party, or, even worse, a majority.

To-day the congregations are being expelled, to-morrow it will be those who will have been inspired by the spirit of the congregations; that is to say, by the true Christian spirit; and the day after to-morrow it will be all who, not thinking in accord with the majority, will thwart its prejudices, combat its doctrines, and thereby deprive it of the suffrages which have made it a majority."

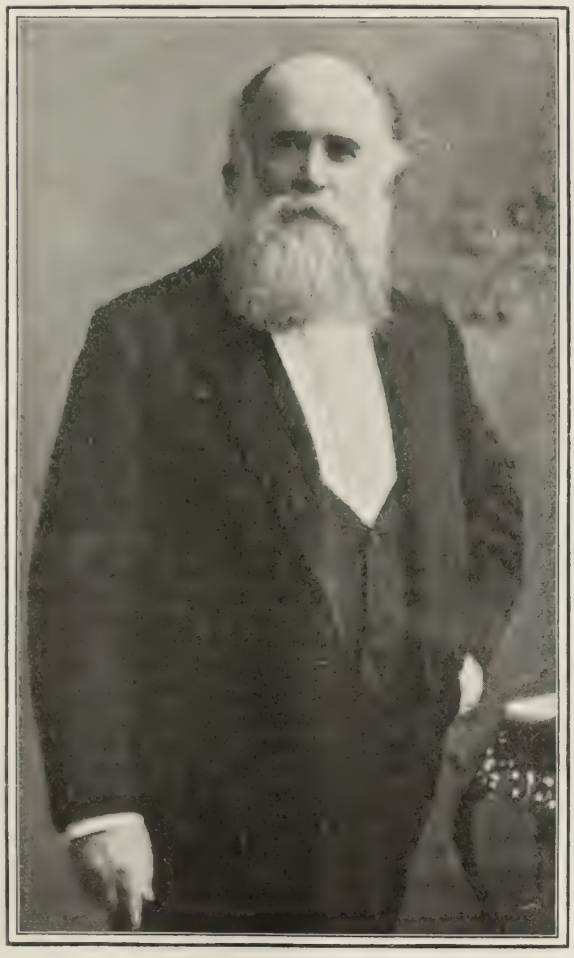
La Revue (Paris) discusses the situation as follows:

"The ancient faith is shaken, the old dogmas are crumbling to dust beneath the systematic attacks of the priesthood itself. And we have been for some years spectators at two dramas of equal interest. On the one hand we have seen priests set on being priests in spite of everything, preparing to found a new church which shall in certain essential points contradict the old church. Elsewhere we have under our eyes priests whose number is every day increasing who, in natural consequence of principles which their reason no longer would let them deny, leave the priesthood.

"In the presence of this crisis, so deep that it attacks the very heart of the church, the very sources of its life, the expulsion of the priests and nuns is a very small matter. At the most the Pope could see in this only the usual 'persecutions.' . . . People are astonished that at the present time he is silent, that he does not join the party for the defense of the congregations, that he does not thunder against Minister Combes and the Republican majority. It is because he has other cares, and graver ones. He is asking himself what is becoming of Roman Catholicism, and in particular what Rome and the authority and infallibility of the Pope will count for to-morrow in what shall remain of the church in France."

M. Georges Clemenceau, of the French senate, contributes a comprehensive article to *The National Review* (London), treating the question from the point of view of one in sympathy with Minister Combes's policy. He says:

"History shows us that in all times, even under the most devout monarchies, there has been a struggle between the civil government and the religious orders, which are *par excellence* the political instruments of the theocracy. To-day the struggle rages round the right of the congregations to teach, which has seemed to our politicians the most serious issue, and every one can see that some of them are prepared to compromise the general right to teach in order to ward off the immediate danger, and to rescue civil society from the Clerical reaction. But every one who stops to think can not fail to see that the danger lies far less in the doctrine taught by the orders, which is after all identical with that taught by the church herself of which no one demands the suppression, than in the political and social interests of which the orders are the center. Our great and little *bourgeoisie* seek education in the schools of religious orders far less on account of the doctrine which is taught there (which is also taught, be it remarked in passing, to the child of the lay schools by the *curés* in the church) than for the advantage of the protection of a powerful corporation, which can secure the child a profitable marriage and assist him at every stage in his worldly career. In proportion as faith declines, the political strength of religious orders which have lost their spiritual restraining influence becomes more and more powerful and more and more strenuous in its attacks upon the *régime* of liberty. But as soon as we get rid of this organ of theocratic oppression, which the need for assuring individual rights shows to be incompatible with the institutions of liberty, what valid reason is there to restrain, to the detriment of the church, the liberty to teach, or any other part of the legitimate liberty to think and act? Every citizen will have the same right to liberty. What can the church want more? The right to live in common for prayer and teaching? She will be able to exercise this right also by means of civil societies, in which the rights of every individual will be guaranteed by the law instead of being crushed as at present in the congregations. And what more? The one liberty which is not permissible is the 'liberty' to abolish the human personality, or, in other words, the liberty to kill liberty. Devotion and charity, which are the noblest traits of our nature, will have free play, but in accordance with common rights, and in an open manner under the sanction of liberty, not in a political interest hostile to progress and 'liberalism,' and to that modern civilization which, tho condemned by the Syllabus, is precisely what we desire to safeguard. The conflicts between the church and civil society have hitherto produced in every nation anxiety, agitation, perpetual instability, and the rebellion of the individual conscience against the theocratic power—or the violence of arbitrary acts. People will only find peace, and the forces of humanity can only be properly harmonized, in the recognition of fundamental rights of the individual, thus merging all autocratic powers in a common liberty."



JOHN ALEXANDER DOWIE.
He is planning a crusade upon New York next October with 2,000 of his followers.

DOWIE'S COMING INVASION OF NEW YORK.

THE announcement that John Alexander Dowie, the famous faith-cure apostle of Zion City, Ill., is planning a "peaceful invasion" of the city of New York next October, with a large company of his followers, is the subject of comment both serious and flippant in the metropolitan newspapers. *Harper's Weekly* describes the main features of the proposed crusade in the following language:

"John Alexander Dowie . . . is likely to prove an interesting visitor to this town. He is an organizer, and abounds in method and foresight. He has ample means to do things in a large way. His plan is to bring 2,000 (perhaps 4,000) of his followers here, and give his kind of religion a careful and comprehensive introduction to the people of Manhattan. Every family on this island is to be visited; every dwelling supplied with Dowieite tracts; every soul, so far as possible, invited to the Dowieite meetings. These meetings are to be held daily in the Madison Square Garden, which has been hired for fifteen days. Special trains have been engaged to bring the Dowie multitude here, and lodgings are being engaged for their accommodation. Dowie is rich. He is in business, and makes money. He has founded a town which has grown in less than two years from a population of 400 to 8,000. The Dowieites do not smoke nor drink nor employ doctors, and they all give a tenth of their incomes to the church. They are busy now practising the music of their crusade and studying maps of Manhattan. Dowie frankly discloses his belief that in him the prophet Elijah lives again for the third time on earth. He is a remarkable citizen, and will doubtless carry out his plans."

If Mr. Dowie "could only convert and carry off the hosts of

Tammany," observes the Brooklyn *Standard Union*, "he would indeed deserve to have his name handed down to posterity as the monumental reformer of the twentieth century and New York's greatest benefactor." The Brooklyn *Eagle* adds:

"There will be a good deal of curiosity to watch his progress in New York, which is confessedly a hard town for new religions, altho it gives its time and its money with enthusiasm to new shows so long as they are entertaining. Fanatics who have made a stir in small communities have often been swallowed up here, and have left us in disgust. A few years ago Schlatter, a natural healer, who had cut a wide swath in the Colorado mountains, came here, and lasted perhaps a week. Last year Sandford, the 'Holy Ghost and Us' leader, departed in disgust after he had baptized his first group of converts in the chilling waters of the bay. But Dowie is of different stuff."

The New York *Sun* says:

"It is not improbable, but rather it may be assumed that the demonstration of Dowie will make something of a stir in New York, tho that he will have here even a shadow of the extraordinary success he has won at Chicago is not to be expected. New York will receive the 'Restoration Host' civilly, and Dowie will be sure to have crowds at his meetings in Madison Square Garden; but this cosmopolitan community is not a promising field for the cultivation of religious novelties. Of the church-going population, two-thirds is Roman Catholic, and therefore far removed from the reach of Dowie's influence; but there are here 636,000 people without any religious attachment, according to the statistics of the Church Federation, and among these he may hope to gain recruits."

How Mr. Dowie himself regards his campaign may be judged from the following extract from a recent editorial in his weekly organ, *Leaves of Healing* (Chicago):

"The amazing scale of the Excursion of Zion Restoration Host, and the fact that we have taken the Madison Square Garden Auditorium, which seats 16,000 people, and all the rooms connected therewith, has made a profound impression.

"The general interest, which we have known for years that thousands in the East have felt in us and in our Mission, has found very remarkable expression in New York City. . . . . .

"We know that the enemy is strong, but God is stronger.

"We know that the hosts against us are numerous, but we know that all the Hosts of Heaven are with us.

"The chariots are swinging low at the command of Jehovah-Sabaoth, Jehovah, God of Hosts.

"We are glad that thousands will accompany us from Zion City, at the end of the many months of toil that lie before us, going forth to reap with us in God's great Harvest Field at the time of harvest. . . . . .

"The first great Requisite for success is that every good soldier shall seek Divine Purity in Spirit, Soul, and Body.

"If we are to endure hardship as good soldiers of Jesus the Christ, whilst upon this great work of Restoration in New York, every one must remember that for the time being all 'Entanglements' from the Business Affairs of this life, as far as possible, must be laid aside; for, as the Apostle Paul wrote:

> No Soldier on Service entangleth himself in the affairs of this life;
> That he may please him who enrolled him as a Soldier.
> And if also a man contend in the games,
> He is not crowned, except he have contended lawfully.

"It is of the utmost importance that every member of the Legions of Zion Restoration Host shall set aside, if it be possible, the whole of the Fifteen Days for this First Great Operation in which the Host is to engage in New York.

"Like Soldiers who are also Citizens, and who lay aside the duties of life that they may go into the Camps and drill and learn how to fight successfully, so Zion Restoration Host must prepare, and then, leaving home and friends and all, they must mobilize, as it were, rapidly into one Great Unit with One Heart and One Mind in the greatest City of this Continent.

"We have many plans concerning the operations of the Host beyond this Mission in New York, and there is a desire upon the part of some for us to visit Philadelphia after the New York mission.

"We do not feel it well at this time to decide between the rival claims of several large cities.

"We are somewhat inclined, if it can be arranged satisfactorily, to give one or two weeks either to Boston or Philadelphia, or divide our time between them."

The fame of Zion City has reached even to Europe; and in *La Revue* (Paris) M. L. de Norvins gives a picture of Dowie and his religion as they appear to a Frenchman. He points out how susceptible Americans are to new religious movements, and passes in review the various religions, such as Mormonism, Christian Science, etc., that have thriven in this country. "John Alexander Dowie," he says, "was called upon to choose between the methods of his predecessors. He would not have made the choice that he did unless he had found a hitherto unworked field and one which is assuredly the most American that could be developed." We quote further:

"With remarkable sagacity, he seized the psychological moment to appear in the United States as both the Barnum and the Pierpont Morgan of religion. It was an idea of undoubted genius to have chosen as aids to religion the great factors of American life—commerce, industry, and financial speculation, that tripod on which the whole Union rests. A commercial, industrial prophet who was a man of affairs, an organizer of enterprises paying fabulous dividends—such a one could serve the glory of God and solidify his temple in a thoroughly up-to-date Yankee style. Is it not a master-stroke of Americanism that a man who proclaims himself the direct representative of God on earth should be accepted as such not only because of his pretended Messianic qualities, but also because he is the man who understands better than any one else the fluctuation of values, as well as the heights and depths of the human soul? . . . . .

"God has confided—such is the creed of Dowie—to a man called Dowie not only the mission of watching over the souls of the faithful, but over their money as well, their savings, and the manner in which they use them, so that the new vicar of the Most High is at once the guide of purses and of consciences. This guide is invested with autocratic powers, and like an autocrat he enjoys the splendor and the pomp and wealth of a sovereign."—*Translation made for* THE LITERARY DIGEST.

RELIGIOUS NOTES.

THE well-known Baptist paper, the Chicago *Standard*, celebrated a few days ago its fiftieth anniversary.

MRS. TATTA, a French lady living in Bombay, has been formally invested with the Sacred Thread and the "Sudra" of the Parsees. The London *Times*, which reports the incident, declares that this is the first recorded conversion from Christianity to Zoroastrianism.

A MOST successful public meeting was held in the Brooklyn Academy of Music on Sunday, March 8, in the interest of the proposed Henry Ward Beecher Memorial. The speakers included ex-President Grover Cleveland, Justice David J. Brewer of the United States Supreme Court, Mayor Low of New York, the Rev. Dr. Frank W. Gunsaulus of Chicago, and the Rev. Dr. Newell Dwight Hillis, present pastor of Plymouth Church, Brooklyn. After the speech-making, pledges for more than $18,000 were received from the audience.

THE REV. HARRY M. WARREN has resigned the pastorate of a Baptist church in New York to become the official chaplain of the New York hotels. In all the large hotels neatly printed notices have been hung in conspicuous places, reading: "Guests, patrons, and friends of this hotel wishing the services of a clergyman are respectfully informed that they may call upon Rev. H. M. Warren, the hotel chaplain. He will be pleased to render any kind of pastoral service, regardless of creed, nationality, or residence. Calls may be sent any hour of the day or night."

IN connection with the department of sociology at the University of Chicago, a special investigation is being made of religious work on behalf of young men. The results are to be published in book-form, and in order that the volume may be comprehensive and of real service, facts and suggestions from pastors, superintendents, and other church workers will be welcomed. Information as to books and magazine or newspaper articles bearing upon the subject is also desired. All letters on this subject should be addressed to Mr. F. G. Cressey at the University of Chicago.

THE judgment of the final Court of Appeals of Prussia sustaining the action of the Berlin authorities in prohibiting Paul Heyse's sacred drama, "Mary of Magdala," has aroused some resentment. The Berlin *Vossische Zeitung* points out that the play has exercised a deep religious effect in America and England, and in the former country performances have been attended by bishops. Performances have also been given in Bremen and Hamburg which were attended by the clergy and laity who testified to its religious effect. The same paper goes on to say: "But what is permissible in Bremen and Hamburg is not permissible in Prussia, especially in Berlin. This is the favored land of censure. Here must religious feeling be more zealously protected by the police than elsewhere."

FOREIGN TOPICS.

THE SULTAN'S ACCEPTANCE OF MACEDONIAN REFORM.

THE Sultan surprised Europe by his immediate acceptance of the scheme of reform for Macedonia presented by Austria-Hungary and Russia. The scheme provides for the appointment of a dignitary to be styled "inspector-general," who will hold office for three years and whose responsibility to Turkey will be only nominal. The soldiery and police will be officered in the higher grades by nominees of the two cooperating Christian Powers. Rural police will be recruited in the village they protect. Albanian excesses are to be putdown. Political amnesty will be granted and the finances made scientific. The Sultan's acceptance of these things has been so graceful that Macedonia is practically reformed on paper. The Austrian press says everything is settled, but this view is inspired by a Government that wishes to minimize the complications. The *Fremdenblatt* (Vienna) says:

FURID PASHA.
The Sultan's new Grand Vizier, who is said to be a reformer.

"The plans to which Turkey has given approval constitute a definite achievement. The Powers will see to it that they are given effect. The proceedings of the Turkish officials are to be under the supervision of the foreign representatives. The combined action of the Powers attests Europe's good faith in taking matters in hand. The honest cooperation of all should bring about a pacific conclusion of an affair which, if conducted along other lines, might have a grave outcome."

The official charged with carrying out the reforms will be fully sustained, says the *Neue Freie Presse* (Vienna), but the *Zeit* (Vienna) is more reserved and prefers to suspend judgment altogether. The official Russian press is optimistic, but the *Sviet* (Odessa), a Panslavist organ, says Germany is guilty of double-dealing, siding secretly with the Turk. The *Journal des Debats* (Paris) hopes that Bulgaria, Servia, and other states will refrain from rash action that would uselessly complicate the crisis. The *Male Novice* (Belgrade) says the Macedonian Christians should await the outcome of the reform scheme before taking revolutionary action. English opinion is very much divided. The London *Times* remarks:

"The Sultan has lost no time in signifying his assent to the scheme of reforms for Macedonia drawn up by Austria-Hungary and Russia and indorsed by the other Powers. . . . The condition of Macedonia makes immediate and effective action imperative in the interests of the Turkish empire, quite as much as in those of the inhabitants of that unfortunate province. Abdul Hamid might perhaps have been slow to recognize the fact had he been left to his own unstimulated reflections; but, fortunately for him and for his subjects, the Powers have spared no efforts to bring home to him the real situation, and their inflexible resolve that the steps which they recommend shall be taken to amend it. Abdul Hamid possesses much natural shrewdness and a wide and varied experience of diplomatic intervention to promote the better government of various categories of the inhabitants of his empire, and there is some reason to hope that this time he sees the imperative necessity of prompt compliance with the demands made upon him. His conduct on many past occasions has, of course, made it impossible to place implicit confidence in his promises to carry out reforms of any kind, unless he clearly perceives that it is his plain interest to do so. But he has sense enough, we trust, to know that in this instance his best policy is to fulfil his pledges in the spirit as well as in the letter, and to begin fulfilling them at once."

But he will not "begin fulfilling them at once," according to *The Daily News* (London):

"We therefore venture with all the earnestness of an unalterable conviction to urge upon the Porte the inevitability of Macedonia's liberation. Whatever happens, there can only be one end, be it soon or be it late, and that end must be autonomy—a real autonomy, like that enjoyed by Lebanon and Cyprus. But it will be the universal prayer of Europe that the prelude to the autonomy may not be a further deluge of blood."

Meantime the stories of Macedonian wrong and outrage that are pouring into London greatly perturb public opinion. It has been necessary to speak with great lack of reserve in order to convey an adequate idea of the situation. Thus Dr. E. J. Dillon, writing in *The Contemporary Review* (London), raises the curtain on a stage of horrors:

"Some episodes of this awful exodus can hardly be reproduced in an age and country wont to eschew the use of the horrible and loathsome, even in the ennobling service of humanity. But some of the less distressing examples of Turkish methods should find a place in any account of Macedonia which can justly lay claim to historical accuracy. One of the women in Dubnitsa, who seemed more dead than alive, was asked by the kindhearted lady why she looked so utterly crushed in spirit, now that the danger had passed, and life, at any rate, was safe. Amid tears and sighs and convulsive quiverings of the body, the poor creature told the sickening story of how her brother had had his head cut off before her eyes, after which she had to stand by while the ruffians chopped up his body into fragments. Several witnessed the agony of their tender daughters, children of from ten to thirteen—and heard their piercing cries as the men who wore the Sultan's coat subjected them to nameless violence. Numbers of children succumbed to these diabolical assaults, their last looks being turned on their helpless parents or their smoking homes. In one place two children—one aged eighteen months, the other four years—had their skulls split open by the soldiers. Other little girls and boys were deliberately and methodically tortured to death, while a place was assigned to their fathers and mothers where they were forced to listen to the agonizing screams and watch the contractions of the tender bodies each time that the once pretty faces were slowly lowered into the fire into which Turkish pepper had been plentifully scattered. This is in truth a form of torture which only a devil could have invented; for long before death releases the tiny mite, the eyes are said to start from their sockets and burst."—*Translation made for* THE LITERARY DIGEST.

TURKISH REFORM IN MACEDONIA.

The Sultan's conception of how it is to be accomplished.
—*Fischietto* (Turin).

THE GENERAL ELECTION IN GERMANY.

COUNT VON BALLESTREM, president of the German Reichstag, has announced that the general election throughout the empire is to take place next June. The news has plunged all the parties into a fever of excitement, and to all appearances the political campaign will be the most animated Germany has ever known. Three elements seem destined to play leading parts in the struggle. First in numerical strength at the polls are the Social-Democrats. Next is the Center or Roman Catholic party, which is the strongest group in the present Reichstag, owing to the under-representation of the towns. Finally there is a discordant group comprising four parties—the National Liberals, the Conservatives, the Freissinige (radical popular), and the Free Conservatives. Strong efforts are making to combine the "bourgeois" parties against what is styled "the Socialist peril," but nothing promising in the way of results has yet been achieved in this direction. "William II.'s violent attacks upon the Democrats," observes the *Indépendance Belge* (Brussels), "and the incidents following Krupp's death have given great prominence to the Socialist movement in Germany":

"The Socialists therefore have nothing to fear from the coming appeal to the voters, the result of which, from the very nature of things, can only be favorable to themselves. Things are different, unfortunately, with the Liberal groups, which have failed to maintain their policy in the legislative session now ending. They have compromised themselves too much with the Roman Catholic Center and the Conservatives. In the tariff controversy they were the first to range themselves on the side of Count von Bülow, and they did not succeed in obtaining any recompense from the Chancellor, as the Clericals did. The Liberals, especially the National Liberals, will be the losers by the elections, and they will find their numbers reduced between the forces of Conservatism and Socialism. The political campaign that will not be slow in developing throughout Germany will be an interesting one to follow, for it will show us the precise extent to which the Government at Berlin is in conflict with the ideas and sentiments of the nation."

The Prussian agrarians are also greatly discontented with the Government because of the new tariff, says this exponent of Liberal opinion. "The country aristocracy have not forgiven Count von Bülow for his failure to give them entire satisfaction, and they will be as hostile as the Socialists themselves." Some confirmation of this view is afforded in the comment of the Conservative agrarian organs. They criticize Chancellor von Bülow severely and hold aloof from the movement for a combination of parties against the Socialists. The *Kreuz Zeitung* (Berlin) says that "much as we may sympathize with the view underlying this idea, we must confess that we can see little promise of practical results from it." The *Hamburger Nachrichten*, an organ of militarism, says:

"Preparations for the Reichstag elections next June have begun unusually early. But the impression derived from the views pouring in on all sides is one of absolute chaos. Everywhere one misses the guiding hand of a strong and purposing government—a thing more essential, in the split-up of our politics, than it is in any other land. What is Count von Bülow's electoral program? Friend and foe ask this. Nobody can give an answer. Two or three months ago the Government seemed to be having a political policy forced upon it. No less a person than the Emperor gave it utterance when, in his speech at Breslau, he demanded the emancipation of the working classes from Social-Democracy. In the Reichstag the struggle was all waged over the tariff that brought a strong majority together to resist the Social-Democrats. Had the Government made the Breslau speech its own, it would not now have a following to seek. It would have had a powerful combination of parties behind it from the beginning."

The various non-Socialist parties are so distrustful of one another, observes the *Kölnische Volkszeitung*, a Clerical organ, that any combination of them is practically impossible. The *Deutsche Tages-Zeitung* (Berlin) doubts if the projected combination would accomplish anything. The *Vossische Zeitung* (Berlin) says the party confusion is so great that the issue about which the political conflict will rage is uncertain, altho it takes it for granted that popular discontent with the new tariff will enter largely into the campaign. The Socialist organs are generally agreed that their chief enemy is the Roman Catholic Center. The Socialist *Vorwärts* (Berlin) dwells upon this point with emphasis. Not one party organ ventures to make a prediction regarding the result of the election.—*Translations made for* THE LITERARY DIGEST.

AT THE COURT OF THE NEGUS.

WITH emotions amid which mortification and amazement contended for the mastery, the French minister to Abyssinia learned officially that "he had better return at once to his own country," because Menelik would have "no more relations with him." M. Lagarde, the gentleman thus curtly treated, sustained a shock as severe as that of Beau Brummel when he

COUNT VON POSADOWSKY.
The most conspicuous participant in the tariff struggle.

PERSONALITIES THAT FIGURE IN GERMANY'S ELECTORAL CAMPAIGN.

fell out with his fat friend. M. Lagarde, it should be explained, had not recently sustained with Menelik relations of the delightfully personal kind understood to subsist between the German representative in Washington and the President of the United States. A coolness arose in Abyssinia on account of a railway line which the French Government is pushing through Menelik's dominions. The French have incorporated the enterprise and the authorities in Paris disclaim all official connection with it, but the Negus continues suspicious. The following extract from a recent article on Abyssinia in *The Nineteenth Century and After* (London) may throw light on these suspicions of Menelik's:

"Through Abyssinia the French hope to establish a line of trade across Africa from east to west in opposition to our Cape to Cairo railway from north to south. In this they have already achieved some success. They have settled themselves along the Gulf of Tadjoura, on the south of which they hold the magnificent Bay of Djibouti, while on the north their flag waves over the small port of Obok. But their real triumph in these regions has been the establishment of a lasting friendship with Abyssinia by judicious consignments of arms and ammunition which were used against Italy in the war of 1896. Finally, they are now in the act of building a French railway from Djibouti to Addis Abeba, the capital of Abyssinia. This railway will completely cut out the British port of Zeila, for in the concession granted by Menelik it is stipulated that no company is to be permitted to construct a railroad on Abyssinian territory that shall enter into competition with that of M. Ilg and M. Chefneux."

An impressive idea of Menelik's power and importance is conveyed in the same article:

"Its population, the major portion of which is Semitic in blood, consists perhaps of 10,000,000 inhabitants, and its army of about 400,000 men. These are the highest estimates. In 1896, when Menelik made a public appeal for volunteers against Italy, it is said that 200,000 men answered his call to arms. But since then he has increased his territory and improved his organization; his prestige has been enormously enhanced. It is quite possible that he may have doubled the number of his fighting-men. He has modern rifles and modern guns; even in 1896 his artillery was equal to that of Baratieri, tho not so well served. Anent this last point, a characteristic story is told by an Italian officer who while hostage in the Shoan camp was asked by a chief to explain some points relating to the service of artillery. On his refusing the Balambaras merely remarked, 'Never mind. We have learned to use modern rifles, and we shall soon learn to use modern guns.' It seems that they have done so."

All this was written prior to the painful communication which Menelik felt called upon to make to the French minister. So, of course, was what follows:

"At Menelik's capital, Addis Abeba, there is, to use the expression of M. Hugues le Roux, a silent duel in progress between the representative of the various nationalities. We [the British] are represented by Colonel Harrington. But, altho Menelik is wise enough to extend a friendly greeting to all, there is no reason to suppose that we should enjoy as great a share of favor as other nations. Altho throughout the war we preserved a strict neutrality, we are regarded as a powerful and aggressive neighbor, and as the ally of Italy, whereas the French have been the truest friends of Abyssinia. The Russians are also in communication with the Negus, and their efforts are, of course, seconded by France. As for the Italians, their position seems now to be as good as that of any European nation—a status which is due partly to the ability of Major Cicco di Cola, and partly to the fact that, having defeated them, the Negus is disposed to be their friend."

The French are naturally disconcerted by the unfavorable position in which their representative has been placed by Menelik's action. According to an article in the *Patrie* (Paris), "the English have taken advantage of King Menelik's dissatisfaction. They convinced him that the French meant to annex the region through which the railroad runs. The Negus thus became hostile to M. Lagarde and ourselves. In due time we shall have to cease operations on the railroad or face war. Meanwhile, Abyssinia is in the hands of our enemies, the English, as well as in the hands of the Italians." The *Temps* (Paris) thinks the rumored discord in Menelik's French relations may be exaggerated and in any event the incident is perhaps personal, affecting only M. Lagarde, who has been losing favor with the Negus lately. The *Kreuz Zeitung* (Berlin) calls attention to Russia's sudden interest in Abyssinia. Russia's naval position in the Red Sea would be immensely improved by an understanding with Menelik. British interests must inevitably conflict with Russian interests in Abyssinia:

M. LAGARDE,
The French Minister in Abyssinia, who has been told by Menelik that his room is more desirable than his company.

"The English and the Russians may lose patience in the end and come into serious collision. But this is not probable. The only thing likely to occur now is renewed diplomatic activity in Addis Abeba. Thus questions may be opened up that may involve the most diverse European interests and ultimately occasion conflict."—*Translations made for* THE LITERARY DIGEST.

JOSEPH CHAMBERLAIN'S RETURN FROM SOUTH AFRICA.

SOME sensational announcements are expected from the British Colonial Office as a result of the return of Joseph Chamberlain from South Africa. The great questions that have to be faced by the Government include forced native labor for the mines, the proposed introduction of Chinese, self-government, federation, political amnesty, compensation for war damages, and the racial antipathy between Boer and Briton. Lord Milner, the high commissioner, who has come in for so much criticism in South Africa and Great Britain, has been fully sustained by Mr. Chamberlain. The last-named statesman left South Africa, says the London *Times*, "with the conviction that the South African problem is not so serious as has been represented, and that time only is required to eliminate racial feeling:"

"He cherished, he said, the hope that such good feeling would now prevail in the [Cape] Colony that the colonial Government might feel justified in liberating all purely political offenders who are still undergoing punishment. It is of good augury for the future relation of parties in the Cape, we trust, that this concession to Dutch feeling has been made with the entire approval of the Progressives. All they desired was that it should not be made in such a form as to amount to a confession of weakness, and this end, they believe, has been assured by the understanding that the amnesty shall not restore to the rebels the political rights which they have forfeited. The trust of the British people in Mr. Chamberlain is so great that probably they will acquiesce with readiness in his judgment in this matter. But it is quite certain that they would have regarded the step with deep misgiving had it been supported by any statesman in whom they had less confidence. It certainly is an act of generous boldness which seems to border on temerity."

The idea of conciliating the Dutch is not palatable to some British minds, which urge the planting of a large British population in the South African colonies. Thus *The Saturday Review* (London):

"The only 'conciliation' which the South African Dutch will accept, or indeed can understand, is the conciliation which consists in giving the Dutch race the political supremacy that in their mind is inseparable from their present numerical superior-

ity to the English, and from the isolated and self-contained existence of each separate Boer family. From this conception of conciliation the Boers will not depart, until they are confronted by the *fait accompli* of a preponderant British population, that has actually removed the previously existing social conditions upon which the conception was based. While, therefore, we gladly recognize the admirable temper which Mr. Chamberlain has displayed in his interviews with the Boer leaders, we do not indulge the hope that anything that he has done and said will remove the necessity for giving effect to this paramount object of British policy. If we are to hold South Africa, we must place a British population upon the land side by side with the Dutch. That is the sole method by which the amalgamation of the two races can be brought about."

But the grand problem of all is the so-called native labor question, which affects the mines and which has given rise to tons of printed matter in England since Mr. Chamberlain sailed for South Africa. The mine-owners want to tax the Kafirs so heavily that they will have to work at mining, and they also desire to import Chinese. The outcry against both courses is vehement, and yet Mr. Chamberlain is said to favor some sort of taxation of the blacks in order to get them into the mines. *Truth* (London) asks:

"Now what does all this really amount to? That forced labor should be imposed on blacks south of the Zambesi, and that a sort of slave trade should be set on foot in other parts of Africa. Mr. Chamberlain justifies both on the ground that it is a sacred duty imposed on us by Providence to teach blacks the 'dignity of labor.' Far from this being a duty, I entirely deny that we have a right to oblige any human being within the British empire to work for another, either by direct or by indirect means, on the plea of inculcating the dignity of labor, or, indeed, on any plea whatsoever. The dignity of labor was never taught by forcing a man to work."

Lord Harris, of the South African gold trust, made a sensation in London last month by declaring that Chinese should be imported into South Africa, and that the blacks should be made to work in the mines not "by actual physical compulsion," but "by offering them exemption from taxation." *The Spectator* (London) characterizes as "frankly intolerable" the "claim put forward by Lord Harris":

"We can not believe that Mr. Chamberlain and his colleagues in the ministry can contemplate acquiescence in the enactment of a system of taxation avowedly designed, not to meet any fiscal requirement, but to force the natives to work in the mines at the rate of wages which the mine-owners think they ought to be ready to accept. With whatever plausibility such a plan might at the outset be defended, there can be no doubt that it would be the entrance on an inclined plane, down which the progress to complicity in virtual servitude would be practically certain, as soon as, if not before, self-government for the new colonies were established. We are no maintainers of the political and civil equality of the colored races with the whites; but the whites are trustees for the colored peoples, and to set up a system of taxation driving them to work is to open the way to all kinds of abuses of that trust."

An organized insurrection of the blacks, extending pretty well over South Africa, is hinted at as a possibility of the future by Alfred A. MacCullah, an authority on the native question, writing in *The Contemporary Review* (London):

"Yet it does not seem probable that there could be for many years to come sufficient cohesion between the native races to unite them in a formidable army to dispute the white man's sovereignty. Even granting this, the fact remains that they are practically unarmed. But it may be remarked that some British subjects have not in past years been above making their fortunes by 'gun-running'—that is to say, by selling arms to the natives which the natives afterward used against the British forces. Now if British subjects have done this against their own Government, it seems possible, even probable, that foreigners may do the same thing. The British empire is now the paramount Power in South Africa, but without the approval, or anything but the sullen acquiescence, of the European nations. There are many Germans and Hollanders who have played losing parts in the latest South African drama, who would not be above spoiling so far as they could their great enemy's reward of victory. As the British were not opened-eyed enough to put a stop to the arming of the Dutch republics, one may be inclined to think that the secret arming of the South African native races might not be an impossibility. Even should the natives be beaten down, as no doubt in the end they would be, in any rebellion to which they might be secretly urged by foreign haters of Britain, there would remain the question of their future treatment. This would offer many occasions for serious disagreement between the imperial Government and the various colonial governments or that of the South African confederation (when it comes into being), even so great as to end in the defection of South Africa from the empire."

POINTS OF VIEW.

DJAMBI.—"The kingdom of Djambi is in the island of Sumatra, and is described in *Nieuwe Tijdingen* (Amsterdam), which says that the natives refuse to recognize Dutch supremacy. The result has been a series of sanguinary conflicts extending over many years. The country is comparatively unexplored. Djambi is half as large again as Holland, which can never cease its work of pacifying the land until the task is completed.

A JAPANESE RURAL EXODUS.—The rural portions of Japan are being depopulated by a rush to the cities, says the *Shakai Zasshi* (Tokyo). Intelligent young Japanese desert the farms in the hope of making their fortunes in Hakodate, Osaka, Kobe, and other cities. The diffusion of education has led the countryman to think that his lot is a sad one. So he flocks to the city in a discontented frame of mind. This means a grave social problem in the future.

KITCHENER IN INDIA.—"The military situation in India is somewhat behind the times at present," says *The Fortnightly Review* (London). "The appearance of Lord Kitchener on the scene is therefore specially opportune. For he largely owes his present fame and reputation to the fact that he has proved himself in the past a really great organizer, and that is exactly what India at the present moment most requires. The opinion, too, of a victorious general, fresh from a series of unbroken triumphs in the Sudan and South Africa, will necessarily carry with it far greater weight than those of his immediate predecessors, and there is consequently much reason to hope that some of the weak spots in India's armor will be promptly dealt with."

NOTABLE BOOKS OF THE DAY.

THE HUMOR OF MRS. WIGGS.

LOVEY MARY. By Alice Hegan Rice. Cloth, 4⅞ x 7⅛ in., 197 pp. Price, $1.00. The Century Company.

THE author of "Mrs. Wiggs of the Cabbage Patch" has not, it seems, exhausted all the literary possibilities of that more or less delectable locality. Lovey Mary comes before us as an unloved girl in a charity institution, but she soon runs away, taking with her a baby boy she has had the care of, and they find the Cabbage Patch and take root there. Mrs. Wiggs is another demonstration of the great advantage of humor over wit in the point of popularity. The Cabbage Patch abounds in humor (in both books), but the wit is scanty. The humor is broad and obvious, and gives all of us, even the dullest, a capital chance to laugh at somebody who knows less than we know. That is one of the secrets of the perpetual charm of Dickens's humor for multitudes who care nothing for Thackeray, of Samantha Allen's vogue where John Oliver Hobbes could never gain a hearing. There is something besides the broad humor, however, to account for the popularity of Dickens's humor, or Samantha's or Miss Rice's, and that is the ethical purpose underlying the humor. Mrs. Wiggs persists in seeing the good points of human nature, and compels everybody to do his or her best to justify her good opinion. "As for the children," she says, "I always did use compelments on them 'stid of switches." Lovey Mary herself gives us the ethical purpose of the whole story in the following: "I was awful mean when I come to the Cabbage Patch; somehow you all just bluffed me into being better. I wasn't used to being bragged on, and it made me want to be good more than anything in the world." There's a good, wholesome, workable, every-day philosophy in that, and when you can learn philosophy and at the same time have the gratification of laughing at the philosopher (instead of being laughed at), it leaves you in good spirits. For it is the same philosophic Mrs. Wiggs who rushes up to the car-platform where Lovey Mary stands, about to start on a journey to Niagara Falls, and who holds out an empty bottle and shouts breathlessly: "I want you to fill it for me. Fill it full of Niagry water. I want to see how them falls look."

ALICE HEGAN RICE.

A NOVEL THAT ENDS IN AN INTERROGATION POINT.

JOURNEY'S END. By Justus Miles Forman. Cloth, 5¼ x 7½ in., 240 pp. Price, $1.50. Doubleday, Page & Co.

ON the paper cover of this novelette are two charming young ladies, labeled respectively "Molly" and "Miss Evelyn Berkeley," and the choice of one as bride is declared to be "the Lady-or-the-Tiger" sort of problem in "Journey's End." Miss Berkeley is a ravishing young actress who has made the success of Calthrop's play, and "Molly" is the Honorable Miss Something of Hartwell Towers, with whom he had been terribly chummy until he was left a destitute orphan with only a hundred pounds a year. Then he came to America to earn his living. He writes his play "Journey's End," and leaps at once into fame and a bank account. Then too—"it never rains but it pours," even more in novels than in life—he rapidly falls heir to an earldom and a dukeship, with "money to burn." At this time the Lady-or-the-Tiger character of the story begins. Which lady shall it be? To bear out the publisher's luring insinuation of stimulating mystery, the author concludes his story with Calthrop heading across Madison Square to the sub-post office, holding a letter "which he had written carefully in one hand" (a comma after "carefully" would have done no harm!), "but its face was turned inward so that it could not be seen whether the stamp on it was for foreign or domestic carriage." (If the face was "turned inward," by the way, we are afraid the letter never reached its destination!)

JUSTUS MILES FORMAN.

As Evelyn, the actress lady, had sent him the most encouraging note that morning, and had requested him to call at four that afternoon, its "dollars to doughnuts" that the letter had stamp payment for a transatlantic passage. Had he decided to throw his handkerchief at Evelyn, Calthrop had been in America a year, and would have called her up on the 'phone to say "he would be round sharp at four."

"Journey's End" is light and bright. Mr. Forman, its author, is a young man who, like young Lochinvar, has come out of the West. He is of Minneapolis, writes quite a little like Richard Harding Davis, and like him, has achieved a pleasant grasp of English as spoken "smartly" in London. Evelyn on one occasion looked for Calthrop and found that he was "quite gone." Sometimes the cherishing of English amenities of speech and garb are slightly to Mr. Forman's undoing. Even a young Britisher arrayed in the morning raiment of a Piccadilly would hardly arrest a game of baseball because the "kids" playing it were rapturously diverted by the spectacle.

Calthrop, while so keen as to know when people who have passed him turn to regard him, without looking back himself, has this to say about New York men: "They seemed undersized for the most part and very pale and anemic. They walked badly as if not used to exercise, and their clothes were dreadful, Calthrop thought. Such coats upon such figures!" Yet there are those who think New York men of rather good presence, with signs of plenty of blood and dressed in good taste. The author makes a very manly, interesting young fellow of Calthrop, tho he does not steer him through his love affairs with a very consistent care.

A WOMAN WITH A BAR SINISTER.

LADY ROSE'S DAUGHTER. By Mrs. Humphry Ward. Cloth, 5 x 7½ in., 490 pp. Price $1.50. Harper & Brothers.

A COUNTRYWOMAN of Mrs. Ward once remarked very truly that "one very special feature noticeable in Mrs. Ward's novels is, not only that they have a good deal to give the reader, but that they also demand an unusual amount from him in return. People who read for amusement, or distraction only, do not, as a rule, greatly care about them; the fact of the matter being that unless they do more than merely pass the time, they seldom do so much."

MRS. HUMPHRY WARD.

Mrs. Ward in this novel comes more within the scope of those who read for pleasure only than ever before. Not that this close and lengthy study of a remarkable young woman whose temperamental parents were not united in marriage is something to be lightly skimmed and indolently savored. There is brawn, subtlety, an infinity of meticulous adjusting. Even then, "Lady Rose's Daughter," taken ruminantly, does not stand forth the convincing thing her creator desires. The odd amalgam of heredity, temperament, passion, and femininity which she is must, even under a master-hand at portraiture, have some nebulosity, despite the fact that Mrs. Ward's strongest trait is a vivid, tho varied, potency of characterization. The majority of her humans are as sharp-cut as cameos, individual to the finger-tips. In this novel, for instance, Lady Henry, Sir Wilfrid Bury, the little Duchess of Crowborough, as well as her Duke, are so projected that you feel that you would know them at a glance in a crowd. But Julie Le Breton, Jacob Delafield, Capt. Harry Warkworth, the three principal actors in the drama, are impressionistically limned. Notwithstanding that they are liberally annotated with devoted burrowing into "the dimmest and deepest caverns of personality," to borrow a phrase from Mrs. Ward herself, the reader is left unbalanced in his estimate of them.

There are several things calculated to make this the most "popular" of her novels: the intense love interest; the "atmosphere," which is that of the "smartest" people in London; and an important episode which most minds will apprehend as distinctly naughty!

"Lady Rose's Daughter" is introduced to the reader as Mademoiselle Julie Le Breton, *dame de compagnie* to Lady Henry, a Thackerayan type of the *grande dame*, at one of that vigorous old thing's "Wednesday Evenings." She is a three-year-old occupant of that position, and in that time has relegated Lady Henry to the position of "second fiddle" in her own *menage*. Only six persons in the London world know of the ugly bar in Julie's escutcheon. Julie meets many of her blood relations, including her delightful septuagenarian grandpapa, the Duke of Larkington (dukes are almost a commonplace in this romance), and dominates everybody, Mrs. Ward's intellect is masculine rather than feminine, and brain appeals to her more than beauty. So Julie is not beautiful. Yet she captivates all the men as the fluffy little Duchess of Crowborough could not think of doing with all her vivid white and gold prettiness and femininity. A tremendously clever editor wants Julie

to marry him, and the fine Delafield, only two fragile lives away from a dukedom, had to be refused twice. Then she must needs fall in love with Capt. Harry Warkworth. It eventually turns out that all the time he is engaged to Julie's cousin, a slight thing with an enormous fortune. When Julie learns this, her Continental training makes her recognize the need of her cousin's *dot* for the captain's career, and he has only asked for her friendship, in any case.

But after she has won for him the African post he desires and he is parting with her forever, love gets the better of them both, and he proposes that she meet him in Paris and he will take her to a dear, green, woody little spot, and for two days they can live as love impels. Julie is twenty-eight, old enough to know the price of such pleasure, but—she consents. She is met at the Paris station on the way to keep the appointment with Warkworth, by Jacob Delafield, who has a telegram from the Duchess of Crowborough saying the Duke of Larkington is dying and wishes to see "Lady Rose's Daughter." He bears her back to England. She gets out of him that he knew what was up, and there is considerable tension, as may be conjectured.

Withal, Mrs. Ward rounds her tale to a "happy ending" without sapping its strength or interest.

"Lady Rose's Daughter" is a charming book and a clever one, and it is likely to be the book of the year.

THE CHARM OF THE SPANISH MISSIONS.

SOME BYWAYS OF CALIFORNIA. By Charles Franklin Carter. Cloth, [illegible] pp. Price, $1.25. The Grafton Press, New York.

IT is a pensive and pleasant wayfarer, a very gentle and sympathetic seeker of all that time and change have spared of the old Spanish habitations, and of the simple life and ways, who leads his reader, in these modest pages, by unworn paths among the remoter but most picturesque of the hamlets that cluster round the old Franciscan missions of California. Of the twenty-one missions which were the earliest settlements, fully fifteen grew into towns of more or less importance, some of them to be numbered now among the largest cities in the State. But the writer, with an artist's instinct for the picturesque, and a temperamental craving for the atmosphere of the old time, takes us a-rambling, fondly loafing, as it were, from place to place seldom named by the tourist, rarely visited by the sojourner.

CHARLES FRANKLIN CARTER.

He takes us to Pala and Lompoc and Purisima, Jolon and Pescadero and San Juan Bautista, and to Camulos, "the Home of Ramona,' where he shows us the house of the Del Valle family, as "H. H." had already shown it to the mind's eye of her readers—the long rows of adobe walls, the court with its vines and flowers, and its wide verandas, where the family life went on; where the women said their prayers and took their naps and wove their lace; where the babies slept and played; where the herdmen and shepherds smoked and lounged or trained their dogs; where the young made love, while "the old dozed." The only *hacienda* in the country, as Señora Coronel assured "H. H." that remained true to the life as it was before the Americans came and made havoc of the good old ways. Quiet, "deadly dull" perhaps, to some; "but there are others—and they not few," says our pensive rambler—"who are tired unto death now with the incessant, nerve-torturing of the American city with all its tumult and noise and scramble."

Unerring was the taste, the instinct, of the *padres* in the selection of the sites for their missions. Whether boldly facing the sea, or nestled among the hills, or embowered in umbrageous valleys, or snugly disposed on the shrubby bank of a stream, the same happy selection asserted itself in all; and it has become an accepted saying among Californians, that where a mission is there is natural beauty and charm. And so, for the buildings themselves, never was there a form more happily adapted to the country in which its lives were reared. These Spanish buildings, whether in fair preservation or in ruin, constitute important architectural remains—showing the culmination of the half-Moorish style.

The missions are eloquent in their decay. Let us keep them with us, so long as may be, for nothing can take their place. "Where," exclaims this sympathetic enthusiast, "is the 'Landmarks Club' of the Next to follow the brave example set by the Club of that name in Los Angeles?"

THE AFTERMATH OF THE HISTORICAL NOVEL.

FOR A MAID'S DEGREE. By C. C. Hotchkiss. Cloth, [illegible] pp. Price, $[illegible]. D. Appleton & Co.

THE tide of historical romances is receding. A good many such books are still being published, but all the signs of the times show that the public is less eager for the pageantry of the Middle Ages and the rattle of Revolutionary drums, and we may look to see our writers turning more and more to descriptions of nature and political novels or to dissecting the souls of women. Among these literary turncoats we may be sure we will find Mr. C. C. Hotchkiss, who, since the great popularity of the historical romance, has been industriously writing historical novels.

The plot of his latest work is almost touching in its fundamental simplicity. There are a brace of bad people, a villain and a villainess; a brace of good ones—a hero and a heroine. The bad plot against the good, and, needless to say, the good win. This somewhat worn-out theme is bedizened and ornamented by every kind of adventure—poisonings, arrests, treachery, duels, disguises, and for the third time this year we have a plot that hinges on the phenomenal resemblance of two of the characters. Of course the good people are supposed to be very good, and the bad ones very dreadful; but unfortunately the author has not made a very great difference between them. We are told that the villainess is quite a devilish person, but nowhere does the author convince his readers that she is so; in fact, as far as one can have sympathy for such machine-made characters, one's sympathies are rather with her than with the "maiden brave." And while the hero is not as murderous in his tendencies as his physical counterpart, the villain, he is no less of a cad. One regrets that somewhere he should not have received the thrashing which he richlydeserved.

CHAUNCY C. HOTCHKISS.

Mr. Hotchkiss has been at some pains to look up the historical data upon which his story is supposed to rest. The reader is not allowed to forget this. Foot-notes dot the pages, and the reader is informed that such and such an event was a fact, or that such and such a street mentioned in the story is now called by a different name.

Worse historical novels than this have been written and have been successful. There is probably a public which will read this with the same sort of interest with which they have read many kindred books. But, on the whole, it will make discriminating readers glad that the day of the historical novel seems to be waning again.

A BOOK FOR STUDENTS OF LITERATURE.

A STUDY OF PROSE FICTION. By Bliss Perry. Cloth, [illegible] pp. Price, $1.50. Houghton, Mifflin & Co.

THE painstaking but untutored reader who wishes to know what books he ought to like, and why he ought to like them, is more kindly treated by the writers of literary criticisms and literary analysis in this country than anywhere else. Our writers are willing, even eager, to explain every literary question however elementary, and to guide readers from the first dawnings of their intelligence. To judge Mr. Perry's book fairly, the reader must constantly bear in mind that the book is designed to instruct and guide what Mr. Perry himself calls "the painstaking reader," and not to suggest a new point of view or to serve as further illumination to the cultivated one.

It was as a series of lectures in Princeton College that the book first took shape, and the trail of the classroom is over it. For this reason, as a book for the casual reader, it will prove heavy enough. To enjoy very much of it one should study it carefully and "do" the exercises suggested. One should, for instance, be ready to sit down with a copy of "Vanity Fair," and analyze in the following manner: What is the aim of the book? the character? plot? introduction (chaps. 1–11 inclusive)? development (chaps. 12–26)? etc. The average man or woman has not time for thorough and conscientious work of this kind, and so it happens that a study of prose fiction is a work which addresses itself to a limited and rather academic audience. There are, however, passages which are suggestive and enlightening even to readers who are not eager to analyze "Vanity Fair," or pass a self-imposed examination in "Ivanhoe," and students will find it a systematic and detailed guide. The thirteen chapters, or lectures, include careful studies on the relation of fiction and poetry, fiction and the drama, fiction and science, and separate chapters devoted to the consideration of plot, setting, realism, etc. The novel is held up before the eye of the student in every possible light, and is then picked to pieces and the component parts analyzed with all the care that a botanist might give to a flower.

BLISS PERRY.

There must be roads and guides to lead people into the pleasant land of books, for it is not every one who can find his way there by himself. Mr. Perry will prove a safe guide as well as a sane one, even if the road which he points out is a somewhat arduous one.

BOOKS RECEIVED.

THE LITERARY DIGEST is in receipt of the following books:

"Veronica."—Martha W. Austin. (Doubleday Page & Co., $1.50.)

"Leavening the Nation."—Joseph B. Clark. (Baker & Taylor Company, $1.25 net.)

CURRENT POETRY.

"The Gates of Silence."

By ROBERT LOVEMAN.

[Through the Knickerbocker Press, Mr. Loveman has issued a volume of verse, from which we quote the following:]

SONG.

The Dawn is a wild, fair woman,
With sunrise in her hair;
Look where she stands, with pleading hands,
To lure me there.

The Dusk is dark and glorious,
A star upon her brow;
With sunset blushes in her cheeks,
She beckons now.

I, ever fickle, stand between,
Upon my lips a rune,
And in my summer-singing soul—
The hoiden happy Noon.

II.

I could not see till I was blind,
Then color, music, light,
Came floating down on every wind
And noonday was at night.

I could not feel till I was dead;
Then through the mold and wet
A rose breathed softly overhead,
I heard a violet.

A trade-mark is valuable only because of what it represents. People ask for

A PLAIN BUSINESS TALK ABOUT THE BEST TYPEWRITER IN THE WORLD

In order to make a typewriter that can be sold in competition with other high-class machines, without cutting the price, it stands to reason we must make one that has points of merit that make it *better* than any other.

That is what we have done in the Fox Typewriter. It is a basket type machine, with ball bearing carriage, two oz. key tension instead of 4 or 6 half inch key dip, aluminum finger levers with individual tension, adjustable type bars insuring perfect alignment even after years of service, and lock, automatic line spacer and automatic ribbon movement. It is the easiest to operate, most durable, has highest speed and combines all the desirable features of the standard machines, with decided improvements.

We can demonstrate its superiority over any other typewriter to any business man who will make a careful examination and test.

We are making a special proposition for Clergymen, Lawyers, Medical Men and Bankers, which it will pay to investigate.

A Fox Typewriter will be sent to any responsible firm or person in the market for a typewriter, on *ten days' trial free*, and no obligation to purchase will be incurred.

One Michigan manufacturer recently replaced 30 well-known typewriters with Fox machines—because we proved to him that the Fox was the best he could buy. Send for new 1903 Catalogue.

Fox Typewriter Co., Ltd., 550 N. Front St., Grand Rapids, Mich.

XVII.

The body is the barque
That bears the soul away,
Down to the docks of dark,
Down to the harbor gray.

Then suddenly alone,
The spirit leaps afar,
On, on, from zone to zone,
On, on, from star to star.

XXII.

What is it, where is it, how is it
After the day is done?
What good and fate for love and hate,
Beyond the lusty sun?

How is it, where is it,—what is it,
Nirvana, heaven, hell?
Shakespeare, Omar, Solomon,
Will not God let you tell?

XLII

O mystery of mysteries,
O secret vast and rare,
We stretch blind hands unto the skies,
We fathom everywhere.

From the dumb silence comes no sound,
No syllable we hear,
And man must venture outward bound,
A chartless voyage!

Honey.

By PAUL LAURENCE DUNBAR.

Sweetes' of all lovin' words,
Honey, Honey.
Got de soun' of matin' birds—
Honey, Honey,
Othah words don' seem to 'spress
What's a-th'obbin' in yo' breas',
Don' try nuffin' mor' nor less
Dan Honey, Honey.

W'en he calls me by dat name,
Honey, Honey,
Den my hea't gits in a flame—
Honey, Honey.
My han' hol's his han' so tight.
All de worl' seems gittin' bright,
F'om dat sof' name of delight,
Honey, Honey.

Sweetes' name in all de lan',
Honey, Honey;
"Darlin' one" ain't ha'f so gran'.
Honey, Honey;
Oh, my hea't hit fills and swells,
I don' want my lovin' ne'se
Fu' to call me nuffin' else
'Cept Honey, Honey!

—In *Saturday Evening Post* (Philadelphia).

Fog.

By JOHN B. TABB.

The ghost am I
Of winds that die
A like on land or sea,
In silence deep
To shroud and keep
Their mournful memory.

A spirit white,
I stalk the night,
And, shadowing the skies,
For fold the sun
To hide upon
My noonday mysteries.

—In *Munsey's Magazine*

A Failing Memory

is the first evidence of mental decay. No matter what your position in life may be, a good memory can not fail to be of inestimable value to you. It is absolutely necessary to success. The poorest memory may be developed and strengthened by proper training, just as the muscles of the body are developed and strengthened by a proper course of physical exercise. A poor memory may be made good, and a good one better, by

PERSONALS.

The Right of Way.—The latest story relative to the methods of President James J. Hill, of the Great Northern Railroad, comes from a Western city in which his lines has car-yards and many side-tracks, and it is published in *The Saturday Evening Post*. It runs as follows:

A prominent citizen of the place desired to have a subway built to his property. Its construction involved tunneling under the tracks of the Great Northern.

It seems that he had experienced some delay in getting the corporation's consent, and so when President Hill passed through the city recently the citizen bearded the magnate in his car.

"I want this subway bad," Mr. Hill's visitor explained. "I have petitioned your company but without getting satisfaction. So I have come to you for advice."

The railway builder smiled.

"I have found," he said, "that the best plan in such cases is to go ahead, and get permission afterward."

The subway is now in course of construction, and no protest has been filed by the Great Northern.

Elkins at the Races.—When Senator Elkins was in college he liked to see the races. One day, says the New York *Press*, he and his chum slipped off together from school and on the way to the track came across their professor, who said in surprise:

"Young gentlemen, what does this mean? You should be at your lessons."

Elkins said: "Sir, we wanted to go to lessons and also to the races, so we tossed for it, and it came down for the races."

"Ah! Then you must have used a two-headed coin, or tried the gambler's plan of heads I win, tails you lose."

"No, sir; it was a fair toss," said young Elkins.

"What did you throw up?"

"We threw a lump of coal up. If it stopped up we went to school; if it came down we went to the races, and here we are, sir."

Rockefeller's Heaviest Hole.—"The heaviest hole in my experience was one that weighed 432 pounds," remarked John D. Rockefeller, one day, according to the St. Louis *Post-Dispatch*. It happened in this manner:

"I happened on this hole in my younger days. I had ordered two castings, each 36 inches square and 10 inches thick, the first casting to be solid and the second to have a perforation about 20 inches in diameter through its middle. Well, the foundry clerk, through some error, billed both castings to me as if they were solid, and when I pointed out his mistake sent me a credit slip. He had evidently, according to the slip, taken the dimensions of the hole of the second casting—10 inches by 20 inches by 20 inches—and calculated what the weight of the piece of iron of those dimensions would be. Then that weight, 432 pounds, he had put down as the weight of the hole, and the credit slip he sent read: 'John D. Rockefeller, Cr. By 1 hole, weight 432 lbs., at 5c. $13.50.' And that was the heaviest hole I have ever known."

Mrs. Bowen's First Revolution.—Mrs. Bowen, wife of the United States Minister to Venezuela, was, before she was married, a Galveston girl. Their wedding took place in Caracas, says the San Francisco *Argonaut*, and soon afterward, it is said, a revolutionary army and a government army met by chance on a mountain behind the United States Legation.

When the Mausers began to pop and the flash of the rifles showed red on the verdant hillside,

Mr. Richard Bagot's New Novel

Donna Diana

By RICHARD BAGOT, author of "Casting of Nets," "A Roman Mystery," etc. Crown 8vo, cloth, gilt top, $1.50.

"In 'Donna Diana,' the scene is laid among the 'Black' Society; prelates, monsignori, cardinals, princes and young men of fashion are painted with extraordinary fidelity and cleverness. It is obvious that the author knows them intimately, and has analyzed all their faults and all their virtues."—*L'Italie*, Rome.

". . . There is not a particle of let-up in interest from cover to cover. As one enters the city gates via the first chapter, he is loth to quit the interesting company of friendships he makes, both secular and churchly, until he knows as far as the author reveals it, the destiny of each of the personages who participate in the making of a capital story."—*Transcript*, Boston.

". . . Equals Marion Crawford's books in the capable and certain handling of his characters in the picturesque but tortuous highways of the Roman world of to-day. He gives a detailed view of the domestic customs and social life of the aristocracy and tells at the same time an absorbing love story."—*Item*, Philadelphia, Pa.

"The book is one that proves how steadily Mr. Bagot's reputation is advancing."—*Yorkshire Post.*

"The descriptions of Rome and its life are quite interesting"—*The Living Church.*

"Cleverly conceived and cleverly written."—*Glasgow Herald.*

Longmans, Green & Co., New York.

Mrs. Bowen rushed out to the piazza, where Mr. Bowen, long before mated to warfare of the entire continuously served up in Venezuela, was unconcernedly pulling a cigar.

"Why, what is the matter?" she asked and glanced apprehensive toward the firing.

"Oh, only a battle," Mr Bowen replied.

"But are we not in danger?"

Mr. Bowen assured her of the mild nature of the battles, and, although it was the first time she had been "under fire," she returned complacently to her needlework and never allowed the scares about Venezuela "wars" and "battles" to perturb her.

A Senatorial Inventor.—James B. McCreary, recently elected United States Senator from Kentucky, has an inventive mind, which the following incident taken from *The Saturday Evening Post* illustrates:

Some years ago, while he was governor of Kentucky, Mr. McCreary's favorite horse, Prince, a handsome bay of royal blood, learned the trick of slipping the bridle. The governor had his groom to search every saddler's shop in Richmond for a bridle that Prince could not slip. Being unable to find one, he went in person to a certain shop and asked for a safe bridle. The dealer replied that he had none.

"That's strange," said the governor, "why don't you make one?"

"Never saw one, and don't know how."

"Well, I'll show you."

With that he took off his coat and went to work. The result was such a surprise to the saddler that he did not get over it for a week. The hooded bridle, now in common use, is very simple, but will baffle any horse, however tricky he may be.

The dealer wanted to have it patented and called the McCreary Bridle, but the governor would not hear of it. He said that any man who had followed Morgan, who had ridden every kind of horse that could be "borrowed" on the way, and then didn't know how to make a bridle that would not slip, ought not be allowed to own a horse.

Representative Hepburn's Shave.—When Representative Hepburn, of Iowa, went into the House barber-shop recently, says the Washington correspondent of the Baltimore *Herald*, he found his clerk in one chair and his messenger "next."

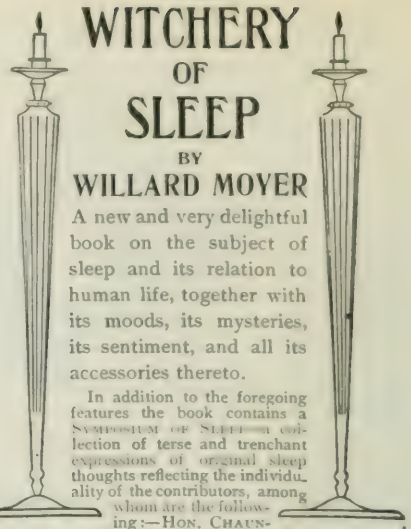
The messenger magnanimously offered to relinquish his place in favor of the Congressman, but the latter, much disgusted, went upstairs and made the biggest kind of a kick against House employees keeping statesmen waiting for the barber's operation. This much has been published, but not the sequel.

As a rule there is no one about the Capitol on Sunday except some secretaries, and the tonsorial corps is much reduced in consequence. Only one man, in fact, was on duty there. Half a dozen secretaries came along for the customary Sunday shave, and were surprised to find that a stringent rule had been put into force since the Hepburn incident—that no one but members should have the privilege of the establishment. They argued that such a rule might hold good on week-days, but that on Sunday a Representative rarely put in an appearance. The argument had enough weight to cause the barber to waive his instructions and proceed to shave the secretaries. Just when the artist's had half finished his first customer he saw a sight that froze his blood in his veins and caused the razor to drop from his hand. There in the doorway stood Hepburn, frigidly sizing up the clerk in the chair and the half-dozen young men planked on the sofas awaiting their turn. He didn't say a word but turned and walked away. The unfortunate barber is awaiting in fear and trembling the end of the week, expecting that his commission will be revoked.

LEARN PROOFREADING.

If you possess a fair education, why not utilize it as a genial, well-rewarded profession, paying $15 to $25 weekly? Situations always obtainable. We are the original instructors by mail. HOME CORRESPONDENCE SCHOOL, Philadelphia.

THE WITCHERY OF SLEEP



BY
WILLARD MOYER

A new and very delightful book on the subject of sleep and its relation to human life, together with its moods, its mysteries, its sentiment, and all its accessories thereto.

In addition to the foregoing features the book contains a SYMPOSIUM OF SLEEP—a collection of terse and trenchant expressions of original sleep thoughts reflecting the individuality of the contributors, among whom are the following:—HON. CHAUNCEY M. DEPEW, THOMAS A. EDISON, REV. DR. EDWARD EVERETT HALE, REV. DR. PARKHURST, DR. ORISON SWETT MARDEN, DR. CYRUS EDSON, NAT. C. GOODWIN, and WU TING FANG.

A wealth of superb illustrations of historic beds—many examples of many peoples and many countries—make a delightful book, entertaining and instructive to the highest degree.

Royal Octavo, 225 pages, profusely illustrated with line engravings and 40 inserts in two colors, antique deckle edges, gilt tops, old English style, bound in art cloth, and stamped in gold and color. $2.00.

MORE OR LESS PUNGENT.

"Limericks"

By CAROLYN WELLS

[Miss Wells, in *Frank Leslie's Monthly* for March, gives a short history of the five-line stanza, commonly known as the *Limerick*. From the numerous examples of the stanza which accompany the account we select the following:]

There was an Old Man of Aosta,
Who possessed a large cow, but he lost her;
But they say, said, "Don't you see,
She has run up a tree,
You invidious Old Man of Aosta!"

There was a Young Person of Crete,
Whose toilet was far from complete;
She dressed in a sack
Spickle-speckled with black,
That ombliferous Person of Crete.

There was an Old Man with a beard,
Who said, "It is just as I feared!
Two Owls and a Hen, Four Larks and a Wren,
Have all built their nests in my beard."
[*Edward Lear.*]

There once was an Old Man of Lyme
Who married three wives at a time.
When asked, "Why the third?"
He replied, "One's absurd,
And bigamy, sir, is a crime."
[*Cosmo Monkhouse.*]

There was a small boy of Quebec,
Who was buried in snow to his neck;
When asked, "Are you friz?"
He replied, "Yes, I is.
But we don't call this cold in Quebec."
[*Rudyard Kipling.*]

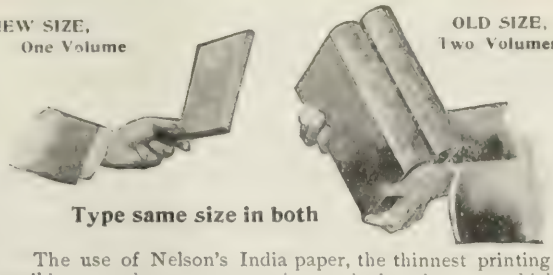
There was a brave knight of Lorraine,
Who hated to give people pain:
"I'll skeer 'em," he said,
"But I won't kill 'em dead."
The noble young knight of Lorraine.
[*Mary Mapes Dodge.*]

I'd rather have fingers than toes,
I'd rather have ears than a nose;
And as for my hair,
I'm glad it's all there,
I'll be awfully sad when it goes.
[*Gelett Burgess.*]

There once was some learned M.D.'s,
Who captured some germs of disease,
And infected a train,
Which, without causing pain,
Allowed one to catch it with ease.
[*Oliver Herford.*]

There was a young lady of Niger,
Who smiled as she rode on a tiger;
They came back from the ride
With the lady inside,
And the smile on the face of the tiger.
[*Anon.*]

Small Great Books.



Type same size in both

Dickens
Thackeray
Scott

The use of Nelson's India paper, the thinnest printing paper in the world, makes it possible to condense 950 pages into a single volume no thicker than a magazine. The size is only 4¼ x 6¼ inches, and fits the pocket. Each novel is complete in a single volume.

The type is as large and easily read as that you are now reading. The

NEW CENTURY LIBRARY

editions of these great works are the neatest, most convenient and readable ever published, and make choice library sets.

DICKENS, 17 Vols.; THACKERAY, 14 Vols.; SCOTT, 25 Vols. Handsomely bound in the following styles: Cloth, gilt top, $1.00 a volume; Leather Limp, gilt top, $1.25 a volume; Leather Boards, gilt edges, $1.50 a volume. Also sets in cases in special fine bindings.

Selected Works of the Best Authors, Complete in Single Volumes

A very grandiloquent goat
Sat down at a gay table d'hôte,
He ate up the corks,
The knives and the forks,
Remarking, "On these things I dote."

"There's a train at 4:04," said Miss Jenny,
"Four tickets I'll take; have you any?"
Said the man at the door,
"Not four for 4:04,
For four for 4:04 is too many!"

[*Carolyn Wells.*]

Blackmail.—CALLER: "I've found that there dorg that y'r wife is advertisin' five dollars reward fer."

GENTLEMAN: "You have, eh?"

How to Paint a House Cheap

And Have it Guaranteed to Look Better, Wear Longer and Cost Less Than the Best White Lead Paints.

Never Fades, Cracks, Chalks, Peels or Blisters and is Not Affected by Gases. Fifty Sample Colors and Illustrated Booklet Prepaid to Any Address Absolutely Free.

The cost of painting the house and barn, outbuildings and fences is a heavy burden. Cheap paints soon fade, peel or scrape off and white lead and oil costs so much and has to be replaced so often that it is a constant expense to keep the bright, clean appearance so desirable in the cozy cottage home or the elegant mansion. The following are a few of the large users of Carrara Paint:

Pennsylvania R. R. Co.; Pullman Palace Car Co.; Chicago Telephone Co.; Central Union Telephone Co.; Field Museum, Chicago; Kenwood Club, Chicago; Cincinnati Southern; C. & E. I. R. R. Co.; Denver & Rio Grande R. R.; Wellington Hotel, Chicago.

Carrara is used because it lasts longer, never fades, never cracks, never blisters, never peels, covers more surface than the highest priced paints and costs less than the cheap mixed paints that injure instead of protect. There is but one Carrara. It is made by the Carrara Paint Agency, General Offices, 769 Carrara Bldg., Cincinnati, Ohio, and anyone having a house to paint should send for 50 free sample colors and our handsome booklet, showing many buildings reproduced in all the colors just as they are painted from this great paint that has stood the most rigid tests for 25 years and, bear in mind, that it is the only paint ever manufactured that is backed by a positive guarantee in every case. Distributing depots in all principal cities. Write to-day and save half your paint bills in the future.

The Waldorf-Astoria, New York, One of the Most Magnificent Hotels in the World, Has Used Tons and Tons of the World-Famous Carrara Paint.

LADY ROSE'S DAUGHTER—FREE

WE ARE GOING TO GIVE AWAY 1,000 COPIES OF "LADY ROSE'S DAUGHTER," MRS. HUMPHRY WARD'S LATEST NOVEL, PUBLISHER'S PRICE, $1.50. DO YOU WANT ONE?

NOTE.—"The Virginian," "Pit," or any other book of equal value may be substituted if desired.

AN ADVERTISING VENTURE. We want to acquaint you with the mail-order plan of buying books—a plan that eliminates the traveling salesman, the jobber and the retailer, and enables you to save from 20 to 50 per cent. on every book you buy. In order to do this, we are going to make you a present of "Lady Rose's Daughter," or any other book of equal value, providing you will look over our catalogue, and if you find our prices are right, send us your orders, up to a certain amount, for a limited time.

A BONA FIDE OFFER. There are no strings to this proposition. We have adopted this novel method to increase our list of patrons and get our wholesale book and stationery catalogue in the hands of prospective buyers. We are an old established house and have the largest mail-order book trade in the United States. This offer expires May 1st. Send to-day for our catalogue and full particulars. Ask for Catalogue **D7.**

We have 50,000 cloth bound books, handy volume size, all standard titles, that we are selling at 10 cents each. See page 41 of our catalogue.

SIMS, WILSON & SIMS CO.
Largest Mail-order Booksellers in the World.

100 Persons Cured Every Day of RHEUMATISM

By Magic Foot Drafts, Sent on Approval anywhere in America.

TRY THEM FREE.

They Will Cure YOU.

If you read this, you will probably send for a pair of drafts and be CURED of your rheumatism. A great many persons try Magic Foot Drafts every month at our expense. Thousands are cured—and pay. Some are not cured, but have found out without expense that they have something else besides rheumatism. We have thousands of letters on file from Judges, Lawyers, Ministers, officials of the Government, and business men, saying that Magic Foot Drafts cured them—many after everything alse had failed. All these are open to the public, with a standing offer of $5,000.00 reward to anyone who finds that they are not all given in good faith and without any consideration whatsoever excepting the good the Drafts have done.

Magic Foot Drafts open the pores of the feet, the largest in the body, and by means of the intricate capillary development of the blood vessels here, draw out and neutralize by alkaline reaction the acid poison accumulations in the blood, reaching and permanently curing rheumatism in every part of the body. Our free booklet will convince you that Magic Foot Drafts, which at first glance may seem unreasonable, are really the most logical treatment ever discovered for rheumatism. We want to send you a pair on approval, without a cent in advance. If you are satisfied with the benefit received, send us One Dollar. If not, keep your money. Write to Magic Foot Draft Co., R U 21 Oliver Bldg., Jackson, Mich., to-day. Send no money—only your name.

THE OLD MAIDS' CONVENTION

For twenty female characters and one man. A new entertainment for churches, similar to "The New Woman's Reform Club," (25c), "Aunt Jerusha's Quilting Party," (25c), etc. A first-rate frame for a concert or a miscellaneous entertainment.

Price, 25 Cents, post-paid, by mail.

Send for our new catalogue of dialogues and entertainments, free to any address.

The Literary Digest

VOL. XXVI., NO. 13 NEW YORK, MARCH 28, 1903. WHOLE NUMBER, 675

Published Weekly by
FUNK & WAGNALLS COMPANY,
30 Lafayette Place, New York. 44 Fleet Street, London.
Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE. Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents. Foreign postage, $1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

HOW THE COAL STRIKE AWARD IS RECEIVED.

"I'M as dumb as an oyster, or, rather, as a clam," said President Baer to a Philadelphia *Ledger* reporter, last Saturday, when asked how he liked the award of the coal strike commission. Whether he was also as happy as the latter crustacean is popularly supposed to be is considered problematical, however. The great majority of the daily papers think the miners have scored a triumph. And so thinks President Mitchell. The decision is "a decided victory for the miners, and I am pleased with it," he said, in an interview in Detroit. And Clarence Darrow, counsel for the miners, calls it "a victory unparalleled in the history of strike settlements," and "a practical recognition of the union." "It puts the operators distinctly in the wrong," says the New York *Times;* and the New York *Evening Post*, whose sympathy during the strike was rather with the operators than with the men, calls it a "sweeping victory for the United Mine Workers," in which "the commission appears to have gone nearly to the full length of the miners' demands." The men "have won what the operators vowed they could not possibly concede," it adds, and "the result can not but greatly enhance the prestige of the United Mine Workers and of John Mitchell."

The miners demanded, last spring, it will be remembered, an increase of twenty per cent. in the pay of the contract miners, a decrease in time of twenty per cent., without change of pay, for the men who work by the day, a uniform system of paying by weight for the coal mined, and a yearly conference between the operators and the union to adjust differences in regard to wages and hours. The awards of the commission may be summarized as follows:

The contract miners are to receive an increase of ten per cent. in wages, dating from November 1 last.

Engineers employed in hoisting water shall work in eight-hour shifts. Those now working in eight-hour shifts shall receive an increase of ten per cent. in wages, dating from November 1 last. The rest continue at their former wages, but shall receive a sum equal to a ten-per-cent. advance covering the past five months.

Other engineers and pumpmen shall receive a sum equal to a ten per-cent. advance covering the past five months. From April 1 the advance will be only five per cent., but the men "shall be relieved from duty on Sundays, without loss of pay."

Firemen "shall have eight-hour shifts" at their former pay, and shall receive a sum equal to a ten-per-cent. advance covering the past five months.

All other employees or company men "shall be paid on the basis of a nine-hour day" at the rate formerly paid for a ten-hour day, and shall receive a sum equal to a ten-per-cent. advance covering the past five months.

"Present methods of payment for coal mined shall be adhered to, unless changed by mutual agreement."

Disputes which can not be settled locally "shall be referred to a permanent joint committee" of six, chosen as follows: "If there shall be a division of the whole region into three districts, in each of which there shall exist an organization representing a majority of the mine workers of such district, one of said board of conciliation shall be appointed by each of said organizations, and three other persons shall be appointed by the operators, the operators in each of said districts appointing one person." In case of a deadlock, the dispute "shall be referred to an umpire, to be appointed, at the request of said board, by one of the circuit judges of the third judicial circuit of the United States, whose decision shall be final and binding in the premises." And it is further adjudged that "no suspension of work shall take place, by lockout or strike, pending the adjudication of any matter so taken up for adjustment."

"Whenever requested by a majority of the contract miners of any colliery, check weighmen or check docking-bosses, or both, shall be employed," their wages to be paid by the men.

Mine-cars shall be distributed "as uniformly and as equitably as possible," and the miners shall not limit output or detract from the quality of their work except as may be agreed "between an operator or operators and an organization representing a majority of said miners in his or their employ."

The wage increase "is based upon the cars in use," and any increase in the size of the car shall be accompanied by a proportionate increase in the rate paid per car.

A sliding scale is put into effect, providing for a further increase of wages when the price of coal shall rise, but providing that the wages shall not fall below those fixed by the present award.

"No person shall be refused employment, or in any way discriminated against, on account of membership or non-membership in any labor organization; and there shall be no discrimination against or interference with any employee who is not a member of any labor organization by members of such organization."

The contract miners shall furnish statements of the amounts due from them to their laborers, "and such sums shall be deducted from the amount due the contract miner, and paid directly to each laborer by the company."

These awards "shall continue in force until March 31, 1906."

The commission recommends the discontinuance of the system of employing "coal and iron police," recommends the stricter enforcement of child-labor laws, and discusses the subject of the investigation and arbitration of industrial disputes at some length. Compulsory arbitration is disapproved. Labor-unionism is also discussed, and the commission says, on the subject of the recognition of the United Mine Workers of America, that they do not consider this point as within the scope of the juris-

diction conferred on them. Disorder, violence, and boycott by the striker and the use of the black list by the employer are strongly denounced.

Union Editor's View.—"There are parts of the decision that probably will not suit the miners. The ten per cent. increase can be taken, I suppose, as being in favor of the miners, altho percentages are great delusions.

"One of the greatest points in favor of the miner is the recommendation for the withdrawal of the coal and iron police, who are responsible for most of the trouble that occurs in the mining regions.

"The lessening of the working hours for engineers, firemen, and other workers is a great point in favor of the miners. The ruling against child labor is also in favor of the miners. The requirement that companies pay the laborers of contract miners is a safeguard against unfair treatment, and is favorable.

"The section in which the commission takes grounds against compulsory arbitration is also favorable to the miners. The employment of check weighmen and the companies' collections for their pay, and the distribution and regulation of cars, are also favorable to the miners.

"The provision for the creation of a conciliation board to settle points of disagreement will generally meet with the miners' hearty approval. Tho the commission does not require the operators to recognize the miners' organization, in the organization of this board of conciliation recognition of the organization is assured. The commission also suggests recognition of the organization in several places. The decision itself recognizes the organization. These points at least are in favor of the miners.

"There is at least one point in the decision that is in favor of the operators, and that is the sliding scale based on markets between Perth Amboy and Edgewater. By the abridgment of the finding that I have, this will figure only a half-mill increase on every five cents, and not one per cent. additional on the ten per cent. increase, making eleven per cent.

"By the decision it seems that the operators may combine to curtail the production of coal, but the miners can not without the consent of the operators."—*Statement by S. M. Sexton, editor of The United Mine Workers' Journal, Indianapolis.*

"Sentimental, Not Judicial."—"If the commission had been a veritable court, whose function it was to administer justice according to the evidence, it would have been compelled to omit its award of ten per cent. increase of pay and reduction of the hours of labor. The descriptions of the miners' homes, families, and tasks, with their accounts of which Mitchell and his associates sought to draw public sympathy toward their side of the controversy, were blasted, every one. The condition of life in the mining regions proved after this exhaustive examination to compare favorably with industrial life elsewhere. Of the statements that 'wages were so low that children were prematurely forced into labor,' 'the commission does not think that the testimony warrants it in finding as a fact the allegations so made.' On the 'general contention that the anthracite wages are lower than the bituminous wages or than the wages of other occupations requiring equal skill and training,' the commission reports 'failure to produce testimony to sustain either of these propositions.' To some extent, also, the 'contract miner has his working hours within his own control.' The miner of 'special aptitude and industry can and does make a larger income than his fellows who fail in these respects.'

"The arbitration habit, however, was strong, and the commission recommends an increase of ten per cent. in wages, for reasons plausible enough, but without referring to the effect of such action on the price of coal to the public or to the marked attraction of the mines for laboring men. The commission's conclusions here must be considered as sentimental rather than as judicial."—*The New York Sun.*

Violence Condemned.—"Nothing in the anthracite strike commission promises to have a more lasting or a deeper influence than its condemnation of violence during the strike and its direct and unmistakable assertion of responsibility for those who shared in all the various forms which violence assumed. Its wage award will be forgotten as wages change. Its assertion of personal rights and the sanctity of law will long be cited.

"Throughout the strike there was a perpetual attempt to minimize the amount of violence, to deny its existence and to assert that no intimidation existed, when as a matter of fact a passive reign of terror had been created, either by the threat of violence or by its previous use. Evidence before the commission was presented to the same end. The commission justly accepts the legal maxim that those who would naturally profit by an act must accept a fair responsibility when it takes place in connection with their own procedure and policy.

"This condemnation is rendered all the more weighty because its expression is shared by Mr. Clark, himself conspicuous in a great labor-union, and Archbishop Spalding, whose sympathy with the claims of labor has been everwyhere asserted and accepted. There is a perpetual tendency during a strike and in public and private discussion at all times to treat violence and the violation of law during a labor contest as in some sort justfied by the conditions of semi-warfare. The anthracite strike commission meets all this with explicit and cogent argument. A violation of law is always a violation of law, whatever the excuse. A man on a strike has no right to molest another man who seeks to work."—*The Philadelphia Press.*

Organization Favored.—"The commission has in fact opened a door of invitation for the anthracite miners themselves to form an organization of their own, for in providing for a board of conciliation to consist of three persons representing the miners and three representing the operators, it says that if the district shall be divided in three sections one of the members of the board representing the miners shall be chosen in each of these sections by any organization that may include a majority of the miners therein.

"This is practically a recommendation that the miners be organized in these three sections of territory for the purpose of maintaining contractual relations with the operators, tho it may not imply the forming of unions in the ordinary sense. If it results in that, with the independence of the anthracite miners from the United Mine Workers of the bituminous field, it may work an improvement to which the operators will not object, tho it may lead to troubles in a new form. The board of conciliation almost of necessity implies some form of organization, for it is to represent the two parties to any dispute that may arise either under this award or from any other source, and is to endeavor to bring about a settlement. In case a majority can not agree upon a decision, which would mean the winning of one member over from his own side to the other, an umpire would be appointed by the United States circuit judge, and in the mean time there could be no suspension of work by strike or lockout. Of course there would be no means of actually enforcing the ultimate decision, whether of the board or of the umpire, but it would have an important moral effect, at least, upon public opinion outside of the contending forces. While the commission avoids discussing the question of unionism, or the more important question of interference with the rights and liberties of non-union men, it favors agreements between employers and workmen as a body by what is called collective bargaining.

"The report may be regarded as favoring labor organization for legitimate purposes."—*The New York Journal of Commerce.*

"First of all, and paramount above all other points in the award, the freedom of labor is upheld and is to be maintained. That was, of course, the fundamental issue in the strike; or that and the mandate issue of recognition of the miners' union. All other questions, of wages, hours, and what not, were subsidiary to these, and were so recognized; and could have been settled in a day had it not been for these. Were non-union men to be permitted to work in the mines without molestation? Or was the miners' union to be made the dictator of the anthracite field, determining who should and who should not work, and how the operators should conduct their business? To these questions the answer of the commission is unmistakable and emphatic. . . . Men shall be free to sell their labor wherever they can find a purchaser for it, and no third party shall say them nay. We have regarded that principle from the outset as absolutely fundamental, and have assumed that the commission would necessarily affirm it. Nevertheless, since it was so strenuously and impudently denied during the strike, and even in the proceedings before the commission, it is fitting to point out that the report of the commission does reaffirm it in the strongest manner."—*The New York Tribune.*

A NEW LABOR MOVEMENT.

TWO new labor organizations, one in Indiana and the other in New York State, are attracting attention for two reasons: they are incorporated, and they are openly hostile to some of the labor-union methods that have aroused criticism. A frank criticism of some of these methods by a union man was presented in our columns on December 6 last, and now it seems that the dissatisfaction has grown to such proportions that it is resulting in the formation of separate organizations. The Indiana organization is known as the Independent American Mechanics' Union, and is located in the city of Anderson. Its articles of incorporation read:

"The objects of this association shall be to encourage industry, economy, thrift, and honesty among its members; to maintain amicable relations between employees and employers of labor; to assist its individual members in obtaining the highest wages consistent with the general good of all concerned; to promote all forms of productive industry and increase the employment of labor at good wages; to prevent unjust and unreasonable discrimination against any of its members by any person, combination, or conspiracy to prevent such members from securing employment in any branch of industry, and to protect and defend its members against any and all attempts by any person or combination of persons to abridge the inalienable right of all mankind to work for such wages as shall be mutually satisfactory to the individual workman and his employer."

The New York State organization is described and commented upon as follows by the New York *Journal of Commerce*:

"An interesting movement is appearing in several States which seems to indicate that the American workingman is about to declare his independence of the tyranny of the labor-unionism that makes the suppression of individual freedom and a violation of the common rights of man a part of its creed. In this State the Independent Labor League of America has been incorporated at Albany, which indicates a willingness to take the responsibilities of a legalized organization. Among its declared purposes is to 'protect independent workingmen in their independence,' and to 'oppose strikes, lockouts, boycotts, and black-lists.' It will also seek to obtain higher wages, shorter hours, and better conditions 'by intelligent application of energies, earnest cooperation with employers, and legitimate business methods.' If it confines itself to these methods and accepts the conclusions to which they lead, it may serve a useful purpose; but its chief promise lies in rallying the spirit of independence and manhood in American workingmen, which will help to put down the abuses to which labor-unions have become addicted through a bad leadership which is mostly of foreign origin. It is well known that 'organized labor,' as it exists to-day, includes only a small minority of the wage-earners of the country, and there is reason to believe that a majority of its members chafe under the arbitrary rules and dictatorial orders of a few leaders. It is high time that the American spirit asserted itself among them and gained courage to maintain the rights of free citizenship."

The New York *Times* believes that this movement represents the true feeling of the majority of American workingmen. It says:

"It is not at all surprising that the aggressiveness, intolerance, and violence of some of the unions have invited revolt through opposing organizations. In all probability the movement will spread and become a factor of importance in future labor movements. No large proportion of the wage-earners of the United States is now or ever was enrolled in the membership of the trades-unions, and of those who are it is safe to assume that very few approve or are in sympathy with the means which have been employed in so many recent instances to make strikes formidable when they lacked a moral basis in real grievances. The position of the unions which have been the storm-centers of disturbance has been much more vulnerable than their leaders have found it agreeable to admit. Men disgusted and ashamed of their excesses may not be ready to surrender membership and face the issue single-handed; but if they can form new and stronger alliances in unions organized for sane purposes and pledged to maintain law and order, to respect life and property, and to discourage excesses of all kinds, they will be very apt to cast their lot with those who stand for good citizenship. There are enough of these to render the unions powerless for blind mischief by simple withdrawal from the ranks of membership."

THE MISSISSIPPI FLOODS.

THE need of forestry laws in every State of the Union; more attention to interior waterways by the Government, and the holding of freshet waters in reservoirs in States at the headwaters of the tributaries of the Mississippi are some of the remedies suggested by the press for floods such as have been causing severe damage in the Ohio, Missouri, and Mississippi valleys for the past month. At this writing the floods of the Ohio are subsiding, while the Mississippi continues to rise. At one time last week the river at Memphis showed 39.8 feet on the gage, the highest ever recorded. Many of the smaller and weaker levees along the water-front have broken, causing hundreds of miles of land to be submerged to a depth of from one to

THE "WATER CURE" UP TO DATE.
—*The St. Paul Pioneer Press.*

ten feet, while in other instances the water has flowed over the tops of the levees. All the lines of railroads entering Memphis from the West have been washed out. The levees protecting New Orleans and Memphis, tho they have held firmly, are vigilantly guarded. To add to the situation a downpour of over seven inches of rain occurred in New Orleans, on March 14, in less than six hours. It was feared the rain had weakened the levees about the city, but they stood the strain. The New Orleans *Times-Democrat* says on this point:

"So far, the levees have stood and have proved all that was claimed for them by the engineers and levee boards, that they were in better condition than ever known before. In any previous high water we would have heard before this of a dozen breaks, for the rain would have weakened the already water-soaked levees and at the same time have prevented the repair work needed on them. If, in spite of this weakening, they stand the strain, it will be the greatest river victory ever won on the lower Mississippi."

Many newspapers take this opportunity to show the need of forestry laws in every State, for, it is pointed out, the destruction of the forests means the unsettlement of the rainfall, with seasons of flood and freshet following long droughts. The St. Paul

Pioneer Press, in the heart of a region that was at one time nearly all forest, but is rapidly becoming denuded of trees, says:

"They [the floods] are, in the main, the penalty we pay for the barbarism and ignorance which has marked what we are pleased to call 'the march of civilization.' We have chosen to destroy instead of conserving the forests on our hills, and to remove the sponge-like forest floor, which was capable of holding in store volumes of water sufficient to fill the channels of our rivers many times over. Now all these volumes pour down the descended slopes and over the frozen plains, carrying destruction to millions of property and consternation to our brothers in the towns we have built along our rivers. Yet, even while we discern the cause of these calamities, we go on with the work of creating conditions which shall produce yet greater floods. The reckless denudation of forest lands in Minnesota and Wisconsin receives no check. Probably every present dollar made by the lumbermen, by the wholesale cutting of trees and the leaving of 'barrens,' is matched by two or three dollars lost by the people 'down stream' through the floods. The nation is more and more impoverished, and the process of repair, to be undertaken by and by, made infinitely more costly every year. The power to arrest the spoliation, and thus to limit the amount of future reparative expenditure, lies in our state legislatures, but they can not be roused to action. Meanwhile the floods pour on and on, dissolving wealth by millions—all that the right of a few individuals to destroy what they claim as 'their own' may not be impaired."

The New York *Mail and Express* suggests that the States holding the headwaters of the Mississippi, Missouri, and Ohio rivers follow the example of New York State and appoint a commission to look after the storage of the freshet waters in reservoirs. This would prevent the floods, it thinks, and would be a "valuable and sure and safe asset." The Louisville *Courier-Journal* believes the Government should pay more attention to interior waterways:

"It is all very well to provide harbors at the outer edges for the shipping of the world, but that shipping is not going to come up to expectations if we leave the interior undeveloped, and allow the rivers to grow steadily more unnavigable, and to be swept by fiercer and fiercer floods. . . . . .

"The dredging of the channel to anything like uniform depth diminishes the danger of floods. Yet the men who go to Washington every two years persistently ignore so patent and simple a fact. They give the bulk of the rivers and harbors appropriations to the outside harbors. Here is a chance for them to gratify their American passions for seeing the results of their own handiwork. It is true that the spending of all the money necessary for a perfect system of locks, dams, and levees on interior waterways would be merely treating the symptoms of this national disease; yet, if they were to appropriate only one-tenth of the amount really needed for this purpose, they would see results, before they die, sufficient to gratify their peculiar American cravings."

TREATMENT OF THE TREATIES.

IT is related of Lieutenant Peary that on one occasion, after having traveled northward for hours over an ice-field, he discovered that, owing to the fact that the ice-field was drifting in the opposite direction, he was farther south than he was at the beginning of his day's journey. This is brought to mind by the somewhat similar predicament that Cuban reciprocity finds itself in at the close of the Senate session; it has been allowed to pass the Senate on condition that it now pass both House and Senate. The treaty is ratified with the proviso that it "shall not take effect until the same shall have been approved by the Congress." Says the Washington correspondent of the New York *Journal of Commerce*:

"Matters could not have been much worse if there had been no action at all, for the treaty as ratified does not provide for reciprocity with Cuba, now or at any definite time in the future. It simply promises that the reciprocal concessions made by the treaty shall go into effect some time in the future if the Senate and the House of Representatives are willing. It is to be presumed that the House of Representatives will act with reasonable promptitude on a resolution putting the treaty into effect soon after it convenes in extra or regular session, but there is no assurance that the Senate will act. The way in which it has postponed action on the Cuban treaty already, allowing the whole of the last session to pass, is an indication of what may be expected in the next session, and it will not be surprising if the Cuban treaty would still be ineffective at this time next year."

But many papers that favor reciprocity with the island believe the situation unavoidable. Thus the Philadelphia *Press* says:

"No delay is involved which is not inherent in the case. Even without the additional clause the legislation would have been requisite just the same. As the treaty stipulates a modification of the revenue law, the action of the House is required to make it effective, and the requirement is the same whether expressed or unexpressed. The provisions of the treaty could not have been made applicable to the present Cuban crop unless it had been ratified and approved last winter, and they can still cover the next crop.

"It is understood that the President has been considering the expediency of calling an extra session of Congress in October to act on the treaty. The question is still undecided, and may not be determined for some time to come. There is much to be said in favor of such a course. It would be an advantage not only to secure the confirmatory action as soon as possible, but to gain two months of the general work of Congress, and complete its record and permit an early adjournment in the Presidential year. But there will be time enough to review this question in all its bearings."

The ratification of the Panama canal treaty has been expected so long, and discussed so thoroughly, that most of the comment elicited by the final vote is of the most perfunctory sort. When the treaty is accepted by the Colombian Congress, work will begin. Then the problem of paying $40,000,000 to the French Panama Canal company and $10,000,000 to the Government of Colombia without disturbing the money market will confront the Secretary of the Treasury. The New York *Times* says of the financial features of the canal enterprise:

"Here is an engineering work on which

SOUTHERN CARTOONS OF THE PRESIDENT.

already some $400,000,000 has been expended by the French company that originated it, and which we have undertaken to complete at a cost, for franchises, title, and construction, of some $250,000,000. Our experts say that it can be done. Congress has authorized the expenditure. The people are entirely sure that it will be done, and that the process will not disturb the ordinary course of business or in the least strain the resources, financial or other, of the nation. The $50,000,000 needed to clear the way will be paid out of the till of the Treasury from the surplus already existing there. The $200,000,000 for construction, or even a larger amount, is to be raised on bonds that bear 2 per cent. interest, and must be sold at par at a time when the British consols bearing 2½ per cent. sell at about 92. But there is no real need that this sum should be borrowed. It could without serious embarrassment be paid as the expenditure is required from year to year out of the annual income. The entire amount could be raised in five years from the taxes that have been repealed since the close of the Spanish war, and the effect on the general business of the country would not in all probability be felt.

"Measured by similar enterprises, the Panama canal is practically unapproached in cost. The Suez Canal is estimated to have cost $100,000,000, and was in its time the wonder of the world. The Pacific railways received advances from the Government to the amount of some $65,000,000, which the interest brought up to some $116,000,000, together with about 40,000,000 acres of land. Both the Suez Canal and the transcontinental railways were for a long time regarded as hopelessly visionary. Neither of them at present would be considered formidable either as to difficulty of construction or as to cost.

"Certainly we move rapidly in our day, but there is no reason to think, judged by the strictest practicable tests, that we do not move steadily and safely. The pace of the modern fast train would have seemed utterly destructive to the grave member of Parliament who asked Stephenson what would happen to his locomotive if a cow should get on the track."

THE PRESIDENT'S WESTERN TRIP.

THE newspapers are expecting some new and picturesque topics of discussion as a result of the President's tour of the West. The previous excursions of the President have been marked by the presentation of strikingly original ideas on present-day problems, such as the trusts and the tariff, and the developments of the coming tour are awaited, therefore, with no little interest. Some, indeed, are awaiting them with nervousness. The New York *Sun*, for example, which has been in a state of more or less agitation and anxiety ever since Mr. Roosevelt began his campaign of trust regulation, requests the President to confine his remarks, on this trip, to some tranquil and calm topic like race suicide. *The Sun's* editorial also gives some interesting facts in regard to the tour, which will include Illinois, Wisconsin, and every State west of the Mississippi, except Arkansas, Louisiana, and Texas. To quote:

"Mr. Roosevelt's projected campaign for the spring months covers sixty-six days and twenty-two States.

"Deducting the sixteen days assigned to the Yellowstone National Park for rest, recreation, and communion with nature in her visible forms, there remain fifty days of incessant travel and oratory. This is the most ambitious program ever arranged by a Presidential candidate for a Presidential nomination.

"The itinerary already arranged provides for stops and speeches at one hundred and thirty-four cities and towns. Allowing for unforeseen extensions of the tour, side trips, and the usual proportion of informal remarks at way-stations, it is probable that the total output will be not fewer than two hundred different speeches to different audiences.

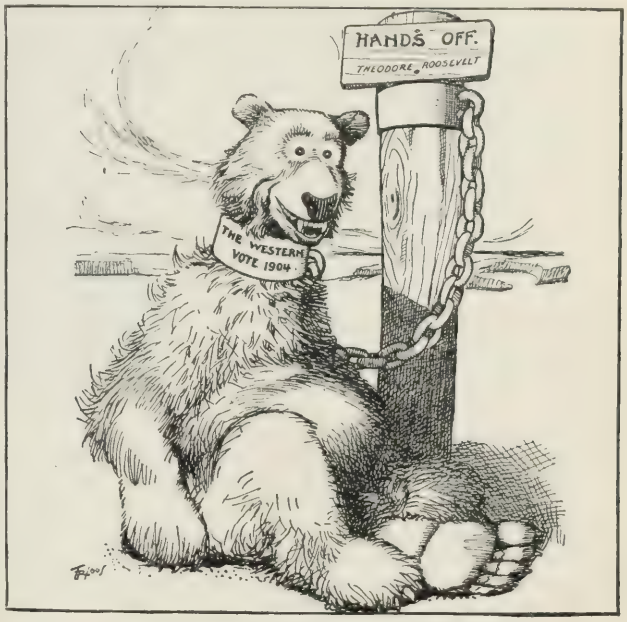
"No man less energetic than Mr. Roosevelt would ever dream of such an undertaking. The mere thought of it would drive to nervous prostration a candidate less frankly confident of the endurance of his physical and intellectual powers under any strain whatsoever.

"We beg leave to suggest that a most profitable theme for at least the major part of the two hundred speeches can be found in the general line of thought started by the President's letter on race suicide. The subject is always interesting, always practical, and particularly so in the less densely populated parts of the Union.

"It possesses, moreover, the inestimable advantage of permitting earnest exposition and discussion without stirring the passions that menace the stability of business conditions and the industrial and commercial prosperity of the United States of America."

Some think that Mr. Roosevelt, as hinted in the above comment, has his eye on the 1904 nomination, and intends, in this tour, to strengthen his hold on the West. The Kansas City *Journal* (Rep.) says, however:

"It might as well be stated now that the President's contemplated tour through this country is entirely unnecessary, if it is planned for the purpose of strengthening his fences and securing his nomination as the Republican standard-bearer in 1904. The West has no man in view except Roosevelt. In fact, a remarkable unanimity of feeling about this matter prevails throughout the nation. No enthusiasm arises upon the mention of the names of the other men suggested as probable contestants for the nomination, but Roosevelt's name is likely to be a word to conjure by before delegates are selected for the next national convention."



THE GAME TO BE PROTECTED IN THE WEST.
—*The New York Press.*

A different opinion is held by the Colorado Springs *Gazette* (Ind.), which says:

"The President undoubtedly has a twofold reason for the trip; one is to make himself secure in the West, to overcome any opposition which may develop in New York, and the other is to keep the voters in line for the Republican party.

"That there is some reason for anxiety on both counts is tolerably clear. The Hanna wing of the party is disgruntled over the strenuous attitude of the President. They consider him unsafe, erratic, and a disturber of business conditions. There is reason also to believe that the country is dissatisfied with the record of extravagance made by the two last Congresses and is disgusted with the favoritism shown to large corporate interests. This was demonstrated when a suggestion of very minor changes in the tariff was made. The grip of these combinations was shown to be absolutely unyielding.

"The President therefore has abundant reason for his protracted journey and for his many speeches. It will assuredly be a hunting trip—not for bear, but for votes."

Ex-President Cleveland is also planning a Western tour, and his critics have started a report that he is after the Democratic

nomination next year. More papers, however, believe that the ex-President will use his influence rather in the direction of "harmonizing" the Democratic party than for any personal gain.

AN EXPLANATION OF SOUTH CAROLINA.

MR. WALTER H. PAGE, editor of *The World's Work*, is a man of Southern birth and training, and a sympathetic student of Southern problems. One of these problems is South Carolina. The lieutenant-governor of the State recently met on the street an editor who had criticized him and, as Mr. Page puts it, "fatally shot him in cold blood." The lieutenant-governor was promptly put in jail, "but the prevailing opinion is that the murderer will not be hanged." The editor of the Charleston *News and Courier* was murdered a few years ago, and his murderer went free. What is the explanation? South Carolina "is not a frontier community"; in fact, "it is one of the original thirteen," and "has long been the home of a cultivated society." Why does the bully survive and the murderer go unpunished? Here is Mr. Page's explanation, as he gives it in his magazine:

"The general fact that explains the State's degradation is that human life is held, and has by a large part of the population always been held, cheap; and it is held cheap because all men are not considered to have the same rights and privileges. An individual assumes that he and not the organized community is dominant; and the organized community has not asserted itself strongly enough against such an individual assumption. In plain English, the democratic theory of society is not in favor. It is not accepted in the daily life of the people of South Carolina. Such a community is as far off from modern American ideals as a community that existed a century ago.

"The remedy is in education. Education means the free right training of every child in the commonwealth; but it means a great deal more than this. It means the assertion of the community against the lawless individual—the community's authority against individual authority. The State must tax; it must educate; it must punish. It must give every individual the same privileges, the same duties—put them on a level.

"An aristocracy in a democracy means a group of a few privileged persons; outside this group, the bully; behind the bully an ignorant populace that will elect the bully to office, will hold him in honor, and will acquit him of crime. There is yet something structurally wrong in South Carolina, and the many good people of the State have the sympathy of the country in their efforts to reform their social structure. They can do it only by building up all the ignorant and neglected classes. Then a Tillman could not be a hero, he could not be elected lieutenant-governor, he would not be even tolerated, not to say admired and acquitted. No State can rise higher than its average man, no matter how high the personal conduct or how gracious the civilization of some of its individuals."

LABOR AND CAPITALISTIC JOURNALS ON THE USE OF INJUNCTIONS IN STRIKES.

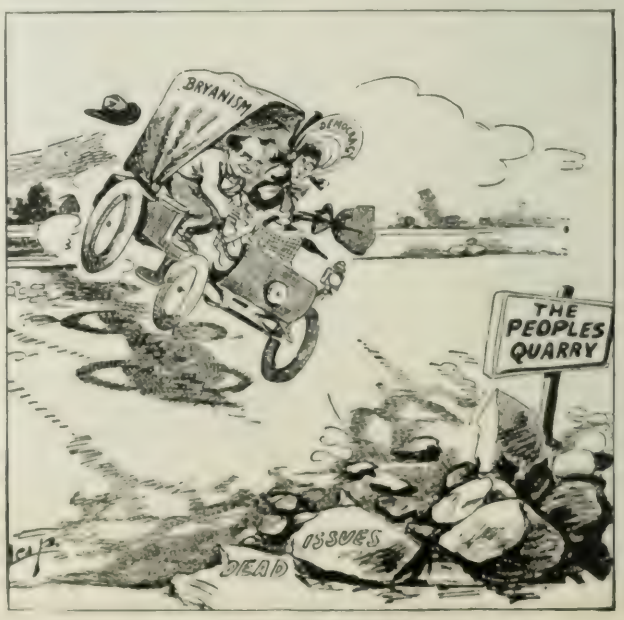
AS the members of the labor-unions and their employers are probably concerned more vitally than anybody else with the use of injunctions in strikes, it is interesting to turn to their organs of opinion and find what they have to say about the injunctions of Judge Adams in St. Louis, Judge Elmer in Waterbury, Judge Keller in West Virginia, and Judge Philips in Kansas City. All these judges have issued orders in the last few weeks restraining labor-unions and their members, in various ways, from interfering with the businesses against which they are, or were intending to be, on strike. The St. Louis injunction restraining the officers of the Brotherhood of Railway Firemen and the committee of Wabash employees from "ordering, coercing, persuading, inducing, or otherwise causing the employees of the railway to strike or quit the service of the company" has aroused the most feeling. It is a "monstrous usurpation," which has "strangled the most sacred rights of American citizens," declares *The United Mine-Workers' Journal*, of Indianapolis, in an editorial deprecating the failure of the anti-injunction bill to pass Congress. The same paper adds:

"As matters now stand there is not a lawful right of the people but what is subject to the whim and caprice of judges. To go further, there is not a right accorded to American citizens by the supreme law of the land but what has been denied them by injunction judges. Scores of men have been sent to jail for doing that which they have a clear and lawful right to do. Scores of men have been sent to jail for exercising the privileges accorded them and guaranteed them by the organic law of the land."

And *The National Labor Tribune*, of Pittsburg, treats the St. Louis injunction in much the same spirit. It says:

"If this injunction stands and is finally written into the laws of our country, it is difficult to conceive of the possibility of fixing any limit to 'government by injunction.' There have been other injunctions granted by the courts in railway strikes,

FIRST REAL SCARE REPUBLICANS HAVE HAD IN YEARS.
—*The Jacksonville Times-Union.*



ACCIDENT OR SUICIDE?
—*The Detroit News.*

CALAMITOUS PREDICTIONS IN CARTOON.

but none so sweeping and far-reaching as this. Judge Adams is a monstrosity, as a product of republican institutions. That he or any other intelligent person should imagine the people of this country, without respect to class, will permit themselves to be governed in any such manner as his astounding assumption suggests, is an eccentricity that there is no accounting for. No one but a fool would wish to see the issue that this reckless judge has raised pushed to its logical conclusion. Business men are condemning him as strongly as are the so-called 'labor agitators.' If he is prudent, he will modify his order; if he is as unfit to sit on the bench as now seems, he will persist."

Turning to the organs of the employers, however, one is informed that these injunctions are perfectly just and reasonable. *The Railway World*, of Philadelphia, says of the St. Louis order:

"Men must not be compelled to work against their will. So much is required that liberty may be real, and he who chooses to do so must be permitted to leave his employment in spite of the inconvenience his action may produce. This, however, is very different from conspiring with his fellows to suspend the entire operations of a railway or to dissuade others from continuing at work. A decree against using orders of an organization pledged to obedience and against persuasion or coercion of others is not in any way directed against the legitimate rights of the individual railway employee. Nothing can be more serious in its consequences to the employees themselves than hasty action in regard to controversies over wages. This appears especially true at this time, when railway companies all over the country are pursuing policies of great liberality in dealing with wage questions. The Wabash Railroad has been no exception to this rule, and the public has the right to expect that its employees will adopt a reasonable attitude and aid in averting the catastrophe of a great railway strike. In affording time for calmer consideration the injunction may confer a lasting benefit upon the employees, as well as upon the general public."

JUDGE ADAMS,
Whose injunction restrained the officials of the trainmen's and firemen's unions from ordering a strike on the Wabash road.

And *The Iron Age*, of New York, regards the courts and their injunctions as the last refuge from the encroachments of the turbulent unionists. To quote:

"What the labor leaders are pleased to designate and denounce as 'government by injunction' has come to stay. It appears to be the only kind of government which the turbulent element of the trade-unions can be made to respect. They can change statutes to suit themselves by maintaining a steady pressure upon demagogs in legislatures and adroitly menacing defeat by 'the labor vote' to those who resist them. The common law they can not change, nor is it likely that they will be able to curtail the powers of the courts without first recasting federal and state constitutions—a task of considerable magnitude and no little difficulty. The turbulent element of the trade-unions is not the majority of the membership in any instance, nor indeed a considerable percentage of it. It is noisy, arrogant, and intolerant, and wields an influence out of all proportion to its numerical strength by means which are tolerated rather than approved. For the moment it appears to be difficult for the typical partizan of the union movement to realize, or even to understand, that he has duties of citizenship from which he is not absolved by a desire to further the interests of labor. He claims special privileges and immunities which he would resent and resist by revolution if claimed or exercised for his oppression, forgetting that a conspiracy does not legalize what society could not tolerate in the individual. By and by he will come to a realizing sense of the fact that he can not undertake to be a law unto himself without throwing the whole social system into disorder. There is no wrong without a remedy, and this is as true of the wrongs he suffers as of those he commits. His safety and well-being are in the support of the law and the preservation of peace and order."

TERRITORIAL PRESS ON STATEHOOD FAILURE.

THE newspapers of Oklahoma, Indian Territory, New Mexico, and Arizona have a suspicion that the failure of Congress to pass the Statehood bill at its recent session was due to sectional jealousy. It was "a cold-blooded conspiracy to keep the West in subjection to the East," declares the Augusta (Oklahoma) *Free Homes;* and the Newkirk (Oklahoma) *Republican News Journal* makes the same charge. The Okeene (Oklahoma) *Eagle* characterizes the killing of the bill as "one of the most dishonest political deals since this country was established," and it goes on to say, in a picturesque comment:

"The spirit of our Constitution never meant that Congress should be converted into a blabbery and boodlers' headquarters as it seems to have been. Those high-priced, verbose air-heaters, who think their gabberies are the centers of gravity for the entire universe, ought to be sent away back to sit down until they can learn to stand by the pledges in the platform of their party."

Skepticism, pessimism, and "a tendency toward crustiness" have, as a result of this failure, fastened their baneful influence upon the average Oklahoma citizen, whose "simple, trustful faith in party pledges has been terribly jarred." So the Billings (Oklahoma) *News* informs us; and the Carmen (Oklahoma) *Headlight* reports the citizens in its vicinity as being disappointed and bitter in spirit. But they find comfort in the thought that the defeat is due to political and commercial jealousy. Thus the Enid (Oklahoma) *Events* declares:

"Oklahoma failed of admission this session of Congress solely because of the jealousy of the little dinky States in the East located beyond that little ridge called the Alleghany Mountains. The East fears the rising power of the West. The Western Senators defeated the ship subsidy bill and have made the Eastern part of the United States resemble thirty pieces of copper on several occasions when the East wanted to foist its pet sectional schemes upon the great bulk of the people. Very few of the people, comparatively, of Eastern States and Yankeedom know anything about the West. It is an unexplored region to them, and all facts and statistics drummed into their dull ears prove unavailing to change their set convictions, which, mule-like, are as unchangeable as an African's skin. . . . . .

"The Republican party was not responsible for the defeat of Statehood any more than was the Democratic party. Men of both parties stood on either side. The envy and jealousy of the East, without regard to politics, defeated Statehood, set at naught campaign pledges, and exemplified the spirit of Cain, who slew his brother through jealousy."

In the Indian Territory, however, some of the papers are very glad that the Statehood bill failed. The people of the Indian Territory are anxious enough for Statehood, and willing to be united with Oklahoma, but in the bill championed by Senator Quay it was provided that the Oklahoma constitutional convention should express the consent of the State that Congress might attach all or any part of the Indian Territory to the State of Oklahoma. The Indian Territory citizens do not care to be "attached" to Oklahoma in that way. The South McAlester (I. T.) *News* declares that "the passage of the piecemeal Statehood legislation would have been a calamity years could have never repaired," and "would have engendered an endless sectional hatred." It hopes for the union of the two Territories in single Statehood, but demands that Indian Territory have an equal voice with Oklahoma in the making of the new State. So, too,

thinks the Vinita (I. T.) *Chieftain*, and the Muskogee (I. T.) *Phœnix* declares:

"The Indian Territory will consent to go into Statehood with Oklahoma only on terms of absolute equality, to be represented in the constitutional convention man for man, to participate in the division of the public institutions building for building, to secure a division of the political places office for office. On these terms will we consent to go in; on any other terms will we exert our best efforts to defeat Statehood legislation which contemplates Statehood for Oklahoma and Indian Territory jointly.

"The defeat of that provision of the omnibus bill which made of us political orphans and attached us piecemeal to Oklahoma was the best thing that could possibly have happened for the Indian Territory."

In the newspapers of New Mexico and Arizona the charges of jealousy, sectionalism, and politics are reiterated. "The game of politics has kept the Territories from their just rights, and will do so as long as the men at the helm pursue their narrow, short-sighted, and wholly selfish policy, which, in its inception, is wholly unpatriotic and unworthy of true American citizenship," declares the Silver City (N. M.) *Enterprise*, and the Carlsbad (N. M.) *Argus* makes a similar charge. The Las Cruces (N. M.) *Progress* remarks, in a half-sad, half-humorous vein:

"A great Territory, a rich Territory, an educated Territory, must still knuckle in abject vassalage to the machinations of political bosses from the Eastern commonwealths who tremble for their sovereign power in the legislative halls of the country when a possibility of some new Western votes confronts them. We have been maligned, traduced, and spit upon. We have been rub-dubbed and razzle-dazzled. For the time-being our name is neither New Mexico, Montezuma, nor Lincoln; it is 'Mud.' We have had our friends, however, and always loyal will be New Mexicans to Senators Quay, Foraker, Elkins, Teller, and others, who have fought our battle on the floor of the enemy's wigwam. The proposition to get even with our traducers is a difficult one to solve, but if any of you have any speeches from the garrulous boy Senator from Indiana, burn 'em up, and rid your libraries of the 'Oration and After-Dinner Speeches' of Chauncey Depew. It is time wasted to read such stuff, anyway. Adios, Statehood—'we shall meet, but we shall miss thee.'"

The Tucson (Arizona) *Citizen* lays the failure at the door of the Republican party. It says:

"The defeat of the omnibus bill by tactics that have disgraced the Republican party need not discourage the people of Arizona. It has been demonstrated that a majority of both Houses of Congress favored Statehood. We will try again. Injustice and bigotry can not always prevail. The autonomy of Arizona has been preserved. When the next Congress convenes Arizona's demands for admission to the Union will be again presented.

"We know now who are our friends and who are our enemies. Every Democratic vote in both Houses of Congress sustained the claims of Arizona for admission to the Union. This is a gratifying fact that luckily can not be denied. The influence of the Roosevelt Administration opposed admission. The Republican organization opposed admission. The Republican leaders in the Senate opposed admission, and in doing so placed the party responsible for legislation in the unprecedented attitude of engaging in a filibuster to defeat the will of the majority of the Senate. . . . . .

"The Republican party is responsible for the defeat of Statehood. This assertion is not open to question. The Republican leaders in the Senate violated the solemn pledge of their national convention. The people of Arizona will hold the Republicans to strict responsibility for the denial of their right to full political enfranchisement."

DR. CRILE, of Cleveland, says he can keep an animal alive after decapitation, and that the process may be applied to human beings. Certain office-seekers would do well to investigate the system before Mayor-elect Weaver returns.—*The Philadelphia North American.*

LETTERS AND ART.

THE FUTURE OF THE DRAMA.

"THE history of the drama is the long record of the effort of the dramatist to get hold of the essentially dramatic and to cast out everything else." This sentence sounds the keynote of an article by Prof. Brander Matthews, of Columbia University, in *The Bookman* (March). There was a time, as he points out, when the drama contained all kinds of foreign elements. The Elizabethan plays, for example, were "often prosily didactic," and admitted many "accidental and adventitious superfluities." Even in Shakespeare there are scores of passages which "exist for their own sake and are not integral to the play wherein they are embedded." The stage has been made to serve as "a pulpit for a sermon, a platform for a lecture, and a singing-gallery for a ballad." But to-day there is a principle of specialization at work in all the arts which is compelling purity of type and form. Modern critical judgment demands that the drama, whatever else it is or is not, shall be dramatic. And so Professor Matthews is confident that the drama of the future is going to be "less rhetorical, less oratorical, less lyric, less epic, more purely dramatic." He illustrates his point of view in the following passage:

"In the ill-lighted theaters of old, the dramatic poet had to take care that his plot was made clear in words as well as in deeds; and he was tempted often to let his rhetoric run away with him. But in the well-lighted modern houses he can, if he chooses, let actions speak louder than words. Being able to reach the playgoers through their visual as well as their auditory sense, he sometimes plans to let a self-betraying movement do its work without any needless verbal elucidation. He recognizes that there are moments in life when a silence may be more eloquent than the silver sentences of any soliloquy. He is well aware that a sudden pause, a piercing glance, an abrupt change of expression, may convey to the spectator what is passing in the minds of the characters more directly than the most brilliant dialog. He has noted not only that emotion is often inarticulate when it is keenest, but also that a mental struggle at the very crisis of the story can often be made intelligible by visible acts; and he knows that the spectators are far more interested in what is done on the stage than in what is said.

"At first sight it may seem to some as tho this utilization of the picture-frame must result in making the drama in the immediate future even less literary than it is to-day. This will surely appear to be the case to those who are accustomed to consider the drama as tho it was merely one of the divisions of literature—or, indeed, as tho it was a department of poetry. But the drama, altho it has often a literary element of prime importance, does not lie wholly within the boundaries of literature; and it has always exercised its privilege of profiting by all the other arts, pictorial and plastic, epic, lyrical, and musical. Above all, the drama is what it is because of its specifically dramatic qualities; and these qualities can be exhibited wholly without rhetorical assistance, as every one will admit who has had the good fortune to see the 'Enfant Prodigue.' In fact, many a noble drama—'Hamlet' for one—has a pantomime for its skeleton, and calls on literature only to furnish its flesh and blood."

The London *Times Literary Supplement* takes issue with these conclusions. It says:

"In this matter of localizing the illumination at will . . . what advantage can the future expect to have over the present in the way of dumb-show scenes? It has to be borne in mind that, tho art changes, the laws of optics do not. When once the incidence of the light is settled for a particular scene it can not be altered. The light can not follow the actor about the stage, the actor will still have to move into it, Mohammed to come to the mountain. But these are purely mechanical considerations; there is one of another kind which, we think, ought to qualify the forecast that the drama of the future will tend to minimize speech. No doubt, as Professor Matthews says, 'the set speech, the oratorical display, the *tirade*, will tend to disappear'; but if he means that the dialog will be reduced to such speech as merely carries on the immediate action—and, whether he means it or not, it is a currently accepted view—we think it is a mistake. . . . There will always be something over and above the directly significant word or the eloquent action to which Professor Matthews would reduce drama. There will always be the 'harmonics' of the fundamental notes, the minor or ostensibly 'superfluous' dialog, which is really there to make us aware of the peculiar *timbre* in the dramatist's voice, to enable him to unbosom himself to us in that intimacy of soul and soul which is the ultimate aim of drama, as it is the ultimate aim of all art."

The same paper continues:

"For our part we think the future career of the drama is likely to be hampered by its inability to tell cultivated and curious people of to-day a tithe of the things they want to know. What the drama can tell, it can tell more emphatically than any other art. The novel, for instance, is but a report; the drama makes you an eye-witness of the thing in the doing. But then there is a whole world of things which can not be done—of thoughts and moods and subconscious states which can not be expressed—on the stage, and which can be expressed in the novel. In earlier ages, which could do with a narrow range of vivid sensations, the drama sufficed; it will not suffice for an age which wants an illimitable range of sensations and, being 'quick in the uptake,' can dispense with vividness. If any one considers for a moment the extraordinarily complicated texture of subtle thoughts and minute sensations in such a book as Mr. Henry James's 'Wings of the Dove,' and then thinks of any, the most 'advanced,' modern play—'The Master Builder,' say, or 'Le Repas du Lion'—the contrast between the abundance of the one and the meagerness of the other can not but be ludicrous. We are brought back once more to the element of drama which Aristotle called *διάνοια*, its mind-stuff, its 'philosophy,' as our fathers used to say. . . . Well, who can deny that it is thin, unsatisfying, and generally behind the times? For one explanation of this we should point to the rigid limitations of the dramatic medium. For the poor lookout of our own drama, in particular, there is perhaps the additional reason that few of our modern authors with the dramatic instinct seem able to accomplish any fresh, original, profound thinking."

A REVIVAL OF THE "GLYPTIC" ART.

THE art of "glyptics," or engraving on gems, which was very popular during the eighteenth century but was entirely neglected later on both by historians and art collectors, seems to be winning favor again, particularly in France. The revival of interest in this art is chiefly due to the researches of M. Babelon, a member of the French Institute. M. Jules Guiffrey, who writes an article on this subject in the *Gazette des Beaux-Arts* (Paris), says:

"The apparent neglect of the art of glyptics can be easily explained if we take into account the difficulty of making a comparative study of these little gems, unless they are kept in public museums. One experiences the greatest difficulties in attempting to approach the private owners of intaglios, cameos, and miniatures possessing artistic value. As a rule, indeed, the very existence of such treasures is absolutely ignored. They are kept concealed in jewel-boxes and seldom exhibited. The student is limited to public collections; and while these collections are often very valuable, they are most of them defective in many respects."

The researches of M. Babelon make it plain that the glyptic art has been practised by Occidental nations for many hundreds of years. He has discovered intaglios and seals dating from the reign of Charlemagne. An intaglio of King Lothair, and a crucifix and secret seal belonging to Jean-le-bon, are in the possession of the British Museum. Jacques Gay, a protégé of the Marquis de Pompadour, was perhaps the greatest exponent of the glyptic art. Says M. Guiffrey:

"It would be useless to give the names of all the poor imitators of the great artist, Jacques Gay, altho among our contemporaries are a few possessing real talent. Their chief defect has been their inability to select the proper kind of stones. It is far from

easy to find perfect material. For instance, Adolphe David, who engraved a cameo representing the 'Apotheosis of Napoleon I.,' had to search three years before he found a sardonyx suitable for his work. Artists make a mistake when they seek stones of excessive size. Such stones are exceedingly scarce, and, besides, their size often makes their use impracticable. They are suitable for collections, but not for individuals. Artists should remember that the number of capitalists willing to pay large sums for useless jewels is daily decreasing. Engraved stones are therefore not in great demand. We see nowadays but few private collections of gems engraved during the nineteenth century, whereas at the time of the Renaissance every prince or great nobleman owned a collection of precious gems, just as we to-day make collections of engravings, books, and bric-à-brac. There are indications, however, of a revival of interest in the art of glyptics."—*Translation made for* THE LITERARY DIGEST.

MAETERLINCK'S "MONNA VANNA" AND ROBERT BROWNING.

PROF. WILLIAM LYON PHELPS, of Yale University, brings what is practically a charge of plagiarism against Maurice Maeterlinck. His charge is formulated in the pages of *The Independent* (March 5), and is based upon the "extraordinary resemblance" existing between Maeterlinck's new play, "Monna Vanna," and Robert Browning's drama, "Luria." Professor Phelps declares:

"Maurice Maeterlinck and Robert Browning—it would be difficult to find two authors more unlike, two men whose writings have less in common. And yet the similarity between Maeterlinck's latest play, 'Monna Vanna,' and Browning's poetic drama 'Luria,' is so striking that it is surprising it has thus far escaped the notice of continental, British, and American critics. That Maeterlinck should have gone to Browning for material is curious enough; but that the likeness of 'Monna Vanna' to 'Luria' should be purely accidental, seems even more curious to one who knows both plays well."

The real reason why the similarity of "Monna Vanna" to "Luria" has thus far escaped notice is attributed by Professor Phelps to the comparative obscurity of the latter play. He writes on this point:

"Published in 1846 in the last number of the 'Bells and Pomegranates,' 'Luria' attracted little attention at the time, and has never been classed among the poet's more popular works. It is a melancholy, noble, and ideal drama, and, like so many of Browning's poems, it represents 'action in character, rather than character in action.' The plot deals with a war between Florence and Pisa in the fifteenth century. Luria, the commanding general of the Florentine forces, is a Moor, who has been drawn to Florence by his passionate love of art and culture. His success in arms has been brilliant, and on the eve of a final battle with the Pisans—a battle so well planned that it can issue only one way—we find that his worst enemies are in his own camp, and that his final reward from the city he has served is to be—death. Bracchio, commissary of the republic of Florence, has keenly watched the development of Luria's power, and, while pretending to be his friend and admirer, has secretly sent despatches to Florence, which will result in the general's arrest so soon as he is no longer immediately necessary to the city's welfare. This contemptible intrigue is well known to Luria, as he has intercepted the despatches; but instead of going over to the enemy he calmly persists in his duty. In a remarkable interview with Bracchio, Browning brings out the characteristics of the two men. Luria, a great, simple nature, brave and noble, scornfully tells Bracchio that his duplicity has been completely discovered, and naturally he expects the latter to be overwhelmed with shame and confusion. To his amazement, Bracchio is as cool as ice, and defends his underhand methods with astonishing subtlety, stating that he knows only one master, Florence, and that it is not well for the city to be beholden to any one man. He therefore thinks it best that Luria should die."

SCENE FROM "MONNA VANNA" AS ACTED IN BERLIN.
Courtesy of *The Independent*.

The opening situations of "Monna Vanna" are precisely similar:

"The plot deals with a war between Florence and Pisa in the fifteenth century. Prinzivalle, an alien, is the commanding general of the Florentine forces, and on the morrow he is about to give the last fatal blow to the Pisans, whom he has, thanks to his brilliant campaign, in a situation from which they can not possibly escape. Trivulzio, commissary of the republic of Florence, while pretending to be the bosom friend and admirer of the commander-in-chief, has in reality been sending secret despatches to the home city, the result of which means the arrest and death of Prinzivalle, so soon as he has fought the final battle, and is no longer needed. These despatches have been intercepted, and, in a powerful scene, Prinzivalle confronts Trivulzio—precisely as Luria confronts Bracchio—with the proofs of his appalling treachery. . . . Trivulzio springs upon the general with a knife, is overpowered, and then coldly defends his conduct in the despatches with absolutely the same reasoning, even to the smallest detail, employed by Bracchio in Browning's play."

All these striking similarities, concludes Professor Phelps, may be accidental; but "surely they seem otherwise." He thinks "it would be interesting to hear M. Maeterlinck's explanation of them," and adds:

"Possibly he [Maeterlinck] might call attention to the totally different manner in which the play ends, which is true enough. The love motive is practically absent in 'Luria,' all attention being concentrated on the chief figure. After winning over all his critics by his splendid magnanimity, Luria commits suicide, and the play is merely an illustration of the Scripture text, 'And I, if I be lifted up, will draw men unto myself.' In Maeterlinck, the situation becomes otherwise, and, indeed, it can not be summarized without making the drama seem far more gross than it really is, tho it is certainly unpleasant. But the object of this brief article is simply to point

out the extraordinary resemblance that undoubtedly exists, and to recommend readers to examine it for themselves."

"Monna Vanna" has already had a somewhat checkered career. In London, as will be recalled, it was condemned by the public censor. In Paris, however, the play had a most successful run; and in Germany and Austria, where it is still being presented, with Madame Maeterlinck in the title rôle, it is one of the sensations of the day. The announcement is made in the newspapers that Maeterlinck and his wife intend to visit this country in the near future, and to present here "Monna Vanna" and others of his plays, including "Ioyzelle" and "Aglavaine et Selyzette." The first Maeterlinck drama seen in this country was "Pelléas and Mélisande," played last season by Mrs. Patrick Campbell.

MISS ETHEL M. SMYTH.

Her opera, "Der Wald," is the first by a woman ever produced in America.

A WOMAN'S OPERA.

THE only novelty of the present operatic season, Miss Ethel M. Smyth's music-drama, "Der Wald" was presented at the Metropolitan Opera-House on the evening of March 11. Miss Smyth is an Englishwoman, and her opera was performed twice last July at Covent Garden, London. It has also been produced in Berlin, and is in preparation in Strasburg and Vienna. The New York performance was enthusiastically received by a large and brilliant audience, which included the British ambassador, Mr. John S. Sargent, Prince Troubetzkoy, and other celebrities. The following critical comment on the opera is taken from *Harper's Weekly*:

"Miss Smyth has abundantly earned the right to a judgment of her work based upon standards of the most uncompromising impartiality. Whatever one is prepared to say of its excellences and its defects, 'Der Wald' can not justly be set aside as being merely woman's work, with all that that disposition is made to imply of qualification and denial. Miss Smyth has written with too high and serious an aim, with too ripe and confident an artistry, to be considered with anything but an attentive respect. Dramatically, 'Der Wald' is a brief and passionate illustration of that wonderful thought of Plotinus, that 'in the particular acts of human life it is not the interior soul and the true man, but the exterior shadow of the man alone, which laments and weeps, performing his part on the earth, as in a more ample and extended scene, in which many shadows of souls and phantom forms appear.' Miss Smyth has intended, in her own phrase, to show 'the quiet workings of the eternal forces of nature as contrasted with the storm and stress of mortal life'—which is merely a British and modern variant of the meditation of Plotinus. She has chosen (being her own librettist) to set against the background of a primeval and spirit-haunted forest, a tragic human action, contrastingly swift, brief, and calamitous; and at the end, as at the beginning, a mystic chorus—the elemental spirits of the wood—chant, in the words of the argument, 'their own eternity and the brevity of things human.' With all possible sympathy for its essential, if unrealized, poetry, it must be said that this conception, as Miss Smyth has actualized it dramatically, seems at times a little too obvious, a little too crassly romanticistic (as Mr. Howells would say). We wish that, in developing her theme, she had handled it more subtly, more aerially, with somewhat less bald an insistence upon the point of her allegory. This, however, concerns the dramatic structure alone; of the music with which she has invested it we can speak with somewhat less of reservation. After a single hearing, one recalls passages of indubitable force and beauty; an unflagging sentiment for dramatic appropriateness; a constant endeavor to reflect, as eloquently as may be, the essential poetic substance of the play. Miss Smyth has not escaped a measurable dulness and inefficiency, nor has she scrupled to write without the bidding of that incalculable inspiration which is not to be realized by mere seeking and desire. But for an unswerving fidelity of purpose, a consistent preoccupation with dramatic verity, a dexterously contrived significance, 'Der Wald' is notable in a considerable degree."

The New York *Evening Post* takes a much less favorable view:

"It may be that some day women will write as good music as men; but 'Der Wald' does not bring us half an inch nearer that epoch. It is well scored, the treatment of the orchestra being by far the strongest point—strong to the verge of masculinity. But the vocal parts are neither effective (except in a duo) nor individualized. Mmes. Gadski and Reuss-Belce, MM. Anthes, Bispham, Blass, Mühlmann, and Dufriche did their best with them, and they deserved all the applause they got. But the best of singers could not for a long time float a work so barren of original, individual melody as this opera is. That is its weak, its fatal point. It has no physiognomy of its own. Any one of a thousand musicians now living, women or men, might have written it."

JOHN FISKE AS A POPULAR HISTORIAN.

MR. W. S. GILBERT once remarked, in relation to comic operas: "There are some men who seek to win the applause of the private boxes; there are others who cater to the taste of the gallery; but I always keep my eye fixed on the dress-circle." What Mr. Gilbert did for comic operas, John Fiske did for history. He won his triumph by appealing neither to very clever people nor to very ignorant people, but to the educated classes of the "dress-circle." It was this popular quality, which, in the opinion of Mr. H. Morse Stephens, professor of history in the University of California, gave to Mr. Fiske his peculiar distinction. Professor Stephens writes (in *The World's Work*, April):

"It is impossible not to recognize that there must be more than accident in the fact that John Fiske was not only the most successful popular historian, but also the most successful platform lecturer on history of his generation. The same qualities that commended his books commended his lectures. Practically all his historical works were based upon lectures delivered to cultivated and educated general audiences from Maine to California. In the preface to his 'The Beginnings of New England' he mentions no less than twenty-three places in which lectures had been delivered by him, containing the substance of that book, between May, 1887, and its publication in April, 1889. This practise of trying his books from the lecture-platform in all parts of the country gave Mr. Fiske an admirable means for testing their effectiveness. Tho popular in form, his lectures, like his books,

were not designed for the uneducated; and the crowds which attended them consisted of cultivated people of all classes and professions, and not simply of young students. It would be vain to speculate whether Mr. Fiske learned his power of writing popular history from delivering popular lectures, or whether it was the temperament in the man that made him acceptable to a broad general audience both as a lecturer and as a writer. His unrivaled gift for hitting the popular taste was certainly heightened by the steady intermingling of lecturing and writing. He learned on the lecture-platform what interested his hearers and faithfully followed their indications when he sent his books to press. In his case the lecture-platform was more than an advertisement; it was a rehearsal. His greatest merits—simplicity of style, charm of manner, and delicate interpretation of the past by use of modern phrases and modern instances—were seen to equal advantage in lectures and in books. His chief defects—a certain carelessness about details, a lack of true perspective, and a readiness to digress from the subject in hand and to give vent to his own personal views on ethics or politics—were faults encouraged by these platform rehearsals. But it was to them that he owed his exact perception of his readers' demands and learned how to satisfy them. Incidentally, the familiar acquaintance made with the personality of the man upon the platform gave to thousands of readers of his books an opportunity to read between the lines and to interpret the written pages by the voice and gesture of the living man. It has only to be remembered that John Fiske was a famous popular lecturer on history, that he was neither a hard-worked college professor on the one hand nor a political stump-speaker on the other, to understand why his books are more widely read than those of any other historian of this generation by the educated and cultivated section of the American people."

The scientific historical writer hesitates, as a rule, to make comparisons between past and present. He avoids the use of analogies that are necessarily based upon transient standards. The popular historian, on the other hand, is apt to revel in allusions that stimulate the reader's imagination. Mr. Fiske, we are reminded, was a "past master in the art of modern allusion":

"When dealing with the history of the beginnings of the American Revolution he found it expedient to write a page of praise for Mr. Gladstone's policy with regard to the Boer War of 1881, thus creating a misleading analogy that has been popular in these latter days. This sort of thing is common to all popular writers of history, who occasionally abuse their position as recorders of the history of the past to advocate their own political and economic and literary ideas with regard to the present. Mr. Fiske was a convinced free-trader, and dozens of allusions can be found, sometimes in the most unlikely places, in all his books, in which he takes a fling at the policy of protection. Wherever a pretext can be found he was ready to appeal to the past for the condemnation of this particular present policy that offended his political and economic ideas. He was equally ready to vent his literary likes and dislikes. A sincere lover of the novels of Charles Dickens, he took every opportunity to bring in citations from his books, and sometimes with a most curious effect, as where he described Augustine Herman of the Bohemia Manor as suffering from 'matrimonial infelicities like those of Socrates and the elder Mr. Weller,' or where in a note on the Mexican drink, *pulque*, a reference is made to the plant which stood by the front doorsteps of George Nupkins, magistrate in Inswich, England, who figures conspicuously in an episode in the 'Pickwick Papers.' This wealth of modern allusion, political, economic, and literary, is characteristic of all successful popular historians."

Furthermore, Mr. Fiske brought to all his work an optimistic and buoyant spirit, a sane, human touch.

"As might be expected, he defends the popular view of the character of Christopher Columbus, and, throughout his writings is kind to all popular heroes. He is sufficiently touched with the modern spirit of impartiality not to fall into the snare of the Carlyle theory and practise of hero-worship. His heroes are as thoroughly human as modern critics could desire; he admits that Columbus was not married to Donna Beatriz Enriquez de Arana, and that his son Ferdinand was illegitimate; he admits that General Grant in his memoirs is not fair to the splendid conduct of General Thomas in the matter of the battle of Nashville; and his portrait of George Washington is that of a noble gentleman and not of a prig. The same sweet reasonableness, with a full acknowledgment of the value of modern research, is shown in his attitude toward other problems than those of individual character, and a good specimen of his kindly treatment of controversies is to be seen in his account of the voyages of the Northmen to Markland and to Vinland."

In brief, Mr. Fiske "knew his public thoroughly and they responded generously. He brought out what was best in them by giving to them the best that was in himself. . . . It was because he saw and felt like one of themselves, and was possessed further of the power of explaining to them why they saw and felt thus, that John Fiske became to thousands of his countrymen the interpreter of their own thoughts and feelings in the spheres both of history and of philosophy."

NOTES.

A NEW quarterly journal entitled *Modern Philology* and "devoted to research in the modern languages and literatures" is announced by the University of Chicago Press.

The Bookman's March list of the six best-selling books of the past month is as follows:

1. The Pit.—Norris.
2. Mrs. Wiggs of the Cabbage Patch.—Hegan.
3. The Virginian.—Wister.
4. Letters of a Self-Made Merchant to His Son.—Lorimer.
5. Glengarry School Days.—Connor.
6. The Blue Flower.—Van Dyke.

CHARLES GODFREY LELAND, journalist, poet, philologist, and all-round man of letters, died in Florence on March 20. His most original creation, "Hans Breitmann's Ballads," achieved world-wide popularity. As long ago as 1849 he was associated with R. W. Griswold in the editorship of *The International Magazine;* and he was a contributor to *The Knickerbocker Magazine*, *Putnam's Magazine*, and many other of the old-time periodicals. His last book, "Kuloskap, the Master," deals with Indian folk-lore, and was written in collaboration with Prof. J. Dyneley Prince, of Columbia University.

EMPEROR WILLIAM has turned his attention to the reformation of the German language. According to a Berlin despatch in the New York *Sun*: "The Kaiser directs that the official style shall be clear and simple, he particularly desiring the omission of long-winded sentences, with involved subordinate clauses. The practise of putting several participles and infinitives into a sentence is to be avoided as much as possible. The style of reports is to be grave and measured, free alike from slang and rhetorical pathos. Unnecessary adverbs, far-fetched expressions, foreign terms, and platitudes are to be omitted."

SCIENCE AND INVENTION.

OUR PLACE IN THE UNIVERSE.

SOME interesting comments on Alfred Russell Wallace's recently published theory of the universe, according to which the earth and man are at its center, are made in *The Independent* (New York) by Prof. W. H. Pickering, of Harvard. In the first place, Professor Pickering thinks that Wallace's conclusion that the universe is limited is not upheld by the evidence that he offers. Says the professor:

"It is true that the increasing power of our telescopes and cameras shows a constantly decreasing increment in the number of stars revealed by them; but this, it seems to me, does not indicate that we have reached the limits of the stellar system, but rather that we are still very far from them. An approach to the limits would be marked by a sudden instead of a gradual decline in the number of additional stars observed.

WILLIAM H. PICKERING,
Of Harvard Observatory.

"It may be shown mathematically, assuming all the stars to be alike, that with each additional magnitude we should increase the total number of stars four times. That is to say, suppose that in a certain region in the heavens we want to find 5 stars brighter than the sixth magnitude. Then we should expect to find 20 stars brighter than the seventh magnitude, 80 stars brighter than the eighth, 320 stars brighter than the ninth, and so on. In point of fact the ratio 4 is seldom reached, and never held long, even among the brighter stars, while among the fainter ones much smaller ratios are found to obtain. Thus among 825 stars in a part of the constellation of Orion the successive ratios between the sixth and fifteenth magnitudes were 3.7, 2.5, 1.7, 1.7, 1.8, 1.5, 1.4, 1.4, 1.4, and 1.3. Here we find no sudden drop in the ratio, indicating that we had found all the stars. What we do find is a steady and uniform decline, which, as far as we can see, might with more powerful instruments be continued indefinitely.

"This really means apparently one of three things: either, first, that as we recede from our sun the stars grow smaller; second, that, as we recede, the stars grow father and farther apart; or, third, that there is an absorbing medium in space which makes the remoter stars appear fainter than would otherwise be the case. It is possible that all three of these hypotheses are correct, but it is not likely that we are near the edge of the universe as yet. . . . . .

"With regard to our position in the exact center of the Milky Way, Mr. Wallace seems to have been led into error by the accuracy of the figures given by Sir John Herschel. Many astronomers, especially in former times, were in the habit of giving their numerical results in very small fractions of the second of arc, whereas, in point of fact, they could not measure the given distance perhaps within several minutes. This seems to be the case in the present instance. If the Milky Way were merely a hazy uniform band of light, we might locate its medial line with some approach to accuracy. A close examination, however, shows that it is, on the contrary, a branching structure of most irregular form and brilliancy, sometimes one side being the brighter and sometimes the other, and it would not be possible for any two observers, or indeed for any single observer working on different nights, to agree within as much as a degree as to where the medial line should properly be drawn. . . . . .

"Assuming, however, that we are within one degree of the medial plane, and within ten per cent. of its central position, which is indeed quite possible, it may readily be shown that there are from one to ten thousand stars that are just as likely to hold the central position as we ourselves. That is to say, any one of our naked-eye stars may be the central one.

"But again, supposing our sun is the central star, what of it? If we are central to-day, since we are moving about fourteen miles every second straight toward one side of the Milky Way, we are not likely to remain central very long, and when the human race first appeared, perhaps 100,000 years ago, we certainly could not have been anything like central. It would therefore appear that our sun is no more likely to control the one favored planet of the universe, on this hypothesis, than any other of the three or four thousand stars that are visible to the naked eye upon a clear night."

With regard to the habitability of the various planets, Professor Pickering seems to agree in the main with Mr. Wallace, altho he will not admit that there is no possibility at all that Mars is inhabited. He says in conclusion:

"It has been said that if an angel were to have paid a brief visit to the earth once every 100,000 years, he would have come perhaps a thousand times since the earth first separated from the sun, but only once would he have found intelligent life upon its surface. From this we may argue that if we ourselves could now visit one thousand planets that were capable sooner or later of supporting life, on only one of them could we properly expect to find inhabitants of a degree of intelligence equal to that, let us say, of our own ancestors ten or twenty thousand years ago.

"From this point of view perhaps we may claim that we really are the most intelligent animals in the universe, at the present moment. At the same time I fear we must admit that there is very little evidence from an astronomical standpoint which can be gathered in support of such a claim."

ARE ALL STREAMS BECOMING SUBTERRANEAN?

THAT flowing surface is gradually disappearing, and that a subterranean system of circulation is being substituted for it, is the somewhat startling thesis upheld by a French physicist, M. Martel, in a lecture delivered before the Paris Geographical Society on January 9 last. From investigations and studies of a large number of caverns, pits, and dry valleys he has come to the conclusion that the surface of the globe is slowly drying because the water-courses are abandoning it for subterranean channels. Says the writer of a report in *Cosmos* (February 21):

"The learned lecturer also proved that as a general rule all great caves have either captured, or are in process of capturing, some exterior water-course whose neighboring valley is dry or in process of drying. This is the law of 'the capture of water-courses by fissured regions.' This law is of considerable importance, for the disappearance of surface streams incessantly continues on account of the formation of fissures in the soil, of gravity, of erosion and corrosion, and of the tectonic movements of the earth's crust. Thus, in all fissured regions, which occupy a large part, perhaps the greater part, of our planet, desiccation, aggravated by the ravages of deforestation, will proceed, multiplying plains, steppes, and arid deserts. Have we not proved, in the course of every hydrologic investigation, the disappearance or the diminution of springs? This is why we must search for the subterranean receptacles that absorb the water of fissured geological formations, if we wish to utilize the reserves of water contained in the bosom of the earth, or else execute the necessary works to arrest the progress of this absorption and prevent its disastrous effects."

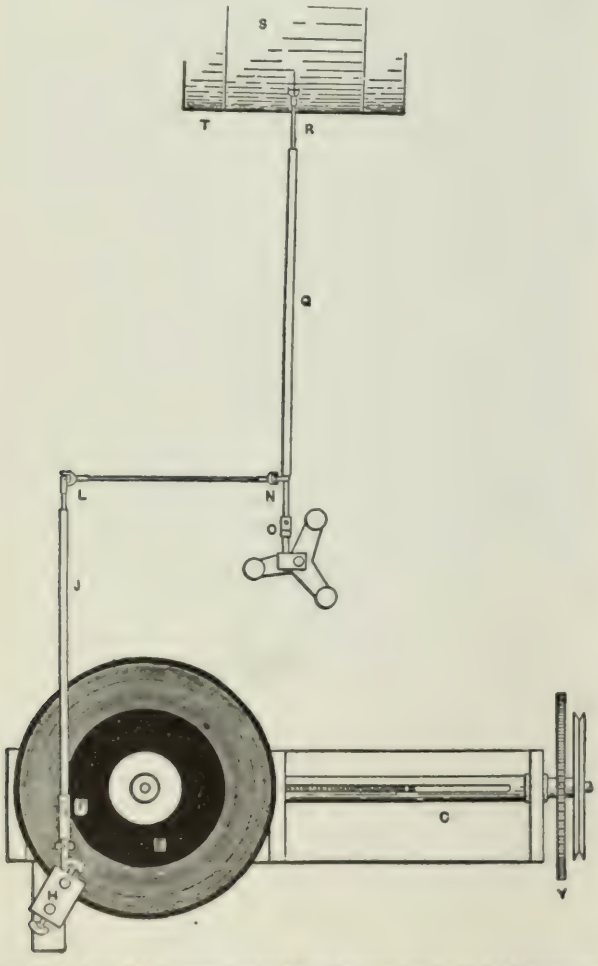
To what point this disappearance of surface water may extend is shown by a recent report of M. Hector Josse on the springs of the department of the Somme, France, which is quoted by the writer of the article in *Cosmos*. It appears that these springs are rapidly disappearing. In the canton of Roisel, the level of the water in the wells has been falling, in spite of very rainy weather, some having become completely dry. The water level in all the wells is approximately the same, which shows that the

whole rag on is supplied by the same water-bearing stratum. This level is falling steadily, sometimes slowly, sometimes rapidly. Of course the importance of all this depends on the extent of the geological formations that favor this action; but there seems to be no doubt that action of this kind is taking place in more regions than we have hitherto suspected.—*Translation made for* THE LITERARY DIGEST.

THE CURVES OF SPEECH.

THE production of what are called speech-curves and the drawing of deductions from them has become an important part of the science of experimental phonetics, which has developed within the past ten years. The best "speech-curves" are now obtained by enlarging the record of an ordinary phonograph. Says Prof. E. W. Scripture, of Yale, in an article on the subject in *The Medical Record* (February 28):

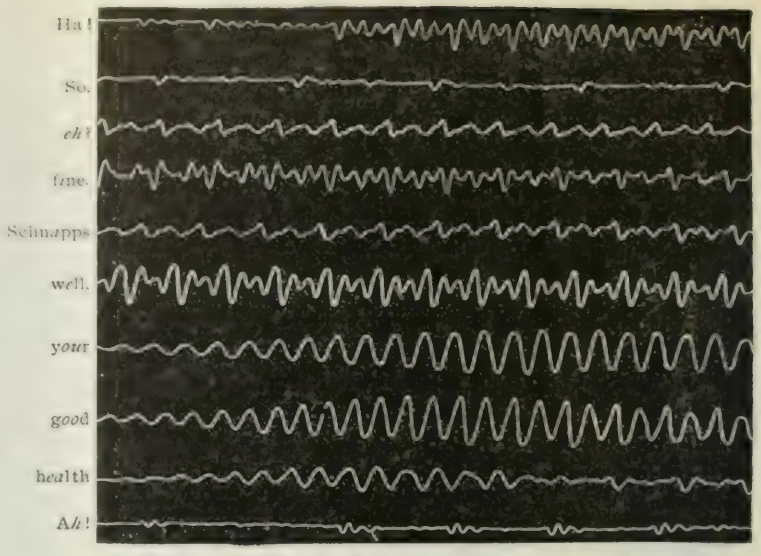
"The best phonographs and gramophones now produce records that hardly fall short of perfection. It remains only to devise machines that will trace off the records on to paper so that they can be studied with accuracy.



MACHINE FOR ENLARGING CURVES OF SPEECH FROM A GRAMOPHONE DISK.

E, gramophone disk with spiral speech-groove containing lateral vibrations; *C*, revolving barrel with feed-screw that turns the disk and moves it sidewise; *V*, gear-wheel that turns *C*, being moved by the last of a series of reducing-gears connected to a motor; *J*, magnifying lever containing a fine steel point near *F*, which travels in the speech-groove and follows its vibrations; *L*, *N*, gimbal joints with connecting-rods that transmits the movements of *J* to the second lever *Q*, *O*, fulcrum of *Q*, *R*, recording-point that draws a line on a slowly moving band of smoked paper *S*; *T*, side of one of two cylinders about 8 feet apart, around which the band of smoked paper travels. The movement of the point in the speech-record at *F* is repeated with great magnification by *R* and recorded as a white line in the soot.

Courtesy of *The Medical Record* (New York).



CURVES FROM THE VOICE OF MR. JOSEPH JEFFERSON IN "RIP VAN WINKLE'S TOAST."

Courtesy of *The Medical Record* (New York).

"For tracing off the curves of a phonograph cylinder a very accurate machine has been devised by Professor Hermann, of Koenigsberg. A fine glass point runs in the groove cut in the wax, and moves a system of small levers, which reflect a beam of light. The light is made to record its movements on a sensitive band of paper. The curves are of great accuracy and beauty. . . . . .

"Let me give an illustration of the way in which such curves are studied. Take, for example, the word 'So,' the second line of the figure. The vibrations are seen to be in groups of fairly similar character; each of these groups we know to represent one vibration of the vocal cords with the vibrations of the vocal cavities imposed upon it. The time of each vibration of the cords is found by measuring the length of each group. In this way we can get the melody on which the vowel is spoken. The melody for the entire toast by Jefferson has thus been calculated. . . . . .

"The voice curves contain much further information. The curve of 'So,' for example, shows that alternate groups of vibrations are of diminished intensity; this would be expected to indicate some sort of a low rumble an octave below the tone of the cords, and it is, in fact, just what is heard when the disk is made to speak. It is exactly the rumble that occurs regularly in a voice when a particle of liquid has lodged in the throat; we have thus a record of the drink in its effect on the voice in this particular 'Toast.' As one of my flippant students once remarked, such records are a 'good way of getting on to a man's curves.'

"Still another field of strange interest lies before us, but it is yet utterly unexplored. We can all detect sorrow, anger, fear, fatigue, etc., in a person's voice. Since the voice travels in the form of air-vibrations from the speaker's mouth to the ear, a record of these vibrations must contain the results of emotions. An understanding of the modifications of the speech curves must reveal the effects due to the emotions: it is only a matter of skilful recording, measuring, and analyzing to detect them."

Knife-and-Fork Surgery.—This name is given by *The Hospital* to a method of operation, lately described by Koenig at Berlin, intended to prevent infection of the subject by the surgeon's hand. Says this paper:

"According to this an attempt is made to perform the operation without ever touching the tissues, much as we eat our meals by aid of forks and spoons instead of clawing our food. By practise with suitably devised metal instruments, which of course are capable of complete sterilization, he has found that he

can get through very many operations without ever touching the wound. Even in abdominal cases, in many of which it is often impossible to avoid introducing the hand, he carries his instrumental method to its extremest limit. In operating on cases of appendicitis during the quiescent interval he has been able to do the entire operation with instruments. This is a method which, while it has its advantages, has also its limitations. One can hardly doubt, however, that the surgeon often does things with his fingers which, by aid of a little practise, could be done just as well with an instrument, and if we are to accept as correct all that is said about hand-infection it would often be well, in suitable cases, to adopt the 'knife-and-fork' method of surgery."

MICROBES AND MOLECULES.

WHAT is the limit to the smallness of living organisms? There are certainly some that are too small to be seen with the most powerful microscopes; where does the series stop? It is shown by M. L. Errera, in the *Revue Scientifique* (February 7), that if we are to accept the molecular theory of matter, no bacteria can exist that are very much smaller than those with which we are familiar—the size of the molecule limits that of the microbe, which must contain many thousand molecules. Says M. Errera:

"We know to-day of the existence of a certain number of microbes so small that they remain invisible under the most powerful objectives; they betray their presence only by the very slight opalescence that they give to liquids in which they are, by their aptitude to be retained on sufficiently compact filters, and by their pathogenic effects. Such is notably the case with the virus of aphthous fever, that of bovine peripneumonia, that of 'horse-sickness,' and others.

"Have we the right to hope that a little later on some improvement in our microscopes will enable us to perceive these 'invisible microbes'? If for this it would be sufficient, as was long supposed, to increase the enlargement, the thing would be easy. But it is not so. Thanks to the classic work of Abbe, we know that the visibility of very fine structures depends on quite different factors; it increases proportionally to the aperture of the objective and is in inverse ratio to the wave-length of the light utilized. . . . Czapski, of Jena, who is an expert in these matters, reaches the conclusion that our microscopes are very near the extreme limit of their capacity—at least, as he is careful to add, 'with the means at present known, in present conditions, and according to the present state of our theoretical knowledge.' In fact, even by using oblique illumination, Czapski finds that we can not push the power of 'resolution' of our microscopes beyond elements that are 0.10 to 0.13 micron in diameter [a micron being a thousandth of a millimeter, or about one twenty-five-thousandth of an inch], and it is interesting to note that the smallest organisms observed are precisely of this order of magnitude. A microbe injurious to rabbits, studied by Koch. . . . measures only 0.15 micron in diameter, and a colored bacterium found by Voges in water has a width of 0.06 micron and a length of 0.18. Besides the bacteria we should also mention the *Micromonus Mesnili*, which is related to the Flagellates, and which is only 0.25 by 0.75 micron.

"According to all this, it seems that the optical search for 'invisible microbes' has a chance of future success only through one of the three following methods: First by ordinary methods of fixation and coloration. The utility of these needs no longer to be demonstrated; it is evident when we come to treat of such tiny elements, whose index of refraction is practically the same as that of the surrounding medium. . . . In the second place we should try illumination with blue light. Finally we must have recourse to microphotography, using apochromatic objectives and an illumination by very refrangible rays. For infinitely small as well as for the infinitely distant objects the sensitive plate, owing to its faculty of storing up radiations, especially those of very short wave-length, may fix images that are too feeble to impress our eyes."

But the ultra-microscopic flora, whose richness we are beginning to suspect, leads us, says the writer, to another problem, namely, are there organisms that are extremely small in comparison with ordinary microbes, just as these are extremely small with reference to large animals and plants? . . . At first sight, he thinks, there seems to be no reason why there should not be living organisms a million times, or at least a hundred thousand times, smaller than the bacteria now known. This question brings us in conflict with the data of physics and chemistry. If the atomic theory be true, we have a limit of size below which no organism can exist, for every organism is a complex aggregate of molecules. As a test, the author proceeds to estimate the amount of sulfur in a microbe. Every bacterium, he says, contains about 0.00015 of one per cent. of this element. Accepting current estimates of the size of atoms, this means that the *Micrococcus progrediens* contains about 10,000 sulfur atoms. In the same way it is calculated that this microbe has 30,000 albuminoid molecules. This, however, is for a large micrococcus, and smaller ones might contain as low a number as a dozen albuminoid molecules and three atoms of sulfur. The writer concludes:

"We must then come to the conclusion, with a degree of probability which is of the same order as that of the molecular theory of matter, that there can not exist organisms that bear the same relations of size to ordinary bacteria that these do to the superior organisms. . . . Still more, the existence of microbes, even a few hundred of times smaller than those that we know, would be an impossibility.

"The 'invisible microbes' of which we have spoken at the opening of this article are thus probably only a very little smaller than the smallest of visible microbes.

"A dozen only of simple substances diversely combined, and 60° C. between extreme limits of temperature—such are, as is well known, the narrow boundaries between which the whole magnificent spectacle of life is unrolled. We have just seen that the size of organisms also has its limits, and these are not very far removed from what the microscope has already enabled us to see."—*Translation made for* THE LITERARY DIGEST.

HOW AN AUTOMOBILE TURNS A CORNER.

WHEN an automobile turns a corner, it is evident that the wheels on one side must revolve faster than those on the other. How is this managed, since the motor is connected equally with both? Says a writer in *The Automobile Magazine*:

"Should curiosity tempt the interested one to ask how the wheel on the inside of a turn is called upon to travel less rapidly than its mate on the outside thereof, the chances are that the inquirer would be informed that the whole thing was accomplished by 'differential gearing.' If he asked what that was he would be told it was nothing but a 'balance-gear.' Having been thus enlightened, how much more would he know than when he began his investigation?

"What really takes place is this. With the two or more motor equipments there is no problem involved, since each wheel is free to turn to accommodate itself to the prescribed path. With the single motor, however, the problem arises, since it can not be directly geared to the two wheels, so some intermediate device must be supplied to permit of one wheel turning faster than the other, when called upon to do so, as in making a sharp turn or in suddenly veering away from an object, in doing either of which one wheel may almost stop while the other revolves at an accelerated speed.

"The accepted device for accomplishing all of this consists in placing upon the rear axle a 'balance-gear.' This is an old scheme originally used in paper-mills to maintain an even tension on the paper as the diameter of the rolls upon which it winds steadily increases. Tricycles were constructed twenty years ago with this same differential gear.

"The principle consists in cutting the driving-axle in two, and then rigidly attaching the wheels to its outer ends. The inner ends of the axle have two beveled gears rigidly attached to them and facing each other; a smaller bevel gear or pinion meshes in the teeth of both, and thereby connects them; this pinion is free to revolve on a short stud contained in the cast-iron case that

surrounds the gears; on the outer edge of the case are the ordinary spur teeth, into which mesh those of the pinion on the armature-shaft.

"So long as the vehicle is on a straight track and both wheels are free to revolve at the same speed, the case which contains the gear rotates, and the bevel simply acts like a 'dog' or clutch to drive both gears and their axles alike; but the instant one wheel is called upon to travel a shorter path than the other one, the bevel pinion slowly rotates on its stud at a speed representing the difference of these paths; if one wheel stops the other continues to rotate, and the pinion revolves around the faces of the gears at one-half the rate of the moving wheel.

"If the vehicle be lifted from the ground and one wheel turned by hand the other wheel will revolve at the same speed, but in an opposite direction, the armature and gear-case in the mean while remaining stationary. Thus it will at once be seen the requisite flexibility of movement is surely realized. A mechanical objection to this method is, of course, the undesirability of cutting the axle in two, with the additional weight and difficulty necessarily introduced to provide suitable bearings. The ratio of gearing is usually 1 to 10, but varies from 1 to 8 to 1 to 14."

QUININ AND THE MALARIAL PARASITE.

IT has long been known that quinin has the property of fluorescence; that is, of raising the pitch of light-waves that fall on it, so that it turns white light to a bluish tint. That this property may be closely connected with its ability to destroy malaria has been suggested by a recent writer. Says Dr. A. Cartaz, writing on the subject in *La Nature* (Paris, February 7):

"It is fifty years since Dr. Maillot indicated that the sole effective agent for fighting malaria was the use of quinin. . . . Up to this day quinin is administered at the first appearance of the disease, and it is well known that few cases withstand the treatment.

"How does quinin act? We might answer, as in Molière's time, that just as opium causes sleep by its soporific virtue, so quinin cures fever because it is a febrifuge. Formerly, for this as for so many other drugs, it was necessary to content ourselves with a somewhat simple interpretation. The nature of most maladies was unknown, and of the action of the drug we were forced to be in still deeper ignorance.

"Now, however, we know that malaria is due to the presence of a parasite in the blood; it has been discovered very recently that this parasite penetrates the body by the bite of a mosquito. Now the parasite of malaria scarcely ever develops except in darkness. Is it the red color of the blood that favors its life and the violet rays that interfere with its evolution? This is the theory advanced by an American physician, Dr. King, in an interesting work. According to him, quinin is a fluorescent substance, and it is through this fluorescence that it acts as a destroyer of the malaria parasite.

"The arguments given by Dr. King to support his view have plausibility. Two vegetable substances already employed as remedies for malaria, esculin and fraxin, the active principles of the horsechestnut and the ash, give the blue rays. Iodin, which is not fluorescent, finds in the system starchy substances with which it combines to form an intensely violet-blue combination. Methylene blue, recently prescribed in forms of chronic malaria, and in inveterate neuralgia, would also act by the emission of rays that are hurtful to the parasite.

"It has been long recognized that the absorption of the quinin increased the fluorescence of the blood, and that this lessened or increased according to the doses prescribed and to the lapse of time since the ingestion of the salt. The parasite, then, like many microbian agents, must be disagreeably influenced by the violet rays.

"There is a slight objection to this theory, which is that we meet cases of malaria that resist quinin salts. Dr. King admits that there are refractory cases, but then, he asserts, the attacks are due to the undeveloped and not to the complete parasite. The undeveloped parasite is found especially in the deep organs and the more obscure parts of the body. In these conditions the destructive action of quinin can not take place, for its fluorescent power is then nearly absent.

"If King's theory is true, we might try (and the experiment would probably not be especially dangerous) to administer to malaria patients substances possessing this fluorescent property in a very high degree. Certain newly discovered metals, such as radium, would perhaps succeed in cases where quinin has proved powerless."—*Translation made for* THE LITERARY DIGEST.

WHAT IS BAD AIR?

THAT air which has been breathed is not fit to be breathed over again, we all know from experience; yet if we are to believe an editorial writer in *The Lancet* (February 21), it is not easy to give a satisfactory scientific reason for this fact. What is the vitiating constituent of the human breath? Says the writer:

"Certain it is that the chief constituent added to the air by respiration—namely, carbonic-acid gas—*per se* has little or no effect upon the health. Indeed, it has been stated that men can breathe for two or three hours without marked discomfort air which contains—with, of course, its full complement of oxygen—as much as twenty per cent. of carbonic acid, and the presence of one per cent. has not the slightest effect. But if the carbonic acid in the air be raised only to one-tenth per cent. by human respiration, the resulting air is most unwholesome and detrimental. There is no chemical difference, of course, between the carbonic-acid gas of the human breath and the carbonic-acid gas obtained from chalk or from the combustion of carbon or coal gas. The obvious deduction is that the carbonic-acid gas of respiration has a poisonous companion, and this companion has so far eluded all attempts at isolation and recognition. This poisonous constituent may occur as a constant quantity in relation to the carbonic-acid gas; possibly it does not. We do not know, altho it is very important that this point should be determined. We are content, however, to judge the impurity of air by measuring the amount of carbonic acid in it, and to some extent this measure is a valuable guide. It is not satisfactory that the evidence of impurity is not obtained more directly than this. Every one knows that air vitiated by human respiration is offensive and poisonous. In other words, bad ventilation—that is, a condition in which the products of human respiration are not removed—sooner or later produces toxic symptoms. There are usually loss of appetite, discomfort, severe headache, and malaise which can not be traced to infective organisms any more than the absence of such organisms can explain the curative effects of fresh air. Moreover, it is a common experience that a sojourn in a badly ventilated room occupied by a great number of people predisposes to disease. There seems little doubt that the impurity of the air has some connection with the 'catching of a cold.' The presence of respiratory products is declared by an offensive smell, and it seems odd that chemical analysis is not able to lay bare what actually the nose readily detects. The effect of bad air upon the health can not simply be that of an offensive smell, tho that undoubtedly plays a part. . . . It not only is absolutely devoid of the vitalizing effect of fresh air, but it has also a most sickening smell and sooner or later gives rise to a sense of oppression. What is this poison? It seems to us that the whole question needs a much more extended inquiry than has been hitherto carried out, for surely chemistry and physiology hand-in-hand could eventually elucidate this matter."

SCIENCE BREVITIES.

SIGHT WITHOUT EYES.—Press despatches from Paris tell a remarkable tale of an invention by Prof. Peter Stiens which is said to convey a visual image directly to the brain and is thus adapted to give sight to the blind. The inventor, it is said, refuses to give details, or to explain the working of the instrument, and scientific men can scarcely be blamed for remaining skeptical in regard to the story.

"FROM PARIS," says *Electricity*, "comes the report of a new amusement known as 'electric billiards.' It is played on a table, in the center of which is placed a plate of some easily electrified material. The billiard-balls are of compressed pitch, and the cue is a short rod with a cork tip, prepared chemically. The balls are of course subject to the influence of the electrified plate in the center of the table, and owing to this fact it is difficult to make caroms. It is said to be purely a game of skill, and when it is introduced into New York, which it is said will be in the near future, it is likely to become popular among champion billiard-players who are thirsting for new difficulties to conquer, as well as by all others who find handling the cue a fascinating pastime."

THE RELIGIOUS WORLD.

THE ASSYRIOLOGISTS AND THE BABEL-BIBLE CONTROVERSY.

IT was to be expected that theologians would take a determined stand against Professor Delitzsch's conclusion that the Old Testament was derived chiefly from Babylonian sources. What professional Assyriologists, who have no religious dogma at stake, have to say on the question is of greater interest. Some idea of what their position would be could be gleaned from the addresses (already referred to in our pages) that were delivered at the International Congress of Orientalists in Hamburg, in which the sentiment was practically a unit against Delitzsch. The same seems to be the case of opinions expressed since the publication of the second address on the subject. Probably no one is better able to voice the sentiment in this regard than the veteran senior of Assyriologists, Prof. Jules Oppert, of Paris, who at the request of the editor of the Vienna *Zeit* has furnished his views, of which the following is a summary:

As against those who regard the Bible as literally inspired and as the dictation of God, Delitzsch has an easy task. He, however, proceeds from the false premises that everything we read in the Bible, every story and every tradition, every moral precept, is of Chaldean origin. But what really is derived from Mesopotamia he shrewdly ignores. It is indeed true that the Jews, like the Greeks, are comparatively a late nation on the stage of history; they are "children," as the Egyptian priests said to Plato, and the Chaldean type of civilization is several thousand years older than that of Israel. Moses is found exactly midway between the time of the erection of the pyramids, 5000 B.C., and our own day. Chaldean civilization was the product of a Turanian people that came from Central Asia and then descended into Mesapotamia and invented the cuneiform system of writing. As early as the sixth millennium before Christ, Semitic hordes came into the Euphrates and Tigris valleys, and the union of these resulted in Babylonian civilization. About the close of the third millennium before Christ, there came from the west, from Ur of the Chaldees, a great man who, according to the testimonial of the great Babylonian historian Berosus, was well and favorably remembered by the Chaldeans, namely, Abraham, who was the first to express a faith in one higher Being. Whether he borrowed this idea from another source, we do not know. When the Mohammedans call Abraham the first Moslem, they tell the truth; under all circumstances he was conspicuous for his monotheism, while the Babylonians were polytheists and ever remained such. The most brutal type of nature service and of polytheism characterized the religion of both the Assyrians and the Babylonians down to the time of the Romans.

The most remarkable feature of Delitzsch's theory is that he ascribes a Babylonian origin to Jahveh—as a Jewish adaptation of Yauwe-El. This may have been the Elomite god Yauva; but this name, like that of Bel-El, Marduk-El, is one of many which we find in Babylonian proper names, and which are to be translated "Bel (or Merodoch or Yau) is God." The beautiful name El-ittya, "God with us," is often found in polytheistic times, and proves as little for a monotheistic religion of the Chaldees as Thucydides or Timotheus does for a Greek monotheism.

In the end, the whole argument for the so-called Babylonian origin of the Jewish culture amounts to the following: We can prove that the Chaldeans had the nose in the middle of the face; the Jews had the same; hence the noses of the Jews are derived from the Babylonians!

But what a heaven-wide difference exists between the Babylonian and the Israelitish culture is seen in the chasm between the expressions in thought and life of these two civilizations. A Protestant pupil of Delitzsch has correctly said that it is enough to take a glance merely at the passages in the Old Testament in Luther's translation which are widely spaced as indicative of their importance.

And now what is left of Babel in the Bible? On Sunday, August 20, 587 B.C., the Babylonians had burned the temple in Jerusalem, and had taken large numbers of the Jews into captivity to be released by Cyrus in 538 B.C. What was left of the old literature of Israel was collected after the return and welded together into a volume. In this way our Pentateuch and the pre-exilic books of the Old Testament originated in their present form. Much in these books is old; it is silly to maintain that nothing of this can date back to the days of Moses, who could read and write. Before the period of the Exile, Egyptian influence of necessity surpassed the Babylonian in Israel; after the return from Babylon, the influence of Persia and of Babylon predominated down to later times, when the Babylonian Talmud was written and the great Jewish high schools were founded in those regions. Now the opposite is the case, and we can explain many of the technical expressions in the legal cuneiform tablets from the Talmud, into which they had found their way from the Chaldeans.

That which the Pentateuch has really borrowed from Babylonian sources has not been touched by Delitzsch at all, namely, the so-called chronology of Genesis; and this Chaldean gift concerning the age of the world, which limited the Jews to six thousand years, is the most harmful gift that the Babylonians have handed down to our times. Accordingly of the Bible-Babel and the Babel-Bible matter but little remains.

This opinion of Oppert's has naturally attracted the widest attention, as the great Assyriologist is even more conservative in his conclusion than the theologians themselves. Conservative papers such as the *Evangelisch-Lutherische Kirchenzeitung* (Leipsic) accordingly reproduce this article with great satisfaction. —*Translation made for* THE LITERARY DIGEST.

JOHN S. SARGENT'S "DOGMA OF THE REDEMPTION."

THE instalment of Mr. Sargent's second contribution to the series of mural decorations which he is executing for the Boston Public Library is deemed a notable event, whether judged from the religious or from the artistic point of view. Miss Estelle M. Hurll, a well-known Boston writer on artistic subjects, declares that "nothing has happened in Boston for a long time which has so demonstrated the moral and religious earnestness of our American people as has the uncovering of Sargent's painting." She continues (in *The Congregationalist and Christian World*):

"Day after day, and all day long, the hall is thronged with men, women, and children gazing at the great picture. They speak to one another in subdued voices, and come and go in silence. They carry an air of awe, as in the presence of a solemn mystery.

"That this is a superb decoration does not at all account for the remarkable interest it has aroused. Doubtless its rich, sober color, the strength and simplicity of its lines, and the well-balanced symmetry of the design make some sort of an impression upon even the dullest esthetic consciousness; but with these artistic matters the majority of visitors are not chiefly concerned. They care very little for 'art for art's sake,' but are intensely interested in a picture with a meaning. And here is a picture with a meaning which appeals to the universal Christian sentiment, and it is for this reason, above all others, the crowds of people are attracted to it. With absorbed attention they turn from the picture to the printed description and back again to the picture, as they strive to decipher the various details of the symbolism. It is as if, like Paul, they were 'determined not to know anything save Jesus Christ and him crucified.'"

The same writer gives an account of the symbolism of Mr. Sargent's painting, which we condense as follows:

Like its companion picture, "Ancient Religions," the new mural painting is divided into a lunette or semicircular portion, and a rectangular section or frieze below, and on a narrow cornice separating these two parts runs the legend which is the key of the picture: "Factus Homo Factor Hominis Factique Redemptor; Redimo Corporeus Corpora Corda Deus" [The Maker of man was made man and the Redeemer of his work; as man

(incarnate) I redeem the body, as God I redeem the soul (heart)]. The background of the wall is a dark, lusterless blue, but the dominant color of the composition is red. Blue, the color of the sky and of the sapphire, is the symbol of truth and eternity; red, the color of fire and of the ruby, is the token of love.

The central feature of the painting is the crucifix upon which hangs the figure of the Redeemer. Above the head of the Christ is the Latin inscription, "Missa Sunt Peccata Mundi" (The Sins of the World are Remitted). On either side of the cross Adam and Eve hold chalices to catch the falling drops of blood. "As in Adam all die, even so in Christ shall all be made alive."

At the lower end of the cross is a gilt relief representing a pelican feeding her young with the blood of her own breast. This supposed habit of the pelican is an old symbol of the redemption and appears in many representations of the crucifixion. The most familiar example is in Fra Angelico's great crucifixion in the chapter-house of St. Mark's, Florence, and here the figure is inscribed with the sixth verse of the One Hundred and Second Psalm, "I am like the pelican in the wilderness."

Behind the cross loom the three figures of the Trinity, represented as kings occupying side by side a wide throne of Byzantine mosaic. The folds of their garments overlap each other in a curious way, which seems to suggest the union of the three in one. Seven doves encircle the throne—the seven gifts of power, riches, wisdom, strength, honor, glory, and blessing, mentioned in the Apocalypse.

The angels of the frieze bear the various objects used in the Savior's Passion—namely, the ladder; the lance, hammer and pincers; the three nails; the sponge and reed; the pillar and cords of the flagellation; and the crown of thorns. The two angels in the center are occupied entirely with the cross, and their tunics are ornamented with deep arabesques in gold relief. On one the motif is a sheaf of wheat, on the other a cluster of grapes: the sacramental elements of bread and wine which symbolize the body and blood of the Redeemer.

THE LENTEN RELIGIOUS REVIVAL.

THERE are indications that the Lenten season this year is being observed with unusual rigor and devotion. "At a time when the very foundations of the religion of Christianity are attacked," says the New York *Sun*, referring in particular to the controversy excited by Professor Delitzsch's latest utterances, "religious faith flames the more brightly." The same paper continues:

"The extraordinary devotion displayed at this Lenten season is of the nature of a demonstration by religious faith that all human science is powerless against it. The exhibition is the more impressive because it is made by men of distinguished intellectual ability and discipline, no less than by the unlearned and those whom science would put in a low scale of intellectual development. On Passion Sunday, or the fifth Sunday in Lent, two weeks before Easter, fifteen hundred men of social, political, and intellectual prominence in New York will enter a Lenten retreat at the Roman Catholic Church of St. Francis Xavier and continue their devotions daily until Palm Sunday, or the Sunday before Easter. Among them will be three justices of the

Copyrighted by the Trustees of the Public Library of Boston, 1903. From a Copley print, copyright, 1903, by Curtis & Cameron, Publishers, Boston.

SARGENT'S MURAL PAINTING OF "THE REDEMPTION."

Supreme Court, Justices O'Brien, O'Gorman, and Giegerich, and the rest are all men of superior standing in this community. They will manifest their religious faith by attending mass at eight o'clock in the morning of every day of that week and a service at eight o'clock each evening, and at early morning mass on Palm Sunday they will receive the Holy Communion. It will be for them a week of special religious meditation, and their thought will be further led in a spiritual direction by sermons preached daily.

"Two hundred Catholic women of social prominence have already gone into retreat at the Convent of the Sacred Heart. Meantime in every parish of the Episcopal Church daily services are attended by greatly increased crowds of men and women, and in the religious and charitable activities of each thousands of women especially are engaged with great assiduity, and probably never was the number so large, actually and relatively, as in the present Lenten season. The gaiety and luxurious indulgence of fashion have been replaced by religious abstinence and meditation; by systematic efforts to exemplify the graces of Christianity and bear witness to the vitality and power of the Christian faith. Lent has brought a change over the whole face of social life in New York; even those who recognize no obligation to pay heed to the fast are compelled to share in the abstinence from the social pleasures they pursue usually. . . . .

"It might be said that already in this Lenten season a revival is in progress; but no signs at present appear that it will be . . . a revival of the sort of the Great Awakening of 1857, or of the periods of religious exaltation in which the evangelist Moody has been conspicuous since that extraordinary excitement. Such emotional revivals, as past experience has proved, do not come in times of prosperity like the present, but at periods when men, crushed by earthly misfortune and misadventure, are impelled at last to bow down and appeal for succor to a higher Power than humanity. It is not improbable that the very spread of a skepticism which is the most fatal to religious belief in the whole history of religion will be the cause of producing a passionate religious reaction; but if it comes, the indications seem to be that in character it will be marked by the disciplined restraint of the Lenten season rather than by the excitement of past religious revivals."

Harper's Weekly says:

"Our generation is not irreligious, but the prevailing tendency is to be more concerned about the conduct of life than about salvation. Perhaps we are rashly and ill-advisedly calm about salvation, but our interest in it tends to be indirect. We incline to the feeling that our immediate concern is to make the most and the best of our lives, and that if we do that, whatever follows will take care of itself. Our use of Lent is determined by this general sentiment. We don't so much try to square accounts and make direct and special progress toward heaven, as to fit ourselves for the recurring duties of earth. And, of course, Lent gets observance chiefly from women. Our leisure class is nine-tenths women, and even the busiest women are better able to adapt their daily tasks to the Lenten duties they undertake than most men are. Business does not stop for Lent, though when old Trinity calls Wall Street to prayers many a man lays down his muck-rake, and heeds the invitation to his soul. The usual concerns of life go on, the children go forth to school, the bread-winner goes to his desk or his bench, the bread-maker to her dough. The fixed employments and engagements do not budge, but the mistress of the house and the grown-up daughters can adapt their occupations somewhat to the season. When a Lenten service comes in the morning, they can get to it if they choose, and when Professor Darley lectures on the 'Outlook of Civilization,' their morning engagements can be arranged to include him also. Reading-clubs are particularly active in Lent. So are all other women's clubs, and what with the increased diffusion of ideas, and the moderate slackening of the social pace that gives more time for sleep and reflection, such social intercourse as is left is not unlikely to be exceptionally remunerative.

"If all this does not seem like very strict Lent-keeping, it must be remembered that this is in the main a Protestant country, and that not more than one-fifth of our population belongs to either of the two churches that recognize Lent as a season which brings religious obligations. With the other four-fifths Lenten observances are a matter of taste, to be taken for what they are worth, and borrowed or declined, as convenience dictates."

JOSEPH PARKER'S SUCCESSOR.

NO surprise is occasioned by the call which the congregation of the London City Temple has extended to the Rev. Richard John Campbell, of Brighton. Since Dr. Parker's death three months ago, Mr. Campbell has been performing many of the pastoral duties of the church. "For the moment," as the London *Methodist Recorder* remarks, "he is even more popular than Dr. Parker himself, if mere numbers are a just criterion." From the same paper we quote the following account of Mr. Campbell's career:

Photo by Pennell & Holden, Brighton, Eng.
REV. RICHARD JOHN CAMPBELL,
The new Pastor of the London City Temple.

"Mr. Campbell is the son of a minister of the United Methodist Free Churches, and therefore not strange to Methodism. His career as a student and preacher has been remarkable. Like John Wesley, he is a graduate of Oxford, and a graduate in honors. At least two of the greatest scholars and ecclesiastics in the Established Church had the opportunity of training a not unwilling friend and pupil for the service of that church. If Mr. Campbell to-day is not one of the shining lights of Anglicanism, and on his way toward dignities as distinguished as those to which his old friends, Dean Paget and Dr. Gore, have attained, the reason is to be sought in the influence of a godly non-conformist ancestry, and in that 'conscience toward God' which is the pillar and ground of all that is worth living and dying for in English non-conformity. If we read Mr. Campbell's mind aright, his loyalty to Congregationalism is not measured by hostility to those other churches of Jesus Christ with which in earlier life he was brought into contact. Like Wesley, he will move in the high places of London religious life—'the friend of all, the enemy of none.' It is well that the pastor of the City Temple should be linked by ancestral associations, by tender memories, and by personal friendship with the older form of English non-conformity, with the newest form of Methodism, and with all that is most reverent, scholarly, and progressive in the English Church."

The Methodist Recorder says further:

"There is no more influential Congregational church in the world than the church by Holborn Viaduct. It seems to belong to us all. The ministry of all denominations, not excluding the Church of England, has been in the habit for years past of resorting to its noon-day services for instruction and inspiration. Its influence has made for Christian unity, and for all that is progressive in imperial and municipal righteousness, as well as for all that is Evangelical in doctrine and practical in sympathy."

The British Weekly comments:

"We have no doubt Mr. Campbell will soon build up a very strong church at the City Temple, and that he will in every way make it a home and center for young men. Dr. Parker did not make it his main business to build up a church. His ministry was in every respect unique, and he set great value on the privilege of constantly preaching to changing audiences from all parts of the world. It was the work for which his gifts best fitted him, and it was nobly and faithfully discharged. But in London at the present hour we need nothing so much as strong central non-conformist churches, with preachers in their pulpit both born and called, and with bands of enthusiastic workers, such as the City Temple will, by the blessing of God, more and more become under Mr. Campbell's ministry."

ESSENTIAL ELEMENTS OF THE "NEW THEOLOGY."

THE New York *Outlook* has come to be recognized as one of the leading American exponents of what is vaguely termed the "New Theology," that is to say, the reconstructed theology frankly based upon an acceptance of the conclusions of the higher critics. The school of thought which it represents is closely allied with that of Unitarianism; and in a recent issue (March 21) it prints a significant article entitled "The Coming Religious Problem," in which the Rev. Theodore D. Bacon, a Congregationalist clergyman of Flint, Mich., writes in obvious sympathy with the Unitarian position, but points out that the program of the "new theology" can never win wide assent unless it retains many of the characteristics of the older religious thought. Why is it, he asks, that Unitarianism, "a form of religious belief which ought, apparently, to appeal to every one by its simplicity, its reasonableness, and its liberty," has been a popular failure? His answer is that it lacks the elements essential to a popular religion. We quote further:

"There is a very evident significance in the trend we have seen among Unitarians toward Episcopalianism and even Roman Catholicism. Two elements of attraction are discernible—liturgy and authority. Members of non-liturgical churches may be inclined to scoff at liturgy as a matter of little importance, but a glance at history and at modern conditions will show its power. The continual stream of increase from all sides into the Episcopal Church of those who care nothing for its history or its government is alone enough to show this power.

"Religion is not merely a matter of the intellect, but of the whole soul. Most people do not go to church to think, but to feel, and whatever stirs their religious emotions, and at the same time gives expression to them, gives them deep satisfaction. This may not be highly intellectual, but it is not irrational, as we would sometimes like to imagine. Evidently, then, one problem of no little importance for non-liturgical churches is to recognize more fully the sensuous element in religion and to provide for its legitimate satisfaction. Many attempts have been made in this direction, but it must be acknowledged that, so far as liturgy is concerned, a great deal is so lacking in beauty or logical arrangement that it might almost as well not have been done at all."

The desire for some form of religious authority, continues Mr. Bacon, is "almost universal," and he thinks that "it is entirely legitimate within certain bounds":

"We recognize the need of it in children, and we are coming to recognize that men do not cease to be children because they have lived twenty-one years. Even we ourselves must, most of us, acknowledge that we do not always feel competent to settle every one of the great problems of life, and long in our weaker moments for some one to lean on. In the Episcopal Church, and of course still more in the Roman Catholic Church, the suggestion of authority is everywhere present. It is not generally obtrusive, but is everywhere implied. A mind with its spiritual longings unsatisfied, perplexed with the great problems of life and death, wearied with ineffectual efforts at a satisfactory explanation, is glad to commit their solution to a church that will assume the responsibility, without inquiring too closely into its title-deeds.

"Is it possible to maintain an authority such as so many minds crave and yet be loyal to the spirit of truth? There is no necessary incompatibility. Turn to the physical sciences. There we have at the same time perfect freedom of inquiry and an authority that is tremendous, tho not absolute. Not only by the unlearned, but by the learned, in other branches of science are the conclusions accepted on the authority of the specialist in his own department. It is generally understood that these conclusions are liable to modification, but they are so continually verified by actual experience that they are felt to be working hypotheses sufficiently accurate for practical purposes."

Mr. Bacon proceeds to name a third factor which, as he thinks, has had "still greater influence" in depreciating the popular appeal of Unitarianism—its rejection of the idea of "conversion." He writes on this point:

"Recent investigations have proved that regeneration is a normal event in human development. During his youth every one enters into a new life of some sort, and the question is whether this new life shall include the highest part of his nature. Nor is it to be expected, or even desired, that this great change shall be accomplished without excitement. As well might we expect that the process of falling in love should proceed without excitement. A religious life without excitement is likely to be shallow and unfruitful. A soul that has not been stirred to its depths is not likely to be of great use in the world. Of course the nature of the excitement will vary very greatly in different individuals. Great revulsions of feeling will come rather with those whose previous life has been in distinct antagonism to the new than in those in whom it has been a preparation for the new. But even in the latter there must be this deep stirring of the soul, however quiet its outward manifestation, if there is to be spiritual strength and maturity. The danger of morbid excitement is real and obvious. The danger of spiritual deadness is no less real tho it may be less obvious, and at the present it is much more imminent."

The writer concludes:

"To sum up, then, in a word the results which we have reached, the problem which we have to meet is, 'How to maintain the spiritual life of the church in view of the changed views concerning the Bible and the consequent undermining of our religious faith?' The answer to the problem I find to lie in a 'new theology' founded on God's revelation of Himself in human nature, of which the revelation in the Bible forms a most important part. For practical purposes the points on which we need to lay greatest emphasis at the present time are liturgy, authority, and, most of all, the reality and necessity of the new birth."

RELIGIOUS NOTES.

THE REV. DR. CLARENCE A. BARBOUR, of Rochester, N. Y., has been called to succeed Dr. Lorimer in the pastorate of Tremont Temple, Boston.

IRA D. SANKEY, the famous hymn-writer, recently lost the sight of his left eye and has now become entirely blind. Mr. Sankey is sixty-four years old, and has been engaged in evangelistic work since 1874.

AN injunction has been secured by the trustees and other members of the Congregation of United Brothers of Mount Gilead, Ohio, restraining Isaac Tenant from worshiping aloud. Tenant had long occupied a front pew of the church, and his loud and resounding "Amen" during prayer and sermon was more than the rest of the congregation could stand. The trustees talked with Tenant and asked him to pray to himself, but in any event to omit the "Amen." He replied that he would not. Hence the resort to law.

THE REV. JOSEPH PORTER, Republican chaplain of the Utah state legislature, aroused great astonishment the other day by solemnly offering prayer on behalf of the Democratic minority. "We pray thy special blessing," he said, "upon the minority members of the House. We are under no obligations to them, but realize that they have been neglected and are in sore need of help. Should they ever come to repentance and experience a change of heart, may their paths be strewn with roses and their lines cast in pleasant places." Resolution were offered censuring the minister, but were voted down by a strict party vote.

PLANS are on foot to establish a million-dollar Presbyterian University in Atlanta, Ga. Altho the movement is of comparatively recent date, the Presbyterians of Atlanta have already raised $90,000; and it is confidently expected that this sum will be increased to $150,000 during the next few weeks. The Presbyterians of seven Southern States—Georgia, Tennessee, South Carolina, Alabama, Mississippi, Louisiana, and Florida—propose to subscribe an additional $250,000, and when a total of $500,000 is collected the actual work on the university buildings will be started. The Atlanta *Constitution*, which is whole-heartedly backing the movement, declares: "*The Constitution* has been confident all along that this million-dollar university would be secured for Atlanta, just as this city secures everything else that she starts out to get."

MR. THOMAS GODFREY, a reader of THE LITERARY DIGEST living in Lancaster, Pa., writes calling attention to what he deems the inaccuracy of a recent statement in our pages to the effect that Emperor William is "*summus episcopus* of the Lutheran Church, the state Church of Prussia." "In 1817," says Mr. Godfrey, "the Lutheran Church and the Reformed (or Calvinist) Church of Prussia were by action of the Government united into a single body, to be known as the Evangelical Church. According to the terms of the union there was to be no confessional change—individuals were expected to remain Lutheran or Reformed, as they had been before but in its official relations the church of Prussia was to be regarded as a single organization. . . . As the old confessional distinctions have largely disappeared since the introduction of the *Kirchverein*, I should prefer to call the church of Prussia Evangelical (or United), and to regard the Emperor as *summus episcopus* of the church as thus reorganized."

FOREIGN TOPICS.

REVIVAL OF THE "BOXERS" IN CHINA.

A SERIOUS movement of some revolutionary sort is making progress among the Chinese masses. There seems to be a general agreement on this point among competent observers. The imbecility of the Peking Government, the venality of officials, and the burdens laid upon the masses by the indemnity to the Powers have led to the formation of a native revolutionary organization. Its object is said to be not only the overthrow of the reigning dynasty, but the establishment of an independent government in the southern provinces. Hongkong has been made a base of operations by the leaders of this movement, who are so little known and so cautious in their operations that the authorities—native and foreign—are at a loss how to proceed. *The Overland China Mail* (Hongkong), a British paper, says: "If report be true, and that there is ground for believing the rumor was shown by the recent arrests in Hongkong and the seizure of arms, ammunition, etc., in Canton, the organization is very well equipped, and those who profess a knowledge of the Reform party's movements predict success this time. It is a moot point how far the foreign Powers will sympathize with the movement. The governments of the European Powers can not make any display of sympathy with a revolutionary movement against the settled administrative organization of a friendly Power, no matter how corrupt that administration may be. But there is not lacking amongst foreign residents in China and in Hongkong a very strong feeling of sympathy with the reasonable aspirations of a sadly misgoverned people. The root of the trouble lies in the misgovernment of the country."

It is important to remember that the present movement is wholly one of the masses, who make up not only the rank and file but also furnish the leadership. This would denote a growth of intelligence among the people, a point on which our Hongkong contemporary observes:

"It is perhaps too much to say that in the past eight years the Chinese, as a race, have attained 'an enlightened conception of a higher ideal of government,' but the people are ahead of the officials in their readiness to accept reformed methods. The Reform party in South China is steadily obtaining adherents, and the country is well-nigh ripe for revolution. There are those who hesitate to lend any encouragement to revolution in China, and we would be the last to welcome the slipping of the dogs of war and rapine; but, on the principle that 'you can't have omelets without breaking eggs,' it is almost hopeless to expect a radical change in the Government of China without a revolutionary manifestation of the power of the people."

The tone of the native press throughout China has attracted attention. It has become a potent influence for the dissemination of discontent with existing conditions. The Shanghai *Mercury* and *The Celestial Empire*, leading British organs in China, publish translations of recent editorials in native papers which give an impression of widespread popular discontent. Our British contemporaries quote the following from the *Tung Wan Hu Pao* (Shanghai):

"All those who are anxious to see China prosperous unanimously and rightly say that she should reform her existing systems. But the subject of reform can not be lightly talked of. The power of introducing reforms, it is true, lies with those who are in high positions. But it is the common people that the carrying of reforms into effect chiefly depends upon. Before the reformation of the existing systems of China is commenced, the minds of the Chinese people must be so enlightened as to enable them to see the wisdom and advantages of the step. It is no exaggeration to say that the enlightenment of the minds of the people is a pivot upon which the execution of all reforms which China desires to adopt depends. As soon as the minds of the people have been sufficiently enlightened, they will carry out reforms as readily as the shadow follows the object and as quickly as the echo answers the voice. So long as the people remain ignorant, it will not be of any use for China to see the introduction of any reform measures attended with success. However earnest may be her appeal to the people to cooperate with her in doing the work, they will not respond to it."

The Empress-Dowager is said in the same native paper to be the recipient of bribes from Russia in the shape of jewels, principally. Another native paper, the *Sin Wan Pao* (Shanghai), says: "China is a large, leaky, and dilapidated house":

"It is extremely regrettable that we, who are living in this house, can not do anything to improve its condition, except to cry out loudly both morning and evening in the hope that the powers that be may become alive to the critical situation and take immediate measures to put matters right before it is too late. Since the Chino-Japanese war of 1894-95, this big house has been attacked by many heavy showers of rain and many severe storms. So it has been in constant danger of collapsing. But the powers that be, tho they seem to have at last realized the danger, have not earnestly set themselves to work to ward it off. What they are doing is simply to patch up one hole in the roof or walls of the house to-day and another hole to-morrow, in order to postpone the occurrence of the collapse as long as possible. They have never thought of gradually pulling down the house, part by part, and reconstructing it with new materials. The more intelligent and progressive among the inmates of the house, however, have gradually become convinced that those whose duty it is to look after the house can not be expected to move a finger to improve its condition, and that it is inevitable that the day will come when the collapse of the building will bring common destruction to every one under its roof. They have, therefore, attempted to take upon themselves the work of putting the house in order."

FUTURE RELATIONS OF GERMANY AND THE UNITED STATES.

CASSANDRA, that prophetess of evil in the ancient world, was never gloomier than the *Revue Bleue* (Paris) allows one of its contributors to become on the subject of "future conflicts between Germany and the United States." This twentieth century, we gather, will be a history of such conflicts, and peace will be driven for refuge to some kindlier planet. The able and accomplished writer who falls into this pessimism is M. L. Delfron de Vissec, who has studied men and things in many lands. He has traveled widely in both this country and Germany, and is an attentive observer of the affairs of each. He reaches the conclusion that "whatever be the destiny of the South American republics, all appearances indicate that during the twentieth century they will be the scene of grave conflicts and that they will undergo profound transformations":

"The Americans are aware of this, and they calmly await events. If peace ideas have had their day in the world, it is not from them that they have met with hostility. Whoever now would consult the various peoples of the world regarding their inward disposition would find none more peacefully disposed than the Americans. They are too industrious not to appreciate the value of peace. Their whole energy is absorbed in the production of wealth, in the betterment of social, intellectual, and moral life, and they regard war as a useless waste of time and money. But it would be a great mistake to infer that this sentiment is inspired in them by fear. The American people are too combative, they have too much moral health. This eager spirit of contest would endow them upon occasion with martial qualities capable of withstanding every test. It is wonderful to note how a people so little military are gifted with a patriotism so intense. What a contrast between the towns of Germany, where at every step we come across troops on the march, where the very populace seems divided into regiments, and those immense cities beyond the sea, in which the sight of a military uniform, the sound of a trumpet, are practically unknown! Individuals [in the United States] are all the more citizens inasmuch as they are not soldiers. It is from the profound civism with which they are imbued, from their devotion to the city and the state, that they derive their patriotism. At the first alarm of war they

would rouse themselves as one man. Volunteers would appear by thousands, and on the spur of the moment, at the end of a few weeks they would perhaps be capable of withstanding the onslaught of the best-trained troops of Europe. Before the Spanish-American war no one thought all these American shopkeepers, as Loti called them, would so easily overcome Spain's chivalrous sailors. But they knew how to defeat them without having the least notion of that discipline to which our armies are broken and which we judge indispensable.

"In spite of this ardent patriotism, capable of making the Americans, if necessary, intrepid soldiers, did future peace, to which the world aspires, depend upon them, it would have solid guarantees The Monroe Doctrine binds them to an exclusively defensive policy. It is easy for them, therefore, to make peaceful professions. A menace of war will never proceed from them. But it is not the same with Germany. At the present time she is the only Power which seems to have warlike projects. It will be remembered what resistance she offered before joining The Hague conference, what an attitude she assumed toward the United States during the Spanish-American war. While her ambassador made assurances of friendship to the Government, Admiral Diedrichs did everything he could to interfere with the

STRENUOUS.
President Roosevelt and old Europe.
—*Le Rire* (Paris).

movements of the American fleet before Manila. The German ships crossed the forbidden lines, and Admiral Dewey more than once addressed sharp remarks to them when they went too far. Emperor William eagerly desired coaling-stations in the Philippines, and it was with chagrin that he saw the star-spangled banner raised over those islands."

Since that time, continues this trenchant writer, the American navy has been animated by hostility to Germany. He even quotes an American admiral as having said that war between Germany and the United States will come soon, and that Germany is augmenting her naval forces secretly. To continue:

"All this is not the personal grievance of a few admirals. It is a sentiment that has spread throughout the nation. To this antipathy must be added a strong dislike to the imperial constitution of Germany. When Prince Henry went to Washington, he offered the Government a statue of Frederick the Great. The Government did not venture to refuse this gift, which was a disguised threat addressed to the Monroe Doctrine, but it decided to relegate it, when it arrived, to a corner of the city.

"When symptoms so palpable foretell a conflict between these two Powers, there is need for much reserve on the subject of the progress of ideas of peace throughout the world. In both continents this progress has greatly increased. Certainly, the acceptance of President Roosevelt's proposition has given The Hague tribunal a prestige it will never lose, and the prospect of war for the future is diminished. Moreover, public opinion and the press, both in favor of peace, have become such potent influences with governments that before declaring war a statesman will deem it his duty to consult them, and he will fear to act contrary to them. During the Venezuela affair we saw how they operated in England upon Mr. Balfour's policy, leading him to break with Germany's bellicose ideas."

Our authority thus completes his study:

"What has the future in store? No one knows. Everything depends on Germany. The American people are very patient, very good-natured. They can control themselves and they are not inflamed by a first provocation. But once aroused, they know no bounds and would become the most formidable of enemies."—*Translation made for* The Literary Digest.

SIGNIFICANCE OF GREAT BRITAIN'S NEW NAVAL BASE.

DRAMATIC in more respects than one was the announcement of Premier Balfour that Great Britain will establish at once a new naval base on the east coast of Scotland. This is taken as Albion's answer to Emperor William's plan to control the North Sea. "By the year 1920," says the London *Standard* pointedly, "there will be a fleet [that of Germany], with its headquarters right opposite us in the North Sea, which will be as strong as the French navy now is." Rightly or wrongly, British publicists assume that the naval history of the next decade will center mainly about the Anglo-German rivalry for control of the North Sea. The point chosen for the new naval base is admirably calculated for this rivalry from a British point of view. It is on the Frith of Forth, not far from Edinburgh. *The Daily News* (London) says:

"Strategically the position is a good one. The east coast of Great Britain will then undeniably be well equipped, and the possibility of aggression from the North Sea should afford no undue apprehension. It is about 460 miles from the nearest German base of importance, Wilhelmshaven. Here there are torpedo craft, but a full day's journey separates them from the Forth, and the possibilities of danger from there is proportionately less than at Portsmouth or Devonport in the event of hostilities by France. Industrially the situation is distinctly central. The best of the Scottish coal-fields are in the vicinity, and the harbor is near enough to the Tyne to render the supply of materials a matter of comparative ease. It is within half an hour of Edinburgh, and within easy access by train of Dundee, Glasgow, Carlisle, and Newcastle. Climatically, of course, the position is an excellent one. It offers a natural harbor, and is stated to be one of the most capacious and safest of roadsteads around the United Kingdom."

There has been some curiosity in England regarding the reception of the news in Germany, but the only striking comment has proceeded from the *Vossische Zeitung* (Berlin), which says Germany would have enough to do were she to feel alarm every time a foreign nation added to its naval strength. "We regard with equal calmness the growth in the naval strength of the United States." The same paper adds:

"The British Government's determination to found a new naval station in the Frith of Forth is not one to concern us greatly, in spite of the circumstance that reputable statesmen like Mr. Beckett, the Conservative, and Sir Charles Dilke, the Radical, in addition to the anti-German British press, have urged this new departure to forestall Germany's so-called evil intentions. Such timidity, which is always the sign of weakness, we may leave to others."

To this the London *Standard* is prompted to retort in spirited fashion, thus:

"The *Vossische* makes a commendable effort to maintain a

tone of serene, but slightly scornful, indifference. It calls attention to the firmness of its nerves, as illustrated by its placid contemplation of French jubilation over the submarine boat, and of the growth of the American navy. The same dignified sense of strength leads it to observe that the establishment of a new station for the British navy in the North Sea does not trouble it much. . . . The *Vossische*, still preserving its air of condescension, is good enough to admit that since the English consider their position as a world-power threatened, it is better that they should exert themselves till they feel safe again—when their calm will be restored. This is very fair warfare on the part of the Berlin paper. The good sense of its recognition of the fact that we have a right to protect our coast as we please may be noted with approval. Yet we are conscious of a slight heat at the back of the statesmanlike self-possession of the *Vossische*. If no such influence were at work, why does it recommend us to give up the embittering jealousy with which we regard the completion of the German fleet, which is 'necessary' for the promotion of the political and economic interests of the people? We can not seriously be expected to ignore the existence of that growing force, and we should have been deaf indeed if we had not heard the very loud assurances given us of the use to which it was to be put."—*Translation made for* THE LITERARY DIGEST.

THE DIPLOMACY OF JOSEPH H. CHOATE.

FOUR years have passed away since Joseph H. Choate assumed in London the post of United States ambassador at the Court of St. James. It occurred to the Pilgrims Club in London to celebrate the occasion with a banquet, an ordinary enough event from one point of view, yet a matter of far-reaching importance, according to recent German comment. At this banquet Lord Roberts made an address somewhat in line with an observation in the London *Spectator* to the effect that the United States ambassador can not be regarded as the representative of a foreign nation. Mr. Choate's reply was not without a literary flavor suggestive of the style of James Russell Lowell when, as minister in London, he spoke the happiest occasional addresses of his life. Mr. Choate, for instance, alluded to Bunyan's immortal work thus:

"These pilgrims—I must say a word about them. I congratulate them upon their marked and sudden success. They have found no Slough of Despond in which to founder, they have found no heavy burden to bend their backs, they have found no Hill of Difficulty to climb, no lions in the way, except the tame lions such as sit around this table. (Laughter.) They have reached the House Beautiful and the Delectable Mountains without having to stand one moment in the Valley of Humiliation. If I recollect my Bunyan aright, it was Goodwill that opened the wicket-gates to Christian; and it is the same good-will, it is international good-will between these two great countries, that has opened the wicket-gates to these pilgrims and palmers to go on the road to victory."

But the greatest significance of all was attached to what Mr. Choate said of Anglo-American relations:

"I disclaim for the most part the credit that he has given me for so large a share in keeping alive the flame of friendship between the two countries. I have done what little I could to promote better and more frequent intercourse, better knowledge on the part of each country of the other, and so to promote that harmony of feeling which necessarily ensues; but it is not to me that the improvement in the relations between our two nations in these recent years is due. It is due in the first place, as I believe, to the popular will on both sides of the Atlantic, that will not permit these countries to be dissevered in their friendship. [Loud cheers.] And on this side of the water, so far as my observation and experience go, so far as governmental action is concerned, it is due to Lord Salisbury and to Lord Lansdowne, who by their uniform candor, fairness, friendliness in the treatment of every question that arose, in their consideration for the feelings of the other nation with which they were dealing, have done all that was possible in their power to promote not only peace, but cordial, warm, hearty relations of friendship between the two governments."

Mr. Choate's reference to Lord Lansdowne attracts the more attention because this very Lord Lansdowne, as Foreign Secretary, is held responsible for the recent Anglo-American strain over Venezuela. The London *Times* permits its American correspondent to administer the following reproof to the noble lord:

"The Foreign Secretary seems still to appreciate imperfectly the danger of the situation he created by going shares with Germany in the business of exacting satisfaction from the defaulting republic. He says most truly that throughout the negotiations not one word was said or written by the American Government which was not thoughtful, friendly, and considerate toward England. At what price, at what risk, by what efforts, by what

JOSEPH H. CHOATE,

Who evoked loud cheers at a banquet to Lord Roberts by saying that "the popular will [of Great Britain and the United States] will not permit these countries to be dissevered in their friendship."

use of the President's personal authority, by what political agencies, by what sedulous and skilful appeals to American public opinion this Government was able to maintain throughout that friendly attitude to England, Lord Lansdowne seems totally unaware."

This is followed up by an editorial in *The Times* stating that Lord Lansdowne made "a grave mistake in thus misapprehending public opinion." The *Hamburger Nachrichten*, however, undertakes to explain the diplomacy of Mr. Choate upon the theory that Great Britain was brought to submission both as regards the Monroe Doctrine and as regards Venezuela. It observes:

"This is the first time the American ambassador has overcome the English nation and its rulers with such assurances of friendship, much as he has been courted by the English for months and years past. Hitherto Mr. Choate has always been cool and reserved toward English adulation. However, it is evident why the representative of the United States has thrown aside his customary reserve. It was, of course, the unconditional recognition accorded by the English Government to the Monroe Doctrine and the submissive attitude of Great Britain toward America in the Venezuela matter. The formation of the Alaska boundary commission, which, according to Canadian press opinion, surrenders Canadian interests to the United States, must likewise have inspired Mr. Choate's good feeling. But Mr. Choate's praise should give the English concern rather than fill them with satisfaction. When the American ambassador bestows his approval upon the English Government, he simply recognizes the fact that that Government has failed to assert its country's interests with sufficient energy in opposition to the United States."—*Translation made for* THE LITERARY DIGEST.

THE CASE OF BISHOP KORUM.

MGR. KORUM, Roman Catholic bishop of Treves (Trier), recently ordered his priests to refuse absolution to all parents who sent their daughters to the local high-school. This act, which the prelate has since been forced partially to repudiate, has caused a tremendous sensation throughout Germany, and has given Count von Bülow great embarrassment, and threatens to constitute an issue in the coming national election. The school against which Bishop Korum issued his edict has a teaching-staff of which the great majority are Roman Catholics, while of the 500 girls attending it, 300 are the children of Roman Catholic parents. "It is organized on the basis of equality of the Roman Catholic and Protestant religions in the eyes of the state," and "everything is done to keep the ordinary instruction clear of anything which could offend the most susceptible Roman Catholic or Protestant." The *Strasburger Post* says the bishop's action was prompted by a desire to aid a local Ursuline convent that had suffered from the rivalry of the school. The *Kreuz Zeitung* represents the bishop as alarmed by the teaching of that passage in Homer which recounts the first meeting of Ulysses with the maiden Nausicaa. The attire of Ulysses on this occasion, it will be remembered, was scanty. The bishop also disliked classroom use of undraped statues after classic Greek models. But the bishop speaks for himself in the following address to his people:

"The most sacred duty of parents is the proper education of their children. Religion, however, must constitute the foundation of education. In accordance with repeated decisions of the church, Catholic parents are not permitted to send their children to non-Catholic or undenominational schools, especially when Catholic schools are provided in the locality. This regulation applies to Treves and to its undenominational girls' high-school, and it can not be altered. For this reason, pastors in Treves, in addition to the decision of the right reverend bishop, will announce that if Catholic parents, without the gravest reasons, recognized by the church, and which can rarely apply to those of school age, send their offspring to such schools, they commit a grievous sin and can not obtain absolution through the sacrament of penance."

This announcement acted like the discharge of a thunderbolt into Germany's tense political situation. The matter was at once taken up in the Prussian Landtag, where the National Liberal deputy, Dr. Hackenburg, said the bishop's act was "a declaration of war." He said further that "Roman Catholic teachers are being forbidden to accept appointments at state schools organized on the system of religious equality." Count von Bülow said he was very sorry for what the bishop had done, and that the Vatican had been requested to modify his edict or at least to bring pressure to bear upon him that would lead to its practical suspension. The *National Zeitung* (Berlin) is very much chagrined at the idea of going to the Vatican on the subject. It says the affair is a domestic matter, to be settled at home. Other anti-Clerical papers comment in the same strain, and refer to the treatment a French bishop would receive if he followed the example of Mgr. Korum. The *Vossische Zeitung* (Berlin) declares that the episode reveals the lengths to which the Roman Catholic Center party is prepared to go in view of its strength in the Reichstag. This Liberal organ is annoyed at Count von Bülow's treatment of the matter, saying:

"Count von Bülow emphasized the necessity of maintaining concord more than the necessity of keeping Bishop Korum within proper limits and of maintaining the sovereign rights of the state. Love of peace honors every statesman, as does also an emphasis of the blessing of concord. But it remains to be seen how pleas for peace affect a quarrelsome man at the time he hurls his glove in his opponent's face. Count von Bülow declared that religious struggles have always worked injury to both sides. If Luther had been of this opinion he would have given up the Reformation."

The lesson to be learned from this whole affair, according to the *Frankfurter Zeitung*, is that nothing is ever gained by yielding to the Clericals, because every concession is made the basis of new demands. "Rome will speak. She will convert her bishop to mildness. Upon these considerations rest all the Government's hopes. For the sharp words a friendly look is returned. A few warnings and general observations are uttered, and it is hoped to tone the matter down in this style. That is not the way to make an impression and attain practical results. Even were a temporary settlement thus achieved, weakness of attitude in the Government can lead only to renewal of strife." Far more vigorous is the *Hamburger Nachrichten*, which calls upon the Government to punish "this contempt for its authority." Most of the newspapers agree that the affair will figure in the elections, and outside of Germany it is asked if a new Kulturkampf is impending. The Paris *Temps* remarks:

"Count von Bülow was evidently embarrassed by his difficult position. He could not overlook Mgr. Korum's conduct without disavowing not only the Kulturkampf policy and the memory of Bismarck, but likewise the traditional rule of the Hohenzollerns' Prussia. On the other hand, he knows better than anybody how much he is at the mercy of the Clerical Center, and that by offending this exacting party he runs the risk of losing the most stable element in his majority. Hence he sought to sweeten his protest with compliments and amiabilities. This eagerness to manage the Center led to a step that aroused criticisms from the Radical Dr. Barth and that will occasion anxiety in the public mind. Upon the curious pretext that Mgr. Korum, after issuing his edict, had gone to Rome to take part in the pontifical jubilee of Leo XIII., the Prussian Premier instructed the Prussian minister to the Vatican to call the Curia's attention to the conduct of this bishop and to request its intervention. For a country of the Reformation, with no concordat, wherein royalty has aimed at maintaining not only its rights as external sovereign bishop over the evangelical church, but the plenitude of its rights of sovereignty and police over the Catholic Church, this amounts to giving the Pope a foothold in the monarchy's home affairs."

However, Count von Bülow's measures were effective, and Bishop Korum, prompted by the Vatican, has formally retracted his edict.—*Translations made for* THE LITERARY DIGEST.

POINTS OF VIEW.

EMPEROR WILLIAM'S BLOOD.—When William II. of Germany was younger, says *The National Review* (London), his nose once happened to bleed, to the great alarm of his suite. "Don't trouble, gentlemen," he cried, "it's only the last drop of English blood leaving my veins!"

SPAIN IN MOROCCO.—Spain is the only European Power with any rightful claims in Morocco, declares Genaro Alas in *Nuestro Tiempo* (Madrid). The Spaniards do not propose to submit tamely to any disregard of those rights, a fact of which the Powers should take heed or there will be "international trouble."

IMPERIALISM AND CHILE.—The Chilean people have often been criticized for their imperialist ambitious. These ambitions, said the *Mercurio* (Valparaiso) recently, are not really ambitions but necessities, an utterance severely scored by the *Comercio* (Lima), which says there is no reason why the Chileans should become conquerors.

THE "MADNESS" OF THE TRUSTS.—In a series of articles, the *Revue* (Paris) seeks to show that the trust magnates of the United States are afflicted by that species of madness sent by the gods upon those whom they would destroy. "The trusts," it says, "like those prodigious genii of whom the poets speak, never stop gathering new youth and new vigor. Their growth is miraculous and the mode of their creation charms the American mind."

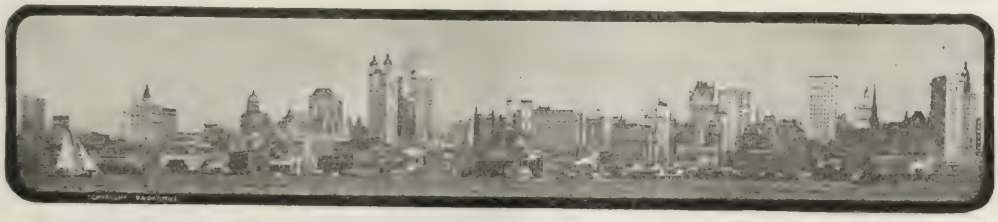
SEDDON IN NEW ZEALAND.—Premier Seddon's triumph in the recent elections in New Zealand prompts *The Review of Reviews for Australasia* (Melbourne) to say: "Mr. Seddon emerges triumphant from the dust and turmoil of the general election. If the battalions which follow him are not quite as big as those which marched beneath his banner in 1899, they are yet big enough to give him a new term of what is practically a political dictatorship. . . . Mr. Seddon's victory wrecks all political records. The present ministry has practically been in power for eleven years, and Mr. Seddon has been its leader for nearly ten years. Colonial cabinets, it must be remembered, die young and easily. The average length of a New Zealand cabinet is less than two years. Mr. Gladstone's longest term of office was only six years. We must go back, indeed, to the time of Pitt to find an unbroken stretch of power such as that which Mr. Seddon has enjoyed, and which the recent elections have renewed."

FREE ROUND TRIP

TO NEW YORK CITY

To enable full investigation of our now famous investment proposition by all who purchase from us one or more lots.

"$10 SECURES A $510 LOT IN GREATER NEW YORK"



WITHIN 35 MINUTES OF THESE SKYSCRAPERS—FARE 5 CENTS

$10 DOWN AND $6 A MONTH, until you've paid $510, gives you an opportunity to make thousands of dollars within a few years.

A legitimate, high-class, and **ABSOLUTELY SAFE** proposition by a firm of unquestioned integrity and standing in the business world.

Advertised only in the **HIGHEST CLASS** magazines, religious periodicals, and daily newspapers.

REFERENCES: Twenty National Banks, all Commercial Agencies, and 30,000 satisfied customers.

LAST YEAR 4,000 customers invested to the amount of **$3,461,000!**—hundreds through this periodical.

THE SECURITY OF YOUR INVESTMENT IS REAL ESTATE IN GREATER NEW YORK, within 35 minutes of the New York City Hall, Post-office, and Brooklyn Bridge.

YOUR MONEY BACK WITH 6% INTEREST if we misrepresent our proposition in the slightest particular.

FREE DEED to your heirs if you die before completing payments.
Magnificent park-like improvements free of cost to purchasers.

This is an offer which you owe it to yourself to investigate at least. Just send us your name and address, that's all.

FIRST MORTGAGES

INVESTORS We will send free, on request, our booklet, "First-Mortgage Bond and Trust Company Investment Methods." It explains how our finance committee, composed of five of our directors, considers, discusses, analyzes, and if agreed invests for this company or for individuals, men, women, trustees, guardians, institutions or companies in the highest obtainable grade of Chicago real estate mortgages, or in bonds; how we are organized; how we invest large and small sums. How we care for, advise and protect conservative investors by our organization, which is composed entirely of investors of experience, ability, discretion and determination in making safe investments, who will offer no mortgage or bond which they can not fully recommend or would be willing to repurchase, charging a small fee for repurchases.

We buy entire bond issues, corporation and municipal. Correspondence invited from parties knowing of contemplated issues of high grade bonds.

We have for distribution a small Russian leather covered security register and card case which can be carried in a vest pocket. You wont have to go to your vault or safe to see when your interest or principal matures if you have one of them. They will be sent upon receipt of twenty cents in stamps to cover cost and mailing.

Responsible parties commanding the confidence of investors can make snug sums by devoting a portion of their leisure time offering such securities as we buy and sell. Those who favor security before high rate.

First-Mortgage Bond and Trust Company

A State Institution organized and conducted by conservative men for the convenience of the people.

187 La Salle Street, CHICAGO.

Officers:
FREDERICK W. MCKINNEY, President

CURRENT POETRY.

"Annus Mirabilis."

By LAURENCE HOUSMAN

Daylight was down: and up the cool
Bare heaven the moon, o'er roof and elm,
Daughter of dusk most wonderful,
Went mounting to her realm:
And night was only half begun,
O'er Edwardes Square in Kensington.

A Sabbath peace possessed her face,
An even glow her bosom filled;
High in her solitary place
The huntress' heart was stilled.
With bow and arrows all laid down,
She stood and looked on London Town.

Nay! how could sight of us bring rest
To that far-traveled heart and draw
The mirror of her dreaming breast?—
Thought I, and gazing, saw
Far up above me, high, oh high,
From South to North a heron fly!

Oh, swiftly answered! Yonder flew
The wings of freedom and of hope:
Little of London Town he knew,
The round horizon was his scope!
High up he sails and sees beneath
The glimmering ponds of Hampstead Heath,

Hendon; and farther out afield
Low water-meads lie in his ken,
And lonely pools by Harrow Weald,
And solitudes unloved of men,
Where he his fisher's spear dips down,
Little he cares for London Town!

So small, with all its miles of sin,
Is London to the gray-blue bird!
A cuckoo cried at Lincoln's Inn
Last April: somewhere else one heard
The missel-thrush with throat of glee;
And nightingales at Battersea!

—In London *Spectator*.

To My Mother.

By ZONA GALE.

Her hand is on my hair: her tireless hand—
All day at tasks for me she longs to bless,—
Lies half in benediction, half caress.
She is so wistful just to understand
How that star-dusty, straying baby-strand
Of silk she used to twine has changed to tress
Of woman's hair, for all her tenderness
That tried to keep me in the shelter-land.

Her eyes, prayer-pure, are on my eyes. Her breast
Is trembling with the sigh that stirs my own.
Swift on sweet missions are her feet. Alone
She toils, and sings, and gladly gives her best.
Ah, sacred, all! But more than I can bear
Will, some day, be that dream-touch on my hair.

—In March *Success*.

Mistress March.

By HILTON R. GREER.

You're a crabbed crone and crusty,
Mistress March!
Vibrant is your voice and gusty,
As you sweep down highways dusty,
Swaying with abandon lusty
Brittle boughs of oak and larch;
Yet we hail you herald trusty,
Mistress March!

For, despite your storm and stinging,
Mistress March,
Hints you bear of buds upspringing,
Silver sounds of wild birds singing,
Flash of swallows, fleetly winging
Where the blue skies overarch.
Bless you for your message-bringing,
Mistress March!

—In March *Lippincott's Magazine*.

The
Winton
Touring Car

earns unqualified appreciation on Fashion's avenue, because, on the boulevard, it is the beautiful finish, the graceful lines, the tasteful trimmings and general smart appearance of the car, that count. But leave the boulevard and take to the highways, ascend mountain inclines, plough through heavy sand roads, or do any manner of what is ordinarily called hard riding and then you realize to the full what an immense advantage it is to be carried along by the force of a strong, sound and practical motor.

It means something to have the benefits of Winton experience in your automobile equipment. It means that you have the best results of long experience successfully tried out—the ripest fruits from practical and scientific knowledge in automobile building and designing. You are at no time inconvenienced by undemonstrated theories. Price of the new 20 horse-power Winton Touring Car, complete with full brass side lamps, horn, tools, etc., $2,500.

Visit any of our branch or agency depots in all leading cities, and the limit of Winton excellence will be demonstrated.

PERSONALS.

Mr. Yerkes's First Venture.—When Charles T. Yerkes was a lad in Philadelphia, says *The Saturday Evening Post*, he happened down on the river front one day, at an auction sale of the contents of a soap-maker's shop. Eighteen dollars had been bid when the lad elbowed his way into the place.

"Going! Going! Going at the insignificant sum of eighteen dollars!" cried the auctioneer.

The lad's eager eye had seen the stock in a hasty appraisal. "Nineteen!"

"Nineteen is bid. Who'll give twenty? Going at nineteen—going!—go-ing! Sold!"

The successful bidder had never had so much money in his possession. He ran home to borrow it of his father, who was reluctant to encourage the lad in such wild speculation. But he got the $19, and a little while after he reappeared at the soap-maker's with a cart. He loaded the cakes of soap on the cart, and then went around selling his stock piece by piece to the Philadelphia housewives. Before the day was over he had emptied the cart, repaid his father's loan, and laid $23 aside.

Twisted His Maxim.—The Italian ambassador was recently preparing a response to a toast to be delivered in English, says the New York *World*, when he came to a point where he stuck fast. He called in his secretary to see if he could help him, but with no avail. Finally the ambassador told the secretary to appeal to the State Department.

The secretary called up Assistant Secretary Pierce. He explained the ambassador's dire need. He wanted to make a speech in English. In it he had hoped to make a happy use of a certain maxim of the English tongue. Would the secretary help him?

"Certainly," replied Mr. Pierce. "What is it?"

"What his excellency desires to say," came in measured tones from the secretary, "is embodied in the phrase 'You must not look at the teeth of the horse that gives.'"

"Ha!" said the assistant secretary, "you mean 'You must not look a gift horse in the mouth.'"

There were loud shouts of joy at the other end of the telephone wire. His excellency the Italian ambassador would be able to use his maxim after all. Another international difficulty was composed.

William Gillette and the Obtrusive Dog.—William Gillette, the actor of "Sherlock Holmes" renown, is fond of dogs, but he does not care for their company in the dining-room. In this connection, the New York *Evening Telegram* prints this story which the actor tells on himself:

Not long ago he was at dinner in the dining-room of a well-known Herald-Square hotel. At an adjoining table was a brother Thespian, who is noted on the Rialto principally for his affection for a scrubby little dog that invariably accompanies him. The latter sat in solitary state, while his canine pet took possession of a chair at Mr. Gillette's table.

"Get down from here and out!" commanded Mr. Gillette.

The owner of the pup looked up with indignation in his eye.

"Come away from there, Fido," he ordered, thunderously.

The obedient brute jumped from his chair, but as soon as his master's head was turned he jumped back, much to the disgust of Mr. Gillette.

The dog's owner noticed it.

"Here, Fido!" he roared. "Come away from there. Do, please, be a little particular with whom you dine."

"And I did not seem to strike the owner of the mongrel that the empty seat at his own table gave evidence that Fido had been particular," commented Mr. Gillette.

Going to move or build?

If a tenant or owner, then see to it that the home has

Steam or Hot Water

heating — better, more healthful heat at less cost — no dust or coal gases brought into the living rooms — far less care required.

If a landlord, your building heated with our apparatus will yield 15 to 25 per cent increased rent—and property keeps steadily rented.

Cheaper to install now than to wait until Fall. It is now very simple to place the apparatus in buildings already erected. Need not be connected to street water supply. Send at once for valuable information.

Kermit Roosevelt's Feat.—The following story of the President's family is taken from a personal letter by the Brooklyn *Presbyterian*:

The present occupant of the White House until the recent renovation found it cramped quarters for a large family. With one or two of the little Roosevelts off at boarding-school, there were enough beds to go around but none to spare. Well, last winter the President was entertaining a foreign envoy of great state and many years, and invited him to the White House over Sunday. He was put in Ethel's room and Ethel, when she came back from school Saturday, went up to sleep with Alice, but unfortunately Kermit did not know of this arrangement.

So when early morning came, mindful of his strenuous inheritance, he crept to Ethel's room with a pitcher of water, and softly opening the door without awakening the slumbering ambassador, dashed forward and threw the icy water over the bed, with the shout:

"Get up, you old lazy-bones, get up!"

Then, when a gray head was lifted from the pillows, dripping and alarmed, the astonishment was mutual and the departure of the youngster instantaneous—without his pitcher.

MORE OR LESS PUNGENT.

Kruger's Answer.—Poultney Bigelow attempted on one occasion to interview "Oom Paul" Kruger and met with about the same fate that many interviewers have had with the former President of the Boers.

He found the old man in a very bad humor, and could get only monosyllables in reply to his questions. He employed every art of the interviewer, but to no avail. Finally, despairing of getting any information of use to him by straight questioning, he determined to be diplomatic and approach Mr. Kruger from his family side. So he asked, very nonchalantly:

"Is your wife entertaining this season?"

Short and sharp came the gruff answer:

"Not very."

And the interview closed there.—New York *Times*.

Their Boasts.—FIRST BOY: "My father's going to have a horseless carriage." SECOND DITTO: "Huh! That's nothing. We've had a coalless furnace at our house all winter."—Boston *Transcript*.

"Tit-Bits" Humor.—GREAT NOVELIST: (dictating): "The storm increased in fury, rain fell in torrents, and the gale shrieked all night like—like—what shall I say?"

SECRETARY (father of three): "Like a baby cutting its teeth."

HE: "What lovely flowers! Do you know, they remind me of you."

SHE: "Why, they are artificial."

HE: "Yes, I know; but it requires close examination to detect it."

Under the Table.—A small mite was with her parents at luncheon, her hands demurely under

he table. Suddenly she said: "Mother, you and father can't guess what I have under the table."

Then, after the manner of parents who like to please their children, they guessed all kinds of things, but without success, and they said, "We give up; tell us."

Then the mite, drawing her face up in a grimace, said: "A stomach-ache."—*Lippincott's Magazine.*

A Palm Beach Episode.—HAROLD: "Oh, I think you'll win her if you only hold out."

HAROLD: "No use, my boy. She's holed out already and started a new game with a better player!"—*Life.*

Inquired the Price.—HE: "Then everything is fixed and we can be married in May, can't we?"

SHE: "There is only one thing I have not spoken of, and mamma insisted that I must."

HE: "Certainly, my angel. What is it? Bid me go through any trial for your dear sake and I'll do it. Ask for the Golden Fleece, and if such a thing is in existence I'll get it—ay, even tho I must swim the seas, climb the loftiest peaks, or search in the fuming craters of mighty volcanoes, I'll do it."

SHE: "It isn't much, my dear. Mamma said I must ask you how much you intended to allow me a week for pin-money."

HE: "Um—er—how much are pins a paper now?"—*Tit-Bits.*

In Vain.—Dr. Herbert W. Spencer tells the following story of his attempt to corner a Christian Scientist:

"Every time we met, this Scientist took occasion to scoff at medical science and to dwell upon the wonders which could be performed through faith. 'You are convinced that through faith you can do anything?' I said to him one day.

"'Yes,' he replied, 'faith will move mountains.'

"A week later he was in my office with a swollen jaw due to a toothache. 'What, you here!' I exclaimed, with feigned astonishment.

"'Oh, doctor,' he said, 'I have suffered agony all through the night, I simply can't stand this pain any longer.'

"'Have you tried faith?' I said to him. 'You know you told me the other day that faith could move mountains.'

"'But this is a cavity, doctor; this is a cavity.'"—New York *Times.*

RHEUMATISM

Cured Through the Feet

Don't Take Medicine, External Remedy Brings Quick Relief. FREE on Approval. TRY IT.

We want everyone who has rheumatism to send us his or her name. We will send by return mail a pair of Magic Foot Drafts, the wonderful external cure which has brought more comfort into the United States than any internal remedy ever made. If they give relief, send us One Dollar; if not don't send us a cent.

Magic Foot Drafts are worn on the soles of the feet and cure by absorbing the poisonous acids in the blood through the large pores. They cure rheumatism in every part of the body. It must be evident to you that we couldn't afford to send the drafts on approval if they didn't cure. Write to day to the Magic Foot Draft Co., R. U. 28 Oliver Building, Jackson, Mich., for a trial pair of drafts on approval. We send also a valuable booklet on Rheumatism.

Regal Shoes by Mail

Over 220,000 men and women are regular customers of our Mail Order Department. One-fifth of one per cent. of gross sales represents the number not fitted with first pair of shoes. Every customer is suited. We absolutely guarantee this.

Regals ensure latest styles from Paris, London, and New York, in all standard leathers and Valvic Calf—a new porous leather of which we have absolute control.

Only genuine Oak Bark Tanned sole leather used. Regals go from "Tannery to Consumer"—eliminating four profits—$6.00 shoes for $3.50; $3.75 carriage charges prepaid.

Write for spring style book, samples of leather and complete instructions for ordering by mail.

48 exclusive stores in United States and Great Britain. 16 in New York City alone.

NEW YORK, February 3, 1903.

Ozomulsion Company, N. Y. City:

GENTLEMEN—I feel I must write you about the wonderful success I have had with your Ozomulsion.

Particularly in one case of incipient consumption. This patient came to my office in November, 1902. He was emaciated, had a constant cough, with night sweats, and all the symptoms of Phthisis Pulmonalis. A microscopical examination of the sputum showed the characteristic tubercle-bacilli.

I prescribed Ozomulsion, telling the patient when I did so, that I thought I could not help him any. Much to my surprise, the first bottle was of marked benefit to him. He has taken in all six bottles and has gained ten pounds. His cough is very slight and he feels so much better that he has gone back to his work as salesman.

I can endorse your Ozomulsion in every way. I have prescribed it in many cases of Bronchitis and in wasting diseases, where a real food was needed. One thing that impressed me was the fact that Ozomulsion did not interfere with digestion, as so many preparations of Cod Liver Oil do. Yours truly,

J. CAMBRIDGE WHARTON, M.D.

SIEGFRIED TARRASCH.

The Monte Carlo Tourney.

TARRASCH WINS FIRST PRIZE.

The last games were played on Tuesday, March 17. Tarrasch takes first prize, $900, with 20 points; Maroczy, second prize, $450, with 19 points; Pillsbury, third prize, $236, with 18½ points. The final score:

	Won.	Lost.		Won.	Lost.
Tarrasch	20	6	Mieses	13	13
Maroczy	19	7	Marshall	13	13
Pillsbury	18½	7½	Mason	10½	15½
Schlechter	17	9	Taubenhaus	10½	15½
Teichmann	16½	9½	Albin	8	18
Marco	15½	10½	Reggio	7½	18½
Wolf	14	12	Moreau	0	26

In expressing the disappointment of Americans over the poor showing of our Champion, Reichhelm in *The North American* (Philadelphia) says:

"The outcome of the play is the triumph of the men of endurance over the man of genius. Tarrasch and Maroczy could have gone on for a month longer without any deterioration of play, whereas the highly strung Pillsbury, with his brilliant imaginative and superb poetic conceptions, could only be at concert-pitch for a limited period.

"The first round of thirteen games exhausted his vitality, leaving him half a game ahead of all competitors. Even as early as his ninth game with Mieses he made an astounding oversight in one move, and resigned forthwith on Mieses' twenty-second turn to play.

"The ultimate combination of pack-horse and race-horse in one individual does not exist. Quality and quantity are rarely found under the same hat. Pillsbury in his best moments will carry through combinations that neither Tarrasch nor Maroczy could equal, but when it comes to playing week after week, for a month and a half, the continuous play of the sturdier men presents better averages.

"Morphy and Pillsbury are illustrations of the ultimate 'chess-mastership,' but men of their calibre must have mental rest between times, and not be obliged to enter competitive and prolonged sitting matches with adversaries of stronger physique."

The Rice-Gambit Tourney.

The Pillsbury National Correspondence Chess-Association announces that in April it will start a special tournament, all games of which must be on the lines of the opening known as the "Rice Gambit."

Mr. Isaac L. Rice, the inventor of this opening, gives $200 as a prize-fund. To this will be added the entrance fees, less necessary expenses. The first-prize is $100.

The entrance-fee is 50 cents. All players in the United States and Canada are eligible. Through the generosity of Mr. Rice, every contestant will get Mortimer's book containing the latest and best analysis of this gambit.

Entries will close on April 15. Address, Pillsbury National Correspondence Chess-Association, 378 Fortieth Street, Chicago, Ill.

TERMS OF SUBSCRIPTION.

PRICE. Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents. Foreign postage, $1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

HALF A BILLION FOR IRISH LANDS.

"WHEN I remember that in 1879 I served my first term of imprisonment for proposing almost exactly what a Conservative Irish secretary proposed to-day, I realize how times change." Such is the comment made by Michael Davitt, founder of the Irish Land League, on the Land bill introduced in the House of Commons, March 25, by the Right Hon. George Wyndham, the Chief Secretary for Ireland. This note of surprise and cordiality characterizes the general tone of Irish comment, and if further examination of the bill does not change the views of the Irish leaders, a long step toward the solution of the Irish problem has evidently been taken. The cable despatches thus describe the scenes after Mr. Wyndham's speech in presenting the bill:

THE RT. HON. GEORGE WYNDHAM,

Chief Secretary for Ireland, who introduced the land bill into the House of Commons.

LORD DUNRAVEN,

Who presided over the recent conference of landlords and tenants which agreed upon the present land scheme.

"The passing of the first reading of the bill was followed by a rush to the lobby, where ensued scenes that might well make the body of Parnell turn in his grave. The tall form of the Earl of Dudley (Lord Lieutenant of Ireland) could be seen amid a crowd of Nationalists, who scarcely a year ago would rather have suffered every penalty than associate with the official head of the Irish Government. Beside Lord Dudley stood grizzled little Sir Antony MacDonnell, the First Assistant Irish Secretary. He it was who drafted the bill. Horace Plunkett, Lord Iveagh, Lord Ashbourne, and many Unionist members joined the group. The Duke of Abercorn, the most powerful landlord in Ireland, asked to be introduced to John Redmond, and a mutual friend brought his grace to the leader of the Nationalist party, with whom the leader of the Irish landlords heartily shook hands. They patched up the peace of Ireland over the House of Commons refreshment-bar."

THE EARL OF DUDLEY,

Lord-Lieutenant of Ireland. The Land bill has inspired the Irish Nationalists with a new feeling of friendship for him.

Copyright by J. E. Purdy Boston.

JOHN REDMOND,

Leader of the Irish Nationalist party. His handshake with Lord Abercorn is considered an event of national importance.

The bill is, necessarily, very elaborate and complicated; but its general features are thus described by the Springfield *Republican*:

"The bill evidently follows, in general outline, the scheme which was agreed upon in the recent conference of landlords and tenant farmers, presided over by Lord Dunraven, and which has already been widely discussed in Great Britain and America. The principle of the bill is voluntary land purchase, under which the occupiers and cultivators of Irish soil may soon become the owners of the land. The landlords are to sell at rates satisfactory to them, and the tenants are to buy with such advances of cash, by instalments, as are within their means. The difference between what the landlords must have and what the tenants can pay is to be made good, as a free gift, by the British Government. . . . . .

"It must be understood that British credit is to be applied in two ways. On the one hand, there is to be this smaller sum [$60,000,000] given freely, which is never to be repaid; on the other, there is an enormous amount to be loaned out of the imperial treasury to the tenants to enable them to buy the land. As Mr. Wyndham explained, this great sum, which is now esti-

mated by both Mr. Wyndham and Mr. Morley as about $500,000,000, is to be raised on a new government loan, guaranteed at 2¾ per cent. interest, and issued as it may be needed during a series of years. The money thus raised will be loaned to the tenant purchasers at 3¼ per cent. interest—all this of course to be ultimately paid back to the Government. As the working out of the scheme will require a long series of years, the annual charge on the British treasury will not be over some $2,000,000 a year, according to Mr. Wyndham, which will be largely counterbalanced, it is hoped, by a reduction in the expense of governing Ireland due to the greater contentment of the inhabitants. Both the constabulary and the magistrates could be reduced in number, while the old land commission could be dispensed with entirely."

For carrying out the provisions of the bill, three "estates commissioners" are to be appointed, who are named in the bill, and one of whom, Frederick S. Wrench, now an Irish land commissioner, is strenuously objected to by the Irish leaders. The bill contains no compulsory clause requiring landlords to dispose of their lands, and it is thought that the majority of the Ulster landlords will refuse to sell under the provisions of the bill. These provisions apply to those lands only which are mainly agricultural or pastoral, and do not, therefore, directly affect artisans and mechanics. The bill, if finally passed, will go into effect November 1 next, and it is estimated that the length of time over which it will operate will be from twenty-eight to thirty years, tho the time for repayment of the government loans will extend over a period of about sixty-two years. The arrears of rent are not swept away by the bill, as first reported, but the commissioners are given power, in special cases, to remit a part or all of the arrears due at the time of purchase.

John Redmond, M.P., leader of the Irish Nationalists, speaks cautiously of the bill, but admits that it "marks an enormous advance on any measure of its kind hitherto proposed by an English government." The Irish National convention will be held in Dublin, April 14, and its action on the bill, it is thought, will determine its fate, as it is not likely that the Government will assume the burdens imposed unless the bill is accepted by the Irish.

The press comment cabled from London and Dublin is all commendatory in general, with reservations as to details. The costs imposed are not considered excessive if the pacification of Ireland is accomplished thereby.

The American press is almost as keenly interested in the bill as is the British press, and its introduction by the Conservative Government is by many attributed to the political need of the Balfour ministry to make terms with the Nationalists. *The Public Ledger* (Philadelphia) concludes an editorial on the "Dawn of Ireland's New Day" as follows:

"What the restoration of their land to the Irish people means can in no way be conceived by those who have not gazed upon the extreme of human misery as it is shown in Ireland to-day. Since Cromwell's armies overran the country, and the land was parceled out among his generals, its people have been subjected to a long and merciless exploitation. The landlords have been mere exactors of tribute; none of the money wrung from tenants has gone back in the form of improvements; little of it was ever allowed to circulate again in the country, which was drained and sucked dry. Each generation paid for the land, without acquiring an acre; the next generation paid for it again, and still owned nothing. Usually the people were allowed to retain enough of the products of their own toil barely to keep their souls in their bodies, tho between 1845 and 1848 a million of them died. After the famine year matters were even worse. Landlords, despairing of regular rents from the starving people, drove them off of large tracts, which they now gave over to pasturage. To-day out of 15,000,000 acres of arable land in Ireland, less than 2,500,000 acres is under the plow. The best land is given to cattle. The people are in many regions huddled together in bogs, trying to eke a living out of mudholes such as an American farmer would turn over to his pigs for a wallow. The mass of them live in huts of one or two rooms, often without windows. One in seven of the population is 'on the rates'—supported by the parish; half the rest live on the ragged edge of hunger, and half the remainder are fed largely by the remittances of sons and daughters in America. Mr. Wyndham on Wednesday instanced a village in which the landlord was in the workhouse the greater part of the year, while the tenants lived under conditions worse than those found among the Kafirs in Africa."

Referring to the outlay imposed ($560,000,000), *The Tribune* (New York) says: "No wonder that the price of consols goes lower than it has been for thirty years. . . . Nevertheless, there are worse things in the world than depressed consols."

The Times (New York) questions the economic wisdom of the bill as follows:

"It is more than a little strange that Great Britain should have waited, before making what looks like a sincere attempt to replace landlordism by peasant proprietorship in Ireland, until the economic and social wisdom of such a change has begun to be questioned and doubted. For scores and scores of years small landholdings have everywhere been praised as producing condi-

DEMOCRATIC LEADERS IN CARTOON.

tions theoretically desirable in any country, and even those who profited personally by the possession of extensive domains have admitted, more or less openly, that their position was only defensive. But now the situation is differently viewed by many observers, and the suggestion is openly offered that what may be called individual farming is neither beneficial to its practitioners nor advantageous to the state. The small farmer can not use to their full extent the mechanical and scientific aids which the age has placed in the hands of the man or corporation that farms on a great scale, and yet the small farmer must sell his products in the open market in competition with the exploiters of tracts that are more like principalities than farms. He gets on the crops from a few acres the same percentage of profit as does he whose harvests are gathered in conditions that turn a minute fraction into an annual fortune. For much the same reason that factories have supplanted the little shops of other days, it is prophesied that the small farmer will soon be regarded as an anachronism. And it is at this time that Great Britain has made up her slow mind to try the experiment of peasant proprietorship! It is reform, but perhaps it is belated reform, with the circumstances demanding something quite different."

THE ST. LOUIS FAIR'S "AD VANCE AGENT."

DAVID R. FRANCIS,

The "Advance Agent" of the St. Louis Fair, who interviewed three Kings and a President within two weeks.

DAVID R. FRANCIS, who has been mayor of St. Louis, governor of Missouri, and Secretary of the Interior, is now president of the Louisiana Purchase Exposition, to be held in St. Louis next year; and his efforts in promotion of that enterprise have met with such astonishing success that he has been suggested as a Presidential "possibility." He is "prominently and frequently mentioned as such in the West," reports the Kansas City *Journal*. In the brief space of time between February 25 and March 10, Mr. Francis visited London, Paris, Brussels, Madrid, and Berlin, and had audiences with King Edward, President Loubet, King Leopold, and Emperor William. King Edward promised to send to the exposition the jewels of Queen Victoria's jubilee of 1897, President Loubet promised to attend the exposition in person, Leopold assured Mr. Francis that only his age and the distance will keep him away, and the Kaiser granted him an exclusive audience of fifty-five minutes and promised to send a quantity of the Hohenzollern family plate and some of his own personal treasures. The German Reichstag, with only two dissenting votes, appropriated $375,000 for the German exhibit, and, it is expected, will make the sum $750,000. The British Government has decided to recommend an appropriation of $150,000, with more to follow. Mr. Francis also succeeded in interesting the European newspapers, public men, and merchants in the fair, and he was interviewed, and dined, and promised exhibits galore. Three hundred French exhibitors entertained him at a dinner in Paris, and some of the members of the British House of Lords "were responsible for several dinners given in his honor." One result of this remarkable European trip has been an increase in the newspaper attention to the exposition in this country.

Says the St. Louis *Globe-Democrat*:

"Before Mr. Francis went over to Europe the governments of that region, except France's, were rather apathetic, and the press of their countries gave comparatively little space to the fair. All this indifference has been displaced by a sympathetic interest which stands a chance to register itself in large exhibits from all of them and a big attendance from all over the world.

"There is a prospect, too, that the heads of the governments of the leading European countries will all be personally represented at the fair. It is understood that President Loubet, of France, will make the visit in person. The Prince of Wales, it is believed, will be Edward VII.'s personal representative here, while Prince Henry or the Crown Prince, and probably both of them, will be sent here by William II. Spain's interest in the exposition has been shown by the circumstance that its Minister has been the first of the foreign diplomats at Washington to visit St. Louis."

Dun's Review gives the following interesting figures in regard to the exposition:

"The following comparisons will serve to convey some conception of the magnitude of the forthcoming exposition. The Centennial Exposition at Philadelphia covered 236 acres, the Paris Exposition of 1899–1900, 336 acres, the Columbian Exposition at Chicago, 633 acres. The World's Fair at St. Louis will cover 1,180 acres. The construction cost of the Centennial Exposition was $8,500,000, that of the Paris Exposition was $9,000,000. The cost of the Columbian Exposition was estimated at $18,322,000, and the total cost was $27,250,000. The estimated construction cost of the St. Louis World's Fair is $30,000,000, and its total cost will be upward of $40,000,000 by the time the work is completed. The various States are now rapidly fixing upon their appropriations for the purpose of being fittingly represented at St. Louis. Missouri has voted $1,000,000, Illinois $250,000 as a preliminary expenditure, shortly to be increased; Iowa $125,000, which will probably be increased, and Mississippi $50,000, the first appropriation of this kind ever made by that State. New York has not as yet made any appropriation, but it is expected that the legislature will see that the reputation of the State for enterprise in such matters is fully maintained."

PROBLEM OF THE PHILIPPINE "LADRONES."

THE capture of Surigao on March 22 and its relief next day, and a pitched battle near Manila on Friday of last week, constitute the most serious of a series of outbreaks that have been occurring with considerable frequency in the Philippines during the past few months, and these evidences of disturbance and unrest are causing some comment. It seems that Surigao, which is a town in Northeastern Mindanao, was "rushed" and taken by about ten escaped convicts and some sixty or eighty "ladrones," who killed Inspector Clark, the American in command of the native constabulary force. The constabulary dropped their guns and fled, while the American residents took to the Provincial building, which fortunately contained the cable office. The building was barricaded, aid was summoned by cable, and, under the command of "Yellowstone Kelly," a former Indian scout and captain of volunteers, the little band of nine Americans, two of them women, held the fort for eighteen hours. When the relieving column came in view of the town, the ladrones promptly fled. On Friday of last week there was a pitched battle between two companies of Macabebe scouts and "the main body of San Miguel's force of insurgents and ladrones," as the despatch from Manila calls them. The "insurgents and ladrones" occupied an entrenched position, and had erected a stone fort, which was garrisoned by 200 men. The fighting lasted an hour and ended in "a gallant and successful charge" by the Macabebes, led by two American lieutenants, which routed the San Miguel party. Lieutenant Reese was seriously wounded. San Miguel was killed.

These outbreaks are regarded principally as evidences of an unsettled and unsatisfactory state of affairs in the islands that

KIND LADY: "You poor man, sorry I can't give you a pair of shoes, but take these" —*The Brooklyn Eagle*.

HELP AT LAST!
—*The Detroit News*.

should be remedied before they become more serious. "It can only be surmised by the general public how far the disaffection extends," says the Manila *Sun*, "and altho the reports of the authorities are reassuring, and depreciate the extent of the trouble, the public is rather chary of believing that there is not some general plan of disturbance on foot." The Manila *American* thinks that a mistake is being made in leaving the suppression of these outlaws to the native constabulary, instead of committing the work to the army. It also suspects that the scattered bands of ladrones are working in harmony, with "individual direction behind them." "It certainly does not appear," adds *The American*, "as tho the situation was as 'well in hand' as the authorities believe it is."

The Manila *Cablenews* takes a much more hopeful view:

"Major Garwood has returned from the province of Albay bringing the intelligence that affairs are much quieter in that province; that a number of brushes had taken place between the constabulary and the ladrones, and that the latter were always successful. There is a lesson in this.

"With all the editorial comment which has been caused by the present amount of ladrone activity—which is indeed considerable—it is singular that one important fact has been overlooked. It is a pleasant fact—an encouraging fact, and this is perhaps the reason it has not been more widely commented upon.

"The men who are at present engaged in keeping peace in this country are the constabulary. They may at times suffer petty reverses through being outnumbered and compelled to be content with drawn battles, but in the main they are winning and they are fighting with a will.

"We wish those who have maintained that the constabulary would never answer the purpose for which they were organized, who were positive in the conviction (and free in its expression) that in organizing them we were merely arming and educating a force which would one day turn on us, to give this fact due weight.

"The Philippines constabulary is to-day engaged in putting down ladronism with all the energy in its power. There is no longer any ground for maintaining that their hearts are not in their work, and the result is gratifying in the extreme in that it finally proves that there is in the Philippines a good element which will offer up their lives if need be to maintain the authority of the United States and to suppress robbery and lawlessness. . . . . .

"Ladronism is not insurrection and the safety of the islands is in no danger, but it is indeed a nuisance and one which should be most relentlessly stamped out. The quickest way to accomplish this is to fully demonstrate to the people that the commission was not wasting time when they decided that 'membership in a ladrone band means death.' We hear much talk of ladrones who force peaceful inhabitants to join them under threats of personal injury. When the native in the provinces realizes that he has as much to fear from the American authorities as he has from the ladrones, ladronism will cease to exist. This will not be the case, however, until the judges realize that their oath of office places upon them the obligation to enforce the law, and the law on this subject is expressed in no uncertain terms."

Governor Taft says, in the report of the Philippine commission which has just been issued in bound form from the Government Printing-Office at Washington:

"It is not certain whether in the present depressed state of agriculture, with the temptations to ladronism, that the constabulary will be able without the aid of the military to stamp it out. Were there any attractions to agriculture, were there prosperous conditions in the country, it would not be a troublesome matter to deal with; but when want and famine are staring people in the face, the life of the freebooter offers to the desperate and the weak a very great attraction.

"The natural discontent with the Government when suffer-

ing is at hand, promoted as it has been by the cholera restrictions and the high prices of rice and other commodities which have been greatly enhanced by the depreciation of silver, might well have caused a new breaking out of the insurrection; and, in my judgment, it speaks wonders for the ease with which this country may be governed in normal times, that we have had comparatively so little disorder since the surrender of the insurgent arms in April. Civil government was completely established in the Filipino provinces throughout the archipelago in July of this year, and since that time an American soldier has not been called upon once to discharge his weapon. The country has been policed by the constabulary, a force of some 5,000 or 6,000 men. It may be that as the conditions grow worse—for they are likely to do so before they grow better—it will be necessary in a province like Cavite, where ladronism seems inbred in the people, to proclaim martial law and even to call in the military finally to suppress it; but it is still hoped that this may be avoided."

OUR NATIONAL DRINK BILL.

THE use of alcoholic beverages in this country has nearly doubled since 1880, having increased from 10.09 gallons per capita to 19.48 gallons, a gain of over 93 per cent. This is one of the several interesting facts which *The American Grocer* presents in its annual estimate of "stimulating beverages." During this period the use of coffee has increased a trifle over 52 per cent., while the use of tea has decreased nearly 48 per cent. The total amount paid in this country for "stimulating beverages," last year, was $1,369,098,276, or $129,989,281 more than the average yearly expenditure for the past five years. The per-capita expenditure for stimulants for 1902 was $17.33 for the 79,003,000 inhabitants, or 4.7 cents a day. The per-capita cost of alcoholic beverages (reckoning that the users of alcoholic stimulants form one-fourth of the population) was $69.32, or 19 cents a day. Bringing together into one group the cost at retail of all beverages, we have as follows:

Alcoholic drinks		$1,172,565,235
Non-alcoholic stimulants—		
Coffee	$149,891,030	
Tea	39,642,011	
Cocoa	7,000,000	196,533,041
Total, 1902		$1,369,098,276
Total, 1901		1,273,212,386
Total, 1900		1,228,674,925
Total, 1899		1,146,897,822
Total, 1898		1,177,661,366

The quantities of the four leading beverages consumed during the year ending June 30, 1902, were as follows:

	Gallons.
Coffee	1,498,910,304
Beer	1,381,875,437
Tea	396,420,115
Spirits and wines	157,206,554

The New York *Press* sees something significant in these figures. It says:

"Moralists will see in these figures a warning against the rapid pace which our people are setting in business and other affairs which induces the use of stimulants, and if they will compare the statistics of 1901, when the per-capita consumption of alcoholic beverages was 17.90, with that of 1902, when it was 19.48 gallons, there will be some force in their argument that the drink bill of the nation is excessively high. There may be some little satisfaction to them, however, in the fact that the consumption of spirits was not so great in 1902 as it was in 1892. The increase in the past ten years has largely been in wine and in beer. It is one of the interesting phases of human nature, as shown by official figures, that panic years, such as 1893, saw a much larger consumption of spirits than did years of general prosperity. Good times, when labor is employed and money is in abundance, stimulate activity in the wine and beer trade, while the consumption of spirits mounts high apparently in years of dissatisfaction and distress."

A timely editorial appears in the New York *Sun* giving the figures of sales of mineral waters in the United States. We quote:

"In 1890 47,000,000 gallons of mineral waters from springs in the United States were sold; in 1901, 55,775,000; and in 1902, 65,000,000. The value at the point of shipment now reaches $10,000,000 a year, and taking into account the expense of transit, bottling, and the profits of retailers, $18,000,000 or $20,000,000 must be expended each year for American mineral waters. Following any epidemic of any zymotic disease there is generally reported a marked increase in the sale of mineral water in hotels, in dining-cars on railroads, and in theaters; and very likely this increased care in the use of water is of immense effect toward counteracting the dangers arising constantly from the neglect to care for the public water-supply in accordance with the growth of population. The productiveness of the mineral-water springs of the United States is practically unlimited, and at the rate which the product is increasing it can not be long before the amount sold each year will reach 80,000,000 gallons, nearly equivalent to a gallon per inhabitant. Americans are the greatest water-drinkers in the world."

A NEW BEEF TRUST.

ON March 20, the Missouri Supreme Court fined five big beef-packing companies $5,000 each for combining to control the price of meat; two days previously the National Packing Company, controlled largely by the same big packers, was secretly incorporated in Trenton, N. J. "Accompanying the filing of the

"I'LL GET IT ALL BACK."
—*The St. Paul Pioneer Press.*

charter, which was first recorded in the Hudson county clerk's office," says the Trenton correspondent of the New York *Sun*, "came a request that the incorporation be kept a secret, and so carefully was this observed that when the corporation clerk was asked for the papers, it developed that he had hidden them so securely that it entailed a long search to discover their whereabouts." The new corporation, which makes its appearance so shyly, is a combination of several minor packing companies which are controlled by the big packers; the big packing companies are not included. The Philadelphia *Record* and several other papers think, however, that the present make-up of the concern is only experimental, and that "if this form of combination shall stand the scrutiny of the courts the combination can easily be expanded to include the big packers who have organized it," while "if it shall be held invalid, the owners have simply to distribute among themselves the several companies which have been combined."

The Baltimore *Herald* encourages the Western cattlemen to form a combination to fight the packers. It says:

"The National Beef Company is to have a capital of $15,000,-

000 and expects to clear in a year $1,500,000, that is, ten per cent. on its capital.

"In reality the earnings may be more than that, because in these days many concerns have capital stocks on paper only. The cattlemen in the West are anxious to be independent of the beef trusts, but they have not yet been able to agree upon a plan. If a drought such as prevailed two years ago in the West should be repeated this year, the trusts would have the country in their grip. Any sort of trust is bad enough, but one that can control any necessary of life is particularly oppressive. It would seem that the Western farmers and ranchmen who are prosperous could unite and form a big company to manage the slaughtering and distribution of meat so as to reap the profits of the business themselves, treating the people fairly at the same time, and thus rid themselves from the oppression of the trusts. That or some other plan will be hit upon. The trusts have invited war, and it will be war if any worse extortion is attempted.

"It will, however, take a large amount of money and considerable grit to fight the big concerns. Besides the National Company, the Swift concern has a capital of $25,000,000 and the Armour Company $20,000,000."

SIX REVOLUTIONS TO THE SOUTHWARD.

SANTO DOMINGO, Haiti, Honduras, Nicaragua, Colombia, and Venezuela are all experiencing revolutions this spring, in more or less aggravated forms, but without attracting much notice from the outside world. The Santo Domingo rebels gained a position on the front page of the daily papers, at the top of the column, last week, by capturing, the city of Santo Domingo; but considerable doubt is expressed of their ability to hold the town against President Vasquez, who was temporarily absent from home when the capital was taken. President Vasquez is considered an expert at revolutionary tactics, for it has been hardly a year since he was himself a revolutionist. Vasquez overthrew Jiminez, who overthrew Heureaux, etc. Now General Alejandro Woz y Gil is trying to overthrow Vasquez. The New York *Sun* gives the following information regarding the general:

PRESIDENT VASQUEZ,

Of Santo Domingo. He let General Woz y Gil out of jail, and the general is now trying to turn him out of the presidency.

"Gen. Alejandro Woz y Gil, who is mentioned as the chief of the rebellion, was the Dominican chargé d'affaires and consul-general in this city during the administration of the late President Heureaux. He was also President of Santo Domingo, about twenty years ago. General Gil was released recently by President Vasquez from prison, where he was confined by conspiracy against the Government.

"He promised to support the Vasquez régime and was to be appointed a member of the cabinet.

"But General Gil is evidently ambitious for another term as President. Hence the present uprising. It has no connection with the one suppressed only a few weeks ago, which was to make Gen. Juan Isidro Jimenez President again. Jimenez is now living quietly at the Hotel Muro in this city.

"General Vasquez said yesterday that no alarm should be felt over the safety of American property, as the Dominican Government could give it ample protection."

The Philadelphia *Press* sketches the general revolutionary situation thus:

"The crop of revolutions in the various countries to the south of the United States appears to be large this season. The one in Colombia is in a quiescent state, because of the canal project and the promises made as to what the new Congress will do. There was some ground for this revolution, as the Government was not legally organized. But the present attitude of the revolutionists is a legal acknowledgment of the government *de facto*, and the probabilities are the $10,000,000 canal money will result in a peaceful settlement of all troubles.

"It is difficult to predict the immediate outcome in Venezuela. Castro obtained his office in the beginning by a revolution which he started because some of his cattle had been seized for non-payment of taxes. He was afterward 'elected' in the way a dictator usually elects himself, and has had a revolution 'on his hands' since that time. Should he retire, peace might be restored. The entanglements with foreign nations growing out of the debt question might result in maintaining the peace. If that were done and the country developed it would be rich and prosperous.

"The threatened trouble between Brazil and Bolivia was not in the nature of a revolution, and has apparently passed away. Yesterday's news by way of Panama reported a serious revolution in Nicaragua, tho it may not be confirmed. But such a report would be received as a matter of course. The revolution in Honduras is reported to be making headway rapidly, and, judging from the various reports as to the cause, it might be expected to succeed. The man at the head of it was elected President to succeed the man now in office. The newly chosen President was engaged to be married to the daughter of the outgoing President, but he broke off the match after his election, whereupon the President in office refused to vacate and the revolution followed.

"Haiti and the Dominical Republic are almost in perennial revolutions. Both are in that condition now, and the United States has ordered a war-ship there to guard American interests. Owing to lack of efficient means of communication, revolutions go on in some of these countries for a good while without the knowledge of them reaching the outside world. But there is a gradual improvement, and the construction of the Panama Canal, followed by the intercontinental railway, will bring these fre-

UNCLE SAM: "Now, young man, while I'm digging here I'd like a long period of depression in the revolution business." —*Puck.*

quent revolutions to an end. The trivial incidents, like that in Honduras, which led to some of these troubles, will then afford only grounds of amusement or criticism."

BRINGING THE ERIE CANAL UP TO DATE.

WITH the railroads that lie between the Canadian boundary and the Potomac and that run from St. Louis and Chicago to the Atlantic all working "in harmony," the existence of a water route through the Great Lakes, the Erie Canal, and the Hudson has become a fact of national importance. In 1825 the Erie Canal was needed because we had no railroads; now it is needed because the railroads have us. So, in substance, argues the New York *Journal of Commerce*. It says of the great railroad consolidation: "A power has been created which holds the commercial future of this port in the hollow of its hand, and practically the sole protection which is left to the merchants of New York against railroad extortion is the operation of motives of enlightened selfishness on the minds of the capitalistic junta who are now masters of the situation. That the argument for a permanent and radical enlargement of the State waterways derives new force from this latest advance in railroad combination requires no demonstration." These reflections are brought out by the passage, last week, by the New York State legislature, of a bill providing for the enlargement of the Erie Canal at a cost of $101,000,000. The new canal will be twelve feet deep and seventy-five feet wide, and will accommodate 1,000-ton barges. A referendum clause in the bill provides for its submission to the voters of the State next fall for ratification. Some doubt of the bill's success at the polls is expressed, but as New York city, Buffalo, and the counties along the canal contain a majority of the voters, others believe the measure will be ratified. In the vote in the legislature, party lines disappeared, and the measure was carried by a combination of Republican and Democratic votes. Most of the Republicans opposed it, and if the Democrats had not come to the rescue, it would have been lost, as the Republican papers frankly admit.

"The maintenance of the Empire State's commercial supremacy depends upon the achievement of this great work," declares the New York *Herald*, and the New York *Evening Post* says similarly:

"The commercial supremacy of the State, as well as of the port of New York, is involved in the canal question. The passage of grain for export through New York has steadily fallen-off from year to year as the Erie Canal has become a less and less efficient carrier in comparison with modern transportation facilities. Railroad improvements have progressed without interruption, but the canal has remained practically stationary since the sixties, the wasted expenditure of 1897 representing the only attempt at substantial betterment. But railway development has not enhanced the relative advantage of this port as a point of departure for foreign freights. Its tendency has, in fact, been exactly the contrary. With the water route practically abandoned, New York has been obliged to take its chances in railroad competition with Portland, Boston, Philadelphia, Baltimore, Newport News, and even with Savannah. As a result of railroad rate-wars, a differential of three cents per hundred in favor of Baltimore and two cents per hundred in favor of Philadelphia was established a number of years ago, greatly to the injury of this port. Furthermore, the Southern ports have the advantage of shorter distance from Western centers, lower dock and transfer charges, etc. The one great natural advantage possessed by New York, besides its splendid harbor, is the topographical opportunity to construct a great waterway connecting the Great Lakes with the Atlantic. This is provided by the valleys of the Hudson and the Mohawk, and the comparatively low and level lands west of Oneida Lake. No such water route could be constructed through any other State, no matter how great its enterprise, and if the canal is completed on the lines now laid down by the legislature, it can have no rival as a waterway from the interior to the Eastern coast, except, perhaps, the St. Lawrence route."

COMING RELEASE OF MRS. MAYBRICK.

THE official announcement, in London, that Mrs. Florence Maybrick will be released in the spring of 1904 ends an agitation which has been going on both in this country and England for nearly fifteen years. Mrs. Maybrick, an American woman, was convicted of the murder of her husband, in England, in 1889, and was sentenced to death by Justice Stephen; but the British Home Office commuted the sentence to life imprisonment. Then began an agitation, which was greatly intensified when, several months later, it was found that the justice was mentally incapacitated for the bench. The decision was considered unreasonable, because Justice Stephen, who spoke for two days in charging the jury, declared that he did not see how any jury could convict Mrs. Maybrick. The justice died some time later in a madhouse; but despite the supposition that the justice may have been out of his mind when he sentenced the prisoner, and in spite of the many petitions for her release, the British Government would not yield. The British Home Office investigated the case and declared that the trial was fair and the verdict justified.

In 1889 and 1890 Secretary Blaine appealed to Lord Salisbury, and soon after the second appeal a petition signed by many Americans was forwarded to the English Premier, but with no success. In 1891 Secretary Blaine sent a petition to the Queen, and the next year Secretary of State Foster appealed for a pardon. In 1896 two more petitions were sent to the Queen, and the Woman's International Maybrick Association was formed for the purpose of uniting the petitions of all American women, at home and abroad, in an appeal to the Queen. It is believed that only recently Ambassador Choate made another attempt to secure the prisoner's release.

The Detroit *Tribune* and the Pittsburg *Times* declare that the release is a victory for public opinion in the United States. The Providence *Journal*, however, says:

"Those admirers of Mrs. Maybrick who have labored so long and so earnestly for her release will be gratified by the news that the British Government contemplates opening her prison-doors next year; and perhaps they will see a resemblance in this action to that of the unjust judge of Scripture, who heard the widow's plea lest by her continual coming she should weary him. But it can not be said that public sentiment in general has been on Mrs. Maybrick's side. She had a strong motive for the crime imputed to her, and her life before her husband's death was not such as to bear scrutiny. Doubtless this consideration had much to do with Queen Victoria's determined opposition to her release. The fact that Mrs. Maybrick is needed as a witness to save her mother's property now gives the Home Secretary an excuse for clemency which has not hitherto been available."

LETTERS AND ART.

A LITERARY SENSATION IN RUSSIA.

WHAT are the limits of realism in fiction, especially in fiction touching the delicate and intimate sides of the relations between the sexes? How far may a novelist go in this direction without incurring the reproach of pandering to prurient curiosity and vicious sensualism?

These questions have been raised in the Russian periodical and newspaper press by Countess Sophia Tolstoy, the wife of the great author-moralist. They are discussed with animation and some ill temper not only by professional critics and writers, but by correspondents representing the "reading classes"—students, mothers, fathers, and so on. The debate had its origin in a letter written by the Countess Tolstoy (whose appearances in print have not been frequent) to the *Novoye Vremya* in denunciation of a story by a young novelist, Leonid Andrieff, regarded as a sort of follower of Górky and literary grandson of Tolstoy himself. The story was entitled "In a Fog," and depicted the moral tortures of a young and high-minded student who, through ignorance and bad associations, had glided into immorality and incurred a loathsome disease. Was the subject legitimate, and, if so, was its treatment by Andrieff offensive, needlessly brutal, and calculated to encourage vice and the very evils realistically depicted?

Countess Tolstoy answered the last question in the negative, and, in view of Andrieff's popularity and undoubted talent and original bent in the choice of topics (months before, another story of his had provoked a storm), she went on to make the following general reflections:

"Writers like Andrieff are not to be read, lauded, and rewarded; it behooves all of our educated society to protest indignantly against the filth scattered all over Russia by the reviews and book publishers that encourage them. In the works of Maxim Górky there is always relief in some character or some moving situation, which makes you feel that the author, full of pity for the fallen, firmly distinguishes between the good and the bad, and loves the former. If Górky has imparted much cynicism and nakedness into the scenes in which he depicts the life of a certain class, he makes you feel that he heartily deplores the evil and misery caused by vice, ignorance, and poverty.

"But in the stories of Andrieff one feels that the author relishes and derives satisfaction from the vile phenomena he depicts, and by this love for vice he infects the undeveloped, morally unwashed reading public, which is as yet incapable of analyzing life and which stupidly repeats the favorite but senseless formula: 'But this is reality!'

"Reality! But why should the reader's eyes be turned on that particular side of life? What an immense horizon there is before the really gifted artist! I can not refrain from mentioning the great work which was created under my own observation—'War and Peace'—in which the author penetrated into so many hearts and compelled us all to love that which he loved. For years thousands have been attracted by this book, which throws not the smallest shadow of corrupting influence on the souls of its readers.

"But the pitiable new writers of contemporary fiction, like Andrieff, for example, have been able merely to concentrate interest in the filthy aspect of human degradation. They invite and summon the public to study the decaying corpse of human sin, and to close their eyes to the whole spacious, beautiful world, with the loveliness of nature, the majesty of art, the nobility of human aspiration, the religious and moral ascent of the race, the great ideals of goodness and love—even, let us add, the weaknesses, misfortunes, and tragedies of mankind as shown by a Dostoievsky. In describing the last-specified things, however, the artist should brightly illuminate, not the direction of vice and sympathy therewith, but that direction in which we find struggle against sin and corruption, the triumph of truth and humanity over evil and vice."

Several critics and publicists of note have expressed their sympathy with Countess Tolstoy's indictment of the younger novelists, but Andrieff has not lacked stout champions. The charge that "In a Fog" betrays a salacious sympathy with vice is declared to be absolutely unwarranted by the tone and manner of the story. "A Russian Mother" writes to the *Novosti* that Andrieff is to be thanked for raising a question which so vitally concerns the welfare of the rising generation and for breaking the silence imposed by cowardice and hypocrisy. A university student writes that the story so violently attacked points a salutary and profound moral, and is free from all suggestion of evil. There is no filth in the story, asserts a third writer, and the author's object is to excite aversion and terror, to compel a study of the causes of a condition which wrecks thousands of lives, physically and morally, and converts society into a huge hospital. "A Russian Woman" writes in the same paper:

"It is not immoral to cry out, to tell the painful truth. We mothers, in our inmost souls, tremble for our sons, and if we detect something wrong in their lives, we try to deceive ourselves and to make light of it. We need more of such healthy champions of morality as Andrieff, who, in his final stroke, sounds the knell of vice and impurity. We, fathers and mothers, must stand nearer to our children and save them from a mass of errors and faults. Andrieff does not render vice alluring; he artistically depicts the inevitable and revolting consequences of an abnormal social relation."—*Translations made for* THE LITERARY DIGEST.

WILLIAM MORRIS: "THE HAPPIEST OF THE POETS."

TO those who have discerned the spirit of melancholy that clouded the later years of William Morris's life—a melancholy bred by the contact of so idealistic a nature with the stern facts of our present-day world—there must seem something paradoxical in the statement that Morris was "the one perfectly happy and fortunate poet of modern times." The words quoted are used by Mr. W. B. Yeats, the Celtic poet, in an appreciation of Morris bearing the title, "The Happiest of the Poets," and appearing in *The Fortnightly Review* (March). What Mr. Yeats means is evidently that Morris followed, his life long, "a dream of natural happiness," and that "all the people of all his poems and stories, from the confused beginning of his art in 'The Hollow Land' to its end in 'The Sundering Flood,' are full of the heavy sweetness of this dream." We quote further:

"All he writes seems to me like the make-believe of a child who is remaking the world, not always in the same way, but always after his own heart, and so, unlike all other modern writers, he makes his poetry out of unending pictures of a happiness that is often what a child might imagine, and always a happiness that sets mind and body at ease. Now it is a picture of some great room full of merriment; now of the wine-press; now of the golden threshing-floor; now of an old mill among apple-trees; now of cool water after the heat of the sun; now of some well-sheltered, well-tilled place among woods or mountains, where men and women live happily, knowing of nothing that is too far off or too great for the affections. He has but one story to tell us, how some man or woman lost and found again the happiness that is always half of the body; and even when they are wandering from it, leaves must fall over them and flowers make fragrances about them, and warm winds fan them, and birds sing to them. . . . His poetry often wearies us, as the unbroken green of July wearies us, for there is something in us, some bitterness because of the fall it may be, that takes a little from the sweetness of Eve's apple after the first mouthful; but he who did all things gladly and easily, who never knew the curse of labor, found it always as sweet as it was in Eve's mouth. All kinds of associations have gathered about the pleasant things of the world, and half taken the pleasure of them for the greater number of men, but he saw them as when they came from the Divine Hand."

Morris's vision, continues Mr. Yeats, is "true because it is poetical, because we are a little happier when we are looking at

it." He knew, "as Shelley knew by an act of faith," that "the economists should take their measurements, not from life as it is, but from the vision of men like him, from the vision of the world made perfect, that is buried under all minds." Mr. Yeats says in conclusion:

"He knew clearly what he was doing toward the end, for he lived at a time when poets and artists have begun again to carry the burdens that priests and theologians took from them angrily some few hundred years ago. His art was not more essentially religious than Rossetti's art, but it was different, for Rossetti, drunken with natural beauty, saw the supernatural beauty, the impossible beauty, in his frenzy, while he, being less intense and more tranquil, would show us a beauty that would wither if it did not set us at peace with natural things, and if we did not believe that it existed always a little, and would some day exist in its fulness. He may not have been, indeed he was not, among the very greatest poets, but he was among the greatest of those who prepare the last reconciliation when the Cross shall blossom with roses."

WILLIAM MORRIS,
The English poet and craftsman.

An evidence of growing American interest in the work of William Morris is afforded by Elizabeth Luther Cary's new and handsomely illustrated biography, "William Morris: Poet, Craftsman, Socialist." Miss Cary says, in part:

"In regarding Morris through the medium of his work, it is difficult to gain a coherent impression. He turned one side and another to the world with such rapidity of succession as to give a sense of kaleidoscopic change. What new combination of color and form his activities would take was always impossible to forecast. And the thing that he was doing seemed to him at the time the one thing in the world that was worth doing, the one thing that 'a reasonable and healthy man' would make it his pleasure to do. Yet all these pursuits taken up by him with so much zest, and laid down by him with such suddenness, fitted harmoniously and accurately into the plan of his life, which, with the decade of militant Socialism deducted, presented a smooth and even surface, unbroken by any violent change of circumstance or method or motive. He has been described by nearly all who have written of him as a 'rebel,' and a rebel he was in the true Quixotic sense, his lance in rest to charge at any moment against any windmill of convention that might offend him. . . . It is doubtful whether he would have made as strong an impression on his generation as he did if he had devoted his time to one branch of art and worked along conventional lines. His greatest gift was not so much the ability to produce art, artistic tho he was in faculty and feeling, as it was the ability to make people see the difference between the kind of beauty to which his eyes were open and the ugliness commonly preferred to it. Nothing is so convincing as to see a man accomplish with his own hands what he has declared possible for any one to accomplish. Morris's continual illustration of his theories was perhaps more useful in awakening interest in just the matters which he had at heart than any more patient pursuit of an ideal less readily achieved.

"Considered superficially, he appeared the very prince of paradox. Art was a word continually on his lips, the future and fortunes of art were constantly in his mind, yet for the greatest art of the world he had few words, and the most passing interest. The names of Raffael and Leonardo, Giotto, Dürer, Rembrandt, Velasquez, were seldom if ever on his lips. Art had for him an almost single meaning, namely, the beauty produced by humble workers as an every-day occurrence and for every day's enjoyment, art by the people and for the people."

A NEW INTERNATIONAL LANGUAGE.

CONSIDERABLE interest is being manifested in "Esperanto," a language intended for "universal" currency and invented by a Russian, Dr. L. Zamenhof, in 1887. It fills the place previously occupied by "Volapük," which was devised by J. M. Schleyer in 1879, but never attained to any great degree of popularity. "Esperanto" has already some eighty thousand adherents, including members of the French Institute and professors in several of the Continental universities. It has also won the indorsement of Count Tolstoy and of the late Max Müller. Its object, as M. Louis Baron explains (in *Le Monde Moderne*, Paris), is:

"To furnish to people who need to communicate with foreigners—travelers, scientists, business men—the way to a mutual understanding without the necessity of resorting to the study of many foreign languages or to translations; in fact, to realize the harmony of expression which is said to have existed previously to the time when men conceived the foolish idea of erecting a tower of Babel."

The new "universal language" is based upon all existing languages. Latin, however, is the predominating element, and this fact doubtless accounts for the greater popularity which "Esperanto" enjoys in France, Spain, and Italy, as compared with its vogue in Germany, England, and Scandinavia. Says M. Baron: "This is the weak point of the new language. . . . . The question is bound to be asked why one should take so much trouble to manufacture an idiom which is only a counterfeit of Latin, when Latin is already being used the world over by savants who wish to communicate with one another or to formulate new scientific terms."

M. Baron quotes the following expression of opinion from Tolstoy in relation to "Esperanto":

"I found 'Volapük' very complicated, while 'Esperanto,' on the contrary, is very simple. It is so easy to learn that recently, having received a grammar, a dictionary, and several articles in that idiom, I was able at the end of two short hours to easily read the language and even to write some of it. The trouble involved in a few hours' study is so slight, and the results may prove so great, that no one should refuse to make the attempt."

Max Müller said, shortly before his death:

"The conception of an artificial, international language, existing side by side with national languages, may be realized. I am sure that a language can be created more regular, more perfect, more easy to learn, than any of the natural dialects of humanity. I have frequently had to express my opinion as to the merits of the various schemes of a universal language. Each one of these seems to possess some special advantages and disadvantages, but I should certainly place the Esperanto system very high above its rivals."

A writer under the nom-de-plume of "Freidenker" discusses this whole subject interestingly in the pages of the New York *Times Saturday Review*. He says, in part:

"'Volapük' dropped into disuse because it had too much grammar and the vocabulary was constructed on an impractical principle. Beginning with Dr. Zamenhof, a number of erstwhile Volapükists have constructed international languages, basing their vocabulary on the enormous number of words which resemble each other in the principal modern languages, and giving a strong preference to the Latin side. By far the best of these is the 'Idiom Neutral,' mainly due to Voldemar Rosenberger, of St. Petersburg. In this all the good features of 'Volapük' and 'Esperanto' are preserved, and the objectionable features of both are eliminated. The bad points of Zamenhof's language

are that it requires certain special characters for printing, has an accusative case, and the verb is not simple enough.

"The following is a sample sentence in English and the three artificial languages:

"English.—Scientific books published in this language can be read by everybody in the original.

"Volapük.—Buks nolavik pepüböl in pük at kanoms pakapälön fa alim in rigad.

"Esperanto.—Libroj scienca publigata en tiu ci lingvo povas esti legata de cie en origino.

"Idiom Neutral.—Libri sientifik publiked in ist idiom potes esar lekted per omnihom in original.

"It will be observed that the 'Volapük' is unintelligible to a person of any nationality who has not studied it. The roots of the words are taken from English and Latin, but the system of forming them is so artificial that they are unrecognizable. 'Esperanto' and 'Idiom Neutral' can be easily understood by a Frenchman, Italian, or Spaniard without study, and present no great difficulty to an Englishman or German. The last version is manifestly the easiest."

A monthly journal, *L'Espérantiste*, printed in French and "Esperanto," is issued in Paris. In London, Mr. W. T. Stead, the editor of *The Review of Reviews*, is pushing the claims of the new language. In this country, a complete text-book on the subject has been prepared by J. C. O'Connor, B.A., and is published in New York.—*Translation made for* THE LITERARY DIGEST.

THE DANGERS OF A "LEARNED PROLETARIAT."

UNIVERSITY statistics recently published revive the discussion of the old problem that Bismarck, in his parliamentary addresses, so frequently mentioned with apprehension, namely, that of a "learned proletariat," a "mob" of technically educated men vastly in excess of the demand. The *Frankfurter Zeitung*, which is under all circumstances the best-informed journal in the "land of thinkers and authors" on subjects pertaining to higher educational matters, has something to say on this subject substantially as follows:

The statistics of the attendance at the universities and the technical institutes, which latter, by recent action of the authorities, have been placed on an equality with the former, again show how all the professions, with the sole exception of the Protestant ministry, are in danger of being swamped by an overproduction of graduates who want appointments, but who are doomed to disappointment. The total university attendance in the present winter term is 47,798, and the total enrolment at the nine schools of technology is 17,033, making a grand total of 62,831 men and women (the latter number but 1,271) who are preparing chiefly for professional careers. Of the university students probably about 8,000, and of the students of technology about 3,500, are not regularly inscribed members of these institutions, but all, with scarcely any exceptions, are aiming to fill positions that require technical and professional training. The representatives of the statistical sciences, such as Professor Lexis, have repeatedly drawn attention to the dangers resulting from this condition of affairs for society and the state, especially because the system of education that prevails at the German higher institutions of learning is of a kind that prepares men excellently for the one particular department which they have selected, and by reason of this specialization makes it exceedingly difficult for them to adapt themselves to other callings if they find their own line overcrowded. Bismarck repeatedly declared that the really bright minds in the dangerous ranks of the Social Democracy are such disappointed candidates for the various professions, and he was at times not disinclined to favor the policy prevailing in Russia, of limiting the attendance at these professional schools.

It is uncertain whether the danger of a learned proletariat will be increased or diminished by the fact that the attendance at the various schools of technology has increased so phenomenally during the last few years. In former years, these schools were ignored and often despised by the university people; but now, especially through the all-powerful influence of the Emperor in putting the two kinds of institutions upon an equal footing, the schools of technology have been given power to bestow the degree of "Doctor of Engineering." These schools are so overcrowded that the German students have entered upon a regular crusade against the foreign contingent, who learn in them the secrets of German industrial and commercial development, only to use their newly acquired knowledge against Germany in the home and foreign market. The majority of these institutes have already decided upon measures that limit the foreign element; their example has been followed in this respect by several of the universities, notably Berlin, Halle, and Leipsic. This rush to the schools of technology, however, has not made the attendance at the universities smaller, and no relief from the danger of a "learned proletariat" seems to be promised thereby.

In the Munich *Allgemeine Zeitung* (Nos. 10 and 28) full and complete statistics of these schools are published. Berlin leads with 4,378 students of technology and a total of 13,300 in the university. It is doubtless the largest educational center of the world now, and the most cosmopolitan. Its roster of students reads like a catalog of nations, representing almost every country in the world.—*Translation made for* THE LITERARY DIGEST.

THE AGITATION FOR A NATIONAL THEATER.

THE idea of a national theater, which has been eagerly championed from time to time and has won the approval of many leading authors, actors, and theatrical managers, including Joseph Jefferson, E. H. Sothern, Julia Marlowe, Mrs. Leslie Carter, Henry Miller, and Heinrich Conried, is again to the fore. A resolution has been introduced into Congress by Representative Meiers favoring a great state-endowed theater in Washington, and a congressional committee has been appointed to give the matter serious consideration. The American Dramatists' Club has also appointed a committee "to discuss and formulate a plan for presenting the endowed national theater project to the public," and among those actively interested are William Gillette, Augustus Thomas, and Arthur Hornblow, editor of *Th atre* (New York). Mr. Joseph I. C. Clarke, vice-president of the American Dramatists' Club, contributes an article to *The Theatre*, proposing:

JOSEPH I. C. CLARKE.
Vice-President of the American Dramatists' Club.
Courtesy of *The Theatre*.

(1) That a representative committee be organized by progressive steps, and proceed to incorporate itself.

(2) That a plan of subscription for shares or seats, or both, be formulated. "It has been calculated that a subscription for seats, or a sale of shares that would furnish an advance fund of $150,000, would be ample to give the plan a year of prosperous life. With the proper organization to give assurance of practical business-like management and a definite program announced, it is not to be doubted that the sum named could be raised."

(3) That a theater be leased for one season, and that one be built for the next, if the money therefor comes in.

(4) That a director be chosen "with the greatest care, for in his hands would lie much of the future of the project."

(5) That a conservatory of dramatic arts be organized in connection with the theater.

Mr. Clarke's plans have attracted attention throughout the country. The New York *Dramatic Mirror* thinks that "there is no doubt that if a proper plan of organization and operation could be devised, and the endowment secured, it would not be long before such a theater would be self-sustaining. Its influence upon the stage and public taste would be of incalculable

benefit." The Chicago *Inter Ocean* declares that "Mr. Clarke's deductions are not only readable, but, in the main, practicable." *The Theatre* says editorially:

"The national theater, properly conceived, would not be devoted to the cult of what has been facetiously called the Long-Haired Drama. Let the untimely demise of the late Theater of Arts and Letters forever stand as a warning and an example! The national theater would not be the theater of a coterie of literary lions, college professors, or so-called society folk. It *would* be the theater of the sane American people. The first thing necessary is to dispel the idea that the chief object of an independent theater would be to force the unacted playwright on the public. That was the policy of the Theater of Arts and Letters, and it was fatal. The repertoire, at first, must necessarily depend more on the world's classics than on the nascent American drama. Later, and by degrees, the national theater will give the native playwright his opportunity. But it would be a serious blunder to permit the public to think the promoters had interested motives for espousing what is really an exalted and unselfish cause."

In this connection it is interesting to note that George Clark, the veteran actor, is meeting with considerable success in his attempts to establish an American Academy of Dramatic Art in Philadelphia. The sum of $250,000, it is reported, has already been subscribed toward this undertaking. Says the Philadelphia *Inquirer*:

"It would be a good thing for the stage, a good thing for the public, and a good thing for Philadelphia if there were established in this city an institution where the best, the highest type of the dramatic art could be both acquired and exercised. . . . *The Inquirer* congratulates the gentlemen who have conceived the idea of establishing an American Academy of Dramatic Art in Philadelphia upon their breadth of view and liberality of spirit, and heartily wishes them all possible success."

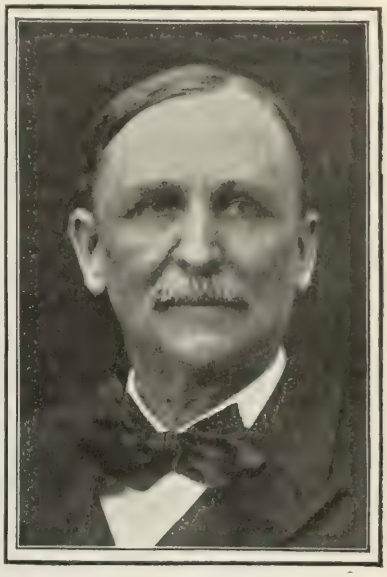
THE PASSING OF TRANSCENDENTALISM.

THERE can be no doubt that the transcendental movement embodied the most important influence that has affected American literature. "Whatever were its defects," observes Mr. George Willis Cooke, a well-known New England littérateur, "it was a creative power, and it gave us our greatest poetry." Mr. Cooke continues (in an introduction to his new anthology, "The Poets of Transcendentalism"):

"Transcendentalism was a movement of inquiry, revolt against conventionality, and assertion of the worth and dignity of man. It declared that religion is natural to man, that he may trust his own instincts, that individual freedom is essential to a large and wise living, and that spiritual insight is a direct revelation from God. The movement thus developed had a large influence upon American poetry. It may be justly said to have been the formative power that produced our best literature. It is impossible to separate it from the names of Emerson, Lowell, Thoreau, Whittier, Whitman, and a large company of our lesser poets and prose writers. That phase of it shown in the teaching of Wordsworth deeply touched the poetry of Bryant, and Longfellow was by no means outside its movement and its spirit."

Individuality, we are reminded, was the one essential word and thought of the transcendentalists. Emerson was never tired of insisting that each man must be himself, live his own life, and think his own thought. But this idea of individuality rested back upon a conception of an omnipresent Deity—the "Over-Soul"—which would make of the individual only a distinct and unique expression of the Infinite Spirit. It was this feeling which gave "the oracular mood" to so much of the writing of Emerson, Thoreau, Alcott, Margaret Fuller, and many others. They thought that they were speaking with the authority of a higher life than their own. Doubtless, this feeling—or at least the consciousness of a "message" which must be preached—was also responsible for what Mr. Cooke regards as the most marked limitation of transcendental poetry. He writes on this point:

"The chief defect of the poetry of the transcendentalists is that it is too philosophical. Its largest intent is ethical or religious, and not artistic. Beauty is not its chief inspiration, but thought. It is not written to please, but to convince. It contains a gospel, and not an appeal to emotion and imagination. That this defect always presents itself it would not be just to say, and yet it is too often present. These poets are more concerned as to what they say than as to how they say it. They are not singers, but teachers. The problems of life much concern them, and how to reform the world is to them of great importance. The charm of their poetry is in the beauty of the thought, and not in the delight of the song they sing. The form is often rugged, the verse is halting and defective. Their meters stumble, and their rimes are not correct. They are too metaphysical, subtle, and complicated in their thought to sing themselves clearly and strongly out into beautiful words. Their thought is involved, and often obscure. They are so charmed with what they have to say, and it is of such a complex and subjective nature, that they can not find simple and direct speech for its utterance. Hence the halting nature of their verse, its crippled meters, and its defective rimes. Too often in their verse they are not poets, but philosophers.



GEORGE WILLIS COOKE,
The editor of a new anthology of the poetry of transcendentalism.

"These poets do not sing for the joy of the singing; and yet it was their idealism, the fact that they were enamored of beautiful thoughts, that made them use the verse form instead of prose. Poetry was to all of them the occasional rather than the chief medium of expression. With the exception of Lowell, they were not poets by profession, and even with him prose was used oftener than verse. Altho Emerson early declared that his calling was that of a poet, yet he gave to the lecture and the essay the preference. With Thoreau, Margaret Fuller, Higginson, and Wasson, as well as others, poetry was occasional or incidental. To a larger number poetry was an accident, and they wrote one or two or a half-dozen poems only. There was something in transcendentalism that made them poets in youth or at rare moments; but they were grave theologians or philosophers for the rest of their lives. They were so stirred by the joy of life or the beauties of nature that prose ceased to be a fit medium for their thoughts. When verse thus became necessary to them, they used it with a considerable degree of success, and these rare utterances are far above the level of occasional verse, whatever their defects."

The transcendental movement deserves lasting recognition if only for the reason that it expresses so vividly the life and thought of the men who gave it birth. But it "no longer holds the place it once occupied. It is not now the inspirer of poets or the chief influence in our literature." Mr. Cooke concludes:

"We may give to transcendentalism a generous recognition for what it was to the men and women who accepted it; but we must see in it a passing phase of American thought. It may be that there are a larger number of persons who accept this faith to-day than in the prime of the movement as it affected American literature; but it is now an echo. To no great men is it inspiration, and it develops no creative literary movement. The charm of it has passed away as a vital force. It is a beautiful memory that is precious and glorious, and that still charms and delights us."

SCIENCE AND INVENTION.

TROLLEY AGAINST LOCOMOTIVE.

IN seven years, the number of persons carried by the railways of the United States has fallen off by twelve millions. At the same time the average distance traveled had risen from 23½ to 28 miles. These figures, which seem odd at first, are really a clear indication that we are abandoning the steam-roads for short-distance traffic and taking to the trolley. Says Samuel E. Moffett in *McClure's Magazine* (March):

"Of course people are not really traveling less frequently than they used to, nor are they journeying longer distances. More passengers by hundreds of millions are traveling than ever before, but the steam-railroads are not carrying the increase. The growth in the length of the average passenger haul on those roads means that they are steadily losing the short-haul business, which a younger and more vigorous rival is claiming for its own.

"Inch by inch the field is contested, and slowly, sullenly, the locomotive is giving way before the insistent trolley. A dozen years ago it was only the car-horse and the cable in the towns that were threatened by electric traction. Then the trolley poked an inquiring tentacle over the city limits into the suburbs. The results were satisfactory, and swiftly the electric lines flung their spider filaments from town to town, until now great sections of the country are cobwebbed with them. The trolley map of Eastern Massachusetts looks as complete as the steam-railroad map. If you have a little time to spare, you can go on an electric car to almost any part of Southern New England that you could reach by a locomotive, and to a good many parts that you could not. . . . . .

"In its early development the trolley had four advantages. It could run separate cars at frequent intervals; it could take on and let off passengers anywhere along the road; it could take people near their homes and offices; and it could pay a profit at nominal fares. *Per contra*, it had the disadvantage of less than railroad speed, not because there was any difficulty in making an electric car that could go as fast as a locomotive, but because the trolley track as a rule was laid on the surface of the public highway, crossed all intersecting roads at grade, and was a thoroughfare for vehicles, pedestrians, and domestic fauna. These characteristics still prevail over most of the electric mileage of the country, but as the trolley lines have grown longer and the need for sustained high speed has become more urgent, the tendency has developed to build the roads on private rights of way and to operate them by steam-railroad methods."

To justify these statements, Mr. Moffett brings up an array of facts that is quite startling, even to those who think they have kept up with the rapid recent development of the electric roads. He tells us of the road from Indianapolis to Muncie, Ind., where the trolley cars cover the 53 miles in two hours, a time only ten minutes longer than that of the accommodation-trains on the railroad. On this electric road the cars make a mile a minute on part of the route. On the Buffalo and Lockport electric line they make 50 miles an hour for part of their trip and cars are building to make 75 miles an hour—a rate that would carry one from New York to San Francisco in two days or less. The Indianapolis, Lebanon, and Frankfort Railway, now under construction, has arranged a schedule that calls for a maximum speed of 60 miles an hour. . . . The motors on the Albany and Hudson line work up to 60 miles an hour, and on the Nantasket Beach to 40. On Lorain and Cleveland road the highest speed is 50 miles. On the projected New York and Portchester road a speed of 67 miles an hour at one point is called for.

The great ganglia from which the electric roads are pushing out are cities like Boston, Pittsburg, Dayton, and Cleveland, Ohio, Indianapolis, and Detroit, which Mr. Moffett says is the greatest electric traction center in the United States. Here, he says, the trolley-car is full grown; it no longer creeps timidly from house to house, but covers 300 miles at a leap.

Space fails to quote all Mr. Moffett's instances. He calls our special attention to the growth of trolley-freight traffic—a very noteworthy recent development. Between Buffalo and Niagara, heavy electric freight trains of 25 cars or more are now run. Another feature of electric traffic is the pleasure element which is now so noticeable in summer and which is daily increasing in importance. "This," says Mr. Moffett, "is a new luxury of modern life. Neither horse-car nor locomotive ever provided it. The need in human nature to which it responds went unsupplied until the trolley-car came into existence to fill it." In concluding, the writer says:

"Altho this country has more than twice as many miles of electric track and more than three times as many electric cars as all the rest of the world combined, the new system is still in its infancy, even here. There are twenty thousand miles of electric road to two hundred thousand miles of steam-road. The trolley lines might be multiplied by ten with great advantage to the steam-roads, which would find them incomparable feeders, bringing freight and passengers from regions in wihch the locomotive's whistle was never heard. But electricity will not be content with that humble position. It is creating a system of its own, self-centered and independent, and that system contains such a vigorous principle of growth that it will not be surprising to see it swallow up its older rivals. Certainly the locomotive is doomed on local lines; its finish is plainly visible on mountain railroads, where water power is cheaper than coal; and the question whether it can hold its own anywhere is the most hotly debated problem now agitating the transportation world."

AN OLD NATURALIST ON SOME POPULAR NATURAL HISTORY.

THE recent popular revival of interest in natural history and in stories about animals and their haunts has brought out a large amount of readable material. People have read about animals in the last two or three years who never took the slightest interest in the subject before. The only trouble with a large majority of these fascinating tales is that they are lies, pure and simple, so we are assured by that veteran observer of nature, John Burroughs. In an article entitled "Real and Sham Natural History," in *The Atlantic Monthly*, he indulges in some decidedly plain speaking on the subject. It must not be supposed that Mr. Burroughs objects to all the recent story-tellers. Some he commends, such as Bradford Torrey, Mrs. Eckstrom, L. S. Keyser, Florence Merriam, and Ernest Ingersoll. C. G. D. Roberts, too, he praises, but with some reserve. Of this author's "Kindred of the Wild" he says:

"True it is that all the animals whose lives are portrayed—the bear, the panther, the lynx, the hare, the moose, and others—are simply human beings disguised as animals; they think, feel, plan, suffer, as we do; in fact, exhibit almost the entire human psychology. But in other respects they follow closely the facts of natural history, and the reader is not deceived; he knows where he stands. Of course it is mainly guesswork how far our psychology applied to the lower animals. That they experience many of our emotions there can be no doubt, but that they have intellectual and reasoning processes like our own, except in a very rudimentary form, admits of grave doubt. But I need not go into that vexed subject here. They are certainly in any broad generalization our kin, and Mr. Roberts's book is well named and well done."

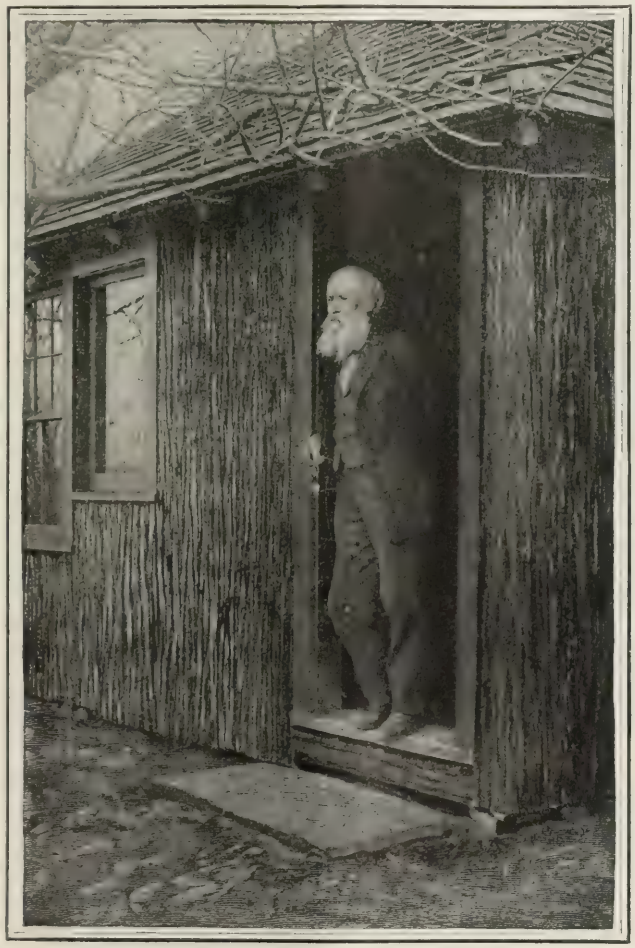
To Mr. Thompson-Seton's interesting stories, the writer takes strenuous exception. He suggests that the title of Mr. Seton's first book should have been "Wild Animals I Alone Have Known," and he more than hints that he does not credit the author's assertion that his tales are all true. Says Mr. Burroughs:

"Mr. Thompson-Seton says in capital letters that his stories are true, and it is this emphatic assertion that makes the judicious grieve. True as romance, true in their artistic effects, true in their power to entertain the young reader, they certainly

are; but true as natural history they as certainly are not. Are we to believe that Mr. Thompson-Seton, in his few years of roaming in the West, has penetrated farther into the secrets of animal life than all the observers who have gone before him? There are no stories of animal intelligence and cunning on record, that I am aware of, that match his. Gilbert White, Charles St. John, Waterton, Wallace, Darwin, Jefferies, and others in England—all expert students and observers; Bates in South America, Audubon roaming the whole country, Thoreau in New England, John Muir in the mountains of California and in the wilds of Alaska, have nothing to report that comes within gunshot of what appear to be Mr. Thompson-Seton's daily experiences. Such dogs, wolves, foxes, rabbits, mustangs, crows, as he has known, it is safe to say, no other person in the world has ever known. Fact and fiction are so deftly blended in his work that only a real woodsman can separate them. . . . . .

"Since Mr. Thompson-Seton took his reader into his confidence at all, why did he not warn him at the outset against asking any questions about the literal truth of his stories? Why did he not say that their groundwork was fact and their finish was fiction, and that if the reader find them entertaining, and that if they increase his love for, and his interest in, our wild neighbors, it were enough?

"It is always an artist's privilege to heighten or deepen natural effects. He may paint us a more beautiful woman, or a more beautiful horse, or a more beautiful landscape, than we ever saw; we are not deceived even tho he outdo nature. We know where we stand and where he stands; we know that this is the power of art. But when he paints a portrait, or an actual scene or event, we expect him to be true to the facts of the case. Again, he may add all the charm his style can impart to the subject, and we are not deceived; the picture is true, perhaps all the more true for the style. Mr. Thompson-Seton's stories are artistic and pleasing, but he insists upon it that they are true to the fact, and that this is the best way to write natural history. 'I believe,' he says in his preface, 'that natural history has lost much by the vague general treatment that is so common.' Hence he will make it specific and individual. Very good; but do not put upon our human credulity a greater burden than it can bear. . . . There should be nothing equivocal about sketches of this kind; even a child should know when the writer is giving him facts and when he is giving him fiction, as he does when Mr. Thompson-Seton makes his animals talk; but in many of the narrations only a real woodsman can separate the true from the false. Mr. Thompson-Seton constantly aims to convey the idea to his reader that the wild creatures drill and instruct their young, even punishing them at times for disobedience to orders. His imitator, the Rev. Mr. Long, quite outdoes him on this line, going so far as to call his last book the 'School of the Woods.'"



JOHN BURROUGHS
At his study door.
From "A Year in the Fields." By permission of Houghton, Mifflin & Co.

With this last-named book and its author Mr. Burroughs has no patience at all. He devotes much space to examining specific stories both of Mr. Long and Mr. Seton, but we have room here only for his general conclusions. After laying bare what he believes to be Mr. Long's inventions and absurdities in the way of natural history, he concludes as follows:

"If it be urged that I discredit Mr. Long's stories simply because I myself have never seen or known the like, I say, No; that is not the reason. I can believe many things I have never seen or known. I discredit them because they are so widely at variance with all we know of the wild creatures and their ways. I discredit them as I do any other glaring counterfeit, or any poor imitation of an original, or as I would discredit a story of my friend that was not in keeping with what I knew of his character. . . . . .

"Why should any one palm off such stuff on an unsuspecting public as veritable natural history? When a man, writing or speaking of his own experience, says without qualification that he has seen a thing, we are expected to take him at his word. Mr. Long says his sketches were made in the woods with the subjects themselves living just outside his tent-door; and that 'they are all life studies, and include also some of the unusual life secrets of a score of animals and birds.' We are not, therefore, to regard him as playing with natural history material for the amusement of his reader, or, like Mr. Thompson-Seton, seeking to make up an artistic whole out of bits and fragments of the lives of the animals gathered here and there, and heightened and intensified by a fertile fancy, but as an actual recorder of what he has seen and known. What the 'life secrets' are that he claims to have discovered, any competent reader can see. They are all the inventions of Mr. Long. Of the real secrets of wild life, I do not find a trace in his volume."

It could hardly be expected that such a direct attack as this would go unanswered, and in the Boston *Transcript* (March 14), Mr. Long undertakes his own defense in a two-column article, in the course of which he announces that a more detailed reply is to appear in *The North American Review* for April. After complaining of Mr. Burroughs's manner in his attack, and of the discourtesy of *The Atlantic Monthly* in printing it without submitting a proof to the person assailed, Mr. Long proceeds to reiterate his assertions that his stories of animal life are true in every particular. This is not the first time, he says, that Mr. Burroughs has made this kind of an attack on other naturalists, and in this, as in the others, he will be worsted. The trouble with him, Mr. Long thinks, is that "he makes his farm the measure and limit of the universe." Says Mr. Long:

"On his farm he is at home, and no one more than the writer has appreciated the excellent nature work that he has done there; but outside his farm, whether in criticism, or literature, or natural history, the limitations of the farm are too apparent, and he is extremely apt to deny that which he has not himself seen or thought.

"Another mistake which he makes—and here he is like all naturalists of the old school—is to overlook the infinite adaptiveness of nature even in a single species, and especially to forget

the individuality of animals, which is every day becoming more apparent. Personally I do not attempt to describe or study animals in classes any more, for the simple reason that I can not find any two animals of the same species that are alike. They differ in habits and characteristics almost as widely as men and women do. Those who have kept dogs, or listened to the marvelous (and true) dog stories of their neighbors, will recognize the truth of this. . . . . .

"Mr. Burroughs . . . denies the facts absolutely because he has not seen them on his farm, and therefore they can not be true. He also denies the theories. There is absolutely no such thing as an animal teaching her young—'there is nothing in the dealings of an animal with her young that in the remotest way suggests human instruction.' Teaching is not primarily instruction, by the way. It is not giving something new to the young animal or boy, but rather by inducement bringing out what is already in him. This is the theory of all good teachers from Froebel to the Boston supervisors. But let that pass. How any man could watch the mother birds and animals for a single season, to say nothing of fifty years, and write that statement, passes my comprehension. . . . . .

"Mr. Burroughs's whole argument in this connection misses the point altogether. He tells us what animals do by instinct (tho he is vastly mistaken in saying that young birds build their nests as well as old ones) and says simply that this is enough. 'School of the Woods' does not deny instinct—I have watched the ant and the bee and the water spider too long for that—it shows, and conclusively I think, that instinct is not enough. For an animal's knowledge is, like our own, the result of three factors: instinct, training, and experience. Instinct begins the work (for the lower orders this is enough); the mother's training develops and supplements the instinct, and contact with the world finishes the process. . . . . .

"It must be remembered that of the larger animals of which Mr. Seton and myself chiefly write, Mr. Burroughs has no knowledge or personal experience. When he has watched the animals by day and night, not as classes, but as individuals; when he has lived with them alone for months at a time, or followed them with an Indian whose life for fifty years has been a continuous study of animals; in a word, when he has left his farm for the larger life outside of it, then we shall listen to his criticism with more attention, and perhaps change our theories. But the facts remain. I have seen them and verified them every one, either by a second observation or by the testimony of reliable trappers and Indians. And they can not be changed by Mr. Burroughs's dogmatic denial on the sole ground that he has not seen them."

IS LAUGHTER A MANIFESTATION OF DISPLEASURE?

THIS question seems absurd at first sight, yet some recent analyses of the causes and origin of laughter seem to suggest that we laugh at the ludicrous, not because it is pleasing, but because it is painful. This view is upheld by W. McDougall in a review of James Sully's book on "Laughter," in *Nature* (February 5). Says Mr. McDougall:

"Such a theory may appear at first sight somewhat paradoxical, and yet as an explanatory principle it may perhaps go further and deeper than any other. The truth of it appears clearly in those cases in which we begin by disliking a thing and proceed to ridicule it, *i.e.*, to display it in its ludicrous aspects. Professor Sully appears as an apologist and advocate of laughter, and yet even he recognizes that laughter is not all joy, as when he says of modern laughter 'there is in it from the first ejaculation something of a biting sensation or something of a melancholy pain,' and again, 'the laughable spectacle commonly shows us in the background something regrettable'; and of its function as a vitalizer or stimulant that enables us to bear up against the ills that surround us he has no doubt. 'Some hearts of many chords . . . might break but for the timely comings of the laughter-fay with her transforming wand.'

"In considering any theory of the ludicrous, we must sharply distinguish between 'laughter-at' and that simplest, most charming, and infectious kind of laughter which is the overflow of good spirits and is fully explained by Herbert Spencer's principle of the overflow of surplus nervous energy into the most open tracks. 'Laughter-at' is, of course, often combined with other forms of laughter, and the accompanying mental state may be extremely complex, yet the spectacle of the displeasing seems to be its fundamental cause.

"Just as in times and places in which the mass of men live under unnatural and depressing conditions the stimulating effects of alcohol are used not merely as a protection against cold, but are sought for their own sake, so the spectacle of the coarse and brutal comes to be sought for the sake of the stimulating effects of laughter, normally a protection against depressing mental influences; we have then the curious phenomenon of the crowd flocking to the circus and the pantomime (to have a good laugh, as they frequently say), where the staple source of laughter is the buffeting of the clowns, blows being apparently dealt which, if witnessed in real life, would make one-half the spectators feel sick and faint. We may note, too, how in the course of a football match a heavy fall or a violent collision between the players calls forth a roar of laughter from the crowd and so adds to the attractions of the spectacle.

"The consideration of the laughter caused by tickling also points away from the 'pleasure-theory' and supports the theory here suggested. There can be little doubt that the sensation of tickling is in itself distinctly unpleasant, both to the child and to the adult, even while the victim responds with loud laughter; the enjoyment of the situation by the child seems to be analogous to its enjoyment in being mildly frightened or in any other vivid and lively experience. And Professor Sully himself tells us that 'much, at least, of the later and more refined laughter is analogous to the effect of tickling.'"

A SCIENTIFIC STUDY OF THE STATUS OF WOMAN.

ONE of the most interesting recent works on the woman question from its scientific standpoint, both physiological and sociological, is that of the late Prof. Charles Letourneau, the eminent French sociologist. This volume, which is entitled "The Condition of Woman in Different Races and Civilizations" (Paris, 1903), was Letourneau's last work. His conclusions, which will not please everybody, are given in the following paragraphs from his book, which are translated from a quotation in the *Revue Scientifique* (February 7). The author makes the point, at the outset, that differences between the sexes are of two kinds; necessary physiological and anatomical differences, and those that have grown up in the course of centuries by reason of differences of modes of life and training. He says:

"I have been able to prove that, since the origin of human society, with the exception perhaps of the age of gold, feminine sexuality has not involved, essentially and of itself, the relative inferiority of females. We must even recognize that in the primitive human types the woman does not differ sensibly from her companion; that except for sexual differences properly so called, the type known to us as feminine exists especially among civilized peoples and must therefore result chiefly from the division of labor—the difference of occupations that complex societies have established between the two sexes. From the diversities of modes of life have come secondary sexual characteristics, some anatomical, others physiological and psychic, forming a special type, generally but not always hereditarily transmissible in the female line. In this way alone has been created what we call 'woman.'

'This feminine type has often been described, studied, and analyzed, being often regarded as inferior to the masculine type and sometimes exalted above the latter. . . . Without entering into detail regarding facts alleged on one side or on the other, we may sum them up by saying that from the morphologic point of view woman is nearer to the child than her male companion. The conclusion is purely anatomical; it would in no wise justify oppression or and contempt for woman, even if it held also for the physiological and psychological sides. In fact, woman has always served as an indispensable link between man and child . . . But woman is not and should not be always and only nurse

and teacher. What is her psychic value, in herself, compared to that of man, outside of all sexual considerations?"

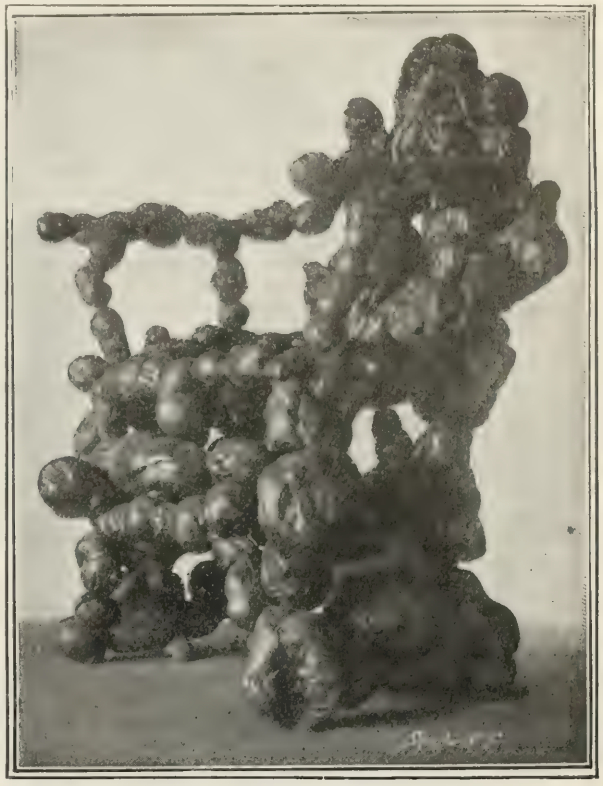
This question M. Letourneau answers practically as follows: Woman is generally inferior to man in strength, precision, and swiftness of movement. She is generally more given to reflex or impulsive action. She is more apt than man to form intuitive judgments, often exact, but instinctive and almost independent of reasoning power—a faculty referred by some authorities to the subhuman age, and thought to have originated in the need of protecting her offspring. She is more emotional than man, and is often less impressed by argument than the manner or voice of the speaker. This mental difference is noticeable also in the applications of intellect. The great creative artists have all been men. In literature, woman lacks originality. Neither in the arts nor in the sciences has a woman yet reached the very first rank. On the other hand, the tendency to crime is four or five times less developed in woman than in man, according to Quetelet, and her influence, not only on her offspring, but on her husband, is potent for good or ill. The author goes on to say:

"No serious and lasting social progress is possible if woman does not aid it and benefit by it. This truth, which is in appearance axiomatic, has nevertheless been neglected for a long time and is yet frankly admitted only by an intelligent minority. How shall this result be reached? The first reform, and it is in course of execution, though yet timidly, is to put the two sexes as much as possible on a footing of equality, in education, in marriage, in the family, and in society. The words 'feminine' and 'masculine' are labels that may cover very different articles. Many men are inferior to the average type of woman; many women exceed the mean measure of their sex. All aptitudes should be free to develop without constraint; equilibrium will come of itself. But if either one of the sexes may of right claim certain privileges and immunities, it is surely the so-called feeble sex, on which nature has imposed the heavy burden of reproducing the species, and of nursing and rearing the young. A future civilization, more human and less warlike than ours, may perhaps lighten this burden; but it will always be heavy, and in the future as in the past it will create for woman disadvantageous conditions of individual competition, as well for manual labor as for mental work. In fact, almost always women who have been distinguished in art or letters have had few or no children.

"In our social organization, such as it is, with its imperfections and its vices, it is already possible to better notably the lot of woman; but the more or less rapid evolution that is upon us can not affect one of the sexes alone; that woman's position may become worthy and just, that of man must be modified in the same direction; it is necessary that a gradual but profound reform should change all our institutions for the better—marriage, the family, the régime of property and of labor, the body politic. If the forward movement does not cease we may believe that, in a more healthy, juster, better ordered social state, the social, mental, and even physical differences between the two sexes will be lessened. Then there will be no more women who are merely 'playthings,' and also fewer men who are brutal to the point of bestiality; neither man nor woman will lose by this, and certainly society will gain much."—*Translation made for* THE LITERARY DIGEST.

A Natural Armchair.—The armchair represented in the accompanying illustration may be said to have partly grown out of the ground, altho its shape was furnished by twisting and turning a vine out of which most of its framework was formed. Says *The Scientific American* (March 14), from which both picture and description are taken:

"It was brought to the United States by a sea-captain who saw it in a Korean city. The chair is studded or ornamented with seeds of the gingko-tree of various sizes, which have actually grown to the fiber of the vine. A Korean gardener, familiar with the adhesiveness of the seed, took a native vine, noted for its toughness, and rudely made it into the form of a chair, holding it in place with branches of small trees. The seeds fresh from the tree were bound to the vine until they had firmly fastened themselves to it, the vine being allowed to grow in the mean time. After the seeds and boughs had become attached, the vine was cut from the roots, and this natural chair exposed to the sunlight until the sap had dried from the fiber and all of



AN ARMCHAIR FORMED BY NATURAL GROWTH.

the material had hardened into a substance as solid as oak. It was then polished until its surface glistened like mahogany. Altho but three feet four inches in height and twenty-five inches in width, the weight of this curiosity is over a hundred pounds, on account of the hardness of the material of which it is composed. The armchair may well be regarded as a striking example of the gardening skill of the Far East."

HOW "MINERAL WOOL" IS MADE.

AN account of the manufacture and use of the so-called "mineral wool" is sent to *The American Machinist* by a contributor. According to this writer, the wool can no longer be made from the slag as it comes from an iron furnace, simply by blowing steam through it, as used to be done twenty years ago. Of late so many improvements have been introduced in the extraction of iron from the ore that the slag has lost its former value in this respect, and the wool is now made from the slag of former years with far better results. To quote from the account:

"The slag is brought to the works where it is broken into lumps of from four to eight pounds. It is then elevated to a platform by an endless belt with suitable buckets, and from there fed into the top of a cupola with about 12 per cent. of limestone and 8 per cent. of sandstone. The limestone is added to give the wool its white color, and the sandstone helps to make it light and fluffy, as the slag by itself is glassy and rather heavy. It takes about two tons of coal and over a ton of coke as fuel to every ten tons of the rock mixture. . . . . .

"A layer of wood is followed by a layer of coal and coke, then a layer of the rock mixture. More coal and another layer of rock having been placed in the cupola, the fire is started, and an air-blast with a pressure of from 3 to 5 pounds per inch is forced through this mass, soon heating and fusing it. When it is in this state a small opening is made at the base of the cupola, and

a stream of the fluid mass as thick as the stem of a clay pipe is allowed to run out. A steam-pipe with steam at 90 pounds has a suitable opening about a foot below the base of the cupola and a few inches from the stream of melted rock. A valve being opened, steam rushes out of the pipe with great velocity, encounters the stream of glowing liquid, and carries it along with it in a rush. The steam-jet and the flow of the rock are adjusted with such nicety by the attendant that none of the liquid drops to the ground, but all is caught up by the steam and whirled into the blowing-chamber, where it falls by its own gravity. The blowing-chambers are oblong rooms 20 to 30 feet wide, twice as long and about 20 feet high, and such is the force of the jet of steam that the finer wool is blown to the extreme end of the room, the heavier and coarser settling down nearer the entrance. Having thus been automatically graded, it is packed in bags for domestic use or pressed into bales for export. The bags weigh from 35 to 55 pounds, according to quality, and the bales weigh from 150 to 180 pounds. When running with a double shift working from 18 to 20 hours the capacity of the works is about 10 tons per day.

"The uses of mineral wool are so many that the supply is hardly ever equal to the demand. It is used for packing around boilers, furnaces, and pipes to retain heat, and in other places to keep the frost out. It is used in buildings between the walls and in the ceilings to deaden the sound and also to retain heat. During the recent coal scarcity it was put to a new use, a wire cage being packed with the mineral wool, which was then impregnated with kerosene and used as fuel in heaters or stoves, and as it is incombustible it would last indefinitely."

APPETITE AND DIGESTION.

A NEW and important light has been thrown on the processes of digestion by the experimental work of Dr. Pawlow and his pupils, for which he was awarded the Nobel prize in 1901. He has thrown especially interesting light on the connection between appetite and digestion. Says an editorial writer in *The Hospital:*

"His investigations go to prove that it is not the latent need of the organism for food that is the immediate cause of appetite. Real appetite sets in with eating. It is in part due to an appreciation of the taste of food. . . . . .

"In animals the craving for food is, when awakened, an impulse to seek it. In man it gives the appetite, sometimes latent, necessary for the enjoyment of the more solid portions of the meal. Further it has been proved by Pawlow that appetite thus aroused is the strongest exciter of the several gastric glands; for even in starving animals food introduced direct into the stomach, without attracting the animal's attention, or awakening the desire for food by sight or smell, totally fails to stimulate the gastric glands or to provoke any secretion of the digestive juices. From this fact the immense importance of the 'appetite' digestive secretion is apparent. It has been called the 'igniting juice' by Pawlow, for without it the food remains in the stomach for a considerable period entirely unaltered. It may be more than an hour before any gastric secretion takes place, and then only when the food contains some chemical constituent that acts directly as an exciter of gastric secretion. This explains why food eaten without appetite is a cause of gastric disturbances.

"Food should therefore be eaten with interest and enjoyment. The busy man must put aside his cares and troubles when he comes to his meals. The formalities of a set meal, and the ritual observed in the partaking of the various courses of a dinner, have their importance as appealing to the psychological factor in the secretion of the digestive juices.

"Extra inducements to the proper working of the digestive glands are the stimuli derived from the organs of taste. They play a like part in starting the initial flow of the gastric and pancreatic secretions.

"Bitters, and particularly alkaline bitters, have been held to promote digestion, but want of any physiological proof of their potency has led to an unwarranted neglect of their use as a therapeutic measure. Pawlow claims that they stimulate the digestion by the unconscious comparison of their disagreeable taste with the more pleasant taste of food; that they act by awakening the appetite for food. He, therefore, regards them as useful adjuncts in securing a proper flow of the initial or 'igniting' digestive juice."

Habits and tastes, we are told by Dr. Pawlow, must also be considered in prescribing a diet; otherwise digestive disorders can not be properly treated. In children particularly habits and tastes as regards food require careful education, otherwise a proper variation in diet is difficult to attain. The writer goes on to say:

"A restriction of the amount of food taken at any one meal is important as awakening a further appetite, and hence a more copious flow of digestive juices. Pawlow shows that food given in small portions, at frequent intervals, is more potent in promoting secretory activity in the digestive glands, than when the *same* amount of food is given in one meal. Here is an explanation of the clinical value of small quantities of nourishment frequently repeated, compared with the same quantity of food given in larger amounts at longer intervals of time.

"The development of appetite or zest for food enters largely into the sequence of foods chosen for the chief meal of the day. Experimental evidence shows that this sequence, first observed as an empirical custom, has a definite physiological basis of fact, and is, indeed, a rational procedure.

"The meal is begun with foods designed more to promote appetite than afford nutrition. The soups that follow act directly upon the secreting mechanism of the gastric glands. Pawlow finds that among the chief chemical excitants of gastric secretion are the extractives of meat, and it is these extractives that form the principal constituents of bouillon. They carry on the stimulation of the gastric glands initiated by the psychological stimuli of appetite and taste."

Acid wines are also approved by Pawlow, altho the total abstainer may note that it is the acid he commends, not the alcohol. The former, he says, provides a part of the acid necessary for the activity of the gastric ferment. The acid also plays another important part. Says the author:

"Pawlow finds that its action upon the mucous membrane of the duodenum is a direct excitant of pancreatic secretion. Bayliss and Starling have recently shown that this is due to the acid acting on a chemical compound present in the cells of the duodenal mucous membrane. The acid sets free this compound, which then circulates in the blood until the pancreas is reached. Arrived at the pancreas this compound, termed by them 'secretion,' is a direct chemical excitant of pancreatic secretion. Any acid, and more particularly the hydrochloric acid of gastric juice, is thus a direct and immediate cause of pancreatic activity. Gastric digestion is the proper precursor of pancreatic digestion."

SCIENCE BREVITIES.

MUCH has been said in the public press recently of the acousticon, an instrument for enabling the deaf to hear. The results obtained from it are said to be wonderful, but no satisfactory description of its method of working has yet appeared. It is said to operate by intensifying and concentrating sounds and to include an electrical battery, a transmitter resembling that of a telephone, and a capsule containing a gas "whose composition is known only to the inventor." Under these circumstances, the public has no resource but to trust the papers and wait for further developments.

"It is a remarkable fact," says *The Lancet*, "that water may be made to assume apparently the solid form by adding 1 per cent. only of gelatin to it. The more or less stiff jellies used as table delicacies contain probably over 95 per cent. of water. The jellyfish similarly contains only a small percentage of solid matter. This remarkable property of gelatin of rendering water, so to speak, solid has been a problem to physicists. It is generally maintained, however, that after all the water in a jelly is in a fluid condition and that therefore it retains its properties unchanged. According to this view the solid condition of a jelly is a property of the gelatin itself. At any rate, it has been established that a jelly behaves under certain physical experiments very little differently from water. Thus jelly offers little more resistance to the passage of diffusing substances than does pure water. The condition of water in a jelly, therefore, resembles its state when absorbed by a highly porous substance such as pumice-stone or sponge. In other words, the gelatin on setting forms a sort of fine spongy network in which the liquid water is held captive by capillary forces. Gelatin is, in short, a very capacious carrier of water, and it is not unreasonable to suggest that in those cases in which the conveyance of some liquids is found to be inconvenient the use of gelatin might afford an easy way out of the difficulty. Thus, by dissolving a very little gelatin in milk the milk could be carried in solid blocks. Moreover, the milk would gain rather than lose nutrient value by the process."

THE RELIGIOUS WORLD.

THE BAPTISTS AND ST. PATRICK.

A CONTROVERSY not without amusing features has been started by the claim of the Rev. Addison Moore, a New Jersey Baptist minister, that St. Patrick was a Baptist. Mr. Moore arranged a service on St. Patrick's Day in honor of Ireland's patron saint, and he is reported by the New York *Herald* as saying:

"St. Patrick was not an Irishman. He may have been a Frenchman, but was most likely a Scotchman, born in Scotland about 390 A.D. When six years old he was captured by Irish pirates and carried, with many others, to Ireland, where he became a Christian when sixteen years old. Soon afterward he escaped from slavery and returned to Britain, but was moved by the Spirit of God to go as a missionary back again to Ireland.

"The story of his work seems more like the description of the toils and tasks of a Baptist missionary than a Roman bishop. He certainly was ignorant of the doctrine of the celibacy of the clergy, for he declares in his 'Confessions' that his father and grandfather were priests.

"His creed proclaims an orthodox faith similar to that of the evangelical churches of to-day. His chief theme is Christ's blood shed for sinners and God's love for mankind. He makes no mention of Pope or Virgin Mary, and never seems to have heard of the mass. Such topics as purgatory, transubstantiation, or prayers for the dead find no place in his preaching or his writing. When the ecclesiastical records of his time are searched, they reveal no mention of his name by any Roman historian. There is no reference to him or to his mission by the Venerable Bede, by Aquinas or by Baronius. The bishop of Rome knew nothing about him. Clearly he had no connection with the Roman Church.

"In addition, it may be said that in the fourth century and the fifth the bishop of Rome had no jurisdiction in Britain or in Ireland, and that St. Patrick in his mission followed none of the distinctive teachings of the Roman Church.

"He loved his Bible devotedly, and preached its truths faithfully, exactly as a missionary of any of the modern evangelical churches. There is even evidence that he baptized his converts by immersion. Many parts of Britain not reached by the Romans were conquered for Christ by ardent Christians of the early church in the first and second centuries.

"It is a matter of history that Christian churches existed in West and South Britain in the fourth century. From them St. Patrick learned of Christ, became his disciple, and then his apostle to Ireland, in the same manner that St. Paul became the apostle to the Gentiles. Rome has appropriated him and Ireland considers him as patron saint. But he really belonged to the church universal, and his life should be studied as furnishing one of the most inspiring chapters in the history of Christ's kingdom on earth."

A writer in the Chicago *Standard* (Baptist) takes a similar view. "The fact is," he says, "that St. Patrick was neither Catholic nor Protestant. He lived at a time when all Christian men were Baptists. The Catholic Church had not then crystallized into the mighty empire it afterward became, and as all the Protestant churches were offshoots—protesting against the assumption of the Catholic Church—Patrick antedated them all."

The New York *Catholic News* devotes a lengthy editorial to Mr. Moore's "ridiculous claim." It says, in part:

"Our Baptist friend should know, if he is anything of a scholar, that St. Patrick's 'Confession' is a work in which much is left unsaid. But there is conclusive evidence that Patrick was a Catholic and nothing else. Mr. Moore told his congregation that the saint 'loved his Bible devotedly and preached its truths faithfully.' We wonder if any of them, stopping to think, asked themselves where Patrick got the Bible when he was preaching early in the fifth century. From the Catholic Church, of course."

The New York *Freeman's Journal* (Rom. Cath.) comments in facetious vein:

"It gives pleasure to the real old simon pure patricians to find their patron saint growing in respectability and popular esteem. They knew he deserved it all the time, but that knowledge does not diminish their pleasure and surprise at seeing his merits so eloquently recognized.

"But there is a dead fly in their cup of joy. It is that the preachers, like some others whose bump of acquisitiveness, abnormally developed, makes them want to appropriate every good thing in sight, want to appropriate St. Patrick and make a Baptist preacher of him. The immortal green Patricians do not take kindly to this kidnaping business, and if they can not get out an injunction they can at least enjoy the privilege of a protest. They can not understand how a Baptist preacher could make faithful and devout Catholics of a pagan people. And nobody else can. Nor can they understand how the Catholic Church could canonize a Baptist preacher. There is a sad lack of concatenation accordingly."

The Boston *Transcript* is of the opinion that St. Patrick's service to the world was "purely public and undenominational." It sees no reason why "all branches of the church might not revere the great religious teacher of Erin's Isle, even tho he has been exclusively appropriated by canonization in the Romish sanctuary for centuries."

THE RELIGIOUS PRESS OF THE UNITED STATES.

THE NEW WORLD, a Roman Catholic paper published in Chicago, furnishes some interesting information in regard to the religious press of this country. The tables given, we are informed, have been "compiled with the greatest care, and are very closely, if not absolutely, correct." The resources of the Library of Congress and other avenues of information have been freely drawn upon to obtain the greatest accuracy possible.

The following table shows the number of American religious papers, with their aggregate circulation:

	No. Papers.	Circulation.
Catholics	250	875,400
Methodists	113	753,200
Baptists	142	465,300
Presbyterians	46	415,100
Jews	45	238,900
Episcopalians	54	142,700
Disciples of Christ	22	127,200
Congregationalists	19	112,800
Lutherans	44	105,550
Adventists	15	41,180
All others	128	244,200
Totals	878	3,521,530

A second table gives the ratio of church-members to a paper, and the average circulation of the papers of the ten leading denominations:

	Ratio to a Paper.	Average Circulation.
Jewish	3,100	5,200
Adventist	5,800	2,700
Episcopalian	13,100	2,600
Baptist	31,000	3,200
Congregationalist	32,000	5,600
Presbyterian	34,100	9,700
Lutherans	36,000	5,200
Catholic	38,500	3,500
Disciples	52,000	5,700
Methodists	53,100	6,600

The New World comments:

"It will be noted that the Methodists and Baptists, who together have 10,500,000 communicants, which is slightly less than the Catholic population, show a larger circulation for their papers by 338,000. In explanation it may be stated that in the compilation the Sunday-school lesson papers of the two denominations were included in the circulation, altho these publications do not come properly into the category of newspapers. After excluding these the circulation would be about the same as that of the Catholic papers. A curious feature is the great number of papers which the smaller denominations support. Those under the head 'All others,' with a membership of only 1,400,000, have 128 papers, which is one paper to every 10,000 members."

A RELIGION OF STRANGULATION.

AMONG the many strange religions of India there is one spectacular sect whose murderous practises are but dimly known even to those who are particularly interested in Hindu religions and Hindu literature. This is the famous sect of the "Thugs," who worship the wife of Siva in her manifestation as Kali. Kali is represented as a black and terrible goddess holding weapons in her ten hands, her face dripping with blood, and hung around with human skulls. In the Indian Government reports, the details of the practises of the followers of Kali can be found. It is to this source that M. Jean Finot owes the information which he gives us in an article on "The Religion of Murder" in *La Revue* (Paris). He says:

"A librarian of the British Museum showed me a few years ago one of the most curious maps that has ever been made for the use of mankind. This is the famous map of Captain Paton, who in 1890 conceived the idea of offering to his Government an exact description of the places where the Thugs had strangled and buried their victims. This map was prepared from the detailed information supplied by some twenty chiefs of this religious sect, and located all the tombs in the province of Oude, where 'Thugism' counted the greatest number of the faithful. Nearly 5,200 murders had been committed by some forty men, all very much esteemed and enjoying the respect of the communities in which they lived. Heading the list was the venerable Buhram, who claimed 931 assassinations as the fruits of his religious activity, covering a period of forty years in the province of Oude. The second in order of merit was a certain Ramson, who for his part had strangled 608 persons. Fussy Khan, it seems, had strangled 508 individuals, but he had practised 'Thugism' for only thirty years. He had the record of 25 murders a year. Tambux the Black showed for his account 340 murders; Alayer, 377; Muckdoomee, 264. In running through this ghastly list one descends from these heights to the more modest figures of 20, 10, or even 5 miserable yearly assassinations, executed in honor of the goddess Kali."

At one time there seems to have been a perfect epidemic of murder. Thousands of Hindus, rich and poor, young and old, disappeared, and their terrified families dared not make complaint. M. Finot continues:

"The English statisticians go so far as to assert that 30,000 to 50,000 lives yearly were sacrificed on the altar of this terrible goddess, who, wishing to counteract the principle of life which was overpeopling the earth, preached the destruction and suppression of mankind. . . . Exasperated by the crimes which were being committed around him, Captain Sleeman decided, in spite of the resistance of the chiefs of the East India Company, to make war against the religion of strangulation. His alarming reports aroused the Government in England, and it was even thought necessary in 1830 to create a special head of a department, 'The General Superintendent of Operations against Thugee,' to conduct a crusade against this sect. Captain Sleeman, who was appointed to this strange office, consecrated to it all his courage and, indeed, almost his whole life. A struggle covering a period of twenty years ensued, the details of which would cause the most dramatic stories of Conan Doyle to seem tame. In the works, written on the information furnished by Captain Sleeman and especially on his numerous reports addressed to the Thagi and Dakaiti departments, are to be found the most thrilling stories of the methods employed by the Thugs to decoy and despatch their victims."

M. Finot gives the following account of the origin of this "religion of strangulation":

"European travelers in India in the seventeenth century pretend to have encountered it, but its true origin is lost in the shades of the past. It is probable that during the Mohammedan invasion all sorts of crimes were perpetrated under the cloak of religion. In time the sect grew. Sometimes fascinated by its exploits, again attracted by its fanaticism, the most peaceful of Hindus would join the Thug chiefs as passive supporters, and contribute large sums of money to the common treasure.

"During Sleeman's time, the number of Thugs arrested and executed amounted to 2,000 annually. In later years the number became greatly diminished, but since 1895 there has been an increase. In that year the number of Thugs condemned to death for murder was but 3; in 1896 there were 10 executions, and in 1897 25. However, travelers in the provinces of Rajputana and Hyderabad give much higher figures. The practise of the Thugs is to follow the adage that dead men tell no tales, and they kill all the companions of the chosen victim. Consequently the identification of the criminals is difficult, and the dexterity with which they get rid of the corpses completely baffles the English authorities. Then, again, the families of the victims are terrorized and generally do not make complaints. And so the murders continue under the eye of people either indifferent or terror-stricken.

"One curious fact must be noted: The Thugs never kill women. They only make one exception to this rule, and that is when a woman is with a man whom they have marked for death. For fear that she should denounce the murderer it is then permissible to include her among those dedicated to Kali. In spite of all these facts, the Thugs themselves admit that murder is not always a virtuous act, but that there are also punishable murders, murders which may be considered as reprehensible and criminal."—*Translation made for* THE LITERARY DIGEST.

THE RELIGIOUS BELIEFS OF ABRAHAM LINCOLN.

A MULTITUDE of varying opinions have been expressed in regard to Abraham Lincoln's religion. A certain Rev. Dr. Smith asserted many years ago that he once converted him; Lincoln's two law partners, Stuart and Herndon, ridiculed this statement. One Bateman declares that Lincoln once said "Christ was God"; a personal friend of Lincoln affirms that he denied the very existence of God. Noah Brooks says that "any suggestion of Lincoln's skepticism is a monstrous fiction—a shocking perversion"; Mrs. Lincoln declares that Mr. Lincoln had "no faith and no hope in the usual acceptance of those words." In view of these conflicting statements, it may well be asked: What, then, did Lincoln believe? Mr. R. C. Roper, a writer in *The Open Court* (Chicago), endeavors to give a satisfactory answer to this question. He says:

"When a boy—his biographers all agree—Lincoln was practically without faith or piety. It is stated that his closest friends at New Salem were freethinkers, and he accepted Volney, Paine, and Voltaire as his text-books in the frequent religious discussions in which he engaged. Lincoln was then at that age in young manhood when reason is apt to run rampant; when the boy spirit will not tolerate persecution without at least making a bold fight in self-defense.

"Lamon in his 'Life' states that Lincoln when a boy had a very poor opinion of the 'article'—religion; that, 'when he went to church at all, he went to mock and came away to mimic' (p. 487).

"Considering the narrowness of church-life it is not strange that Lincoln, urged on and encouraged by his atheist associates, became so imbued with the spirit of antagonism that he too became unreasonable when he thought he was reasonable, illiberal when he thought he was liberal, intolerant and scoffing to the sacred beliefs of others. We must excuse the boy and blame the environment for the extreme to which Lincoln was actually forced in self-defense.

"It is interesting to know that Lincoln went so far as to write a book on the Bible. Mr. Herndon, in his biography, tells us that the purpose of this book was to demonstrate, first, that the Bible was not God's revelation, and, second, that Jesus was not the Son of God. The pamphlet was similar, in its treatment, to Paine's 'Age of Reason.' One day while Lincoln and his usual friends were discussing its merits around the old wood stove, one Hull, who was just then more anxious to protect the future of the young Lincoln than Lincoln was himself, seized the manuscript and threw it into the stove. It had been Lincoln's intention to publish and circulate this pamphlet, which, fortunately, thus went up in a cloud of smoke.

"Thomas Paine wrote the 'Age of Reason,' and the managers

of the Centennial Exposition at Philadelphia refused to allow his bust to be placed among the heroes and patriots of the Revolution. Abraham Lincoln wrote a similar book, and fate decreed that it should be destroyed and he should live in the hearts of his countrymen."

As Lincoln grew older, there seems to be no doubt that he outgrew these ultra-radical opinions. He came to believe firmly and implicitly in God—in a direct Providence, if not, indeed, in a prayer-hearing God. It is a matter of history that, as President, he "not only asked for prayers from the people, but that he himself believed in and used prayer many times when the burdens of the nation were pressing hardest upon him." We quote further:

"As to his beliefs concerning other points in the Christian faith, there is not as convincing authority. The best authority is his own words, and while there is considerable in his writings to indicate a strong faith in God and prayer, there is very little to indicate his beliefs regarding Christ, the Bible, etc. But the very absence of anything on these points is good evidence that he did not hold the views which some have attributed to him.

"Lincoln accepted the practical teaching of the Bible, especially the New Testament, and was fond of the Sermon on the Mount. The best authorities seem to hold that Lincoln never substantially changed his earlier views regarding the inspiration of the Bible and the divinity of Christ, altho there are some who claim he changed in later years."

Mr. Roper sums up Lincoln's mature religious beliefs in the following words:

"He was a firm believer in the 'great and good and merciful' God, but not in a revengeful and cruel God who would consign men to an eternal hell when nothing good to those who suffered could possibly come from such punishment. He believed in and used prayer as a means to bring himself in closer relations with Right in everything. He did not believe that it is best or safe to rely upon death-bed repentance, but that every act will surely reward itself with good or evil. 'He believed in universal inspiration and miracles under law,' and that all things, both matter and mind, are governed by law. He believed that all creation is an evolution under law, not a special creation of the Supreme Being. He hoped for a joyous meeting in the world to come with many loved ones gone before. He believed that Christianity consists in being, not in believing, in loving the 'Lord thy God with all thy heart and thy neighbor as thyself.' He believed that the Bible is a book to be understood and appreciated as any other book, not merely to be accepted as a divine creation of infallibility. He believed in the man Christ, not in the God Christ. He believed that it is nobler to be man and grow to be a God than it is to be a God and descend to be a man.

"He was once an admirer of Volney, Paine, and Voltaire; later of Theodore Parker, Emerson, and Channing. He was once a scoffer of religion; later, a supporter."

The writer affirms, finally, that Lincoln was "too great a man to belong to any sect whose creed would force a single soul outside its fold; too broad a man to confine his religious life within denominational barriers; too simple to enjoy the pomp and show of forms and ceremonies; too sympathetic to affiliate himself with any church less inclusive than the brotherhood of all men."

THE LATE DEAN FARRAR.

GENUINE regret is manifested in this country over the death of Dr. Frederick William Farrar, the dean of Canterbury, which took place in London on March 23. "The death of many an archbishop," observes *The Independent*, "is a smaller loss to the Christian world than that of the versatile and progressive Dean Farrar. He was the friend and advocate of every reform, a brilliant preacher, a lively controversialist, the ardent defender of the 'eternal hope' against the doctrine of eternal sin and suffering, and the author of many books, of which his 'Life of Christ' and 'Life and Works of St. Paul' are among the best known, if we except his stories of public-school life, such as 'Eric' and 'St. Winfred's,' which are the delight of boys." The New York *Churchman* gives the following brief *résumé* of Dean Farrar's career:

DEAN FARRAR, OF CANTERBURY.
He has been called "the most popular of Anglican clergymen."

"He was graduated with distinction from Trinity College, Cambridge, and won the chancellor's medal for English poetry. He was made deacon in 1854, priest in 1857. For sixteen years he was assistant-master at Harrow, and from 1871 to 1876 headmaster at Marlborough. He was made canon of Westminster in 1876 and archdeacon in 1883; was appointed chaplain to the Queen and for five years, 1890 to 1895, was chaplain to the speaker of the House of Commons. He was then appointed dean of Canterbury. He received distinguished honors from both the great universities; was Hulsean lecturer at Cambridge and Bampton lecturer at Oxford. His name was long a household word in both continents for many very popular books, . . . in which he made himself an eloquent exponent of the liberal views of the Broad-Church school, and took for a time an active part in ecclesiastical controversy. In 1885 he visited this country, having a son resident in Philadelphia, and enjoyed here many strong friendships. Many of our countrymen will recall with pleasure the 'American pew' which he had set apart for them at St. Margaret's when he was rector there."

Dean Farrar, declares *The Outlook*, was "a popularizer of the less dogmatic and traditional, the more vital and reasonable, conception of religion." The Springfield *Republican* says:

"Dr. Farrar had the lot of being beloved; and his liberal theology had drawn to him the sympathetic regard of those who value life before dogma or ceremony, and yet must cling to certain warm and tender aspects of supernatural religion. To these the simplicity of Farrar's faith, like that of Phillips Brooks, whom Farrar greatly admired and loved, has been as a harbor of comfort, even when they have sailed far out of hail. Men like these have a great service to render to restless minds that yet are not daring enough to launch out in search for the absolute truth, and want their refuge sure 'in some near port or bay.' To these Kingsley's sermons at Eversley and Farrar's 'Life of Christ,' as well as his sermons and other gracious writings, have been of inestimable value. It is this quality of faith, and the unpretentious devoutness of his spirit, which have given Farrar

a certain place in the advance toward the faith which was in Jesus himself, no doubt already sufficiently indicated in what has been said; and which assuredly does not rest upon any high intellectual power or literary quality."

Mr. Herbert W. Horwill, an English clergyman now resident in this country, writes in the Boston *Transcript*:

"It can scarcely be contested that, since Liddon's death at any rate, Dean Farrar has been the most popular of Anglican clergymen at home. He was a preacher who appealed to all classes and all denominations, and his religious books had a circulation equally independent of ecclesiastical boundaries. In the days when he frequently preached at Westminster Abbey it was necessary to reach the building an hour beforehand in order to get a seat. If a Congregationalist deacon or a Methodist circuit steward from the country were visiting London, the one Anglican preacher he would be sure to hear would be Farrar, and however scantily Anglican theology might be represented in his library you would be certain to find the 'Life of Christ' or the 'Life of St. Paul' somewhere on his shelves. . . . He had no sympathy with such claims as those involved in the doctrine of the apostolic succession, and lived up to his principles by frequent association with non-conformists, much to the indignation of many of his clerical brethren.

"In the sturdiness of his fight against drunkenness and other social evils he showed probably as great a courage as in his companionship of ecclesiastical and theological views that were considered heretical by the authorities of his church. Indeed, I am not sure that some of the sneers at his literary manner did not derive their real incentive from annoyance at the part he was playing in the overthrow of the vested interests which entrench themselves behind the liquor traffic in England.

"That a man of Farrar's power—with the opportunity he possessed for influencing some of the most prominent men in the kingdom—should be an open and determined foe of the vices which corrupt society meant a good deal, and it was worth something if he could be discredited in the eyes of the public even by the proof that there were purple patches in his oratory and slips in his quotations from the Greek. But it was a high tribute to his character that such accusations as these were the staple of the charges brought against him. Whatever else may be said of him, this remains: alike through good report and ill he was an honest fighter on the side of causes which he held true and righteous, and not many knightlier souls have ever entered into rest."

A BRAHMAN'S DEFENSE OF CASTE.

BRAHMEBANDHAV UPADHGAY is the formidable-looking name of a Brahman who is a convert to Roman Catholicism and who presents credentials from his Grace the Archbishop of Calcutta. He is zealous for the conversion of all Hindus to his new faith, but he sees certain formidable difficulties in the way, and he writes to *The Tablet* (London, Rom. Cath.) to point these out and to effect their removal. The difficulties are caused chiefly by the alleged misunderstanding on the part of Christians of Hindu philosophy and Hindu social organization. He speaks of "the baneful effect of English culture" upon the Hindu mind, and he thus describes the mode of thought which "has shaped more or less all Indian philosophies":

"Hindu thought has reared up a magnificent theism which in its essential conclusions agrees wonderfully with the philosophy of St. Thomas. Vedânta, the greatest Hindu philosophy of theism, teaches that the relation of God to the world is an unreal superimposition. He communicates being, but the communication does not affect in the least His integrity. He is communicative, causative, but not essentially so. Creativity does not belong to the internal economy of His being, for then He would be dependent on effects for His existence. Eliminate His causality or impose it, He neither deteriorates nor improves. God's creatorhood is unreal, because it is, as it were, not for the purpose of His being and bliss; it is a superimposition, because it can be added to or subtracted from the Absolute without bettering or injuring the concept of Being. This unreal superimposition is called *mâyâ*—a principle of illusion. By it God manifests Himself to be the cause of the world without being essentially a Creator. *Mâyâ* is less than being but more than nothing. It is not being, for then it would coalesce with the Divine Substance, making God a necessary creator. It can not also be absolutely false like a barren woman's son, for it is the occasion of effects. The world is, according to Hindu Theism, also unreal—not in the sense of Berkeley or Hume—but inasmuch as it can be made to continue or be blotted out without causing any disturbance in the volume of being. The equation of thought to things is not deceitful, but the sum-total of effect is reduced to nothing when considered in essential relation to the Absolute, who is as He is, whether there be millions of worlds or none at all."

This teaching of Vedânta the writer thinks is in exact keeping with Roman Catholic philosophy, and the best way to teach theism in India, we are assured, will be through this Hindu mode of thought. Christianity, however, has antagonized not only this philosophy, but the social polity of India as well, and the underlying principles of the caste system are thus described:

"The regulating principle of the Aryan or Hindu society is the love of vocation for its own sake and not for its fruits. Hindu philosophers have always maintained that the desire for fruits or rewards accruing from work leads to darkness and bondage, while the control of such desire imparts a fitness for the right knowledge of God. There are eighteen social codes belonging to different periods of Hindu history, and they all lay down a higher motive for work than that of competition.

"Hindu society was divided by ancient legislators into four communities: (1) priest and teacher, or Brahman; (2) ruler and soldier, or Kshatriya; (3) trader and farmer, or Vaisya; and (4) artisan and laborer, or Sudra. The central social law which governed these four classes was the following hereditary vocations. The reason of conserving vocations by heredity was to create a sense of self-respect and to check the sordid desire for reward in the discharge of social functions.

"In the palmy days of Hinduism every householder was obliged by the law of religion to retire from the world just when the time came for the enjoyment of his hard-earned worldly goods. At the age of fifty, when his children were reared up to self-help, he had to give up his property to them and betake himself to some retreat for the practise of penance and meditation. The children were inspired with a holy zeal for continuing on the paternal vocation under all circumstances, however adverse, by the heroic example of the father, who had toiled the best part of his life only to renounce at his old age the reward of his labor. An Aryan youth was loth to forsake his hereditary vocation sanctified by the self-sacrificing toils of his ancestors. It was considered to be a most cowardly act to give up the ancestral calling for the bettering of one's worldly position. The momentum of this principle of self-respect grew in force, as generations followed generations, to such a high pitch that thousands and thousands of Brahmans and Kshatriyas are to be found in India, even in these degenerate days, who would rather die than abandon their vocations.

"Likewise, the mercantile and the artisan classes present a bold front, tho they have suffered the most under the pressure of European competition. Of course, the legislators knew that the law of hereditary vocation could not be made absolute. A wide margin was allowed to men of genius and of pronounced proclivities, and also when the supply was greater than the demand or the struggle for existence became very keen. But a change of vocation under these circumstances did not lead to any change of class, unless the new calling was perpetuated in the family for a few generations and came to be reckoned as an object of honor.

"The Hindu found that the high spiritual motive for work was too intangible for the masses, and the motive of free competition was considered detrimental to the elevation of the spirit. Consequently a loving respect for the work itself, hallowed with the self-sacrifice of generation after generation, was made the ruling motive in the pursuits of life. Self-respect is a noble principle in the nature of man. It is a fertile soil for the cultivation of higher virtues. Therefore the Hindu attempted to bring the passion of greed and grab under the subjection of self-respect; so that human nature thus composed and united might become a docile receptacle of spirituality. The result of this system has been that, perhaps, no race living on the face of the earth is more religiously inclined than the Hindu. His philosophy, poetry, chivalry, culture, and civilization, all inculcate one idea, and that is how to be active and dutiful without being actuated by the motive of gain—not even the gain of paradise, which is considered lower than the bliss of the supreme knowledge of God."

FOREIGN TOPICS.

THE CZAR'S ATTACK ON DESPOTISM.

"GIVE me the man who can cough up his words so the people can understand 'im," said Mr. Dooley, an expression which, done into more courtly language, would indicate the tone of all, or nearly all, European comment on the Czar's recent proclamation of Russian reform. Something that may turn out to be religious toleration is promised, and there is a vague assurance that in an indefinite future the peasantry shall be granted liberty to go wherever they please. "The assistance of persons enjoying the public's confidence," which the Czar desires, is assumed to be a hint at local representative government, but the institution known as censorship of the press not having been reformed by the proclamation, St. Petersburg newspapers afford no clue on this or any other point. The *Viedomosti*, the leading Liberal organ in Russia, says the reforms are a great step forward and reveal the influence of advanced ideas. Outside of Russia, and especially in England, the proclamation is deemed illusory. Says *The Saturday Review* (London):

M. DE WITTE,

The Russian Minister of Finance, who is a friend of reform.

"The enthusiasm of the press on the manifesto of the Czar . . . has been almost a repetition of the eulogies with which the proposal for the peace tribunal was welcomed. The rest of the philanthropic language is similar in both cases, and in both the pious opinion exceeds the concrete benefit. But there is more solidity in the last manifesto and it marks a more real advance. It contains a double plea or command for greater religious tolerance and for a wider freedom to the dwellers in the villages. Religious tolerance is already a 'fundamental law' of the Russian empire; and the Czar announces his intention to 'strengthen the undeviating observance' of this principle. But inasmuch as religious persecution has not been successfully handicapped by the fundamental law, the work of this determination depends entirely on the unexplained methods by which the observance is to be strengthened. The proposals for the improvement of village life are more definite. What remains of the old *corvée*, tho it has already been formally abolished, is to be made to disappear; the villager is to be given greater freedom to free himself from his community and the general revision of the laws affecting the different villages is to be entrusted to the Zemstvos, which correspond roughly to district councils. In these reforms there is nothing revolutionary and the value depends as before wholly on administration. Nor have the Liberal papers any excuse for finding even the germ of a parliamentary system. The autocrat of all the Russias is not so foolish a reformer as that."

Something very important is going on behind the scenes in St. Petersburg, unless European press opinion is much at fault. Nicholas II. is admitted to be a high-minded young man with a passion for reforming the world. But he has to overcome much opposition, especially that of M. de Plehve, Russian Minister of the Interior, who thinks highly of despotism. Freedom, however, has a friend at court in the shape of M. de Witte, who, like our own Chauncey M. Depew, is a railroad man with a tendency to submit to newspaper interviews. We infer from a perusal of some French newspapers that the Czar wrote his reform edict himself and asked M. de Witte what he thought of it. M. de Witte read it over and said it might do. Then the Czar showed it to M. de Plehve. That gentleman has opinions on the subject of reform and reformers incompatible with a temperate use of the Russian language. There ensued a series of discussions between M. de Witte and M. de Plehve which will, no doubt, figure in future memoirs of the Court of St. Petersburg. The *Temps* (Paris) observes:

"This high functionary [M. de Plehve] belongs heart and soul to the party of authority, and he does not hesitate at times to put himself forward in opposition to the dangerous proposition of Finance Minister de Witte, who is doubtless no expert in liberalism, but whose practical mind, business sense, and speculative temperament can not dispense with a certain number of reforms and modern ideas most odious to the champions of pure conservatism. Without forcing matters so far as to speak of a secret conflict, it is certain that M. de Witte and M. de Plehve do not think alike on many points, and that this divergence of view has had its effects upon the inquiry instituted into the causes of agricultural decline in the provinces. Indeed the subordinates of the Minister of the Interior, not satisfied with paralyzing the authority of the local provincial assemblies, have endeavored, at the orders of their chief, to circumscribe the individual authority of the local nobility."

All this, we are assured, in direct defiance of M. de Witte, who retaliated by interfering with M. de Plehve's plan for reorganizing the rural police. The Berlin *Post* comments on the medley of opinions that must bewilder the Czar in all his schemes. "So the Czar has not advanced any defined plan of reforms. All he has done is to indicate the lines along which reforms should proceed." The *Pester Lloyd* (Budapest) thinks there is no warrant in the manifesto for assuming that constitutional or semi-constitutional government is contemplated. The general verdict of the Austrian and German press is that the Russian Government felt compelled to meet the popular demand for some kind of reform, especially reform in the interest of the peasantry. But the Government was in doubt as to the shape the reforms should assume, and in the contest that ensued the Conservatives carried the day.—*Translations made for* THE LITERARY DIGEST.

PEACE IN URUGUAY.

SEÑOR JOSE BATLLE Y ORDOÑEZ has been chosen President of the republic of Uruguay and has peaceably assumed the functions of that exalted office. One of the first acts of the new administration was to come to terms with the revolutionists and at last accounts peace prevailed throughout the length and breadth of the republic. President Batlle y Ordoñez is forty-five, was once a lawyer and later became a journalist. He belongs to the Liberal or Colorado party. He is like John Quincy Adams in that his father before him was a President, and he resembles Theodore Roosevelt to the extent

of having formerly been Vice-President. The *Ilustrado* (Montevideo) congratulates the country on the accession of a great statesman who is determined to guide Uruguay in the paths of peace. The *Nacional* (Montevideo) looks forward to a sound and able administration, but the *Siglo* (Montevideo) thinks the new President is a second-rate man. The *Razon* (Montevideo) says the new President is neither a financier nor an administrator of ability, but the *Bien* (Montevideo) anticipates an era of harmony. The new President must promote judicial reform, improve the quarantine system, now a source of discord with Argentina, and reduce the taxes. The *Tiempo* (Montevideo) intimates that President Batlle y Ordoñez will stand above parties. His election was the result of a compromise, and he does not command a majority either in Congress or the country. This will lead him to temporize.

The Uruguay press generally agrees that Señor Cuestas, the recently retired President and sometime dictator, has lost his political hold. He did not venture openly to influence the choice of his successor, and has made arrangements to go to Europe. As evidence of the wane of the long Cuestas supremacy in Uruguay, the Montevideo correspondent of the *Prensa* (Buenos Ayres) mentions that the now retired dictator took violent measures against certain opposition senators and government officials. Congress, however, took the matter up and forced Señor Cuestas to recede from his position. The same Argentine organ also accused the former President of having planned a revolution to prolong his power. The Montevideo *Times*, an English paper, at once denied this story "as one of many lying telegrams recently published in the Buenos Ayres papers and calculated to injure the government of the country of Uruguay." The same paper declares that there is a conspiracy in Argentina to discredit Uruguay as a South American Power, and concludes:

"The strange part of the affair is that the Buenos Ayres papers—which can not be all supposed to have some special object in misinforming their readers or in injuring Uruguay—should maintain correspondents here whose information is so frequently incorrect, exaggerated, or deliberately false. Yet we can not name one paper in Buenos Ayres that gives a really reliable and impartial account of Uruguayan affairs, especially in the domain of politics. This is curious, to say the least."—*Translations made for* THE LITERARY DIGEST.

A COMING DUTCH CRISIS.

DANGEROUS possibilities in the position of Holland are threatening the peace of Europe with portents graver even than the Macedonian question. The factors in the case are three. There is, to begin with, the prospect that the young Queen of the Netherlands will die without issue. Next is the geographical circumstance that most German exports pass through the Dutch monarchy on their way to the outside world. Finally we see The Hague tribunal establishing itself as guardian of the peace of the world.

Should Queen Wilhelmina leave no issue, the Dutch would consider the setting up of a republic in preference to the acceptance of the German heir to the throne. But this Emperor William would resist, for he regards himself as the divinely inspired champion of the monarchical principle. The fact that Germany must send her exports through Holland is the result of the aggravating accident which places in Wilhelmina's realm the mouth of the mighty river that runs through William's empire. And the climax is capped by the success of The Hague court, which must or may lead the Powers to insist upon the neutralization of Holland, thus banishing the pan-German dream of an empire stretching to the Zuyder Zee.

These considerations give the clue to the panic created by the announcement that what the London *Spectator* calls "sporadic civil war" may soon exist in Holland. A general strike is threatened throughout the land, the aim of which is to paralyze the railways. The Government has taken prompt measures to provide crews for the trains in case the men go out. It is further said that Emperor William told the Dutch Government of his intention to send German troops, if necessary, to keep the lines in operation, "a military occupation," observes *The Spectator*, "which would probably bring the great Powers into the field":

"The position of Holland is therefore more precarious than diplomatists are accustomed to acknowledge. They believe, we fancy, that the little kingdom is safe for many years because it is indirectly protected by the Dual Alliance. It would suit both France and Russia, they say, to fight Germany because of menace to Holland; and therefore the menace will not be offered. We do not feel so certain. Granted a favorable opportunity, France might conceivably be 'squared' by permission to occupy Belgium, as Gambetta once proposed, and Russia, unthreatened and uninvaded, would not alone venture to attack Germany in defense of a distant and partly sentimental interest. Holland would have no available ally except Great Britain, and the value of that ally would depend almost entirely upon her disposable strength at the moment of danger, which would arrive, it must be remembered, almost without warning. That moment may be, of course, postponed for many years, especially if the dynasty of The Hague is continued, as we all hope it may be, or if Holland is neutralized by European agreement; but accidents sometimes occur in politics as well as in railway traveling, and an accident is threatening now. It is quite clear that the Government and the artisans of Holland are falling into an attitude toward each other which may produce most serious consequences. The employing class in Holland, hard-headed, enterprising, and most anxious to succeed, is evidently persuaded that the artisans are stretching their right of combination to a dangerous degree, and that the right therefore must be limited if commerce is to be safe, and has persuaded the Government to introduce a bill which makes almost all acts leading to or connected with strikes penal offenses. The bill would, in fact, if interpreted, as it might be, by courts prejudiced on the other side, put a stop to strikes altogether. The artisans, who also, like their superiors, are dour, have accepted the proposed measures in that sense; they threaten a general strike to punish the Government, and a general strike would inevitably produce distress of a kind most menacing to social order. The Government, well aware of this, has taken military precautions; but fighting social movements with troops is most difficult and harassing work, and Holland might for a few weeks be in a condition of disorder which neighboring states, themselves alarmed by their Socialist parties, would regard with both annoyance and apprehension."

And the London *Times* says:

"The newest question in international politics—one of far graver interest to France than those arising in Siam or Macedonia or Morocco—is the situation in Holland, where the labor troubles have assumed an almost revolutionary aspect. Here British interests do not come in any way into conflict or competition with French interests, while both France and England would be equally unwilling to see the growth of any force that threatened the break-up of the Dutch monarchy and the possibility, in the result, of the extinction of the independence of the Netherlands. Germany, too, is perfectly entitled to have regard to her commercial interests in Holland, which might be imperiled if the labor troubles were to come to a serious crisis. Our Paris correspondent, however, calls attention to the accumulated evidence that 'Germany is pursuing something more than a commercial policy toward the Netherlands.' The rumor that the German Government, in view of the threat of a general strike, has 'made representations' to the Dutch Government has not been confirmed, but it is not improbable. Among other points to be considered is the repugnance shown in Germany to the strengthening of the international tribunal at The Hague. Some well-informed observers of international affairs believe that one of the main causes of this antipathy is that the permanence and prestige of the tribunal would tend to promote the neutralization of the Netherlands—perhaps under a Republican form of government, with an international guaranty—in case Queen Wil-

helmina should die without issue. Such a solution would put an end to the ambitious schemes that have been avowed by the leaders of the pan-German agitation, and have not been disavowed—at any rate with sufficient distinctness—by the more responsible exponents of German policy."

German organs deny that a military occupation of the railway routes was contemplated by Emperor William's Government; but it is customary in England just now to smile at German official utterances. The Dutch press insists that the Government has perfect control of the situation. According to the *Nieuws* (Amsterdam), the strike movement is wholly Socialistic and the States-General will pass laws regulating the hours and duties of railroad employees. The *Handelsblad* (Amsterdam) thinks the jealousies of European states warp their judgment in estimating the international significance of the situation. The *Volk* (The Hague), official organ of the labor movement, contains the most alarming prognostications. It says the Government was with difficulty restrained from placing Rotterdam, Amsterdam, and The Hague under martial law. But this publication is inspired by its lively sense of the wrongs of the toiling masses, and the revolution which it announced for last month did not take place. Conservative papers outside Holland admit that the labor leaders understand the international significance of a general strike and will act upon that knowledge.—*Translations made for* THE LITERARY DIGEST.

POLITICS OF THE POPE'S PREMIER.

LEO XIII. and Cardinal Rampolla, his secretary of state, mutually supplement one another. Their action has always been harmonious. "Proof of this is found in the fact that in spite of all contests, all adversities, all failures, all blunders, Cardinal Rampolla has retained power for fifteen years." Thus writes "Raqueni" in the *Nouvelle Revue* (Paris), in the course of an exhaustive study of the Pope's premier:

"Wholly unjustified is the belief in Italy as well as abroad that the Pope is not his own master, that he is under a tyrannical yoke, that he is a prisoner of the Jesuits, represented by Cardinal Rampolla. Leo XIII., as one of Italy's greatest priests, M. Carducci, has well said, is prisoner only of himself, and he is as free in Rome, whatever be said to the contrary, as he is in the Vatican. The all-powerfulness of the Jesuits is no more than a legend. The order is in great decadence and has no more voice in affairs than have other religious orders. But in recent years the Pope's will has become much enfeebled because of his great age. It is Cardinal Rampolla who does everything, directs everything. That does not mean that his policy is not that of Leo XIII., especially with regard to Italy. The cardinal lays down impossible conditions for a reconciliation between the Vatican and the Italian monarchy, to the great regret of liberal-minded Italian conservatives, who would like to see the young King Victor Emmanuel on better terms with Leo XIII. in the interest of the Savoy dynasty and the church. It is urgent, they say, to put an end to the antagonism between the Quirinal and the Vatican, which is as subversive of Catholicism as it is of the Italian state. But it is not easy to find a basis of agreement in view of the papacy's demands."

The writer of this article next tells us that he made a trip to Rome recently, and while there made the acquaintance of a person who is on confidential terms of friendship with Cardinal Rampolla. He questioned this gentleman on the subject of the cardinal's policy:

"His Eminence, he said, is as obdurate toward the Quirinal as was his predecessor, Cardinal Antonelli. He opposes the conciliatory policy of some cardinals because he deems it destructive of the interests of the church. But he is not an enemy of Italy, an opponent of her political unity, as is alleged, except as regards Rome. He does not wish to accept accomplished fact. The Pope, he says, needs all his independence, and can not accept the situation made for him. The cardinal, added my interlocutor, dreams of a union of Latin Europe under the republican form. An Italian federal republic, in the cardinal's view, can solve the Roman question more easily than the monarchy. The cardinal is an implacable enemy of the Triple Alliance, which guarantees the possession of Rome to Italy."

Cardinal Rampolla is reproached, we read further, with being too friendly toward France. "So he is, indeed. Such he remained even after the passage of the bill relating to French religious orders, which is said to have so greatly chagrined the Pope. It is owing to Cardinal Rampolla that the Vatican

CARDINAL RAMPOLLA.

The Papal Secretary, who "dreams of a union of Latin Europe under the republican form."

remained neutral. The Pope's intervention might have led to a rupture of diplomatic relations with France, and this the cardinal wanted to avoid, in the interest of the church." There is also a party at the Vatican which, in view of recent events, "wants to throw the Pope into the arms of Germany." Cardinal Rampolla "resists this Germanic current with all his might":

"From the point of view of the cardinal's diplomacy, the Vatican can have no ally but France. How is it possible to think of an alliance with Germany and Austria, which, allied with Italy, guarantee her the possession of Rome? As for Protestant and anti-papal England, crushing under an iron rule the nationalism and the faith of Catholic Ireland, she is not to be thought of. Can the Vatican ally itself with autocratic and orthodox Russia, the enemy and irreconcilable rival of the Church of Rome? France alone, in Cardinal Rampolla's opinion, can afford a foundation for Leo XIII.'s policy. Hence traditions and, when necessary, principles, are sacrificed to political necessities."

Cardinal Rampolla's efforts to found Vatican politics on a French basis would appear to be somewhat futile, according to the *Pester Lloyd* (Budapest). "France and the Roman curia," it says, "are so much at odds that a separation of church and state may be announced any day." Crispi, we are further told, used to complain that France used the Pope as a political

weapon. "In the matter of a reconciliation between the Pope and the Vatican, the longest heads have so far been astray. Crispi, when minister, lived for a moment under the delusion that the Pope would become reconciled with Italy and yield the principle of the temporal power." Leo XIII. has remained Italy's most uncompromising opponent. He has yielded nothing. To Germany likewise he has been unbending. In a somewhat similar vein comments the *Tribuna* (Rome), organ of the Italian ministry. "The papacy," it says, "owes, in truth, its purification to Italy. It owes to Italy its lofty moral position in the world, never greater or more solemn than now." The ministerial organ insinuates that while Leo XIII. may be personally desirous of a reconciliation with Italy, he is overpowered by the forces of tradition against which he struggles in vain.—*Translations made for* THE LITERARY DIGEST.

SURRENDER OF THE SULTAN OF ACHIN.

THE Sultan of Achin, Tooankoo Mohammed Daood, has surrendered to the Dutch, an event which is confidently expected to close one of the most extraordinary chapters in the colonial history of the world. Achin is a Moslem state in the northern portion of Sumatra which for some thirty years has been a theater of sanguinary war. Holland in all that period has been trying desperately to overcome the Achinese. The Sultan just conquered has led his people in battle for twenty years past, his spirit being broken at last, it is said, by the recent capture of his favorite wife. His country has had a glorious history, according to *The St. James's Gazette* (London):

"Achin has lived in history as a powerful kingdom, with an imperialism of its own and a king whose every word was law in many islands outside Achin. Elizabeth sent her greetings to the King of Achin, and envoys with confidential communications, and her successor was on such gracious terms with the King that he sent to Achin two brass cannon, which stand to this day at the gate of the palace in the island capital. So strong had the island kingdom become, indeed, that within a few years of its emerging from the position of a vassal state it broke the power of Malacca in ten expeditions, and fitted out five hundred ships, carrying sixty thousand men. It must have been one of the world's wonders, this Achinese navy; quite a hundred of its ships were bigger than anything Europe had ever seen before. So the island state went on its way, swallowing up other states, mining gold and coining money, and encouraging wild extravagance in its monarch, one of whom had a thousand elephants of state. No country in the East, save Japan, was so rich in its output of gold as Achin, and it is not astonishing, perhaps, that the Achinese begat a pride of empire worthy of an imperial race. Pride goeth before a fall, and the fall of Achin has been complete. The days of its power have gone forever. Time was when England was interested enough in this little state to make treaties for its protection, and so late as 1824 England and Holland agreed upon a treaty maintaining the independence of the kingdom, which, commercially, was in close touch with this country. It was to the port of Achin that the merchants of London directed their energies when they were seeking trade in India, and for generations the little kingdom was on friendly terms with England, who found her friendship useful."

The British withdrew their protection from Achin in 1873, "which may well make every Englishman blush for his country, for in the desire of our Government to settle all outstanding difficulties with Holland in the Malay archipelago and peninsula, the kingdom of Achin was shamelessly and cruelly abandoned." In 1874 war between the Dutch and Achinese began. Our authority proceeds:

"The Dutch colonial system, let its advocates say what they will, has the power to inspire the hatred of its native subjects to an extraordinary degree; and an appreciation of the bitterness of native feeling throughout the colonies has made it imperative for Holland to prosecute the war in Achin whether it would or no. An abandonment of the struggle would have entailed a dangerous loss of prestige, and would almost certainly have resulted in serious native risings elsewhere. This, therefore, is the determining consideration which may be recognized as counting for the persistence of Dutch aggression in Achin."

An insight into the nature of the Sultan's sway is afforded by a correspondent of the London *Times*, who writes:

"Upon the whole, our greater knowledge of Achinese government and social institutions obtained since the Dutch conquest of that strange and antique empire, whose dominion formerly extended over a large part of Sumatra and many adjacent islands, has enabled us to correct some of the prevalent misconceptions regarding the real power and prerogatives of the Sultan of Achin. The Dutch themselves have had to admit that they were misled when they acted upon the belief that in the Sultan centered all authority and power; that he was, in fact, an absolute monarch, and that to seize him was to put an end to all active resistance. They have found out since, to their cost, that in Achin the real ruling power lies with the classes, the great nobles, and the high priests, who together form a very strong and a very exclusive oligarchy, which, perhaps, admits more fealty to the Calif at Constantinople than to the local Sultan. It will, indeed, be remembered that when the Achinese sent out, in the seventies, delegates to protest against Dutch aggression and to implore assistance they went to Constantinople first, where their appearance and their doings caused some trepidation to The Hague at the time."

The conceptions of the Middle Ages have some hold over the Dutch colonial administration in these regions, if we are to believe what *The Morning Post* (London) says:

"It was in a frank spirit of plunder that the white men first visited the East, and until within the past few decades it was generally held that a colony was chiefly valuable as a source of individual or national income. Holland alone among the European Powers has held doggedly to the old opinion. The whole system of administration in the Dutch Indies is framed in obedience to this principle, and any surplus revenue that her colonies could produce has always been claimed by Holland as her undisputed right. The Malayan populations of her colonies are by nature indolent, inefficient, and ease-loving, but by nicely calculating the precise amount of taxation which a native can pay without incurring danger of actual want, provided he be diligent, the Dutch have presented their Oriental subjects with the alternative of a life passed in unremitting toil or the most abject indigence. As those who know the character of the Malayan race will admit, this is a choice of evils the bitterness of which can not easily be exaggerated."

A violent denunciation of Holland's methods in Achin appears in the *Volk* (The Hague), which says the Dutch troops plundered the natives and inflicted every species of torture upon them. The *Nieuws* (Amsterdam) says the Dutch Government may establish the captured Sultan upon his throne as a vassal. The *Vorwärts* (Berlin) observes: "Theft, fire, murder of men at prayer—such is the work of civilization that is being done in the island of Sumatra," and it characterizes such doings as "colonial bestialities."—*Translation made for* THE LITERARY DIGEST.

POINTS OF VIEW.

GAY PARIS.—"If the government of dilapidation, corruption, and shame would only give us order and public safety!" says the clerical *Correspondant* (Paris). "But there is pillage, assault, and murder in every Paris quarter like that in Macedonia. . . . It is enough to make us think we are among the genuine Apaches of the American plains."

WHERE ARE THE AMERICANS?—"To the roll of American statesmen this country [Great Britain] has contributed some of its most brilliant names," writes J. Weston in *The Empire Review* (London), in an attempt to show that Britain has been the home of our great men. "Alexander Hamilton, a creative political genius, second to none on the stage of the eighteenth century, was the son of a Scottish West Indian, and a French mother. His monument is the Constitution of the United States, and it was he who guided the republic through the financial and political throes of its early years. To the abandonment of his policy the country owes its defective banking system. It is remarkable that the two most remarkable modifications of the British constitution were the creation of Scots, and neither was born in America. This was thrown in the teeth of Hamilton by Jefferson in a stormy meeting of Washington's Cabinet. 'It is monstrous,' said Jefferson, 'that this country should be governed by a foreign bastard.'"

NOTABLE BOOKS OF THE DAY.

WAR AS A SOUTHERN WOMAN SAW IT.

A Virginia Girl in the Civil War. Edited by Myrta Lockett Avery. Cloth, 5 x 7½ in., 354 pp. Price, $1.50. D. Appleton & Co.

THIS volume fills a niche which the bulkiest history can not supply, for it shows what history had no room for; namely, the actual, individual life of the Southern people, especially of the women, who stayed at home and suffered, while husbands, sons, and fathers were in the field. It was an experience so unspeakably hard that only the intimate inner record from one who lived it could adequately present it. Yet the seventeen-year-old bride of a cavalry officer under the Confederate General Stuart, who tells this story to the editor, is no wailer over her own fate or that of kith or kin.

As a background from which to project the war pictures, the narrator shows us the manner of home life she knew before the guns spoke at Sumter. Her father's home at Norfolk, that of an officer of the bank of Virginia, was a meeting-place for diplomats and naval officers, native and foreign, whose musical evenings and two beautiful daughters proved the attraction, and where the proverbial Virginia hospitality abounded. The narrator tells of the meeting of her "fate" and her speedy marriage. Then follow memories of how the war news affected the people; the incredulity, the sanguine hopes that statesmen could avert it, and, finally, its avalanche upon them, the parting with loved ones, and the conviction that a few days, or at most weeks, would end it. Thus far the memory of Southern feeling could be duplicated in the recollection of many Northerners. But the picture soon shifts, and we are treated to daily fights with material wants unsupplied, to makeshifts and privations, and petty personal humiliations which no Northerner knew, such as the sight of Southern officers appearing before their loved ones in rags and tatters, barefooted and stockingless, and as starved as wives and sisters were at home. The heroism seems the greater when so much of the misery is turned off with a laugh.

MYRTA L. AVERY.

We are also shown a meeting with the famous rebel spy, Belle Boyd, who was for one night bedfellow with the one who recounts these experiences, and who tells how the spy gave her own outer wrap to cover a soldier—even as she had been known on a previous occasion to take the shoes off her own feet to cover the bleeding feet of another victim of war.

The "Virginia girl" gives a most entertaining account of how she ran the blockade and entered Baltimore in order to buy some much-needed supplies—especially cloth for a new uniform for her husband—and how before attempting to return again she made friends with some Union officers who knew her little game better than she supposed, and who aided and facilitated her purpose with the honors of a military escort. Indeed, the tribute she pays to the chivalric gentlemen on the Union side is one of the most gratifying portions of the story. It is a simply told story, which Mrs. Avery dresses in appropriate language, without any attempt at rhetorical ornamentation or flourishes of diction.

THROUGH SIBERIA BY RAIL.

The Great Siberian Railway from St. Petersburg to Peking. By Michael Myers Shoemaker. Cloth, 5½ x 8 in., 243 pp. Price, $2.00. G. P. Putnam's Sons.

MR. SHOEMAKER has written a fascinating book, because he has been content to tell us exactly what he saw and what he underwent in his journey from St. Petersburg to Peking. The railway which he traveled on, so we learn, has been solidly built, but high speed is impossible, the rails being only eighteen pounds to the foot, while the gage is five feet. The engines burn wood, altho coal abounds at many points on the route. The line runs between the fiftieth and sixtieth parallel until it reaches the borders of Mongolia, and stretching southeast to the coast at Vladivostock sends out a branch line almost due south from Harbin, which forks off to Peking and Port Arthur.

The book is thoroughly delightful reading. The author has kept clear of politics, but he gives us a vivid idea of the forests, lakes, and steppes which he traversed, and he describes the dreary-looking people he met. Not one single smile, he says, was visible on the faces he saw and scanned at the railway stations until he had passed Lake Baikal. He gives us a general notion of the fauna of these regions, and the mineral wealth of Siberia is referred to. To Peking he devotes about thirty-seven pages of lively and picturesque writing, scarcely relevant, excepting as a piece of personal reminiscence, to the main portion of the book.

This work of Mr. Shoemaker's, while an important book of travel, readable and popular, must, however, be looked upon as what specialists call a *prodromus*, the forerunner of a more strictly scientific and exhaustive treatise, containing statistical tables and accurate accounts of the fauna and flora, the soils and the mineral deposits, of the regions traversed. It is not impossible that the region may eventually be flooded by foreigners. Mr. Shoemaker seems to think that no Russian unification will result from the establishment of this line of transcontinental communication. He writes: "I doubt if the building of the Siberian road can consolidate this empire . . . a homogeneous nation is not possible which is composed of Sarts, Kirgiz, Persians, Georgians, Tatars, Kourgans, Manchurians, Chinese, the wild tribes of the Caucasus, and the hordes of the Turkoman."

INVENTION RATHER THAN CREATION.

Lees and Leaven. By Edward W. Townsend. Cloth, 5½ x 7½ in., 249 pp. Price, $1.50. McClure, Phillips & Co.

MR. TOWNSEND will probably always be recalled as the creator of "Chimmie Fadden." Those who pretend to keenest knowledge of the dialect of our "East Side" and the personal peculiarities of New York's rough population question if "Chimmie's" lingual twists are quite "the real thing"; but, be that as it may, "Chimmie" did more to make a niche for Mr. Townsend in the temple of fame than his subsequent and more ambitious efforts have done. There are so few people who can do what other people can not, that even a small bit of distinct variation counts more than a superior achievement which at once ranges itself with others of its kind.

In "Lees and Leaven," Mr. Townsend shows chiefly a brisk invention. A writer who has done his turn in a newspaper office, outside of the editorial room, is not apt to prepare his effects too subtly, nor to run to delicate gradings in color. This story, which in the main is of New York (and New York looked at through a newspaper man's eyes), starts out with a breathless rush, in a vague Western town, "the little post of White River on the lake." A dealer in coal and pig-iron is "hard up" for cash. From a doctor who, through him, has just secured an appointment to postmastership of the place, he gets five thousand dollars by selling some land in an iron-ore district in Michigan. The doctor delivered the money in cash to the other and forgot to take away the deed, which Mr. Bunton sends to him by his clerk, "Harry" Lawton. Harry makes arrangements to elope with his employer's daughter that very afternoon. He does so, with the deed undelivered. He is overtaken by his employer, torn from his wife (they had been married before the father caught them) and sent terrified away. Harry gets in a terrific railroad smash-up from which he emerges with no worse result than a subsequent scar which gives him the air of a perennial smiler—*L'Homme Qui Rit*, in a small way. Papa Bunton finds the handle of a valise with "H. L." on it in the wreck and a burned-up body. He is sure Harry is done for.

That same day, the new postmaster was killed at a crossing. A tremendous industrial speculation arises, and the very tract of land deeded to him by Bunton becomes absolutely necessary to either side to spell success. Bunton will not sell, altho he thinks the deed is destroyed, because he has an element of honesty in him.

This situation is evolved with great promptness in the beginning of Mr. Townsend's story, and the complications arising from it occupy him for the rest of the time. He mingles things up beautifully, and in the outcome the young men and women are paired off exactly right, and even the bad ones are let down easily. Tho, as for that, there is no real "badness" anywhere despite the taste of it all through the book, except in the office of *The Morning Chronicle*. Here the worst and most contemptible phases of evil-doing prevail on the part of the editor-manager and others. Blackmailing, lying, hypocrisy, meanness, are the *mot d'ordre* in *The Chronicle* management, and to have worked for it makes a man ineligible for employment in any other New York office. There will be very little doubt among New Yorkers as to the paper aimed at, and the revelation of such phases of journalism will astonish some people.

EDWARD W. TOWNSEND.

In character-drawing, Mr. Townsend is strong in a "free-hand" way, lapsing into caricature when he does an eccentrically humorous person. Harry Lawton is the merest make-believe of a being, and it is a little trying to see him cast for the rôle he fills. Mr. Townsend has plenty of humor, knows New York well as a newspaper graduate, and treats "high life" with something of a newspapery touch.

SPERM-WHALES AND THE GOSPEL.

A Whaleman's Wife. By Frank T. Bullen. Cloth, 5¼ x 8½ in., 352 pp. Price, $1.50. D. Appleton & Co.

OUR caption to this notice should not be regarded as flippant or irreverent. It is a succinct statement of the flavor of Mr. Bullen's book. The last sentence in the book is a favorable sample of his style: "Here let us leave the much-tried pair, nestling under the wing of the Loving Father, whose watchful care has been over them through all their perils, being serenely carried onward to a golden sunset."

The story is of the pious son of the Eddy household and the fair daughter of the Fish family, on an adjacent farm. Priscilla Fish will not have young Reuben Eddy, but at a week's notice marries the dashing Captain Ramon da Silva and starts at once on a three years' whaling cruise with him, from New Bedford, in the *Grampus*. However engrossing and obtrusive may be the pietism of Mr. Bullen, his creative ability did not shrink from making da Silva the most brutal, fearless, savage brute that ever captained a whaler, tho he is repeatedly prevented from quoting his language.

FRANK T. BULLEN.

"Rube," learning of Priscilla's sudden marriage, enlists in the whaling crew of the good ship *Xiphias*, which also sails from New Bedford. His captain develops into the loveliest Y. M. C. A. brand of sailing-master, while the Green Mountain Boy, Rube, becomes a magnificent specimen of manhood and too good for belief. He receives a fall into the sea from which he emerges with no memory, but with no lesion of devotional faculties. Later on, a whale runs away with the boat in which Rube is, straight into a tornado, and they are very badly lost.

On the *Grampus*, Priscilla, who has become as withered and anemic as a desiccated jellyfish, with all the love for the brute da Silva "tried out" of her, has a vision of the lost boat and compels her husband, who is perfectly indifferent to her, to go entirely out of his course to get it. In this ingenious way, Rube and Priscilla get together again, tho it is weeks before they meet, as Priscilla is kept in the smelly cabin of the *Grampus*.

Mr. Bullen has a virginal delight in whales and their capture, and knows a good deal about it. His style is something weird. It is not a little like "Fanny Fern's" in its elegant diction and confidential grip on the reader. He has a maddening way of taking you into his confidence, of interrupting the narrative with side-notes, in which he forestals some critical attitude and explains his motives, or throws light on his literary technique.

A STUDY OF THE DISCONTENTED.

The Social Unrest. By John Graham Brooks. Cloth, 5½ x 8 in., 394 pp. Price, $1.50. The Macmillan Company.

THIS work is an examination of industrial and social facts more or less familiar to the general reader and the students of economics. Many writers who have attempted like tasks have been wholly unfitted for them. Mr. Brooks is at least better fitted. He is sympathetic, which is not the least qualification in a writer who would diagnose social theories and conditions. The phenomena indicated are, on the whole, of the most superficial kind. The attempt is made to interpret these according to rational theory, but hardly down to the basic rock of economic principle. The author may reply that his purpose was only to pass in review just such phenomena as they present themselves. But in these days of many tasks it may be questioned if such employment, even when the work is well done, should be pursued to such length.

Yet the author's conclusions are, for the most part, sane. The following may be selected as an example of a certain prevailing inadequacy of statements: "The labor movement rests on the assumption that the production and distribution of wealth, as now managed, ought to be and can be so far changed as to give the laborer more power in deciding the terms under which he works." Does not the labor movement rest on more than this? From this statement all the possible potency of language seems to have been extracted. It is this want of virility and grasp that marks much of the excellent journalism of this work, and constitutes its chief defect.

Mr. Brooks's cardinal error is his failure to distinguish between the competition of the workers for employment on the one hand, and the monopoly of privilege on the other. Out of this lack arise more confusions than those of our author, who is not a chief sinner in this respect.

Mr. Brooks is a friend of labor organizations, and many of the things he has to say regarding the restrictive rules of labor-unions concerning apprentices, piece-work, and machinery are judicious. But it seems to us that he ignores the broad view of economic principles, to which he refers only to say that these received a severe shock in his contact with the actual, practical work-a-day world. But he had allowed these minuter facts to overshadow these very economic principles. He quotes approvingly the definition of a crank as "a man who sees one fact so clearly that he is blind to all the other facts which alone can explain the one he sees." Mr. Brooks has fallen into the opposite error, in that he sees many facts so vividly that he is blind to the larger principles which alone can explain them.

Is Mr. Brooks entirely accurate when he tells us that Socialists "admit that labor does not produce all wealth," tho he speaks of "the persistent demand of the Socialists that labor shall receive all the product"? But if labor does not produce *all* the product, that is a very immoral and illogical conclusion, of which, surely, few Socialists are guilty.

But on the whole there is much to be said in praise of this work. It is well written, it includes some luminous bits of social philosophy, many strongly compact statements of fact and trend, much discriminating criticism, and it is an accurate picture of social conditions. Perhaps the most valuable portion of it is that which treats of French and German Socialism, in the knowledge of which the author probably has few superiors in this country.

AN ARGUMENT FOR THE BEING OF GOD.

Theism. By Borden P. Bowne. Cloth, 6x8½ in., 325 pp. Price, $1.75. American Book Company.

THIS volume is an enlargement and revision of the author's "Philosophy of Theism" recast to form the Deems Lectures for 1902, delivered at New York University. The text is mostly rewritten and about fifty per cent. of new matter added. Dr. Bowne's style is somewhat clearer than in his earlier writings, but there is still the same apparent fondness for coined expressions out of the usual line, and for epigrams that do not always suit the sense or sentence in which they are used. "World-ground," "the infinite regress," "thinghood," "law of the sufficient reason," "rigor and vigor" method, "the heavens are crystallized mathematics," "all the laws of force are numerical," "crystals are solid geometry,"—these are more or less obscure words and phrases that one has to study in attempting to read the book. Barring these, and some of the overleapings of the thought, in which the connecting links have to be supplied in order to obtain a coherent idea, the philosophy is on the whole acute and able.

The attempt here made is to be classed as a mean between the agnosticism of Hamilton and Dean Mansel, and the ordinary theism that undertakes to establish the existence of God by dialectical reasoning. Dr. Bowne appeals to the practical reason, admitting on the one hand that the logical proofs for the being of God are not complete and can not be, but claiming on the other hand that a stronger case is established by far when we have shown that the whole course of things and the entire practical necessity of the life of man demand the existence of God. This argument, reenforced in various ways, corrects and nullifies the agnostic conclusion of Mr. Mallock, in his recent volume "Religion as a Credible Doctrine." It leaves religion actually unproved by metaphysics, as Mr. Mallock asserts it to be, but instead of throwing us back therefore upon an act of mere belief, it points out that a world-necessity without which no truth and no sanity would remain, is sufficiently supported, whether we can logically prove it or not.

BORDEN P. BOWNE.

There are many theists, however, who would say that both Dr. Bowne and Mr. Mallock too easily surrender the logical and metaphysical proofs for the being of God. Doubtless, as Dr. Bowne contends, these intellectual processes of proof do not stand [illegible] but they have been put forward confidently for the entire period during which philosophy has been forming in the world, and they have great weight with innumerable minds. Taken together as a sum of argument for the being of God, they have been widely accepted as demonstrative.

Dr. Bowne reenforces the argument for theism by an excellent analysis of personality, pointing out the absurdity of what has been called the "impersonal reason" and the greater absurdity of attempting to derive personality from that which is impersonal. He answers acutely the stock objection that personality is a necessary antithesis to absoluteness and infinity in God, and shows by a little definition how, as a matter of strict thought, only an absolute being and an infinite being could be wholly a personal being. The careful manner in which he guards this thought from anthropomorphism, and distinguishes personality from corporeality, is to be commended to a large number of hazy thinkers in these days who are warning us against "material personality."

The entire book is punctuated with sharp bits of reasoning, and the argument taken together is one of the best we have come upon as an exposition of theism, to be read profitably in company with Flint's "Theistic Theories" and Harris's "Philosophical Basis of Theism."

A NEW ERA IN Engineering Education

By FORREST CRISSEY

Main Building, Armour Institute.

A new era has just been begun in the great modern movement of giving instruction by mail; the co-operation of the resident technical school with the correspondence school "to make the work of correspondence co-ordinate with the work of the shops and laboratories." This departure is so significant that it will always stand out conspicuously in the history of teaching by correspondence.

The correspondence school is so distinctively new as a factor in popular education that this latest and most important phase of its development comes as a surprise to the public. The place of the correspondence school in popular education is now generally recognized. After years of experience, the true founder of correspondence teaching in America, President Harper of the University of Chicago, goes so far as to say: "The work done by correspondence is even better than that done in the class-room. Students who come to us after a year of such work are better prepared than those who have taken it with us in the class-room."

This co-operation, therefore, of the resident technical school with the correspondence school is a matter of general moment to the entire educational interests of the country, and especially is it of vital interest to every person ambitious to win a resident technical school degree but who is without the means of spending the *entire* four years in class-room work. The "resident" student whose necessities have obliged him to "drop out" for a few months, with the hope that he may soon return, finds a peculiar boon in a correspondence course so intimately allied with a "resident" institution. It enables him to bridge the gap of absence as nothing else could.

Then, too, it offers parents who have not the means to send their children to college an opportunity to give them the benefit of higher education, at a moderate cost, under men of acknowledged educational standing. It brings, through the instructor, the benefits of a magnificently equipped engineering school with all its costly laboratories, shops and libraries, and its modern methods of teaching, to the humble home on the farm, in the mountain or in the village. How many parents, worn out with the life struggle, are obliged to send their children out into the world handicapped by inadequate early training! To such homes, and to the thousands of earnest, ambitious people in every walk of life who are eager to make their leisure contribute to their intellectual growth, correspondence instruction, under resident school supervision,

MAIN BUILDING ARMOUR INSTITUTE OF TECHNOLOGY.

will prove an inestimable blessing.

Admittedly, there have always been three weak spots in the correspondence system of instruction: a lack of genuine "educational spirit" on the part of the teaching corps; a sense of solitary struggle on the part of the student; the impossibility of directly applying the work done by correspondence toward a course in a resident technical school.

In a recent arrangement with the management of Armour Institute of Technology, Chicago, one school (the American School of Correspondence, formerly of Boston), has overcome the three traditional defects of the correspondence methods. It has given the correspondence school a FACULTY instead of an office force, and has supplanted the commercial spirit with the *academic* spirit; it has given the solitary student in the veldt of the Transvaal and the busy clerk in Wall Street the feeling of brotherhood that in the resident school voices itself in a class yell; it has placed within the grasp of aroused ambition the possibility of a personal resident course in a great technical school, and that without the sacrifice of a single hour of previous study under the "solitary candle."

This work of fusing into the far-reaching mechanism of the correspondence system the true educational spirit has not been done in a tentative or half-hearted manner in this initial instance. Members of the Faculty of Armour Institute of Technology constitute the directing Faculty of the American School of Correspondence. The correspondence student thus works under the supervision of the very men who preside over the laboratories and teach the regular classes at Armour Institute. This means correspondence instruction in its best sense.

President Gunsaulus, of the Institute, defines the purpose of the arrangement in these significant words:

"The aim is to make the work of correspondence co-ordinate with the work of the shops and laboratories. The work done by the correspondence students in accordance with this standard will therefore be duly accepted and credited at Armour Institute of Technology when students desire to complete their course by actual residence here. We co-operate to conduct this educational enterprise by correspondence in the hope that wage-earners and aspiring students of all

Machinery Hall, Armour Institute of Technology.

ages may have the results of the latest and completest laboratory work and experimenta-

tion in the Armour Institute of Technology. For the reason that all examination papers will be reviewed and corrected by members of the Faculty of Armour Institute of Technology *full credit, as above stated, will be given her* for work done according to this arrangement."

Testing Room, Armour Institute of Technology.

Now a word on the value of the correspondence system in general: Already the three weak points have been touched; it has threescore of strong ones. Some of these are:

The correspondence school is the People's University, from which neither occupation, age nor poverty can shut out the ambitious. Only indifference and indolence can bar the aspiring from its benefits. Entrance into the correspondence school means personal initiative—spontaneous, voluntary expenditure of individual energy, often at the cost of sharp personal sacrifice, in order to keep pace with the march of industrial progress. This explains why the average correspondence student has the right sort of timber. He is not "sent to school"; he brings the school to himself because he wants it, and he appreciates it because he feels the need of it. The biggest capital a young man has to invest is his spare time, and the use he makes of it largely determines both his moral and commercial success. No agency for the utilization of spare moments approaches the great modern movement of correspondence instruction under resident school supervision. A clearing house of individual adaptability, a corrector of misfit vocations, a reclaimer of lost educational opportunities—this is exactly what a correspondence school, affiliated with a resident school, is. It gives the man of mature

Corner Instruction Department, American School of Correspondence.

years a chance to catch his "second wind" in life, to grip another educational "life-line," and to show practical repentance for "wasted opportunity."

The man who is looking for a corrected examination paper by to-morrow's mail is more alive and has a greater stake in life than the man who is simply waiting for pay-day and whose chief interest is to hold his job. And the man with the examination paper in mind climbs higher on the pay-roll and is a better patriot because he has a vested interest in the United States mails and what they bring him from the correspondence school.

Only the sons of the wealthy can afford the luxury of a "private tutor" in their school work; every correspondence student has a "private tutor," and those of the American School have the help and direction of the professors of a great technical school.

Correspondence education does not entail costly sacrifices upon "the folks at home."

Sometimes a college education is too dearly paid for in this way. It never happens in correspondence work, for the student *earns while he learns*, and the main sacrifice involved is that of his own leisure. The correspondence student generally swings hammers instead of Indian clubs, does his gymnastics under the eye of a foreman or shop boss instead of under a professional athlete; and in "hustling" to reach the factory or the office on time he does not particularly miss the exercise of the football rush.

To-day every thoughtful observer recognizes how great a force in our national life is the correspondence school and how powerful a factor in America's commercial supremacy. In an article on the American School of Correspondence in a recent number of the *World's Work* the writer says: "It is the men behind the machines who have won industrial leadership for the United States. There never was a time in the history of the world when employers were so eager to get working men of brains as now, or when the opportunities of such men were so great."

But to resume about the American School of Correspondence in particular. The correspondence curriculum includes these full courses in Engineering: Electrical, Mechanical, Mechanical-Electrical, Stationary, Marine, Locomotive, Civil; Architecture, Textile Manufacturing, Heating, Ventilating, Plumbing, Mechanical Drawing, Perspective Drawing, Telephony, Telegraphy, Sheet Metal Pattern Drafting, Tool Making, and some forty Short Courses for General Students.

Nothing about any correspondence school is more vital than the manner in which its instruction papers are prepared. Recently *The American Machinist*, the highest authority in its field, made this comment on an instruction paper of the School on Mechanical Drawing:

"There are not many books on Mechanical Drawing which the practical draftsman feels are satisfactory. With all their effort they somehow fail to 'get there.' We have just seen a copy of the instruction paper on this subject which is put out by the American School of Correspondence, and feel bound to say that we have found an exception to the rule. Indeed, it is not too much to say that in the methods followed it stands in a class by itself. * * * * If this is not effective instruction, we do not know the article."

The conclusion of the whole matter is clear and emphatic: Correspondence school work pays the ambitious and energetic who are determined to improve their position, to increase their efficiency, to expand their earning; it is within the reach of the humblest and poorest wage-earner who cannot quit his place on the pay-roll to follow his educational impulses. It gives the high-school graduate who has not the means to enter a "resident" school a chance to begin a technical education while he is earning the money that will enable him later to take his degree in the "resident" school.

Of these results there can be no question. They are admitted by the soundest men at the head of the great "resident" educational institutions.

But the recent step taken, in perfecting an alliance between a Correspondence School and the management of Armour Institute of Technology of the intimate and practical nature I have described, is altogether the most significant event in the entire evolution of giving instruction by mail.

It does away with the elaborate expenditure and commercial methods of soliciting students through a horde of agents so commonly practised by correspondence schools in the past. Too many of these schools have built up a vast machinery which seems to have but one aim—that of "coining money." By the

Offices, American School of Correspondence.

method now adopted by the school in question a new era in correspondence instruction has dawned. What agents have been costing correspondence schools is, by this school, put into apparatus and teachers, and employed toward the reduction of the tuition. Further, it has been made possible for the correspondence student, through the reduced cost of his tuition, to complete his course in residence at the Armour Institute without excessive cost and with the added benefit of credits for work done by correspondence. The management of the American School of Correspondence as now constituted and the management of Armour Institute of Technology will exhaust every resource to enlarge the influence of this institution toward the laboring man who aspires to larger power and opportunity.

Thus has one correspondence school acquired a recognized standing in the regular educational system of the country. It has by the merit of its work secured at last a truly educational and not commercial, place in the scheme of popular education.

Only general features of this interesting educational departure have been here presented; full details may be had by addressing a postal card of inquiry to Mr. A. E. Zapf, the Secretary of the American School of Correspondence, at Armour Institute of Technology, Chicago.

BOOKS RECEIVED.

THE LITERARY DIGEST is in receipt of the following books:

"The Complete Pocket-Guide to Europe."—Edited by Edmund C. Stedman and Thomas L. Stedman. (W. R. Jenkins, New York, leather, $1.25.)

CURRENT POETRY.

My Inver Bay.

By SEUMAS MACMANUS.

Och! Inver Bay, on a harvest day,
And the sun goin' down the sky;
When with many's the laugh the boats put aff,
And many's the merry cry!
To Cork's own Cove, tho one might rove,
He wouldn't find, machree,
A rarer bay, a fairer bay,
A sweeter bay nor thee!
For the Kaiser's rod and his realms so broad,
I wouldn't swap, not I,
My Inver Bay of a harvest day,
And the sun goin' down the sky!

A sweeter boat there's not afloat
Than Pathrick Rose's *Nan;*
A boulder crew, nor lads more thrue
Is not in wide Irelan'.
A long, long pull, a sthrong, sthrong pull,

An' wan right hearty cheer—
Our *Nan* so brave she cuts the wave,
An' our comrade-boats we clear:
We lead the throng, we sthrike a song,
An' rise it loud an' high,
On Inver Bay of a harvest day,
When the sun goin' down the sky!

Till we reach away where the herrin's play
There's neither slack nor slow;
When quick as thought our nets are shot,
On the thafts then we lie low,
And many a stave rolls over the wave,
And many a yarn is told,
The sea all white with silver bright
The air all filled with gold—
A scene more grand God's good right hand
It ne'er reached, from on High,
Than Inver Bay of a harvest day,
An' the sun goin' down the sky!

—In London *Pilot*.

"The Dancers, and Other Legends and Lyrics."

By EDITH M. THOMAS

We have had occasion from time to time to quote in these columns the poetry of Miss Thomas. Her latest collection of verse from the press of Richard G. Badger has been well received by the press. The New York *Times* says of her work:

"Her technical proficiency is notable. Whether she expresses a commonplace emotion or idea (and it must be confessed that the commonplace frequently dogs her inspiration) or finds in her poetry a voice for high intellectual perception and ardent imagination she is equally in command of her instrument, altho sometimes she uses it carelessly. Her effects, in the main, are those that come from the faithful, if not from the passionate, pursuit of beauty. She is seldom willing to sacrifice a form beautiful in itself for the sake of expressing more poignantly in a more rugged form a feeling adapted to the latter; and this at times works injustice to her gift."]

NATURE AND MAN.

Oh, the glance of the dew! Oh, the flame of the rose springing forth of the thorn!
Oh, the song of the arrow-marked finch singing love in the front of the morn!
Who will speak to them all of the rapture they wake in the children of men?
Who will so lovingly speak, they will heed and answer again?

The glance of the dew but repeateth the liquid glance of the sky,
And the flame of the rose is not brighter, in token,
And the song of the finch, tho his little heart with ecstasy break,
From the answering rapture of man no quickening impulse shall take.

O drops of the dew! O pride of the thorn! O singing bird!
Is there never a mutual tongue, is there never a common word,
Wherein to give thanks, wherein to give praise, from the hearts ye have filled?
With the pure distilment of joy which your cup, over-brimming, has spilled?

THE LOVER'S WORLD.

They were all more subtle than I,
Who moved in blind rapture among them,
"That our notes are new, we deny,
A thousand times over we've sung them,
Be it thrush or linnet, or dove!"
"Nay, but ye birds, one and all,
Now sing, with a rounded completeness,
From matin to vesper call;
Where got ye that marvelous sweetness?"
"I come [illegible]"

They were all more subtle than I,
Who knelt in rapt worship before them,
"The roses of summers gone by,

THE BOOKLOVERS LIBRARY

A Two-Minute Talk

TO INVESTORS

The Shares of THE BOOKLOVERS LIBRARY *Corporation* have had an unparalleled record. The stock is held in the United States, Canada and England by widely known literary, professional and business people. Among the library's shareholders are hundreds of names familiar to almost every cultured home. No broker, or banker, or underwriter has had a hand in the sales. The sole backing of the concern has been its enterprise, its continuous push, and its far-seeing business policy. Every dollar invested shows a hundred cents' worth of extended and established earning capacity.

The plans outlined from time to time have been carried forward in the most aggressive sort of way. We have done what we said we would do. We planned to extend the *Booklovers* to every important city of the United States; the libraries are there. We promised to include Canada; the two successful centers of Montreal and Toronto are the result; from these cities the service extends to outlying Canadian cities and towns. We made arrangements for extending the work to England; to-day the *Booklovers* is the talk of London; it is delivering books throughout Great Britain and includes among its patrons scores of the most distinguished families. We promised an auxiliary library to take care of the field not occupied by the *Booklovers;* the *Tabard Inn*, with its revolving book-cases and five-cent exchanges, is extending the library privileges to thousands of country towns; the earnings of this one department at the present time exceed one thousand dollars a day with only one-twentieth of the field covered. This new library department was started only a year ago. In another year it will have earning capacity largely in excess even of the *Booklovers*. Last fall we announced the preparation of a monthly magazine to round out our publicity plans; to-day *The Booklovers Magazine* sells out its complete edition by the fifteenth of each month; it is owned independently by shareholders of the parent company, and presents all the elements of an excellent property.

We are building into the future; the whole book and publishing trade is undergoing rapid and far-reaching changes; there is a new book published in the United States every hour, day and night, and this enormous output must have its distributing machinery. Millions invested in central storehouses of granite or marble can never change the popular current. The American people want an up-to-date service in books as well as in newspapers, and they are willing to pay for it with their own cash. There is no denying the fact that the *Booklovers* is already a tremendous power among the book interests of the country; it has battled its way to the front, where it means to stay.

We need a central library and office building of our own, and we intend to build one just as soon as a desirable central property in Philadelphia can be secured. This is the next important thing to be done. The block of 50,000 Shares of Stock referred to on the next page has been set aside largely for this purpose.

(CONTINUED ON NEXT PAGE)

(CONTINUED FROM PRECEDING PAGE)

In connection with this public offer of a comparatively small block of *Booklovers* stock there are four inside facts which I want to make public over my own signature: 1. The *Booklovers'* earnings during the three months ending February 28th were **the largest in the history of the enterprise**; 2. The operating expenses per library member were never smaller than at the present time; 3. The "used books" are wholly taken care of at good prices by auxiliary library departments; 4. The Corporation pays cash, and has no debts other than its current monthly accounts.

No additional capital is needed for the *Booklovers;* the increased capital is being used at the present time to extend the *Tabard Inn* and other departments; these auxiliary libraries are necessary to round out the best interests of the enterprise at large; they are the "by-products" of the business and they offer opportunity for very large profits.

The Corporation is capitalized for **$2,600,000** (260,000 Shares at $10 each). Of this amount **190,000 Shares** have already been subscribed and paid for at the par value of $10, making the present cash capital **$1,900,000.** There remain in the Treasury only **70,000 Shares.** Of this remaining block the Directors have authorized the Treasurer to set aside 50,000 Shares to be offered for sale on May 15th next, at $12 a Share. The remainder, consisting of **20,000 Shares,** is now offered to the public in lots of Ten Shares or more at **$10 a Share.** The terms are 10 per cent. with the application and the balance in sixty days. Stock applied for by telegraph will be held five days to await deposit and formal application. (See form of application below.) The sale of this block of 20,000 Shares at $10 and of the remaining block of 50,000 Shares on May 15th at $12 will give the Company **a completely paid-up Capital.** This announcement gives investors the last opportunity they will have of buying *Booklovers* at $10 a share.

The *Booklovers Corporation* has paid dividends at the rate of **10 per cent.** per year since August 1, 1900. The last half-yearly dividend was paid on February 20th. The half-yearly dividend periods end June 30th and December 31, respectively. The Corporation has no bonded debts, and its stock when fully paid is non-assessable. All Shares become dividend-bearing from the date of final payment. Dividends are payable in February and August.

Application Form for Booklovers Stock

(Use wording below in writing out your application)

(Date)

Mr. JOHN E. BRYANT, Treasurer
1323 Walnut Street, PHILADELPHIA

Dear Sir:

Please enter my name for_____Shares of the Stock of The Booklovers Library at Ten Dollars a Share. I enclose my check for $_____ being Ten Per Cent. of the par value, and I agree to pay the balance in sixty days.

*Name*_____

*Address*_____

Didst thou so praise, so adore them,
And set them all roses above?"
"Nay; but we are not the same—
Ye bloom with a beauty supremer;
Where got ye that delicate flame,
Half veiling your petals?" "O dreamer.
From the light of the soul of thy love!"

THE COMPASS.

Touch but with gentlest finger the crystal that
circles the Mariner's Guide—
To the East and the West how it drifts, and
trembles, and searches on every side!
But it comes to its rest, and its light lance poises
only one self-same way
Since ever a ship spread her marvelous sea-
wings, or plunged her swan-breast through
the spray—
For North points the needle!

Ye look not alone for the sign of the lode-star;
the lode-stone too lendeth cheer;
Yet one in the heavens is established forever, and
one is compelled through the sphere.
What! and ye chide not the fluttering magnet
that seemeth to fly its troth,
Yet even now is again recording its fealty's silent
oath—
As North points the needle!

Praise, ye bestow that, tho mobile and frail as
tremulous spheret of dew,
It obeys an imperial law that ye know not (yet
know that it guideth most true);
So, are ye content with its fugitive guidance—ye,
but the winds' and waves' sport!—
So, are ye content to sail by your compass, and
come in fair hour to your port;
For North points the needle!

And now, will ye censure, because, of compulsion,
the spirit that rules in this breast,
To show what a poet must show, was attempered,
and touched with a cureless unrest,
Swift to be moved with all human imitation, to
traverse Passion's whole range?
Mood succeeds mood, and humor fleets humor,
yet never heart's drift can they change,
For North points the needle!

Inconstant I were to that Sovereign Bidding
(why or whence given unknown),
Failed I to tent the entire round of motive ere
sinking back to my own:
The error be yours, if ye think my faith erring or
deem my allegiance I fly;
I follow my law and fulfil it all duly—and look!
when you doubt runneth high—
North points the needle!

Poe's Cottage at Fordham.

By JOHN HENRY BONER.

[We quote herewith a poem by Mr. Boner, whose death was recorded in THE LITERARY DIGEST of March 21, 1903.]

Here lived the soul enchanted
By melody of song;
Here dwelt the spirit haunted
By a demoniac throng;
Here sang the lips elated,
Here grief and death were sated;
Here loved and here unmated
Was he, so frail, so strong.

Here wintry winds and cheerless
The dying firelight blew
While he whose song was peerless
Dreamed the drear midnight through,
And from dull embers chilling
Crept shadows darkly filling
The silent place, and thrilling
His fancy as they grew.

Here, with brow bared to heaven,
In starry night he stood,
With the lost star of seven
Feeling sad brotherhood.
Here in the sobbing showers
Of dark autumnal hours

LINEN UNDERWEAR

Helps Make Life Pleasant

"Sold Under Binding Guarantee."

Warm in Winter, cool in Summer—comfortable always. The ideal underwear.

Linen is cleanly; boiling water doesn't shrink it. That's one comfort. Not so with wool.

The mesh weave encloses a layer of air, and air is a non-conductor of heat; keeps the outside heat out in Summer, and the body heat in in Winter. Another comfort.

Belfast Mesh Linen Underwear instantly absorbs perspiration and dries quickly—that keeps the bodily temperature even, **there's no danger of "taking cold."** Colds are *not* comfortable.

Our fabric is made both "Natural" linen and "White." We recommend the "Natural." It is more durable and absorbent and equally grateful to the skin.

Send for Samples of the Fabric and our Free Book

It is handsome and convincing. It goes into the subject thoroughly and explodes the "wool for warmth" theory in short order. It is designed for **thinking** people who desire comfort with health. The only forcible objection to the other mesh underwears has been that they *"never out too quickly."* **We guarantee** that **Belfast Mesh** will wear to the satisfaction of the purchaser or refund money.

Sold by all dealers, or sent direct by mail if your dealer won't supply it.

BELFAST MESH UNDERWEAR CO.

334 Mechanic Street, Poughkeepsie, N. Y.

He heard suspected powers
Shriek through the stormy wood.

From visions of Apollo
And of Astarte's bliss,
He gazed into the hollow
And hopeless vale of Dis,
And tho each earth were surrounded
By heaven, it still was mounded
With graves. His soul had sounded
The dolorous abyss.

Proud, mad, but not defiant,
He touched at heaven and hell.
Fate found a rare soul pliant
And rung her changes well.
Alternately, his lyre
Stranded with strings of fire,
Let earth's most happy choir
Or flashed with Israfel.

No singer of old story
Luting accustomed lays,
No harper for new glory,
No mendicant for praise,
He struck high chords and splendid,
Wherein were fiercely blended
Tones that unfinished ended
With his unfinished days.

Here through this lowly portal,
Made sacred by his name,
Unheralded immortal
The mortal went and came.
And fate that then denied him,
And envy that decried him,
And malice that belied him,
Have cenotaphed his fame.

—From *The Century Magazine*, by special permission.

PERSONALS.

The Fine Was Remitted.—The death of Michael C. Murphy, ex-Police Commissioner of New York, brings out the following, which is taken from the New York *Times:*

One day he had a delinquent policeman before him in the trial-room, whom he fined fifteen days' pay. Two days later the policeman requested an interview with the commissioner. The bluecoat appeared very bashful and made several unsuccessful attempts before he succeeded in getting out:

"Mr. Commissioner, I didn't kind o' feel like explainin' why I was absent without leave in the trial-room, for I knew the men would laugh." Here his voice sank to a whisper, "I'd been to a christen' of our first. It's a boy."

As the man didn't seem able to get any further, Colonel Murphy interposed: "Yes, it's a boy. Go on."

The visitor shifted from one foot to the other, and finally, by a superhuman effort, managed to volley forth: "And we named it Michael C. Murphy Grogan," and then fled precipitately from the room.

It was several minutes before Commissioner Murphy recovered from the shock, but when he did he began a series of chuckles that lasted the rest of the afternoon. Perhaps it is unnecessary to add that the fifteen days' fine was remitted.

Kept Both Candidates Busy.—Mark Twain, in the course of a talk on politics at the Authors' Club, in New York, the other day told a good

A NEW BOOK OF HUMOR

Way-Side Rhymes, Epigrams, and Parodies. The new repository of **humor** contains **200** funny rhymes and laughable epigrams, many humorous burlesque epitaphs and scores of **parodies** on famous poems. Contributed **original humor** contributed by some of leading funny writers of poetry is incorporated. The author Mr. Harrison Rhodes is congratulated on producing a volume of fascinating humor with a surprise. Artistically illustrated, cloth, PRICE $1.00 postpaid. Money back if not satisfactory.

119 and 121 West 23d Street, New York.

GOV'T REVOLVERS, GUNS, SWORDS. Military Goods, NEW and old, are bought and sold by P. Bannerman, 579 B'w'y, N.Y. In Cat'g'e ...

story on two men he used to know when he was a boy. He said, as quoted in the New York *Tribune*.

"I never went in much for politics. I've known lots of men that did, tho. When I was a boy I knew two men, 'Bob' Smith and Caleb Brown, that went in for politics body and soul.

"Once they were running for sheriff—'Bob' on one ticket, Caleb on the other—and a pretty hot fight it was that they put up. There was nothing those two men wouldn't do to capture a vote.

"'Bob,' on the day of election, hurried after breakfast to the hotel that was the polling-place. He saw in front of the building an elderly farmer, wrestling with a stubborn cow. The cow pulled one way, and the farmer grunting and growling, pulled the other.

"'My friend,' says 'Bob,' 'do you want me to hold your cow so you can go inside and vote?'

"'Why, yes, Mr. Smith, if you'd be so kind,' the farmer answered, and 'Bob' grabbed the cow by the horns and braced himself against a tree. But the cow, for all his bracing, pulled him about at a lively rate. She dragged him up and down the road and flung him from one sidewalk to the other. He could hear a lot of laughing from the hotel porch, for a pretty big crowd had gathered to see him earning a vote.

"Finally the farmer returned, relieved him of the cow and thanked him. 'You're welcome, friend,' says 'Bob,' and then he added, anxiously: 'I suppose you haven't been approached—er—I suppose you haven't seen my rival, Caleb Brown, around here this morning?'

"'Why yes,' the farmer answered. 'Mr. Brown is behind the barn holding a calf for me now.'"

Chief Foley's Revenge.—The late Fire-Chief Foley of Milwaukee, as is natural, was a strong defender of the city's name and institutions. On one occasion, says the Detroit *Free Press*, he read that a Chicago professor had said that the Milwaukee River is so vile and dense that in summer-time sprinkling-carts are run over the water to lay the dust.

The chief thought. He developed an opinion, but waited his opportunity to voice it. The opportunity came with the visit of Prince Henry to Milwaukee.

In honor of the royal guest the fire department gave an exhibition run. Chief Foley received the Prince's congratulations for the efficiency of his men. Subsequently, in discussing fires in general, a member of the Prince's party remarked that "débris of buildings burned in America were hauled away before the ruins had become cold."

"That is possible in all cities except Chicago," said the chief.

"And why not in Chicago?" asked the German.

Turning around so that a Chicago reporter who was near could understand, Chief Foley explained:

"By the time they dig away the mud thrown upon a building, the ruins have become moldy."

Schwab Outwitted.—A photographer, in an interview in the New York *Sun*, gives an account of how he outwitted Charles M. Schwab, last summer, in order to get a photograph of him. He says:

"I was sent to Loretto, the little Pennsylvania mountain town where Schwab spent his boyhood and where he has built himself a magnificently appointed country home. It was easy enough to secure Mr. Schwab's permission to photograph his residence, and, in fact, everything that be-

ADVICE FROM
Ru sell Sage, New York's Most Successful Financier:

He says in the *New York World*, Sept. 28, 1902: "I do not think the future of New York can be depicted in terms too glowing. The most fanciful writers cannot exaggerate the greatness of its future. A man who buys real estate in any of the five Boroughs of the City, exercising good judgment, has a future before him. Young man, buy real estate in the outlying Boroughs . . . it will make your old age comfortable.

See marvelous growth of New York City, page facing reading in front.

LET'S TALK IT OVER

OF course you want to know which piano player is really and truly THE BEST, before you buy one. If you will give us the opportunity we will prove to your satisfaction that the musical performance of the **CECILIAN** *surpasses* anything of which any other instrument of the kind is capable, and *equals* in every respect the work of the most finished human pianist. New features peculiar to the Cecilian make it in truth THE PERFECT PIANO PLAYER. Its cost is $250.00, and it can be bought on monthly payments. We will gladly give you full particulars.

longed to him in Loretto except himself and Mrs. Schwab.

"He was pleasant enough about it, but exceedingly firm in his refusal. In the hope of catching him unawares I loafed around the town for a couple of days, but he turned the tables on me and left town for the East one morning before I'd got up.

"Before taking the stage for Cresson, the nearest railroad-station, six miles away, I found out that Mr. Schwab would return in a week's time. Then I went on to Pittsburg, where I had some work to do.

"On the day appointed for Mr. Schwab's return to Loretto I arrived in Cresson, and, hiring a buggy, I drove along the stage road until I reached the high hill just a mile beyond the village's limit. Here I hitched my horse at the side of the road and seated myself on the ten-foot embankment overlooking the hill at nearly its summit.

"It was two o'clock in the afternoon when I took up my stand, and it was two hours later when I beheld a splendidly accoutred pair of horses begin slowly to ascend the hill. I knew them for Schwab's, because I'd seen the turnout before and because no one else in that region had blooded horses.

"Slowly the horses came toward me, and pretty soon I saw who were in the trap—none other than Charles M. Schwab, himself handling the reins, and Mrs. Schwab by his side.

"For some reason or other they didn't see me until they were right under me, and then it was too late to do anything. I smiled as I saw Mr. Schwab throw up a shielding arm full ten seconds after the camera had clicked. Then as he realized the futility of it all, he turned toward me and yelled:

"'Say, if there had been two roads into this town instead of one, I'd have kept you guessing, all right!'"

Mr. Gilbert's Early Lesson.—When W. S. Gilbert, in his early days as a playwright, had completed a short play, entitled "Dulcamara," for T. W. Robertson, says the London *Tit-Bits*, he took his manuscript to Mr. Emden, Mr. Robertson's manager, for approval.

"This will do," Mr. Emden said, after glancing through the play. "How much do you want for it?"

"Thirty guineas," the young dramatist diffidently suggested.

"Make it pounds and I will take it," answered Emden, a proposal to which Mr. Gilbert eagerly assented.

"Now," said Mr. Emden as he handed over the check, "let me give you a piece of advice. Never sell such good stuff for thirty pounds again."

"And," continued Mr. Gilbert, when telling the story, "I never did."

MORE OR LESS PUNGENT.

The Coldest Spots.—"Pa, I know where the coldest places are!" exclaimed Mary eagerly on her return from school.

"Where?" asked the father of his six-year-old daughter.

"Greenland, Iceland, and Zero," answered Mary triumphantly.—H. C. Wood in *Lippincott's Magazine*.

A Gallant Mistake.—Maurice Grau is telling a story about a French singer who recently attended

AUTHORS! The N. Y. Bureau of Revision, estd. 1896. Unique in position and success. Revision and criticism of MSS. Circular D. DR. TITUS M. COAN, 20 5th Ave., N. Y. City

a reception at the home of a lady noted for her parsimoniousness. The hostess tried to converse with the Frenchman in his native tongue. He noticed that her lack of fluency was embarrassing her, and with commendable politeness exclaimed:

"Pardon, Madame, somewhat the French is difficult for you. But I am able to understand your meanness if you will the English speak!"—New York *Times*.

Lucid.—An American woman in Japan bought a can of mushrooms, and found the directions translated into English as follows:

"Direction.—If several person will be to eat this in that manner they shall feel satisfied nutrition and very sweet or it can put in the hot water for the half hour and then take off the lid. They shall be proper to eat. It can be supply without putridity for several years."—A. C. H. in *Harper's Magazine*.

An Awful State of Things.—

In the State of Mass
There lives a lass
I love to go N. C.;
No other Miss.,
Can e'er, I Wis.,
Be half so dear to Me.

R. I. is blue,
And her cheeks the hue
Of shells where waters swash
On her pink-white phiz
There Nev. Ariz.
The least complexion Wash.

La! could I win
The heart of Minn.,
I'd ask for nothing more,
But I only dream
Upon the theme
And Conn. it o'er and Ore.

Why is it, pray,
I can't Ala.
This love that makes me Ill.?
N. Y., O., W.,
Kan. Nev. Ver. I
Propose to her my will?

I shun the task
'Twould be to ask
This gentle maid to wed;
And so to press
My suit, I guess
Alaska, Pa., instead.

—*Exchange*.

After-Dinner Talks and Blunders.—Joseph Jefferson, a clever man at the table as he is elsewhere, is credited with saying to his grandchildren at a goose dinner: "When we sat down, my children, you noticed a goose stuffed with sage. Now you see a sage stuffed with goose." If Mr. Jefferson said this he appropriated it from the late William M. Evarts, the difference being that the dish before Mr. Evarts was turkey.

At an informal dinner at which several friends of Ambassador Choate were present one asked him: "If you were dead and could come back to this world in another body, who would you prefer to come as?" It is said that he replied: "I would prefer to come as Mrs. Choate's second husband." Is there any connection between this and the remark of Mayor Low, of New York, to an Englishman who had said at a private dinner: "You must be proud to be the husband of the first lady of New

THE MONROE PORCELAIN REFRIGERATORS.
SOLD BY MAIL DIRECT.

From Factory to You

The MONROE is a high-grade refrigerator for family use. Unlike, and better than others, its food compartments are molded, single pieces of solid white porcelain ware—without joint or seam—strictly sanitary.

An order will bring the MONROE at once to your nearest railway station, freight paid. You can have the satisfaction of examining and proving it in your home. If after a reasonable time it is not satisfactory in every respect, write us and we will take it back, and refund your money.

The only way to obtain a MONROE is to order it direct from us. We have no agents.

Have you seen one? It is up-to-date. Think of it, everything within reach. No heavy trays, but light, smooth drawers. Holds as much and costs no more than a good box trunk. Hand riveted, almost indestructible. Once tried, always recommended. Sent C. O. D. privilege examination. 2c stamp for catalog.
F. A. Stallman, 4 W. Spring St., Columbus, O.

York." The answer credited to Mayor Low is, "I am proud to be the husband of Mrs. Low."

Baron Mauser, of Budapest, was not so fortunate in repeating the clever sayings of others. A German with whom the baron was dining separated a single bean, which in German is *bohne*, and asked the baron what famous general it represented. The German had to explain, "Bohnapart." The baron treasured the *bon mot* until he sat at table with a distinguished company. Separating a bean as his German friend had done, he asked, "Can any one present tell me what famous general this represents?" No one replying, the baron answered "Napoleon." Fortunately for him he waited for his company to laugh before doing so himself.

At the New York Chamber of Commerce dinner given to Lazare Weiller, who visited this country in behalf of the French Government, he said in closing a felicitous speech: "Taking my thoughts across the seas that separate France from America, I have this impression—the most attractive thing in our French port Havre that I shall find hereafter is the ship which will bring me again to America." It may be or it may not, that Mr. Weiller had read of a dinner given in Boston to a party of New Yorkers in which one of the guests was so ungracious as to say, "The greatest thing in Boston is the 5:30 train for New York." And this speech has already been credited to several well-known New York after-dinner talkers.—*Leslie's Weekly.*

How to Make Money
IN THE CATTLE AND SHEEP BUSINESS.

The Montana Co-Operative Ranch Company of Great Falls, Montana, is a co-operative company organized under the laws of the State of Montana with a capital stock of $100,000. It now owns 16,000 acres of rich land with the finest range in Northern Montana.

The principal business of the Company is to take care of sheep, cattle, hogs and Angora goats belonging to its shareholders. There are now over 400 shareholders, scattered over the country, over 88 of whom are ladies, while many are doctors, bankers, merchants, etc. Every shareholder who had sheep on the ranch last year, received 61 cents per sheep for their share of the wool, and 64 cents for their share of the lambs, making fully 40 per cent. interest on their investment. The Company issues an illustrated paper called The Montana Co-Operative Colonist, containing pictures of the ranch and telling all about the Company. This paper is sent free to all who address

MONTANA CO-OPERATIVE RANCH CO., Great Falls, Mont.

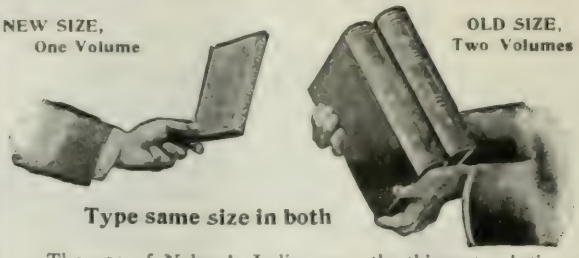
Small Great Books.



Dickens
Thackeray
Scott

The use of Nelson's India paper, the thinnest printing paper in the world, makes it possible to condense 950 pages into a single volume no thicker than a magazine. The size is only 4¼ x 6¼ inches, and fits the pocket. Each novel is complete in a single volume.

The type is as large and easily read as that you are now reading. The

NEW CENTURY LIBRARY

editions of these great works are the neatest, most convenient and readable ever published, and make choice library sets.

DICKENS, 17 Vols.; THACKERAY, 14 Vols.; SCOTT, 25 Vols. Handsomely bound in the following styles: Cloth, gilt top, $1.00 a volume; Leather Limp, gilt top, $1.25 a volume; Leather Boards, gilt edges, $1.50 a volume. Also sets in cases in special fine bindings.

Selected Works of the Best Authors, Complete in Single Volumes

BUNYAN. The Pilgrim's Progress, The Holy War and Grace Abounding. Cloth, $1.00; Venetian Morocco Limp, $1.50.

TENNYSON. The Poetical Works (1830-1859) of Alfred Lord Tennyson. Cloth, $1.00; Leather Limp, $1.50.

CARLYLE. The French Revolution. Cloth, gilt top, $1.00; Leather Limp, gilt edges, $1.50.

BURNS. The Poems and Songs of Robert Burns. Cloth, gilt top, $1.25; Leather Limp, gilt edges, $1.75.

BARNES' SPRING BOOKS

A NOVEL of exceptional interest and power. "The originality of conception; the quality of atmosphere imparted to each changing scene; and the clear and effective analysis of character are very striking and unusual."

THE STUMBLING BLOCK
By EDWIN PUGH
Illustrated by R. M. CROSBY
12mo, Cloth, $1.50

LESSONS, music and games, with illustrations, so planned that small girls can be taught by its use to do neat, intelligent work in their homes, using home materials and utensils. Mothers will find it helpful in training their young daughters in the art of home-making.

THE CHILD HOUSEKEEPER
By ELIZABETH COLSON and ANNA G. CHITTENDEN
With introduction by JACOB A. RIIS
8vo, Cloth, Illustrated, $1.80 net

AN ORIGINAL and unique contribution to Revolutionary history. While not condoning Arnold's treason, Mr. Todd shows that four times he saved the cause of the colonies, and gives the true reason, overlooked by most historians, for his betrayal of his country.

THE REAL BENEDICT ARNOLD
By CHARLES BURR TODD
Author of "The True Aaron Burr," etc.
12mo, Cloth, Illustrated, $1.20 net

A NOVEL of the modern woman. From a wilfulness born of confidence in her position in Club, Society and at home, Ursula Keith learns to accept life rather as she finds it than as she would have planned it.

LIFE'S COMMON WAY
By ANNIE ELIOT TRUMBULL
Author of "Mistress Content Cradock," etc.
12mo, Cloth, $1.50

Solution of Problems.

No. 817. B—K 3.

No. 818. Kt—K 3.

Solved by M. W. H., University of Virginia; the Rev. I. W. B., Bethlehem, Pa.; M. Marble, Worcester, Mass.; the Rev. G. Dobbs, New Orleans; F. S. Ferguson, Birmingham, Ala.; H. W. Barry, Boston; A. C. White, New York City; the Hon. Tom M. Taylor, Franklin, Tex.; J. J. Burke, Philadelphia; the Rev. J. G. Law, Walhalla, S. C.; E. N K., Harrisburg, Pa.; F. Gamage, Westboro, Mass.; R. H. Renshaw, University of Virginia; W. R. Coumbe, Lakeland, Fla.; C. M. Ferrari, Ouray, Colo.; G. Patterson, Winnipeg, Can.; W. T. St. Auburn, Grossepointe Farms, Mich.; E. A. C., Kinderhook, N. Y.; W. J. Ferris, Chester, Pa.; O. C. Pitkin, Syracuse, N. Y.; "Twenty-three" Philadelphia; F. L. Hitchcock, Scranton, Pa.; Dr. B. M. Cromwell, Eckhart Mines, Md.; the Rev. S. M. Morton, D.D., Effingham, Ill.; W. B. Hall, Marion, Kan.; W. G. Hosea, Cincinnati; H. A. Seller, Denver; F. Alsip, Ogden, Ill.; J. E. Wharton, Sherman, Tex.; T. O. B., Franklin, Mass.; P. Hubbard, Washington, D. C.; E. A. Kusel, Oroville, Col.; the Rev. P. D. Thompson, East Newmarket, Md.; P. Hubbard, Boston.

817: C. H. Schneider, Magley, Ind.

818: Dr. E. B. Kirk, Montgomery, Ala.; M. Almy, Chicago.; E. A. Wood, Honey Grove; Tex.; R. W. Muir, Hunter, North Dakota.

Comments (817): "Very good for its purpose"—M. M.; "A brilliant of the first water"—F. S. F.; "Very interesting"—J. G. L.; "Must have troubled the author more than it will the solvers"—W. R. C.; "Excellent"—"Twenty-three."

818: "Very clever illustration of three moves of white P"—M. M.; "Good, but inferior to most of THE DIGEST'S Tourney 2-ers"—F. S. F.; "Rather tame for first prize"—J. G. L.; "Better than 817"—W. R. C.; "If this is 'first' what must the others have been?"—E. A. C.; "Unique"—"Twenty-three."

Many solvers were caught by the little trap set by Mr. Bampton when he put the white P on B 7. Queening the P will not do, for 1. $\frac{\text{P—B 8 (Q)}}{\text{B—B 7}}$, cutting off the white B, and allowing the B to interpose if 2. $\frac{\text{Q—Q 6 ch}}{\text{———}}$.

Reichhelm's end-game begins with Q—R 8 ch. Solved by M. W. H., the Rev. I. W. B., M. M., the Rev. G. D., H. W. B., A. C. W., J. J. B., the Rev. J. G. L., E. N. K., W. R. C., C. N. F., G. P., W. T. St. A., E. A. C., "Twenty-three," E. A. W., E. B. K., H. A. S.; O. C. P., W. G. H.

In addition to those reported, Dr. H. W. Fannin, Hackett, Ark., got 813; D. H. Wiltsie, Jamestown, N. Y., 815; the Rev. S. M. M., the Rev. P. D. T., 815, 816; the Rev. G; W. Getter, Louisville, 816.

The International Universities Match.

The fifth annual match by cable, between English and American universities, was played on [illegible] and the representatives were for Cambridge: Webb, Bateman, Brown. For Oxford: Davidson, Roome, Bumpass. For Harvard: Rice, Bridgman. For Columbia: Sewall, Keeler. For Yale: Sawin. For Princeton: Richardson. At the close the score stood exactly even, with one game pending. Pillsbury, who had been elected adjudicator by unanimous consent, decided in favor of England, giving the Oxford-Cambridge team the match by [illegible] games. The game was that between Brown and Bridgman.

The result at the close was as follows:

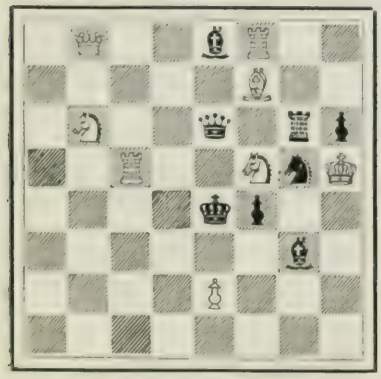
Rice	[illegible]	Webb	[illegible]
Sewall	[illegible]	Bateman	0
Sawin	[illegible]	Davidson	[illegible]
Richardson	[illegible]	Roome	[illegible]
Keeler	[illegible]	Bumpass	[illegible]
Bridgman	[illegible]	Brown	[illegible]
Total	[illegible]	Total	[illegible]

Difficulties of Problem-Construction.

By Alain C. White.

The adage "too many cooks" applies to Chess-Problems only in the punning sense; for two or more heads are frequently superior to one head in polishing, if not in conceiving, a good piece of work. Apart from the many masterpieces of joint authorship, every composer knows how much he has benefited from the criticisms of friends; particularly in having "cooks" and other flaws pointed out, which are often overlooked in one's own work, and which stand out prominently in that of others. The following problem teaches vividly the lesson that to correct a flaw which has baffled all one's resources, the best course is to ask advice from somebody to whom the position in question is new.

NO. 1.



White mates in two moves.

This setting was a decided favorite of mine, and passed through the columns of several papers attracting favorable comments; when some analytical person, not sharing the superficial feeling that because a problem gets into print it must be "sound," showed that it obviously had no solution. The key-move is Kt—Q 5, and the trouble arises from the presence of the black Rook, in the variation 1 $\frac{\text{Kt—Q 5}}{\text{Q — K B 5}}$, and White has no mating-move.

The suggestion to do away with the Rook seemed useless, in that then the "cook" by B x Q became

Pears'

Why is Pears' Soap—the best in the world, the soap with no free alkali in it—sold for 15 cents a cake?

It was made for a hospital soap in the first place, made by request, the doctors wanted a soap that would wash as sharp as any and do no harm to the skin. That means a soap all soap, with no free alkali in it, nothing but soap; there is nothing mysterious in it. Cost depends on quantity; quantity comes of quality.

Sold all over the world.

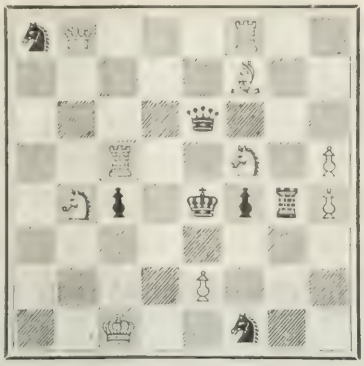
If afflicted with sore eyes use **Thompson's Eye Water**

inevitable. If the Bishop at K sq were retained, the white King must be moved out of danger of check, thereby necessitating extra White force; if the Bishop were dispensed with, the "cook" Q R 8 check became operative. Finding no way out of this dilemma, I laid the problem by, hoping for some future inspiration.

Dr. H. Keidanz suggested the following version:

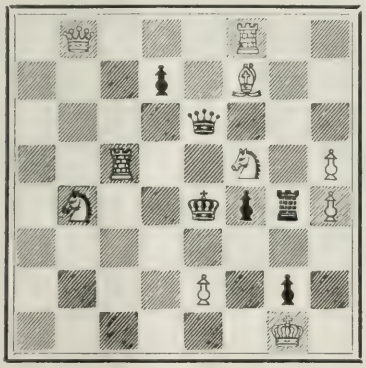
NO. II.



Here we have the black Rook of No. I. replaced by the black Knight on Q R sq, so that, if

1. $\frac{B \times Q}{Kt-B\,2}$ and no mate; and the white King replaced by two new Pawns and the black Rook. The position of the Rook is interesting, in that it not only fills the square Kt 5, but, also, makes unnecessary the black Bishop on Kt 6 in No. I., thus preserving the variation 2. Q x K B P, mate. While this is an excellent attempt at correction, it fails, on account of the "cook," Q x Kt check.

NO. III.



No. III. is the final version suggested by Mr. H. Bennecke. It is a model of construction. All the seven variations are retained and the "cooks" defeated at a considerable saving in material. The transposition of the Pawn from Q B 5 to K Kt 7 enables the white King to find shelter without the aid of the enemy's Knight (K B 8 in No. II). But the masterstroke is the black Pawn on Q 2! This Pawn not only relieves Dr. Keidanz's Kt, in defeating B x Q by moving one square, but it wards off the other "cook," Q x Kt ch, by its power to go to Q 4.

Such strokes of inspiration as this differentiate problems of the grade of No. I., had it been sound, from works like No. III. The fact that such flashes of good fortune do not always come to the original author of a position is the ground on which I base my moral, that, after a certain point is reached in turning out an obstinate problem, the most efficient tonic is advice.

ONE HUNDRED

Of the 1,000 numbered sets of this exquisite edition that we were fortunate in securing, ONLY 25 SETS now remain. No others can be secured after these are gone. The regular price is $87.50. Join this club and you save $42.50. The coupon below brings you the set free for examination; easy instalments pay for it if you decide to keep it.

NO MONEY REQUIRED NOW

It is of importance to note that this edition is of the same sheets as the rare edition now being sold at $3,500 per set!

THE WATCHWEEL EDITION of SIR WALTER SCOTT'S COMPLETE WAVERLEY NOVELS

Twenty-five Royal Octavo Volumes, printed on plate paper, bound in rich red Buckram, Cover Designs in colors, titles, etc., in gold, Gilt tops, etc., and containing 3,340 beautiful illustrations drawn by 44 artists

Never before have the fascinating Waverley Novels been presented in such enduring and exquisite form as in this superb set. This is one of those choice works which will be always the pride of the owner, one of the most valuable parts of his library.

The Size

of each volume is 10½ inches long, 7 inches wide, 1⅝ inches thick.

The Binding

is a rare combination of elegance and beauty, being rich, red Buckram, with designs and titles in yellow, black and gold.

Large Clear Type

"In another corner . . . they were slaying men."
(Reduced from one of the pictures illustrating a scene in "Castle Dangerous.")

The Pictures

vividly and faithfully portray the scenes of the stories—3,340 of them drawn by 44 eminent artists.

The Paper

is of the highest quality, heavy plate; wide margins; gilt tops.

Durable Bindings

Read What These Purchasers Say About It

"Superior to All Other Editions"

S. V. Wilson, Attorney at Law, Clearfield, Pa.: "The Watchweel Edition of Scott's Waverley Novels is the finest edition I have ever seen. Before purchasing your edition, I had examined various other editions. The Watchweel edition has the finest paper, the best illustrations, and the best type it has been my pleasure to come across."

"Better than the Advertisement Says"

W. L. Klewer, Architect, Chicago: "I confess most cheerfully that the edition in its makeup far exceeds that which I expected from your advertisement."

Among His Choicest Books

William O. Cutter, Boston, Mass.: "I have found them to be worthy of a place among others which I consider of the highest grade of typographical excellence, as well as of binding, paper, etc."

The Finest Edition Ever Seen

R. S. Steele, Dept. of the Interior, U. S. Indian Service, Ponca Agency, White Eagle, Okla.: "This is one of the finest sets of Scott I have ever seen."

Read What These Purchasers Say About It

Even More Than Claimed

W. T. Jardan, Trinidad, Colo.: "I find the Watchweel Edition of Scott's Waverley Novels all and even more than you claim. As a lover of Scott, I prize this edition."

A Delight to Read Such Beautiful Books

Herbert L. Luques, Counselor at Law, New York City: "It is a delight to read books so beautifully printed and illustrated."

Gives Entire Satisfaction

J. Snowden Bell, Attorney at Law, Pittsburg, Pa.: "After a thorough and careful examination of the Watchweel Edition of the Waverley Novels which I bought from you some time since, I take much pleasure in expressing the entire satisfaction which the books have given me."

The Illustrations Simply Perfect

A. H. Whitfield, Jackson, Miss.: "The illustrations are not only excellent in artistic quality—many of them being splendid—but they are historically accurate and absolutely true to the author."

Our Special Offer Cuts the Price in Half

If Satisfactory Send us $5.00 We will send these remaining sets on approval to LITERARY DIGEST readers who sign and return the special coupon below. Keep and examine them for five days. If the books are unsatisfactory you may notify us, and hold them subject to our order. If you decide to keep this treasure you may pay for it on the easy instalment terms of $5.00 down when you notify us you have decided to keep it. The balance can be paid in twenty monthly subscription payments of only $2.00 each. **The Balance $2 a Month, 20 Months**

Watchweel Edition of Scott's Waverley Novels

FUNK & WAGNALLS COMPANY, 30 Lafayette Place, New York.

Gentlemen—I accept your special offer to send, without charge, on approval, the 25 volumes of your special limited Watchweel Edition of Scott's Waverley Novels. It is understood that I am free to keep and examine the work for 5 days after receipt, and if I do not wish the books I may notify you, and hold the same subject to your order. If I desire to keep the books I agree to send you $5.00 with my letter stating that I will keep them, and I agree to pay the balance in 20 monthly subscription payments of $2.00.

Name .....

P. O. .....

Date ..... State .....

The Literary Digest

VOL. XXVI., NO. 15 NEW YORK, APRIL 11, 1903. WHOLE NUMBER, 677

Published Weekly by
FUNK & WAGNALLS COMPANY,
30 Lafayette Place, New York. 44 Fleet Street, London.
Entered at New York Post-Office as Second-Class Matter.

TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, $3.00; four months, on trial, $1.00; single copies, 10 cents. Foreign postage, $1.50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent **two weeks prior** to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing **must always be given.**

DISCONTINUANCES.—We find that a large majority of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. It is therefore assumed, unless notification to discontinue is received, that the subscriber wishes no interruption in his series. Notification to discontinue at expiration can be sent in at any time during the year.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

TOPICS OF THE DAY.

ANOTHER GERMAN-AMERICAN TIFF.

AN important feature of current history during the past few years has been a peculiar series of occurrences that have provoked displays of ill-feeling or good-feeling between this country and Germany. The instance most provocative of good-feeling was Prince Henry's visit; the instances provocative of the opposite emotion have been the Dewey-Diederichs incident in Manila Bay, the Admiral's reported remark on his way home that our next war would be with Germany, Senator Lodge's speech at the opening of the Pan-American Exposition, the President's speech in New England on the Monroe Doctrine, the German-British campaign against Venezuela, and Admiral Dewey's recent remarks in Newark, in which he compared our navy with the Kaiser's, to the disparagement of the latter.

Hardly less important than these events have been the expressions of the newspapers in regard to them, revealing the sentiments of the two peoples toward each other; and those who deplore any feeling of hostility between the two nations will be glad to learn that the American press are not stirred by these occurrences to the use of intemperate language or railing accusation. This persistently good-natured temper of the American newspapers in their treatment of Germany has been noted several times in these columns, and the present instance affords further confirmation of the fact. The great majority of our newspapers do not hesitate to express the belief that Admiral Dewey's disparaging reflections on the German navy and Emperor were unnecessary and in poor taste, and a number of papers think he should have been reprimanded. The German papers, on the other hand, so the cable reports tell us, have indulged freely in sarcastic and slurring remarks at our expense, in a manner and to an extent that are in marked contrast with the attitude of our own journals.

Admiral Dewey is reported to have said of the German navy, in an interview with a representative of the Newark *Evening News*:

"I have made a deep study of that navy. My belief is that its efficiency in possible action is greatly overestimated. The men do not begin to compare in education and intelligence with the Americans. Their men have, in my opinion, been educated so that they look to the officers and depend upon them for specific instructions in the least matters. The maneuvers in the Caribbean were not only successful, but were the greatest object-lesson of the kind, probably, that the world has ever seen. It was an object-lesson to the Kaiser more than to any other person. Think of it, 54 war-ships, including colliers and all. Germany could not possibly get a fleet over here that could fight such an aggregation of war-ships as that."

It is said that the President had a personal interview with Admiral Dewey, in which the Admiral, while admitting that he expressed the sentiments reported, said that the interview had been distorted, and that his remarks were not intended for publication. The President is said to have accepted this explanation as satisfactory, but some think they see a mild rebuke to the Admiral in the passage in the President's Chicago speech, in which he said: "Boasting and blustering are as objectionable among nations as among individuals, and the public men of a great nation owe it to their sense of national self-respect to speak courteously of foreign Powers, just as a brave and self-respecting man treats all around him courteously."

The Admiral's words bring out the opinion from one Berlin paper that "the American navy is evidently suffering from a disease of infancy, lack of modesty," while "its leader evinces something unspeakably immature." The same paper declares that it "can only stand amazed that such intensified self-complacency should take root in a people of Germanic origin." We are suffering from "exaggerated military self-conceit," according to the diagnosis of another German journal, while a third names it "silly megalomania." A Count von Reventlow contributes to the press an article in which he avers that Germany's first squadron alone "could smash Dewey's heterogeneous assemblage" in short order. He further informs his readers that our navy suffers from poor marksmanship, an insufficient number of officers and men, low morale, and wholesale desertions.

The Army and Navy Journal (New York) remarks, in a somewhat satirical editorial:

"Is it not a very ridiculous display of wrath in which some of the German papers are indulging at the expense of the gallant Dewey and his countrymen generally? Has it come to this, that the American admiral as well as our forecastle poet, must be forced to silence through fear of German censorship? 'Jack the Dasher' made his choice like a gentleman between fighting and apologizing, and now it has come the turn of the admiral at the other end of the vessel.

"But let us not be ungenerous. From whom can we accept rebuke with so much graciousness as from our good friend of Germany who has given us such substantial proofs in the statue of Frederick and the visit of a prince of the falsity of the French proverb that '*Le Prussien est essentiellement faux bonhomme?*' Are we not still further indebted to the Kaiser for the generous encouragement Admiral Dewey received from the German fleet in Manila Bay? Do we not know how earnestly he sympathized with our attempt to obtain St. Domingo from the Dane, and how unremitting were his efforts through the secret channels of diplomacy to persuade Denmark to ratify the treaty for the cession of the island to the United States? Have we not had in Venezuela a striking illustration of the German Emperor's cordial acceptance of the Monroe Doctrine which we regard as of so much importance to the preservation of this continent from

entanglement in European conditions? . . . The instructions in cypher which hastened the German squadron from Hongkong to Manila, without other explanation than that given by the Germans at Shanghai to the effect 'that Spain had offered a coaling-station in the Philippines to Germany, and that the squadron had gone to take it'; all this was one of those delicate expressions of good-will that sink deep into the hearts of our people, as they did into the hearts of Dewey and his squadron at the time of the capture of Manila Bay. If we are building a navy, it is not because we have any distrust of Germany, but that we may use it against the Turk or defend ourselves against some other unchristian monarch who has given us no proof of friendship and good-will."

A view that is interesting because almost solitary is seen in the following comment by the Norfolk *Virginian-Pilot*:

"It is from every point of view desirable that our relations with Germany should be those of frank antagonism. Politically and commercially, Germany is our enemy—the one enemy with whom we need concern ourselves; for England, while secretly hostile, lives on our bread and meat and will, therefore, never provoke hostilities.

"Of course in saying that the relations of the United States with Germany should be frankly antagonistic, we do not mean to say that the United States should seek a conflict with Germany. Quite the contrary. War is brutal, inhuman, wasteful, and a disgrace to humanity. What we mean is that the American people should be brought to understand that Germany is the enemy of our country—that they should not be deceived by hypocritical blandishments whose purpose is deception. For Germany is trying the same game with us it played successfully on France. The only difference is that the scene is changed from land to sea. Bismarck waited till Germany was superior to France on land, then he provoked hostilities. Emperor William has been trying to soft-soap Americans until Germany's naval armament is superior to ours. Then his scheme of territorial aggrandisement in South America is to be undertaken.

"After all, what do Americans care for Germany's friendship? Absolutely nothing. All that we ask of Germany is that it mind its own business. The United States and Germany have nothing whatever in common. Anything that helps to a popular understanding of that fact is to be applauded."

"Tactless and unbecoming," declares the *New-Yorker Staats-Zeitung* in the course of an acidulated characterization of the Manila hero's burst of confidence. This German-American daily has been accused of deriving its inspiration from the banks of the Spree. "German newspapers are mistaken," it says, "when they put this incident on all-fours with the Coghlan episode, and demand similar disciplinary measures for the Admiral, or at least think them appropriate. Coghlan had, in the course of an occasion that may be deemed public, made the person of the Emperor a laughing-stock." The Socialist *New-Yorker Volkszeitung* observes that "it is a very serious matter for a nation if its military leaders despise the enemy," and it fears that Americans, grown overconfident as a result of the Spanish war, may have experiences of sea power in some future time that will not soothe their national pride. The Jingoes are furious with Dewey, it further observes. Why build a great navy if the very Power it is to withstand is so inferior to ourselves as the Admiral would have us believe?

The Chicago *Evening Post* observes:

"If the highest officer in the German navy were to say, either officially or unofficially, that the sea armament of the United States consisted of a waterlogged flotilla of wornout bathtubs, it is not likely that the remark would cause the slightest ripple of excitement here. We might laugh a little over it, but we should promptly forget all about it.

"But some of our German friends appear to be built of more sensitive stuff, or else they are not so sure about their own navy. They are getting warmer every day as they roll that Dewey opinion like a bitter morsel under their tongues. They seem to have lost their heads altogether and are now trying to see who can say the harshest things about us."

NEW HAMPSHIRE ABANDONS PROHIBITION.

NEW HAMPSHIRE, following quickly in the steps of Vermont, has abandoned its policy of prohibition, or semi-prohibition, of the liquor traffic, to which it has clung for forty-eight years, and has adopted in its place a high-license and local-option law. This takes New Hampshire out of the prohibition column, leaving but three prohibition States—Maine, Kansas, and North Dakota. The old prohibitory law, which was enacted in 1855, resembled the Maine law, except that the prohibition was applied only against the retail sale, and not against the manufacture, of intoxicating liquors. The new law, which was signed by Governor Batchelder week before last, will take effect on May 1, and provides that it shall be lawful to engage in the liquor traffic in all cities and towns of the State that shall have accepted, by a majority vote, the provisions of the act. The law is different from others of its kind in that it calls for the appointment of a bipartizan state board of license commissioners, which is practically given absolute authority to regulate the liquor traffic.

These commissioners may not only grant licenses of all classes, without number, provided that the applicants conform with certain requirements, but they have the power to revoke the innholders' license, which is considered in the first class, "at any time without notice, at their own discretion," and can even grant licenses in towns where the majority votes against license. They are also "authorized and empowered to prescribe regulations for the conduct of the traffic under any license of the first class as they see fit," and can appoint as many special agents as they please "to investigate all matters relating to the collection of license fees or penalties and in relation to compliance with the law."

Some papers regard this board as an experiment on the part of New Hampshire, and doubt whether it will be a success. The Nashua (N. H.) *Telegraph* denounces the new law and the license commission in these terms:

"Evidently the politicians who have forced upon the State the obnoxious state license commission did not feel that they had made their power felt sufficiently, so they add a few amendments to the bill when it came before the Senate, the majority of which materially injure the bill, either as a temperance measure or a just law. The amendment offered by Mr. Remich in the House, making purchasers of liquor at hotels, under the innkeepers' license, pay for a meal of at least 25 cents in value before being eligible for a drink, was stricken out. This action on the part of the Senate spoiled a very good feature of the bill and makes it easier for houses of prostitution to be run with an innkeeper's license. No meal has to be purchased, and any sort of an establishment that has a few rooms to let and a blank-book for a register can pretend to be a full-fledged hotel. Such an institution can be set up even in towns which vote no license, to the disgrace of the town and the displeasure of the people thereof. The bonds are reduced from twice the amount of the license to $500, a provision which will make it less expensive for breaking the law. The very powerful license commission is given increased discretion in the granting of club licenses, and the naming of locations for saloons. Altogether a machine is to be built up that will be able to keep in close touch with the saloon element, and the latter will be a very important factor in political contests in the future, so far as New Hampshire is concerned. The license bill that has been passed is not what the people demanded or expected, but it is a measure prepared for the politicians, and designed to strengthen the power of the latter. It was bad enough in parts before the Senate tried its hand at adding obnoxious features."

Under the new law licenses are granted at fees ranging from $25 to $1,000 a year, and hotel-keepers, in case of a no-license vote of the community in which they do business, can sell liquors each day in the week at the discretion of the license commissioners. The law "is an iniquitous and dangerous measure," declares the Boston *Journal*; but the Springfield *Republican*

believes that the "license and local-option policy can not greatly, if at all, increase the amount of liquor-drinking in the State; while it will certainly result in substituting a state of law over the liquor business in place of the state of anarchy which has hitherto prevailed."

MR. MORGAN ON THE PROSPECT OF PROSPERITY.

J. PIERPONT MORGAN declares that "the general pessimistic talk" in regard to this country's prosperity, which is heard both abroad and at home, "is in no sense justified by the facts." He admits that "there are in the market many undigested securities," but in his judgment they are "essentially sound and stable." They are issued, he points out, "not to build competing lines, but largely for the purchase of rolling-stock and motive power and for the extension of other facilities necessitated by the necessary movement of the products of the country." Mr. Morgan says further (in an interview published in the New York *Times*):

"As for the general situation, you may state emphatically and unequivocally that it is most promising, with the country unqualifiedly prosperous. In the iron and steel trade, for example—the barometer of the country's growth, stability, and business activity—there never was so great or so profitable business. Orders on hand run far ahead and the outlook is decidedly encouraging.

"In short, summing the situation up, not only is there prosperity everywhere, but the promises are of a continuation of that prosperity for a long time to come."

SNAPSHOT OF MR. MORGAN ON A FERRYBOAT IN NEW YORK HARBOR.

Turning to the commercial and financial journals, one finds that Mr. Morgan's optimistic pronunciamento is received with more or less hesitation and skepticism. These journals point out that Mr. Morgan seems to confine his remarks to railroad securities issued to cover new equipment, and to ignore the industrial or "trust" securities which have been recently put on the market. The New York *Journal of Commerce* makes a critical review of the steel trust and shipping trust securities and of the stock of some of the recent railroad combinations, and observes: "There is among these 'undigested securities' some pretty unwholesome stuff, and there are plans for adding to them a mass which will severely test the powers of the market to digest and assimilate even 'sound and stable' material." *The Railway World* (Philadelphia), which speaks with authority on this topic, says that while "Mr. Morgan's position has much to commend it," "exception will be taken to his generalization as to the securities now overhanging the market being issued for the addition of new property." So, too, thinks the London *Economist*; and *Bradstreet's* says, similarly:

"It is, of course, to be considered that the interview in one sense evades an important distinction between new capital like that which is being raised by the Erie Railroad and the Pennsylvania, and which is to be devoted to additional facilities and improvements of their lines, and the issues of securities which have been made by the new Rock Island organization, by the San Francisco syndicate, or even by the transatlantic steamship combination, all of which represent the acquisition, at more or less advanced prices, of properties which already existed, and whose securities were already in the hands of investors and speculators. In this connection there has undoubtedly been a good deal of inflation, and it requires but little consideration to reach the conclusion that the congestion of securities, as it is called, arises from the supply of new stocks and bonds created in connection with the many recent railroad deals and combinations."

The United States Investor (Boston) puts the case even more strongly. It remarks that Mr. Morgan's "nerves must be badly unstrung," and hints that he is whistling to keep up his courage at a time when the outlook is growing dark. It continues:

"It looks as if Mr. Morgan had intended to be very astute, and to divert attention from the main issue to a side issue. The bulk of the 'undigested securities' are unquestionably industrial securities, the result of the most audacious stock-watering on record. But Mr. Morgan said not a word about industrial securities. His remarks were confined to securities which 'were issued not to build competing lines, but largely for the purchase of rolling-stock and motive power and for the extension of other facilities necessitated by the necessary movement of the products of the country,' —that is, to railroad securities. Such puerilities as this are calculated to produce a very different effect from the one intended. Is Mr. Morgan an ostrich that he should bury his head in the sand in this fashion? It is not the creation of new railroad securities (tho that has been greatly overdone) that fills the public mind with apprehension. It is the insane, audacious, outrageous inflation of industrial capitalization (for which Mr. Morgan is, more than any man alive, responsible) that makes the financial and industrial outlook of this nation so somber. Unquestionably Mr. Morgan is fully aware of that fact."

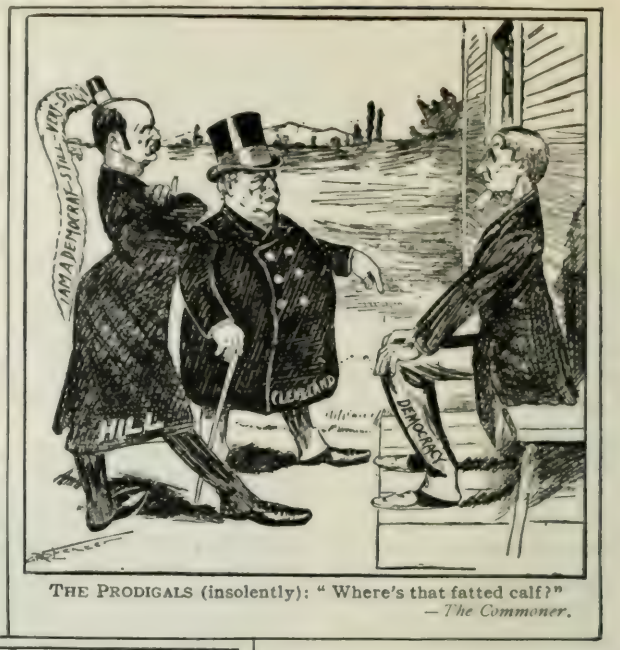
The American Wool and Cotton Reporter (Boston) also thinks that "the financial and industrial situation in the United States to-day is one of peculiar delicacy," especially in view of the labor troubles. It says:

"To the outward eye the productive activity of the country is very great; practically every dollar of capital is in use; labor is fully employed; the exchange of commodities is on an enormous scale. In a word, the country was apparently never more prosperous. And yet there is an uneasy feeling in the minds of the thinking portion of the community—there is a lurking fear that the financial and industrial situation, while outwardly robust and vigorous, is, as a matter of fact, only waiting for some little thing to happen to demonstrate its hectic character. It is a time when every business man of sound judgment is acting cau-

tiously, and is doing nothing that can by any inadvertence precipitate a period of financial revulsion."

It is something of a relief, after reading such opinions as those quoted above, to turn to *The Iron Age* (New York), which believes that the threatened storm has already blown over. "The business situation has undergone an important change," it finds. "During the fall months the tendency to reaction became quite marked," but "the turning-point came about the middle of December, when the United States Steel Corporation purchased the Union Steel Company," a transaction whose importance was not fully appreciated at the time. The purchase, however, "had an immediate effect on the wire trade." Stability was imparted to the wire and wire-nail market and to the market in tin plates, merchant pipe, bar iron and sheets. Nor did it stop there:

"The improved tone noted in the finished steel trade happens quite remarkably to be accompanied by better conditions in metals. Copper, lead, and spelter are all higher than they were during the closing months of last year. Their values have been strengthened by a totally different set of influences, but general trade conditions are assisted by the upward tendency which is displayed in these lines. Another influence in the direction of encouragement is the cheerful character of reports on fall-sown crops. The winter has been very favorable for such crops, and a large yield of winter wheat is now quite confidently expected. Again, exports of American products are increasing, the figures for February showing that all records were broken for that month. And further, the fact must not be overlooked that the European iron trade is recovering from its depression and prices abroad are on the up turn. Thus do combinations of benign influences sometimes unite to promote a better feeling. The most remarkable feature of the present situation, however, is that this is the fourth or fifth time since the dawn of prosperity that a change for the better has occurred when we seemed to be on the down grade. The era of depression has surely been postponed for a season."



THE PRODIGALS (insolently): "Where's that fatted calf?"

FIGHTING IN THE BALKANS.

THE news of a battle at Mitrovitza, in Northwestern Turkey, between Albanian insurgents and Turkish troops, in which 1,000 men were killed or wounded, has inspired grave forebodings of more serious trouble in that quarter. As the Vienna correspondent of the London *Times* puts it, the news "severely tests the optimism of official circles." The Sultan has sent a mullah, a general, and three Albanian officials to the disturbed district to calm the insurgents, or, that method failing, "to issue an ultimatum"; but it is considered doubtful if the Albanians will even receive the peace commission. Meanwhile, the European correspondents seem to be growing less and less certain that Russia and the other Powers will hold aloof. It is said in Vienna that Russia will probably take a hand in the game before long; it is rumored in London that Russia, Austria, and Italy have a secret agreement looking to the partition of European Turkey; and it is "stated unofficially" in St. Petersburg that the Government "is becoming impatient," and that "a change in Russia's attitude toward Turkey may be expected."

The Albanian uprising appears to have little connection with the Macedonian troubles. The New York *Mail and Express* explains the situation thus:

"The situation, in a word, is that Macedonia—the central half of the Turk's European dominion—is aflame with a spring insurrection, encouraged by Bulgaria but discouraged by the joint action of the Powers, while the northern portion of Albania, on the western side of this dominion, has an insurrection of its own in progress which has no point of sympathy with the Macedonian insurrection, and which the Powers had not foreseen and provided against. The only really tranquil district in European Turkey is now the province back of Constantinople.

of Epirus down. Their present outbreak is consonant with their tradition. While the Macedonian Christians are rebelling against Moslem rule, these Moslem Albanians are raiding Christian villages on the one hand and attacking Moslem troops on the other. Against the pan-Bulgarian and the pan-Servian movement, and against their liege lord and spiritual head, the Sultan, they are moving alike. So they are disclosed kidnapping the Servian gendarmes installed by the Powers under the reform scheme; provoking Servia itself to mobilize troops along its frontier; insulting Russia; pillaging Macedonia, and menacing the Sultan's person. The question arises: 'What do they want?'

"In the first place they do not want any Servian aggrandisement. In the second place they want autonomy for themselves. Their demand was first formulated in 1898 when they asked the Sultan for a governor from their own race and the recognition of their language in the schools. Since then the agitation has been kept alive by bands of Albanians living in Athens, Brussels, and Bucharest, but chiefly in the cities of Southern Italy. What was done this week in Mitrovitza against the Russian consul is paralleled by what was attempted in the same district in 1901 against the Servian consul.

"For Albania as a separate country there would be no outlook, either political or economical. It would be an economic liability to any country that annexed it. So poor is its soil that a large part of its population is living abroad or doing service under the Turkish flag. But both Italy and Austria are ambitious to absorb it, the former working through political and priestly agitation and the latter through railroad extension. There is reason to suspect Italian activity behind the sudden and violent Albanian outbreak."

IRISH PRESS IN AMERICA ON THE LAND BILL.

THE Irish journals published in this country distrust the British, even when bearing gifts. A marked reserve characterizes their comment on the Irish land bill, whose provisions were considered in these columns last week. The bill "is undoubtedly a marvelous advance on all previous attempts to settle the Irish land question," says *The Pilot* (Boston), but it advises its readers to follow the example of Michael Davitt and John Redmond and "maintain equal reserve for the present." It

JOHN BULL GOES A-COURTIN'.

—*The Pittsburg Post.*

adds: "The Irish leaders actually in Ireland know best the needs of the country, and are sure to recognize the measure that will fill them. But, at least, it can be said that never was the outlook so hopeful. England's necessity has again been Ireland's opportunity; and Ireland, because united, has risen wisely to her chance." *The Irish World* (New York), too, thinks it wise to reserve judgment until the bill has been passed upon by the convention to be held in Dublin on Tuesday and Wednesday of next week. It says:

"There and then Ireland's verdict will be pronounced on the latest British proposal for dealing with the Irish land question. If the convention approve and accept the bill as a settlement, that, we suppose, will mean the end of the land war, at least for the present and for a long time to come. If it reject the bill, the fight will go on on the old lines, and with, if possible, increased vigor. There will be no cessation of the struggle until the object upon which the Irish nation is resolved be accomplished. That object is the abolition of landlordism, its total uprooting and extinction in Ireland. Nothing less can be a permanent settlement of the trouble.

"This the landlords themselves now see and recognize. They see that the doom of the institution by which they have so long

AN IRISH EVICTION UP TO DATE.

—*The Detroit News.*

been enabled to plunder and oppress the people has been pronounced and must sooner or later be carried into effect. They see, too, that the sooner the thing is done the more likely they are to be let off with good terms for themselves. They know that by holding out longer they may fare worse, and it can hardly be that they are not aware that if they get only what they deserve, or what strict justice would demand, the amount that would come to them would be very small indeed. By the new bill, if passed, they are to receive $500,000,000. This enormous sum the farmers of Ireland, or those of them who have not already entered into contracts of purchase, will have to pay to get rid of landlordism. The men who will get the money, or at least the vast majority of them, are not Irish either by blood or sympathy. They are aliens in race and religion and sentiment. They have been and are the British garrison in Ireland, and take pride in the fact. Their fathers came to Ireland penniless adventurers, or soldiers of Cromwell, and got the land from which the Irish Catholic owners were driven at the bayonet's point. This was the origin of the 'right' of the great bulk of the so-called 'Irish' landlords to the estates for the relinquishment of which they are now to receive, or it is now proposed to give them, $500,000,000."

The Freeman's Journal (New York) publishes a very informing article on the land bill by Robert Ellis Thompson, the Irish Presbyterian educator and economist, who finds that the land bill contains some substantial advantages for Ireland, but falls far short of being a satisfactory remedy for the island's ills. He says:

"The measure is an immense gain for the Irish people, as, so far as it induces the landlord to sell, it will establish that form of land-tenure which all wise economists have declared to be the best for both the Government and for the governed. It will bestow upon Ireland that 'peasant proprietorship' for which Mr. William T. Thornton pleaded, and which France has enjoyed since the Revolution. It will enlarge the area of cultivation by taking over bankrupt estates and dividing them among the people. It will release Ireland from the burden of supporting a small army of absentees, and enable it to spend its production of food for the support of its own people in time of scarcity. And in Ireland it will undo in some measure the age-long wrong by which the people have been rent away from the land, which once was the property of the popular groups, not that of even their native chiefs.

"But the bill, as it stands, can not be said to deal with the

Irish land problem as a whole. If Ireland were everywhere divided among small tenant-farmers, and their landlords were to be induced to sell to them through the Government, it would be all that could be desired. But much of Ireland is in the hands of tenants who rent large farms, and whose ownership of the land will be very good for them, but it will do little for the bulk of the people around them. And the central counties of the island, embracing the most fertile plains the country possesses, are divided up into large grazing farms, which, in most cases, are not under rental at all. They are farmed by bailiffs for the benefit of their owners. The bill makes no provision for this kind of landed property, unless the grazing landowner should care to be quit of a very profitable investment, or—which is more likely—should run into bankruptcy by extravagant living in London or Paris. Are the Irish people to be content with the reservation of the core of their country as grazing-ground for the benefit of the London meat-market? The bill opens more questions than it answers.

"Nor am I able to see that of itself it will put a stop to that drain of the population from Ireland which is the blight of our native land. It will, indeed, check it, for the reasons I have given; but it is not the Irish tenantry which most swells the flood of immigration. It is the people of the towns and hamlets, who have no land, and no expectation of any; or it is the younger children of the small farmers, who know that the bit of land will not be enough for them all. . . . . .

"Nor will this or any land law solve the problem of national government for Ireland. Alien rule, however benevolent, is still alien rule, and no high-spirited people will endure it permanently. As Mr. Gladstone said, before you expect the Irish people to love the law you must concede them an Irish source for that law. It is not as Land Leaguers, but as Nationalists, that Mr. O'Brien and his friends sit in the House of Commons. It was not because of the land, but because of their hatred of English imperialism, that they threw the weight of their sympathies on the side of the Boers. It was not because Albert Edward is an Irish landlord, that they hoisted the black flag on the day of his coronation, but because he claims to rule a country which never has accepted him or any of his predecessors since James II., and because the laws he undertakes to enforce in Ireland are the work of an alien and even hostile Parliament. Ireland may suffer less than she has, but discontent will not diminish. It probably will increase, as it always does, with greater advance toward prosperity, until Ireland is free to rule herself."

THE LOWELL AND OTHER STRIKES.

NO strike of national proportions, like the steel or coal strike, threatens the country this year, and, so the New York *Commercial Advertiser* believes, there is nothing extraordinary in the present labor situation that gives warrant for particular anxiety. There are strikes enough, however, large and small, actual and threatened, to lead other papers, equally well-informed, perhaps, to just the opposite conclusion. Not counting a score of smaller strikes in various parts of the country, there is a deadlock between the officials of the American Bridge Company and the International Association of Bridge and Structural Iron Workers that portends serious delay in the construction of the New York subway and bridges, and the construction of buildings in many of our large cities; and there is a strike of some 20,000 cotton-mill operatives in Lowell, Mass., which has stopped seven big mills, with 850,000 spindles, and with a weekly pay-roll of $125,000. The Lowell strike, if long continued, may accelerate the movement of the New England cotton-mills to the South, where many have already gone, and others are preparing to follow.

The manufacturers' view of the Lowell strike is thus given in the New York *Journal of Commerce*:

"The United Textile Workers, having established a standard of wages in certain mills at Fall River and New Bedford, set out to put it in force in Lowell, with a view to extending it to the mills in all the manufacturing towns. There is no trust or combination among the corporations operating the mills, but there is a labor trust. The mills are variously situated in regard to business advantages, the character of their work and degrees of skill required. Uniform conditions can not be enforced without very unequal effects upon the business, but the textile workers' organization shuts its eyes to every consideration except the acceptance of scales of wages which it has decided to impose. The mills can not work to advantage without a full complement of operatives in their various departments, and they conclude to shut down rather than await the strike and keep up a conflict against the organization."

The operatives' side is given in this comment by the Lowell *Sun*:

"The demand of the operatives for higher wages can not be considered unreasonable. For years they have seen the price of the necessaries of life climbing higher and higher, they have seen also the prices of the mill products mounting higher; they have seen wages raised in the mills of other cities, and they have calculated that Fall River and New Bedford mill operatives receive ten per cent. or upward more than they for precisely the same amount of work. The local mills claim they are not prepared to pay as high wages as paid by the mills of Fall River and New Bedford. If this claim be true, it is a reflection upon the management.

"It may be true of some of the mills and untrue of others. There are at least three of the mills involved in this controversy that, judging from their dividends and the selling price of their stock, are apparently in a condition to increase wages. Yet they persistently say they are not, and they are supposed to know.

"It comes down to a question of how much of the earnings they want to put into dividends and improvements, and how much they are willing to give their operatives in order that the latter may have some share in the prosperity that is said to prevail, but which has not yet reached the toilers in the mills.

"The trusts began the work of fixing high prices. They should not complain if the labor-unions follow the example thus set by their employers."

The American Wool and Cotton Reporter, of Boston, which speaks with knowledge and authority on such a subject as this, can see very readily how "the intolerable conditions created by the rise in commodity prices in recent years, and particularly in the last year, provided an incentive for a strike which it was hard for the operatives to resist"; but it can see just as readily how the small profits of the Lowell mills in recent years dispose the employers to resist the demands of the operatives. The same paper says:

"To speak quite frankly, we do not like the looks of the labor situation in the least. In one aspect, the wage-earning classes can hardly be expected to do otherwise than to clamor for higher wages. Their pay does not have the purchasing power that it did. Some of them have clamored to very good effect, such, for instance, as the employees on a good many of the railroads. These during recent months have succeeded in securing an advance in pay, but the effect of this advance has been very pronounced on the net earnings of the railroads which have accorded it; so much so, that other employers of labor have no doubt begun to question the wisdom of their following suit. Of course, no one has advanced the pay of his operatives without a well-settled intention of making the public pay the bill, in the shape of higher commodity prices. But it is apparent even to the dullest intellect that you can't squeeze blood out of a stone (which is about the condition in which the great rise in commodity prices in recent years has left most of us), and if that fact has not already dawned on the large employers of labor, it is likely to do so very shortly. Consequently we are disposed to look for a marked disinclination on their part to resist the claims of the labor element for more pay. These claims, we are afraid, will characterize the industrial situation throughout the length and breadth of the country as the spring progresses; and if they are not satisfied, there is likely to be trouble. The undisputed fact that long periods of financial and industrial depression are frequently ushered in by widespread strikes, is the nightmare which troubles the mind of every observer of the situation at this time."

THE WABASH INJUNCTION DISSOLVED.

THERE are few papers that are not gratified at the dissolution of the Wabash injunction, on April 1, by Judge Adams, of St. Louis, the judge who granted it on March 3. The injunction, it will be recalled, restrained the officials of the firemen's and trainmen's unions "from in any way or manner ordering, coercing, persuading, inducing, or otherwise causing, directly or indirectly, the employees of the said, the Wabash Railway Company, to strike or quit the service of said company." This order was issued upon the representations of the railroad's counsel, who made it appear that the labor-union officials, who were "outsiders," and not in the employ of the company, were intending to use their authority to call out on strike the firemen and trainmen, who were perfectly contented with their wages and conditions of labor, and who otherwise would remain at work. The labor-union officials, therefore, were about to interfere with interstate commerce and with the transportation of the United States mails, and should be restrained by injunction, which was done. The injunction was only temporary, however, and upon a full hearing of both sides of the case, Judge Adams has found that the Wabash attorney was mistaken. The Wabash has granted the demands of the men, and the strike is averted. The judge says, in his order dissolving the injunction:

"The court finds in regard to the statements of the bill of complaint to the effect that the employees were satisfied with their wages and conditions of service: that for a long time prior to the filing of the bill of complaint the employees were dissatisfied with their wages and conditions of service and a real difference of opinion existed between the railroad and a large majority of its employees, members of the brotherhoods, with respect to their wages; and that the defendants, as officers and committees of the brotherhoods, were fully authorized both by reason of their official relation to their members and also by direct written authority, to represent them in the effort to secure higher wages and changed conditions of service, and that the proposed strike, instead of being officiously ordered by the defendants, was a result of the vote of the employees, acting without coercion and directly authorizing the same.

"The court further finds after a full examination of the evidence that the charge of conspiracy to interfere with the interstate commerce of the United States or the mail service of the United States is not sustained."

The judge further sanctions and defines the right to strike, individually or collectively, spontaneously or upon the advice of outsiders, in the following paragraphs:

"An employee has an unquestionable right to place a price and impose conditions upon his labor at the outset of his employment, or unless restrained by contract obligations, upon the continuance of his labor at any time thereafter; and if the terms and conditions are not complied with by the employer, he has a clear right, either not to engage, or, having engaged in his service, to cease from work. What one may do all may do.

"They may seek and obtain counsel and advice concerning their rights, duties, and obligations in relation to their employer, and persons interested in their welfare may advise, aid, and assist them in securing such terms and conditions of service as will best subserve their interests, and what they may lawfully do singly or together they may organize and combine to accomplish.

"In like manner as capital is combined for legitimate purposes, so labor may combine for legitimate purposes, but this right of combination and the resulting right to strike or quit their employment is a weapon for the defense and protection of employees, and not a weapon of attack.

"They may, by peaceful and lawful combination and concert of action, be able to so control the supply of labor as to compel the employer to come to their terms, but they are not at liberty to make use of this weapon to otherwise interfere with or injure the employer or coemployee.

"The clear line of demarkation, recognized by all law authorities, is that the lawful and permissible strike must not be attended by violence to or destruction of property, nor by coercive measures intended to prevent the employer from securing other employees or otherwise carrying on his business, according to his own judgment."

"The dissolution of the injunction will commend itself to the country as good law, good sense, and good policy," says the Philadelphia *Record*, which believes that "it would have been a dangerous thing to leave on the minds of the wage-earners the impression that the courts would prevent them from trying to get better conditions." And Judge John H. Murphy, general attorney for the Brotherhood of Locomotive Firemen, expresses the belief that "Judge Adams's decision will give labor organi-

THE BURNT CAPITALIST DREADS THE FIRE.
—*The New York Herald.*

zations more confidence in the courts and will tend to make strikes less numerous." The Baltimore *American* declares:

"The order issued on March 3 was in direct violation of the primary right of every American citizen to free speech and action, and contemplated the establishment of an order of things which would have been most revolting to the American mind. . . . . Had the rule of the court been made permanent, a precedent would have been established under which a condition of industrial slavery would have been created. Labor would by the courts be denied the right to relieve itself when oppressed, and the corporations would have had open to them at all times the power to prevent labor disputes, strikes, and the like by merely getting a duplication of the Wabash injunction. They could by such a rule have kept their men at work as long as they pleased, at whatever wage they elected to pay, and under such conditions of employment as they might prescribe. The rule would thus have made the employer absolute master of the employee. Any such rule would have given the radical element of our citizenship just ground for complaint, and the court is to be congratulated for seeing its error and setting itself right."

Several papers, however, think Judge Adams has made a mistake. Thus the New York *Journal of Commerce* says:

"This [decision] is all very well as applied to labor generally, but it utterly ignores the prime consideration in dealing with the problem of railroad labor. The employer there is not carrying on his own exclusive business and he can not act entirely upon his own judgment. He has certain obligations to fulfil to the public, and he is dependent upon a trained labor force whose continuous service is necessary to their fulfilment. A railroad strike is of itself an interference with interstate commerce and the mail service, whether there is any technical conspiracy behind it or not, and there should be some way of preventing it as a concerted movement to interrupt a business which is a quasi-public service. Upon this important question Judge Adams's decision throws no light, and it was the important issue in the case."

The Railway World (Philadelphia), which is devoted to the interests of the railroad corporations, says:

"The Wabash officials are open, in our opinion, to criticism

for asking for this injunction. It is probable that they did so in ignorance of the true state of affairs among their employees, but that ignorance is not altogether excusable. It is not wise to ask for temporary injunctions which can only be made perpetual by a denial of the elementary rights of labor."

EARLY SPEECHES OF THE PRESIDENT'S TRIP.

THE President surprised his newspaper critics by beginning his Western trip with moderate and conservative speeches that were mainly restatements of opinions which he has expressed before. In Chicago he discussed the Monroe Doctrine and advocated a strong navy; in Milwaukee he reviewed approvingly the trust programs of Congress and the Attorney-General, and in Minneapolis he defended the tariff from the attacks of the revisionists. "Unless the President grows more impetuous in succeeding speeches," remarks the Pittsburg *Post* (Dem.), "the conclusion will be forced that he is not campaigning for a nomination, but is really out for a pleasure trip." The Detroit *Tribune* (Ind.), similarly, calls the Chicago speech "innocuous," and observes that if this is a sample, "it is a pity the journey was ever undertaken." And the Boston *Herald* (Ind.) expresses disappointment that the speeches "are not as suggestive and pregnant with thought as it was hoped that they would be." The Philadelphia *Press* (Rep.), however, thinks there is good reason for this changed tone. It says:

"This greater sobriety is due partly to more matured views and partly to accomplished results. Last year the President was a propagandist; this year he points in part to achievements. Then he started out to organize and crystallize public sentiment for legislative action; now he reports on the fruits. Then he was an advocate pressing a cause; now he is a successful Executive presenting what has been done. On the trusts he has advanced from the proposer of measures to the possessor of authority. On the tariff he has the added experience of a year, and the wider observation and consultation of another session of Congress.

"All this makes the President less demonstrative and more contained. His speeches are not so intense but more sedate. As to the trusts he has secured the legislation he wanted, and he has only to point out how the power is to be exercised. As to the tariff, he is more impressed with the wisdom of conservative and careful action. Our unparalleled prosperity has come under the existing tariff. No steps should be taken which are calculated to shake its foundation and bring disturbance. The protective policy is accepted and should be maintained as the basis of our national system. At the same time changes of rates in particular schedules should be made as their expediency becomes apparent, and when it can be done without deranging industry and business.

"It is plain from his discussion that the President has come to the view that a general revision of the tariff before the Presidential election is inadvisable. He would not precipitate the uncertainty which such a movement would create. He would not let the tariff become the football of a political contest. But he would make the American people feel that they can rely on the friends of the tariff to make such modifications as may be shown to be wise and required in the general interests. His speech outlines a policy on which his party can agree, and on which it can safely enter on the Presidential campaign."

JOHN S. SARGENT'S NEW PORTRAIT OF THE PRESIDENT.

"In this picture," says the Springfield *Republican*, "Mr. Sargent has seized upon the sturdy characteristics of Theodore Roosevelt the firm standing on both feet, the assertive attitude, the square-built head, the impressive resoluteness of the countenance. A very pronounced man, this Roosevelt, and Sargent has not admitted into the portrait a trace of that discerning insight of his which is so apt to make his subject betray his or her weaknesses and defects. It is his presentation of Mr. Roosevelt at his best."

LETTERS AND ART.

SPANISH-AMERICAN LITERATURE.

THE attention of those interested in political matters has long been turned toward South American countries. According to Mr. R. Blanco-Fombona, a Venezuelan who writes in *La Revue* (Paris) on "Literary Venezuela," these countries are just as deserving of the attention of those who are interested in literature. Mr. Blanco-Fombona begins his article by saying that he will undoubtedly be received with a smile of incredulity when he announces that among the "savages" of South America there "exists a luxuriant and virile literature and a new and vigorous art, an offshoot of French art and Latin culture." He continues:

"There is a Spanish-American literature and a Spanish-American spirit, a spirit fluid, undefined, but worthy of study; a young literature, if you choose, but one whose most important tendencies can be counted among the most noteworthy of modern art. The unfortunate Cuban, José Marti, is not less great or less original than the English Carlyle; Gutierrez Najera, of Mexico, dead in the flower of his years, gave proof of so graceful a talent that Catulle Mendes might have envied it; Lugones and Dario would stand comparison with the most brilliant living poets in France, Italy, or Germany.

"Latin America, peopled before its discovery with indigenous races of great similarity, subjugated and colonized by the same conqueror, the field of the same European emigration from one end to the other, has to-day, altho divided into distinct republics, a single spirit. It is for this reason that there is a Spanish-American literature, and that the writers in Guatemala resemble those of Chile or of Bolivia. Conversely, altho speaking the same language, the Spanish-Americans are at the opposite pole from the Spaniards. We are an eminently revolutionary people. The Spanish are eminently conservative. . . . . .

"The greatest glory of an author of the peninsula consists in writing like Cervantes, Quevedo, Calderon, and other masters of thought of an earlier day. In America, on the contrary, a flexible language is cultivated, apt at interpreting the modern spirit, a winged tongue, picturesque and subtle, very different from the petrified and sterile writing which pleases in Spain.

"Because of this revolution in the use of language, and because of our too great propensity to nourish our thought on alien literatures, especially French literature, the Spanish critics have taken umbrage; they call us Gallicized, snobs, and corruptors of the venerable mother tongue. But, as a matter of fact, what we have accomplished in America is a miracle. We have brought to life a mummy. To-day the mummy is a young enchantress. And that is why the Pharaohs do not recognize her."

Among all the South American nations, Venezuela shows the most remarkable output of literature and art. Writing of Venezuela's native literary movements, Mr. Blanco-Fombona says:

"Romero Garcia and Urbaneja Achelpolh are the fathers of what is called 'Creolism' in Venezuela. 'El criollismo' is the picturing, sometimes to a point of exaggeration, of the life of the people, the types and speech of the lower classes. It is a literature crowded with provincialisms, many of which would be incomprehensible to any but a Venezuelan. Creolism is gaining ground day by day in the power and number of its exponents. Except for certain exaggerations, which may be excused because of the ardor of their creed, the Creolists, enemies of everything foreign, are right, and it is perhaps to them that our literature of the future must look. However that may be, Creolism to-day is a powerful and prolific force."

Venezuelan literature has not only its philosophers, poets, novelists, critics, and journalists, it has also its decadents. Among the most notable of these Mr. Blanco-Fombona mentions Fernandez Garcia, whose diction is "a marvel of beauty, subtle and refined." The writer says further:

"American literary decadence is entirely different from the decadence of France. In France you know of what it consists; with us it is a tendency to break away from rhetorical formalities, for every one to make his individuality count for something. French decadence has served merely as a spur and stimulant. Thanks to the encouraging example of Paris, the American has come to see that it is possible for each to sing according to his own fancy, under the most capricious forms, and with no other condition than that of talent. In this spirit of liberty half a dozen writers looked within and found themselves. I do not speak here of the multitude of imbecile graphomaniacs who succeed in being only bad plagiarists and translators. The work of these ephemeral copyists will never live. It does not represent the crystallization of any individual or social phase; it is only the grotesque shadow of foreign personalities."—*Translation made for* THE LITERARY DIGEST.

EMERSON'S CORRESPONDENCE WITH HERMAN GRIMM.

SOME hitherto unpublished letters between Herman Grimm, a German scholar, and Ralph Waldo Emerson, have been discovered by Mr. Frederick W. Holls, and are printed in the April *Atlantic Monthly*. Herr Grimm died two years ago, after a long and active literary career. His published writings include lives of Michelangelo and Raffael, six volumes of essays, and a paraphrase of the Iliad. He was interpreting Emerson to the German people as far back as 1861, and the correspondence between the two writers lasted for fifteen years.

In one of the early letters (1859), Emerson acknowledges the receipt of a most flattering critique on his (Emerson's) work, remarking:

"I must say, in all frankness, that your words about me seem strangely overcharged. That such freedom of thought as I use should impress or shock an Englishman, or a churchman in America, is to be expected. But this same freedom I ascribe habitually to you Germans. It belongs to Goethe, Schiller, and Novalis, throughout, and I impute it to your writers whom I do not know: and I know not what whim of rhetoric I may have to thank, that leads you to over-prize my pages. Well, I suppose I must wish your illusions will last, until I can justify them by some real performing."

"When I think of America," exclaims Grimm, in a letter dated October 25, 1860, "I think of you; and America appears to me as the first country of the world. . . . I have endeavored to write my book about Michelangelo in this sense—every page, so that it would stand the test if I could read it aloud to you." Emerson seems to have been much pleased by this book, and wrote, in the following year:

"The book has research, method, and daylight. I hate circular sentences, or echoing sentences, where the last half cunningly repeats the first half—but you step from stone to stone, and advance ever. . . . Michael is an old friend of mine. A noble, suffering soul; poor, that others may be rich; indemnified only in his perception of beauty. And his solitude and his opulent genius strongly attract. I miss cheerfulness. He is tragic, like Dante; tho the Erythean Sibyl is beautiful. I remember long ago what a charm I found in the figure of Justice on Paul III.'s monument, in the Vatican, and wished the legend true that ascribed the design to Michael A. Yet he has put majesty, like sunshine, into St. Peter's. We must let him be as sad as he pleases. He is one of the indispensable men on whose credit the race goes. I believe I sympathize with all your admirations. Goethe and Michael A. deserve your fine speeches, and are not perilous, for a long time. One may absorb great amounts of these, with impunity; but we must watch the face of our proper Guardian, and if his eye dims a little, drop our trusted companions as profane. I have a fancy that talent, which is so imperative in the passing hour, is deleterious to duration; what a pity we can not have genius without talent. Even in Goethe, the culture and varied, busy talent mar the simple grandeur of the impression, and he called himself a layman beside Beethoven."

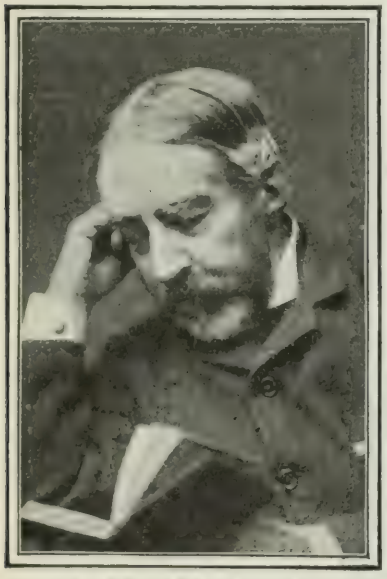
Grimm mentions in one of his letters the friendship existing between himself and Joachim, the famous violinist. He remarks that Joachim was among the first in Germany to become ac-

quainted with Emerson's thoughts "in the fulness of their importance," adding that Joachim and he read Emerson's works "at a time in Germany when besides us perhaps no one knew them." The name of Grimm's wife, Gisela von Arnim, the daughter of the poetess Elizabeth von Arnim, occurs frequently in these letters. She, too, was a great admirer of Emerson, and previously to her marriage corresponded with him. From a letter written to her by Emerson in 1859, and now published with those to her husband, we quote the following characteristic passage:

"One hears so much called 'thought' which is not thought, but only the memories of a torpid mind, that we say, Tell us rather of your cornbarn or your shoestring. But I confide that, if my friend could give me his thought, it is the only gift, and carries all others with it. No age, no experience makes the hunger less. I have the same craving, and the same worship for a new thought as when my first intellectual friendships gave wings to my head and feet, and new heavens and earth."

THE AUTHOR OF "JOHN INGLESANT."

COMPARATIVELY little space has been devoted by the American press to the recent death in Birmingham of John Henry Shorthouse. And yet "John Inglesant," the romance upon which his fame rests, is of such literary importance that the London *British Weekly* links it with "Lorna Doone" as being "most likely to survive of all the [English] books publshed during the last twenty years of the nineteenth century." The London *Academy and Literature* says:



JOHN HENRY SHORTHOUSE,
Who won lasting literary fame on the strength of a single novel.

"Mr. Shorthouse's name stands high in the literary annals of our time. He was always an absolutely sincere worker, and cared nothing for the popularity which may be attained by almost any man who chooses to make capital out of a first success. 'John Inglesant,' perhaps, was never a popular book in the ordinary sense, but it was a book which left its mark; its spiritual quality had an appeal that was bound to touch such readers as took into serious account the eternal conflict between the spirit and the flesh. Mr. Shorthouse was an artist whose lapses were part of his quality; but what his work lost in art was often gained in strength. 'The Little Schoolmaster Mark' was, in some respects, an artistic failure; yet it lives in the memory with something of the insistent recurrence of music. 'The Countess Eve' was a story slight, indeed, but full of the emotional and spiritual suggestion of which Mr. Shorthouse was a master. In that delicate suggestive faculty he approached Nathaniel Hawthorne more nearly than any writer whom we can recall. The greater part of his working life was spent in business; he gave to literature only of his intellectual best. Of the real value of that best we can say nothing more here. There are no doubt many readers to-day to whom Mr. Shorthouse's name is almost unknown; reputation crowds out reputation, and the strong, still man is lost sight of. But when many names now more prominent have been forgotten, the name of John Henry Shorthouse will be remembered and loved."

The same paper gives a brief account of the motif of "John Inglesant":

"This book was proudly called a romance, and in it the romantic as opposed to the sociological spirit is applied to history. It is the spirit which accepts a tradition without criticism and spurs a man to die for it without comment. It is the spirit which made of love the crown or the despair of heroism, a conquest or a martyrdom, anything under heaven excepting a sneer of fatigue. Well, in four vivid scenes these ideals find culminating utterance. The first comes to one with all the tragedy of history: it is the scene in which the king questions Inglesant about the ghost of Strafford. The second is that in which Inglesant allows the woman he loves to pass out of his life. The third scene is the one in which Inglesant, 'fighting a desperate battle for the King's honour, forsaken by God and men,' lies for the House of Stuart. The fourth is the one in which Mary Collet dies. In these four scenes, historic and personal—the personal loyalty to the woman merging always in the personal loyalty to the sovereign—we find a picture of life without which literature would be the poorer, a conception of conduct concerning which all words are idle:

> The old familiar glamour that shed such a holy radiance on the woods and fields of Gidding, now, to Inglesant's senses, filled the little convent room. The light of heaven that entered the open window with the perfume of the hawthorn was lost in the diviner radiance that shone from this girl's face into the depths of his being, and bathed the place where she was in light. His heart ceased to beat, and he lay, as in a trance, to behold the Glory of God.

That 'glamour' of the forest and that 'light' of the soul are symbolic of the romance called 'John Inglesant.'"

"John Inglesant" was printed nearly twenty-five years ago by a Birmingham firm. The first edition consisted of exactly one hundred copies, of which fifty or sixty were given away by the author himself. Mrs. Humphry Ward happened to read the book, and persuaded the Macmillans to publish it. Later, Mr. Gladstone called on Mr. Macmillan "specially to thank him for the copy which had been sent him," and "to ask him to tell the author that he thought it a work of real genius, and of a class that interested him greatly." One of Mr. Gladstone's most famous portraits shows him with a copy of "John Inglesant" in his hand: and there can be no doubt that his recommendation of the book was an important factor in determining its ultimate popular success.

WHO WROTE THE "MARSEILLAISE"?

THE origin of France's national song, "The Marseillaise," has never been clearly traced. It is known that the song was sung in 1792, probably for the first time, by Rouget de Lisle, a young French officer, who was quartered at the house of the mayor of Strasburg; and it has generally been supposed that the song was his own composition. But now a claim is being put forward on behalf of another composer, one Dalayzac, who died at Fontenay-sous-Bois, near Paris, in 1809. Dalayzac's admirers and fellow townsmen are convinced that he wrote at least the music, if not the words, of "The Marseillaise," and they have selected a committee to erect a monument to his memory. M. Cailleaux, a member of this committee, writes to the *Petit Journal* (Paris) as follows:

"The city of Muret, Dalayzac's birthplace, has already taken steps to perpetuate the memory of this illustrious composer. It is sufficient at this time merely to state that a well-founded belief has happily and readily taken root, attributing to Dalayzac the paternity of 'The Marseillaise.' This song, which led the Republican armies of 1792 to victory, has been attributed to Rouget de Lisle, but the actual truth is that the researches of savants have established beyond the shadow of a doubt that the works of Dalayzac included 'The Marseillaise,' and that it was his song which was sung in the mayor of Strasburg's house on the memorable evening of April 24, 1792."

The *Petit Journal* says editorially:

"This is not the first time that Rouget de Lisle's claim to authorship of 'The Marseillaise' has been challenged by others. The case of the violinist, Alexander Bouchet, will be remem-

bered. He proved to be a liar. In 1864 the composition was attributed to an obscure artist named Navoigille. A relative of Rouget, Amédée de Lisle, by means of unanswerable documents, forced a public retraction.

"Many others, among them not a few German musicians, claim to have written our national song. Their claims, however, proved to be worthless, and Rouget de Lisle was proclaimed the author of both words and music of 'The Marseillaise.'

"What will be the result of this new controversy? Are the partizans of Dalayzac able to furnish proof that Rouget de Lisle was a plagiarist? Can they demonstrate that the grave of the real author of 'The Marseillaise' is not at Choisy-le-Roi, where Rouget de Lisle lies buried, but at Fontenay-sous-Bois?"—*Translation made for* THE LITERARY DIGEST.

EDWARD ELGAR'S "DREAM OF GERONTIUS."

IT is seldom that any new musical production evokes such enthusiastic praise as has greeted the first performances in this country of Dr. Edward Elgar's sacred cantata, "The Dream of Gerontius." This choral work, in the opinion of the New York *Commercial Advertiser*, is "of such splendid beauty that one will not go far astray in putting it among the very great achievements in modern music. Certainly, as regards the land of its birth, it can be considered as nothing less than epoch-making." And Mr. W. J. Henderson, the musical critic of the New York *Sun*, declares, in even more glowing terms, that "no other English master has given us such a glorious work of this type. Not since Mendelssohn's 'Elijah' has England been the birthplace of such a sacred musical drama." Mr. Henderson says further:

"Mr. Elgar was hardly known three years ago when this cantata was produced at the Birmingham festival. Richter conducted the work, and expressed his joy in it in characteristic terms. It was performed in 1902 at the Lower Rhenish festival, and the Germans chorused their approval of the hitherto unknown Englishman. America will now fall into line a little late, but none the less eagerly. We have not known much about Elgar. We have heard his 'Sea Pictures' and his 'Pipes of Pan,' songs of sublimated mediocrity, and his overture, 'Cockaigne,' a clever instrumentation of tenuous ideas; but still we wondered why England prized him so highly. We wonder no more. 'The Dream of Gerontius' explains everything, and notice is served upon Mr. Elgar that his standard has been measured in this country. To live up to it will be no child's task."

The New York *Times* says of the first performance of this oratorio in New York: "The occasion was recognized as a remarkable one, full of significance. For it was the first real disclosure that we have had of the true stature and power of a man who has suddenly risen by virtue of this very work to a commanding position as one of the foremost composers of the day." The same paper continues:

"The cantata is a complete departure from the spirit and methods that have prevailed in the music of that country [England] for generations; it denotes, that is to say, a complete liberation from the Handel-Mendelssohn tradition.

"The subject in itself implies such a departure and such a liberation. Cardinal Newman's poem, 'The Dream of Gerontius' is a description in verse of the subjective experiences in death of a true believer, and the disposition of his soul after death, according to the doctrines of the Roman Catholic Church, by the ministering agents of the Almighty's will. It is a picturing of the mysteries that lie hidden across the portals of the tomb. Its musical setting needs exceptional qualities on the part of the composer, among which may be reckoned a complete intellectual and emotional sympathy with the tendency of the poem, its mystical suggestiveness, and its religious significance. This Dr. Elgar has, in virtue of his standing as a devout Romanist; and the fact is everywhere evident in his music. It is written with conviction. It is furthermore clear that the conventional formulas of oratorio music have no place in interpreting such a poem; and Dr. Elgar has discarded them. He has adopted instead the most modern procedures.

"The cantata is divided into two parts, and each part is an uninterrupted whole, without breaks or divisions into musical numbers in the ordinary sense. The solo voices sing, not set arias, but a continuous arioso, a sort of endless melody in the Wagnerian manner, while the orchestra fills an important part in calling up and fixing the mood and providing a descriptive commentary. The orchestral part is built up of a large number of representative themes singularly plastic in their character, and developed with an altogether remarkable skill in instrumentation and symphonic structure. Dr. Elgar exhausts the resources of modern orchestration in this, and writes most elaborately for chorus, frequently divided into many parts, and an additional semi-chorus. The effect is profoundly impressive, and he plays at will upon the most varied emotions. He gains the mystical atmosphere with an unerring touch; he expresses the dying man's fear and trust, the angel's comforting, the tremulous exaltation of the heavenly experience, the devotional fervor of the assistants, the malign and mocking wickedness of the demons in hell, with equal certainty and fulness. His emotional climaxes are of indescribable power, and there is endless subtlety in his use of all his resources. He gains remarkable qualities of tone and of color.

EDWARD ELGAR.

His "Dream of Gerontius" is pronounced the greatest oratorio produced in England since Mendelssohn's "Elijah."

"His choral writing is masterly in its knowledge of vocal effect and in its employment of complexity of texture as a means of varied and potent emotional expression. The score is full of recondite touches that emerge only upon close study or repeated hearing, and indeed the cantata is one that no hearer can expect completely to compass from a single performance.

"Dr. Elgar's music as a whole leaves an impression of originality, of inspiration, and of style. Yet it is a matter of course that various influences have worked upon him to make it what it is. There could not fail to be traces of Wagner in it, for instance; and there are places where it seems as if he had been specially moved by 'Parsifal.' There are others where it seems as if he had listened to the strains of Cæsar Franck. But these things are by no means of a force sufficient to take away from the highly individual character of Dr. Elgar's music. It has the triumphant sweep, the certainty of touch, the deeply moving power that are the marks of mastery."

The New York *Evening Post* is almost alone in voicing a derogatory opinion of Dr. Elgar's composition. It says, in part:

"He is a first-class musical architect, and to the thousands whom the architectural side of music interests particularly he makes a strong appeal. Unfortunately his building is made of the cheapest material—wood and brick. There is no granite, not to speak of marble. Musically speaking, there is a lack of inspiration. Dr. Elgar suffers from the same shortcoming as Miss Smyth and most of the composers of our times of both sexes: he has nothing new to say."

The New York performance of "The Dream of Gerontius," which took place in Carnegie Hall on March 26, was conducted by Mr. Frank Damrosch, with Miss Ada Crossley, Mr. Ellison van Hoose, and Mr. David Bispham as soloists. The cantata has also been presented, with *éclat*, by the Apollo Club, of Chicago.

"NO TIME FOR READING."

MR. ANDREW LANG, that most entertaining of English writers, has been taking up the cudgels against the time-honored plea, "I have no time for reading." He admits that this excuse is common, almost universal, in both sexes, but he is nevertheless of the opinion that it ought not to be entertained. In an article in *The Windsor Magazine* (London) he says:

"Pause, O youth or maiden! before you accustom your lips to this fatal formula: 'I have no time to read.' You have all the time which, for you, exists, and it is abundant. What are you doing with it—with your leisure? Mainly gossiping. Our modern malady is gregariousness. We *must* be in company, chattering. Observe and take warning by the dog. He is so much the friend of man that, if shut up from human society, he often neglects his natural way of passing his time (scratching himself), and utters discontented howls, disturbing the vicinity. Human beings, for the moment destitute of company, do not howl, indeed, but they do not read—they avoid the instructing and amusing society of books. To be always with others, always gregarious, always chattering, like monkeys in tree-tops, is our ruling vice, and *this* is the reason why we have no time to read, and why you see so many people pass their leisure, when alone, in whistling, or whittling. They have time to whittle."

Mr. Lang goes on to point out that people who "have no time to read" books, read newspapers unceasingly. He writes on this subject:

"The newspaper, says Crabbe, that neglected poet, is—

To all men something, and to some men all.

"That was a century ago, when perhaps the rural newspaper came out only once a week. Yet some persons, even then, read nothing else. Nowadays we mark middle-aged men of leisure who pass their mornings, from breakfast to luncheon, in steadily working through every column and paragraph of the morning papers. Then they go to their club and read all the evening papers till they fall asleep. At dinner they repeat to each other what they have read—such is their idea of conversation. The 'newspaper habit' is a disease. What pleasure or profit people obtain by cramming their minds with futile details, frequently contradicted next day, a reader of books can not imagine.

"This is no new malady of the spirit of man. The Athenians of old possessed an ample and excellent literature. When St. Paul visited their town, the citizens (slave-owners, having all the day to themselves, untrammeled by business or labor) might have read Homer, the dramatists, the philosophers, the lyric poets, Xenophon, Plato, the now lost works of Sappho, and many other books of merit. But they took pleasure 'in nothing but hearing or telling some new thing,' which was precisely equivalent to our reading the newspapers and gossiping about what we read. Athens was only saved from intellectual perdition by having no printing-press and therefore no newspapers.

"We are become, in this matter, very like the Athenians, but worse. Asked if he has read a book, a man usually says: 'No, I have no time for books, but I have read a review of it in *The Literary Ragbag*.' Now, what *is* a review in *The Literary Ragbag*? It is not a criticism. It contains a photograph of the author, a description of his 'early struggles,' an estimate of his income, an account of his home, wife, dogs, and cats, and a comment on his favorite amusements. Why has every one time to read all these futilities about the writers of books, while not one person in a thousand has time to read the books of the writers?"

The fact is, continues Mr. Lang, that the most busy people always contrive to have time for everything. "Everybody spontaneously finds time for what his heart is in, for what he really enjoys." We quote further:

"No more time is needed to read masterpieces than to read the last new novel. It is not time, but 'the mind to it' that is lacking. Do not dawdle and put off, but begin upon something good at once. I may freely admit that the study of Bacon and Mill requires seclusion and earnest application; but many good books—say, Boswell's 'Life of Johnson,' or the Doctor's own 'Lives of the Poets'—are at least as easy reading as a new novel, and much more diverting than most new novels. You make acquaintance with such wits and charming characters as you do not, unless you are very fortunate, meet every day. . . . . .

"As for adults who 'have no time to read,' their first economy must be in newspapers. They may begin by cutting down their consumption of the daily papers. But I have very little hope of adults, and none of many ladies in society, except the little flock who must and will read. The habit of finding time must be acquired in youth, will be acquired naturally by all who have the taste for good books, and will not be acquired by the rest of the generation."

The London *Spectator* is inclined to dispute some of these conclusions, and while conceding that "there is a distinct tendency to neglect reading—that is, the study of serious or important literature—noticeable among men and women of the present day," it avers that Mr. Lang's indictment of the newspaper is altogether too severe. It says:

"There are, no doubt, victims of the 'newspaper habit' who would be infinitely better employed—tho some men, indeed, are never well employed—in reading Milton and Bacon. . . . But there are other men who read newspapers in preference to books, and on what ground are you to condemn them? Suppose an avowed reader of newspapers to say to a reader of books: 'You say that no man can afford to neglect the treasures of the literature of the past, and you tell me that in reading newspapers I occupy my mind with futile details. I answer that altho I grant that every man's mind must be the better for an acquaintance with the best poetry and prose men have written, still what absorbs me most is the history of what is going on to-day. Why do you insist that I must read about what men have done in the past and must neglect what men are doing to-day? Here I have, in the columns of the newspaper you despise, a record of what my fellow creatures, alive and about me, are doing and saying and thinking. On what grounds do you claim that this record ought not to interest me? That record is, in fact, the book I choose to read. Your taste is different, and you choose another book, that is all.' The 'reader of books' must admit the force of the argument. As a fact, of course, the serious student of contemporary history does not, and could not afford to, neglect the literature of the past; he must study other ages to get the perspective of his own. But tho he would be well advised to make his study of 'books proper' as comprehensive as possible, it would be absurd to claim that he is wrong in regarding the newspaper as a kind of book, and in devoting time to reading it."

NOTES.

THE art-publishing business of Mr. R. H. Russell, of New York, has been acquired by Harper & Brothers.

MRS. HUMPHRY WARD'S new novel, "Lady Rose's Daughter," is to be dramatized by "George Fleming" (Miss Constance Fletcher).

SINCE the publication of her first book, "Mrs. Wiggs of the Cabbage Patch," Miss Alice Caldwell Hegan has become Mrs. Alice Hegan Rice. A reference to "Miss" Rice, in our Book Review Department, was made in error.

AT the annual meeting of the Federation of the Alliance Française in the United States Dr. W. R. Harper, of Chicago University, was elected to succeed James H. Hyde as president of the society. It was decided to invite Jules Clarétie, director of the Comédie Française of Paris, to give the next course of lectures in this country under the auspices of the Federation.

The Bookman's April list of the six best-selling books of the past month is as follows:

1. The Pit.—Norris.
2. The Virginian.—Wister.
3. Letters of a Self-Made Merchant to His Son.—Lorimer.
4. Mrs. Wiggs of the Cabbage Patch.—Hegan.
5. The Leopard's Spots.—Dixon.
6. The Spenders.—Wilson.

IN an article appearing in our pages about three months ago and bearing the title, "Hall Caine on the Free Library Movement," the statement was made: "Mr. Hall Caine has interested himself deeply during past years in the Free Library movement. By his own personal efforts, as well as by his influence as a Manx legislator, he was instrumental in inducing Andrew Carnegie to establish libraries throughout the Isle of Man." The accuracy of this statement is challenged by Mr. Joseph Johnson in *The Isle of Man Times*. It seems that Mr. Carnegie last June made to Hall Caine "an important and most generous proposal relating to libraries in the Isle of Man," but that the proposal has not yet been acted upon. There is only one free library in the Isle of Man, the one in Douglas, opened about fifteen years ago.

SCIENCE AND INVENTION.

A MALADY OF GREAT AUTHORS.

An examination into the physiological and pathological cases of De Quincey, Carlyle, and Browning is given in an interesting volume, "Biographic Clinics," by Dr. George M. Gould, of Philadelphia. The method which the writer employs is to glean from the autobiographic details left by these men such clinical facts as might have been collected by the life-long observation of a family physician, and to deduce from these the cause of the ailments that entered as such powerfully determining factors into their life, character, and work. Dr. Gould asserts that the afflictions of all three arose from an identical cause—eye-strain. In the case of De Quincey the deduction is interesting from the fact that no record of eye disease is to be found. Says Dr. Gould:

"Without a scrap of evidence as to the existence of eye-strain, a study of the clinical biography of De Quincey by a competent oculist should convince him that the mystery of De Quincey's life and disease, 'the key to the original cause,' as he puts it, of his suffering, was reflex ocular neurosis. Why, then, did his eyes not pain him and suffer? It is one of the greatest of unutilized truths, long known, strangely ignored, that in the vast majority of cases of eye-strain the morbid results of the astigmatism, etc., are not felt in the eyes. It is perfectly explainable why this is so. The value of the eye so overtops that of almost any other organ that the reflex results of its unphysiologic function must be shunted anywhere except back to the eye itself."

From an examination of De Quincey's portrait, the author discovers that he "had what the American oculist calls 'exophoria,' and the European names 'insufficiency of the interni.' It is not squint or strabismus, at least not permanently that; but, so far as symptoms go, it is infinitely worse than permanent divergence. The eye, or one eye, is not always divergent, or turned out, but only when attention and 'fixation' are not aroused." Had De Quincey been afflicted with a divergent eye, "it would have been blind, amblyopic, or its visual activity psychically ignored." Muscular strain necessary to correct vision was resorted to until De Quincey's later years, when, as we learn by the testimony of a member of his family, he used but one eye when reading and writing, the other "being invariably closed." Having thus settled the diagnosis, the author accounts for De Quincey's use of opium by its effect in producing myosis, or narrowing of the pupil to a "pin-point" diameter. This would also greatly aid him in shutting out the confusing rays or diffusion-circles caused by astigmatism, and would thus, in a way, make his vision better. Unconsciously this fact may also have aided in the addiction to the opium habit itself. Up to the age of sixty-two he was able to preserve binocular vision, but at an expense to his nervous and digestional system which was essentially the cause of his opium habit and of all his suffering.

A review of the symptoms of Carlyle's sufferings shows, so the writer affirms, that they did not result from any organic disease—no "morbid tissue-changes or lesions," for such pathologic conditions do not disappear suddenly at sixty years of age and leave one free for twenty-five more. Says the author, after recounting the history of Carlyle's sufferings, and of his various breakdowns:

"There is no working hypothesis except that of eye-strain that will explain all these things. After each day's work, each essay, each volume, each entire work, there was the need of rest, the increase of poignant complaint, the exhaustion of despair. . . . After each was the sickness of weariness, the . . . appalling lack of energy. But Carlyle knew he was not dull. . . . Intellectual activity did not tire him—it was only intellectual activity plus reading or writing."

The case of Browning has not the morbid interest of the two already described, for his ailment seems scarcely to have affected the quality of his writing or the even temper of his life. Yet his case in its general features seems to Dr. Gould to correspond with those of De Quincey and Carlyle. Says the writer:

"He was a man without organic disease, living a temperate life of ease; and yet in the prime of life, with every attempt at reading, writing, or correcting proofs he found himself with headaches and vertigo. Immediate relief came by stopping near use of the eyes, by walking, etc. Nothing can be more certain than that a man with such symptoms is suffering from reflex ocular neurosis."

The other eminent sufferers from eye-strain described by Dr. Gould in this book are Darwin and Huxley. Says *The Dial* (Chicago) in reviewing Dr. Gould's work:

"The lay reader queries whether Dr. Gould does not push his theory pretty far; but at any rate his book is suggestive and helpful. A very beneficent, practical application of his ideas would be, as he points out, the printing of all books, were it feasible, in white ink on black paper, and also the doing away with gaudy gilt picture-frames. Eye-strain would thus be materially lessened."

SOME MORE PECULIARITIES OF RADIUM.

Radium continues to be the subject of interesting experiment on the part of both chemists and physicists. In the course of a communication just made to the Paris Academy of Sciences by Professor and Madame Curie, the former stated, according to a cable despatch to the New York *Sun* (March 25), that this substance continuously emits heat without combustion, without chemical change of any kind, and without any change in its molecular structure, which remains spectroscopically identical after many months. Says the report:

"He found further that radium maintains its own temperature at a point 1.5° Centigrade above its surroundings. This is equivalent to saying that the actual quantity of heat evolved is such that the pure radium salt would melt more than its own weight of ice every hour, or that half a pound of radium salt would evolve in one hour heat equal to that produced by burning one-third of a cubic foot of hydrogen gas, this evolution of heat going on constantly for indefinite periods, leaving the salt at the end of months of activity just as potent as it was at the beginning.

"The world is thus made acquainted with a heat sufficient to raise mercury in a thermometer 2.7° F., the output of which is maintained indefinitely without any visible compensation to the heat-giving body. It is not to be supposed, however, that perpetual motion has been at last discovered. Physicists do not doubt that the effect brought to the knowledge of M. Curie has a cause, and investigation of that cause is regarded as being full of promise for the future."

Hypotheses of the cause of this apparent creation of energy continue to be made. One of the first was that radium and other radioactive substances absorb gravitational energy and that their curious behavior is due to this fact. Recent experiments by Geigel and Forch seem to show, however, that such absorption, if it exists at all, is extremely small. The experimenters proceeded by weighing masses of lead near which were placed quantities of radioactive material, on the theory that if this material absorbs the energy of gravity its presence should effect an apparent alteration in weight. *The Electrical Review*, abstracting an article in the *Physikalische Zeitschrift* (Leipsic), says that "Geigel was not able to detect any difference in weight in any of his weighings. Herr Carl Forch has repeated this work, using a more sensitive balance and conditions more favorable to detect a difference. A telescope was used to watch the balance. The radioactive material used in Forch's work was contained in glass tubes, and by arranging these in groups he was able to obtain a layer of active material twenty square centimeters (about three square inches) in area and from three to six millimeters (one-eighth to one-quarter inch) thick. This was placed about fifteen millimeters under

the lead, which was weighed. Observations were made and repeated a number of times, the results of which showed a deflection corresponding to about one two-hundred and fiftieth of a milligram, or, relatively to the lead mass, 1 part in 25,000,000. These results are believed to show that with the radioactive substance used in this case, at least, there was no absorption of gravitational energy greater than the figure given."

The chemists, on their part, have been trying to find out what are the relations of radium to other elements, to what chemical group it belongs, and what is its position in the so-called "periodic system" in which all the elements have been arranged. Two German physicists, Messrs. Runge and Precht, have attempted to get at this information through the spectroscope. Says the *Revue Scientifique*:

"The authors prove especially that the most intense lines of the spark-spectrum of radium are rigorously analogous to the strongest lines of barium, and to the corresponding lines of its congeners magnesium, calcium, and strontium.

"These last form groups of three pairs of lines, whose distances apart, in the case of the different elements, increase proportionately to the atomic weight. . . . Generally speaking, the authors put forward the theorem that in each group of related elements the atomic weight is proportional to a whole power of the distance in question. The value of the atomic weight of radium, thus calculated, is 257.8, a much greater value than that assigned by Madame Curie. . . . This larger value of the atomic weight of radium appears the more probable, in that it explains better the ease with which the element splits into electrons, as shown by its radioactivity."—*Translation made for* THE LITERARY DIGEST.

TO RESTORE DECAYED TISSUES.

A METHOD of rejuvenating decayed tissues that would be applicable to the human body would be worth a good many fortunes. Investigations along this line have been described at a recent sitting of the Academie Française by Prof. Lucien Daniel, but the process followed with success by Professor Daniel is only thus far practicable upon plant life. "However," says a writer in *The Scientific American Supplement*, "being so successful here, he may be tempted to essay further experiments, which will realize the dream of the early alchemists, and eventually confer upon the human family eternal youth without the aid of the fabled fountain." The writer goes on:

"Much as we poor mortals may regret the impossibility of his transfusing new life into our dying frames, we may yet find it interesting, if not hopeful, to follow the various steps pursued by Professor Daniel in counteracting the appearances of age which present such a marked characteristic in the whole organic world. He points out conclusively that with the help of various expedients the peculiar properties of plants may be considerably altered.

"Thus the ordinary florist with his sheltered conservatory may and does, by the application of heat and moisture, advance or retard the blooming time of plants. In certain plants it is also possible to promote a second blossoming and a second fruition in the same year, as with roses and strawberries. Furthermore, Daniel investigated the effects of grafting upon plants, and to what extent the nature of the scion wood was changed. He grafted tobacco upon the tomato; whereby the tobacco plant became, instead of an annual, a biennial plant; but the tobacco plant did not bloom until the second year. Having experimented with various sorts of beans, grafting one upon another, he finally obtained the seed of a new variety of bean which bloomed and bore fruit twice in the same year.

"The question of rejuvenation now occupied his attention, and he entered upon it with all the more zest, since till now no one had attempted to build up failing strength or vigor in plants or to make young and fresh such parts as threatened to decay and die, by grafting them upon youthful and thriving plants. In this case he worked with a plant which is found in the botanical gardens of Europe and America and is one of the first to bloom in the spring, the *Scopolia carniolica*. It belongs to the same family as the night shade, the potato, the belladonna, the hyoscyamus (henbane), and the tomato.

"This plant, the *Scopolia carniolica*, having borne its fruit, begins to die as early as the month of May. But at this time the tomato is just beginning to develop and grows extraordinarily strong. At this period Daniel grafted the dying shoots of the *Scopolia* upon the young tomato; and in spite of the appearances of old age shown in the scion before the grafting, after they had set new life began to spring up, new sprouts to shoot forth new branches put out leaves, and all became green and vigorous. Indeed, some of them blossomed again and bore fruit as in the early spring."

THE MISSISSIPPI FLOOD AND THE LEVEES.

THE recent floods of the Mississippi and the failure of some of the levees have led to renewed criticism of the levee system and of the engineers who planned it. Says the New York *Times*, one of these critics (March 23):

"One can not help feeling that there is cause for humiliation as well as for sorrow in the too familiar stories of widespread disaster that are now coming from so many parts of the great delta. Year after year enormous sums are expended in building and rebuilding these levees, and year after year they prove inadequate when they are tested by the inevitable spring floods. Of course the problem of restraining a river of such a size and with such a bed as the Mississippi is one of the utmost difficulty, and not equaled any where else in the world, perhaps; but American engineers are not accustomed to admit the existence of physical impossibilities, and they have been at work on this particular problem, now, for a long while, with results by no means impressive—except in their expense accounts. How long will it be before they admit that the best levees they can make are inadequate, and proceed with the devising of a system altogether different for attaining the desired end? We surely ought to be able, somehow, to avoid an annual tax of really frightful dimensions."

A defense of the system is undertaken by *Engineering News* (March 26), which remarks of this extract from *The Times* that "it would be difficult to crowd into the above space a greater amount of misinformation than is there conveyed." In the first place, the writer says, the levee engineers have been anticipating a record flood for several years, but lack of sufficient funds has hampered them in preparing for it. Inadequate as the levees are to protect against the abnormally high floods of every four to nine years, they withstand well the ordinary high water and so are well worth what they cost. Even when they overflow, the actual losses are local and much less than the casual newspaper-reader would be led to believe. The writer concludes:

"In thus defending the levee system and the engineers who have carried it forward to its present stage, we do not by any means claim that it is perfect in its present condition or that such overflows as those of the present year are likely to be a permanent condition in the lower Mississippi valley. The levee system is admittedly incomplete. It is being gradually added to year by year as the money for the work becomes available, and eventually the entire alluvial region will be protected by embankments high enough and strong enough to keep out the greatest floods."

Of *The Times's* assertion that the levee system must ultimately be changed for some better method of flood-protection, the writer says:

"The idea is strongly rooted in the popular mind that reservoir construction on the headwaters is the proper remedy for these great floods. . . . No such illusions are likely to affect the man who actually sees the lower Mississippi 'on the rampage.' The maximum volume of flow in the Mississippi below the mouths of the Arkansas and White rivers in the flood of 1897 was set at 1,740,000 cubic feet per second by Major Starling. Comparing this flow with the volume of water which will be stored by the new Croton dam, nearly the largest artificial reservoir of water

ever created, we find that the Mississippi flow would fill the reservoir behind that great dam in less than 41 minutes. Even if there were in that part of the Mississippi valley from which its floods come geological and topographical conditions suited to the construction of immense reservoirs (which is not the case), the cost of their construction would make the task wholly impracticable. Using a similar comparison, with the cost of the new Croton dam as a standard, Major Starling showed, in his book before referred to, that the reservoir construction to lower the Mississippi flood heights a single foot—if reservoirs could be built as advantageously as in the Croton valley—would cost fourteen times as much as the cost of raising the whole levee system one foot in height."

BIRDS PHOTOGRAPHED BY THEMSELVES.

THAT birds may be made to take their own photographs, or those of other birds, and that results may thus be obtained that are likely to add materially to our knowledge of natural history, is asserted by a writer in *Popular Mechanics*. He says:

"Making birds take their own pictures is the latest and most fascinating practise of the ornithologists. By this new process some new and remarkable pictures have been obtained, one of which is shown in the accompanying illustration. The birds are two young chicken-hawks, unconsciously photographed by their

YOUNG HAWKS PHOTOGRAPHED BY MOTHER HAWK.
Courtesy of *Popular Mechanics* (Chicago).

mother just as she was starting to feed them. The man who arranged the camera for the use of Mrs. Hawk was Robert Hegner, 9203 Pleasant Avenue, Chicago. He was disappointed that the mother did not get her physiognomy in the picture. Probably she was too bashful, but like all mothers she would never miss the chance of getting her babies photographed. . . . . .

"This process of bird photography is as simple as it is interesting. The camera simply takes the place of a trap, only that it does not imprison or harm the bird. The best results are obtained by placing the camera near the nest. A string is stretched from the shutter-release across the nest, and when the bird steps on or into the nest it pulls the string and takes a snapshot. Even after the young birds are able to leave their abodes they often make the nests their headquarters and return there to get the food brought by the parent bird. This is especially true of hawks and other of the larger birds that build their homes in trees. It was through this weakness for the nest that the splendid picture of the two young hawks, as they are about to be fed, was obtained by Mr. Hegner. Of course the process of taking nest pictures is greatly simplified when the nest is on the ground.

"But the nest is not at all an essential in making birds take their own pictures. They may be made to photograph themselves in the fields, in the yard, on the eaves of houses, on fences, and nearly everywhere, by merely baiting the piece of string that leads from the shutter. One late device is to place a piece of fat at the end of a wire electrically connected to the shutter of the camera. Timid birds, like the thrush, will approach the bait and pick it up. At once the shutter is moved by this action and an instantaneous exposure is obtained.

"To get photos of nocturnal birds the wire is arranged to light a little magnesium as it releases the shutter. Still another method of getting the pictures of birds in their natural elements is for the photographer to operate the camera himself from a hiding-place by means of a string or a long rubber tube. The tube is used where the shutter has a pneumatic release. Food is spread on the ground to attract the birds. By this process the photographer can watch the action of the bird and take the picture at the most desired moment. However, the best results have been obtained by the trap process of making the birds take their own photographs."

PROPOSED ABOLITION OF STEAM TRACTION IN SWEDEN.

THE substitution of electricity for steam over the entire railway system of a country is a huge undertaking, yet something of the kind seems likely to be carried out in Sweden. *The Electrical World and Engineer*, in speaking of the project, regrets that the United States is not to be the first to carry out so interesting a project. It says:

"That country [Sweden] has already been the scene of large activity in power-transmission operation, and considering the lack of an adequate coal supply even for operating the railroads, there is good reason for working the water-powers to their utmost. The present project contemplates the operation of the national railway system by electric traction, ultimately in its entirety. At first only sections would be transformed, and then as locomotives needed replacement electric locomotives would take their place, so that without the burden of an immediate heavy investment, and without the scrapping of valuable material, the change will be made complete. It is proposed to press into service both water-powers and the extensive peat-beds that are here and there found and which lie scattered, so that by utilizing both sources the distances of transmission will not be excessive even from the standpoint of present practise. Mr. Dahlander, the engineer who has made the preliminary report, figures out a net annual saving of about two million dollars a year by the change, a sum approximately equal to the entire motive-power expense on the electrical system; and in addition the importation of coal for railway purposes will become unnecessary, which from the governmental standpoint is very desirable.

"The project, as a whole, strikes one as singularly sane and reasonable. It does not attempt the extraordinary, nor does it pass beyond the conservative limits of present practise. In fact it is conspicuous for the absence of sensational features of any kind. . . . . .

"We have done marvels in this country in the development of electric traction for certain purposes and along certain canonical lines, but tho the larger work has been discussed and proposed nothing has yet come of it. There is a great gap that yawns between the best and most extensive interurban road and the most modest of railway systems. Not long ago we had occasion to comment on a paper by Mr. Vanderbilt dealing with this larger problem of electric traction. From his standpoint the outlook was not encouraging, and it is safe to say that it will remain discouraging until we are ready to cut our coat according to the cloth and treat a trunk line as a distinct entity having characteristics of its own, and not merely as a bigger street-car line to be operated in the good old way or left to its fate. We trust that the Swedish project will be pushed to a final development and to construction, tho it is a bit annoying to think of the first point being scored away from home."

Electric Test of the Beginnings of Life.—According to a method invented by Augustus Waller, we may discover whether or not life exists in a tissue or an organism by observing certain electric reactions that do not take place after death. Waller has recently been applying this method to discover at what exact time a hen's egg begins to display signs of life within it. According to a report read before the London Royal Society, this period varied from twenty-four to sixty-two hours after the beginning of incubation. Says a writer in the *Revue Scientifique*:

"Eggs older than this all gave the reaction, except one twelve

days old; but the absence of the reaction was explained when it was broken and found to be spoiled. The exceptions all confirmed the rule, and the rule is that from the earlier period of development of the egg the reaction that characterizes life is present, while it is absent when the development fails or is arrested."—*Translation made for* THE LITERARY DIGEST.

CHARACTER READING FROM PHYSICAL SIGNS.

AN interesting investigation that has been going on for six years past under the guidance of Prof. Karl Pearson was described by him in a recent lecture at the Royal Institution, London. Professor Pearson and his colleagues have set themselves the task of trying to associate external physical characteristics with moral attributes, if possible. Says a writer in *The British Medical Journal*:

"For six years he had been obtaining facts from observations on school children, and he had now 6,000 records, half being of boys and half of girls. The observations on boys were, however, the only ones which had been classified. The folk-beliefs of different countries were also worthy of scrutiny. For instance, as far as he was aware, the color of Judas Iscariot's hair was not recorded, and yet by the old masters Judas was painted with red hair and in directions for passion plays his representative was ordered a red wig. This he supposed was to be connected with the traditional belief that red-haired people were more inclined to vice than others. Similarly blue-eyed people were said to be good, round-faced people to be foolish, and long-headed people to be shrewd. His method was to formulate charts that could be filled in with a great number of selected characteristics, and to circulate these widely among schools of every grade. In some cases the results bore out tradition wonderfully well, but in others there was great discrepancy. Conscientiousness was least found among dark-eyed people and most among blue-eyed. In association with the color of the hair it decreased in the stages of red, fair, brown, dark, and black. Red-haired boys were more quick-tempered and more delicate, dark-haired more sullen and less delicate. There seemed to be a good deal in the attempt to read character by handwriting, and the investigation of 600 specimens indicated that bad writing afforded a warning note. In regard to the association of a large head with intelligence, data from 1,000 Cambridge undergraduates showed that on the whole the head was longest in those who took first-class honors and shortest in 'poll' men, but there was not enough correlation to render prediction possible. It was definitely found that a capacity for athletics in a boy involved also an appreciably higher intelligence, and the converse also held true. The tendency was for the athletic boy to be healthy, intelligent, quick-tempered, self-conscious, noisy above the average, and distinctly popular. The real fool and oaf were, he believed, certainly to be found in the field—but always looking on. Many of Professor Pearson's conclusions would receive strenuous opposition if a plebiscite were taken. Clear handwriting, for example, may signify moral excellence, but illegible penmanship has been more generally correlated in the popular mind with high intellectual development. It is more probably a family trait like an aptitude for outline drawing, and it certainly is characteristic of certain families, not all the members of which are paragons of virtue. Moreover, taking the individual, variations occur in the legibility and especially in the evenness of his writing in correspondence with defects of physical health or with times of mental stress. Similarly it would not be generally held, we imagine, that athletic boys were more healthy than the non-athletic so much as that the healthy boys were more inclined to athletics."

The Juice of Typhoid Bacilli as a Typhoid Cure.—Press despatches affirm that Dr. Allan Macfadyen, director of the Jenner Institute in London, has obtained an anti-typhoid serum by expressing the juice from typhoid bacilli, first rendering them brittle by freezing them with liquid air. Says a despatch to *The Sun* (New York):

"Dr. Macfadyen found that by crushing the microscopic cells of the typhoid bacillus in liquid air the intercellular juices can be obtained apart from their living organism, and that these juices are highly toxic. By injecting them in small, repeated doses into a living animal its blood-serum is rendered powerfully antitoxic and bactericidal: that is to say, it becomes an antidote alike to living typhoid bacteria and to the poison that may be extracted therefrom. . . . . .

"Regarding the crushing of bacteria the question naturally arises by what unimaginable accuracy of grinding can these infinitesimal organisms be broken so as to release their intercellular toxins. The answer that the crushing is done in liquid air does not explain the whole of the marvel, for it is known that the intense cold of liquid air does not affect the vitality of bacteria, but when thus frozen hard they become brittle, and, notwithstanding their almost inconceivable minuteness, can be completely broken up by trituration and will under no subsequent conditions show a sign of bacterial growth."

The Passing of the Wires.—The dismal forebodings of those who fear that wireless telegraphy is doomed to failure are evidently not shared by *The Electrical World and Engineer*. In a leading editorial this paper derides those who take this view, and points out to them that over short distances the newer method is even now replacing the old. Says the writer:

"Those who have attended the despatch of wireless telegraph messages across the Atlantic have described the use of wool in the ears in order to deaden the sound caused by the disruptive discharge across the gap, that sets the ether in a tingle and might burst an ear-drum, so violent is the shock to the auditory organs. According to the wireless advocates this plugging of the ears with wool has been characteristic also of cable managers in regard to the news of wireless work; and we do not think they are likely to find much material for sympathetic comment in the remarks of Mr. George Gray Ward at the annual meeting of the Commercial Cable interests. That veteran cable manager maintained his cheery and optimistic attitude in addressing the stockholders and said: 'Nothing has occurred since I last addressed you to cause us to modify the conservative estimate then expressed, and which I confidently repeat, that telegraphy by means of wires has little to fear from the competition of telegraphy without wires. For the benefit of those who do not share my confidence, I may say that the etheric waves will be as obedient to us as to anybody if it should ever be found practicable to dispense with cables and wires.' . . . . .

"By one of those coincidences of which all history is full, it happened that just as Mr. Ward was standing up for cables, the first cable should be abandoned for wireless methods within view of the room where he was speaking—namely, the Government cable from Fort Wadsworth across the harbor to Sandy Hook. Not much of a stretch, perhaps, but still a cable, lying where some of the earliest cablework in this country was done. As a matter of fact, the claim for the first supersession of cable by wireless might be made for the Guadeloupe-Martinique service, where the volcanic eruptions have broken all the cables, sunk the cable ship, and rendered the wireless essential for communication."

The latest press reports from England, which announce that the London *Times* is now printing daily despatches "by Marconigraph," lend force to this view of the subject.

SCIENCE BREVITIES.

THE possible effect of wireless-telegraphy sending-stations upon the metal pipes and framework of modern high buildings is discussed by *The Electrical Review*. Says this paper: "We have here vertical conductors of a height approximating those of the usual sending wire, and should the electrical constants of this pipe give it a period of oscillation approximating that impressed upon it from the sending-station, will not this pipe become 'charged' and who can tell with what effects? The probable effect of a powerful wireless telegraph sending-station within a large city certainly seems to be a question deserving of the most careful and thorough consideration."

THE life of an express-locomotive in England, according to the *Echo des Mines* (Paris), is estimated at 25 years; that of a freight-locomotive at 26, that of an ordinary passenger-engine at 25, and that of a switch-engine at 27. "In the United States the life of an express-locomotive is 18 years, of a freight-engine 16 years, of a passenger-engine 19 years, and of a switch-engine 22 years. In 18 years, however, the American machine has run 2,000,000 miles—double the average travel of an English locomotive. . . . In other words, the American engines live hard and therefore die young. In France locomotives really live to old age, the average life is 29 years."—*Translation made for* THE LITERARY DIGEST.

THE RELIGIOUS WORLD.

WAS THE UNIVERSE CREATED FOR MAN?

ALFRED RUSSEL WALLACE'S revival of the theory that this earth is at the center of the stellar universe, and is the only habitable globe [see THE LITERARY DIGEST, March 21 and 28], has aroused great interest in the religious world. In many quarters his pronouncement is hailed as a vindication of the older forms of Biblical interpretation and Christian belief. "Science," observes the Boston *Pilot* (Rom. Cath.), "has apparently turned upon her tracks, as she has a way of doing, and has left her infidel votaries in the lurch." *The Evangelical Messenger* (Cleveland) observes that if Dr. Wallace's conclusions are true, "then the Mosaic cosmogony, which makes the earth the central theater of divine activity, and the scene of the display of God's highest wisdom, love, and energy, man, the culminating form of living organisms, and hence properly also the theater of redemption, which is the ultimate manifestation of the glory of God, is strictly scientific." The same paper continues:

"Man, created in the image of God, endowed with immortality, and capable of becoming a partaker of the divine nature, is the one being who is at once a part of the created universe, and able to stand apart from it and make it the object of his contemplation and study. He is at once the interpretation and realization of the Creator's purpose and the interpreter of the universe. In his body matter reaches its finest fiber and its noblest function as the organ of an intelligent, self-volitionating spirit. In his spirit creation reaches the summit of creaturely excellence, the nearest approach to the Creator Himself, infinite from what God is in the infinite. And in redemption, accomplished through the incarnation by and atonement through the Son of God, as the result of divine love, the earth with its crowning creature, man, becomes the center of divine interest and solicitude. As far as we can understand, there could not be even in Orion, or in heaven, a more perfect or sublime revelation of the ethical glory of God than was given on Calvary. Here we walk along the summits of the mountain peaks of divine revelation to a creature. Sinai, Horeb, Calvary, and Olivet mark the sky line of the universe, where the material universe touches the illimitable heavens."

An editorial writer in the Cincinnati *Herald and Presbyter* declares:

"The pendulum of scientific investigation which seemed not long ago to be swinging away from evangelical religion is evidently swinging back, and coming, more and more, into harmony with what is revealed in the Word of God. We welcome the reaction not for the sake of our holy religion, for it is impregnable, but for the sake of the scientists. Realizing man's place in the universe, they ought to believe in him who became a man in order to save our fallen race and to give the universe a conception of the attributes of God far beyond any that is revealed in the revolutions of suns and systems, in what has been called 'the harmony of the spheres.'"

Many of the religious papers are non-committal in discussing this matter. *The Independent* warns preachers and theologians to use Dr. Wallace's arguments "with caution." And the Chicago *Interior* (Presb.) comments:

"The learned Alfred Russel Wallace—whose merits as a scholar are obscured by that invincible popular illusion which sees in him only a hazy double to Darwin—certainly constructed a pretty fabric of argument when he set out to prove by astronomy that our earth is the central body of the physical universe. But it is obvious that his data are not sufficient to establish a conclusive proof, and even more obvious that if his proposition was proved, he would still be far away from the ultimate aim of his reasoning—to show a scientific probability that God's chief creational purpose converged on our planet. There is no tie by which to connect such a premise and such a conclusion, for we have no means of knowing that God would prefer the central planet of the universe above a minor one for working out the supreme problem of His creative plan. For ourselves we do thoroughly believe that man, as he lives just here on this tiny earth, is in essence and possibilities the most sublime existence in all the range of non-divine being—the chief love and delight of God. But it is a far more satisfying assurance of that fact which can be drawn from the direct word of the Father and from the instinctive sense within us of our own dignity, than we shall acquire from any of the deductions of astronomy. However, Dr. Wallace has put ready to our hands an excellent fencing foil for use against those illogical sophists who think to minimize man by minimizing the caravansary that for a brief time entertains him, and for this service gratitude may accumulate around his memory in generations long after he has passed to understand this profound problem better at the real center of the spiritual universe."

The Rev. Frederick Campbell, D.Sc., has the following to say, in the New York *Observer* (Presb.), in rebuttal of Dr. Wallace's conclusions:

"The Bible recognizes the plurality of worlds; when it speaks of heaven it commonly employs the plural word, 'heavens.' 'The Father's house' includes 'many mansions,' and that they are inhabited has been proved again and again by angelic visitations to this world. Heaven is not one world, but all worlds—all but this one, morally detached from the universe, but not strangely the object of the supreme solicitude of the Son of God, who came that he might 'gather together in one all things both which are in heaven and which are on earth,' and thus by his atoning work close up the great breach. To die and be saved is to be released from earthly confines, and to be given a bounding freedom among the exalted beings with whom the starry universe teems. But to die and be lost is to be 'cast into outer darkness,' as the Savior himself teaches. And if it should be that astronomy has found heaven in the stars, it is not unreasonable to think of hell as located among those regions described by Professor Wallace as 'dark patches in the heavens, where hardly any stars are visible, and those seen are projected on intensely dark background,' a region beyond 'the outer limits of the starry universe.'"

A PROPHET OF UNITARIANISM.

A BIOGRAPHY of more than ordinary importance has recently appeared in the life of William Ellery Channing, by John White Chadwick. Apart from the singular charm of Dr. Chadwick's style, the character of Channing and his eminence in the list of great divines who figured in the controversies of the earlier part of the nineteenth century make this biography well worthy of notice.

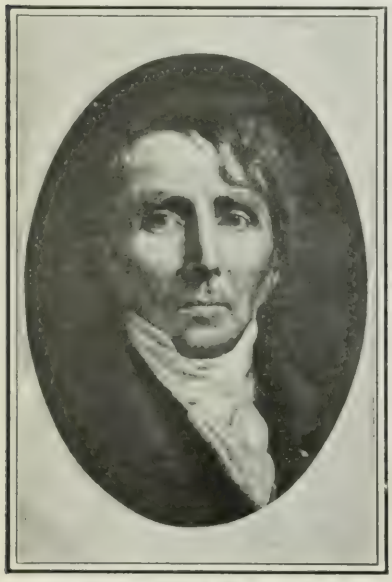
Channing was a native of Newport, and the biographer gives us some interesting descriptions of that place as Channing knew it during his boyhood, when it was "bright with the red of English uniforms and the white and gold of our gay French allies," and "distinguished by the presence of Washington and Rochambeau walking up the long wharf together to their joint reception in the town." One feels the human sympathy of the narrator when he tells us that the boys learned to swim by disobediently running away from the eyes of stern parents; that they were detected by the wet ends of their hair, and duly whipped; but that Channing, being an obedient boy, escaped the whipping, but never learned to swim, whereat he sorrowed all his life.

The biography traces Channing through his school and college career. A spasm of asceticism and quite too severe bodily discipline resulted in spoiling the sunny health of his childhood, and he never recovered normal physical strength. But this was a day when sickliness and godliness were not as clearly differentiated as they are now. When Channing entered the ministry, finding his first pastorate in Boston, the schism between Unitarian and Trinitarian Congregationalists had not begun. He seems to have retained later than many of his Unitarian compeers the principal foundations of a supernatural faith. He assumed the unity of the Bible, but argued for a process of dis-

examination, holding that the more obscure passages should be interpreted by those that were clearer, and those that were repugnant by those that were acceptable to reason and the religious nature. As his biographer remarks: "So much of the Bible was inspired as appealed to his moral and religious sensibility."

Tho Channing at length joined the Unitarian exodus, he seems to have always been of the opinion that this schism was unnecessary. The difference between the two camps seemed to him properly to have been very much a question of vocabulary, tho he repudiated the essence of the Calvinistic system. The truth was that Channing doubted whether anybody really held the implications of Calvinism sincerely. He said in his early ministry:

"Trinitarians, indeed, are apt to suppose themselves at an immeasurable distance from Unitarians. The reason I think is that they are surrounded with a mist of obscure phraseology. Were this mist dispersed, I believe they would be surprised at discovering their proximity to Unitarians, and would learn that they had been wasting their hostility on a band of friends and brothers."



WILLIAM ELLERY CHANNING,
At the age of fifty-nine.
Courtesy of Houghton, Mifflin & Co.

Among the estimates of Channing gathered in Mr. Chadwick's volume is the following from William Lloyd Garrison:

"He certainly had no ardor of soul, but a mild and steady warmth of character appears to have been natural to him. I do not now think that he was timid in a condemnatory sense; but his circumspection was almost excessive, his veneration large, and distrust of himself rather than fear of others, led him to appear to shrink from an uncompromising application of the principles that he cherished. In the theological arena he exhibited more courage than elsewhere; yet, even there, he was far from being boldly aggressive, for controversy was not to his taste. In striving to be catholic and magnanimous, he was led to apologize for those who deserved severe condemnation. He was ever reluctant to believe that men sin wilfully, and therefore preferred to attack sin in the abstract than to deal with it personally."

Channing seems to have felt even in his day the weight of the world's social inequalities, and many of his utterances on social questions sound extremely modern. For example:

"Mightier powers than institutions have come into play among us,—the judgments, the opinions, the feelings of the many; all the hopes of stability that do not rest on the progress of the many must perish." "The present selfish, dissocial system must give way." "No man has seized the grand peculiarity of the present age who does not see in it the means and material of a vast and beneficent social change; . . . a mighty revolution not to stop until new ties shall have taken the place of those which have hitherto connected the human race. I have no fear of revolutions. . . . What exists troubles me more than what is to come." "Society ought to be troubled, to be shaken, yea, convulsed, until the solemn debt to the poor and ignorant is paid."

Dr. Chadwick thinks that if Channing were to return to us he would be less interested in our material progress, in our electric improvements and new machines than in the increase of the divine amenities of Christian charity, and the growth of cooperation and spiritual interests generally. He closes his interesting book with this passage:

"It is impossible for any one to study Channing long and carefully and not feel that if, from any height, he sees and knows the present order of the world, he finds the realization of his hopes far less in the spread of those particular opinions which received his intellectual assent than in the softening of sectarian animosities, the diminution of sectarian zeal, the kinder mutual regard of different bodies of believers, the enlarging sympathy of the world's great religions, and the labors of those men who are doing what they can to lessen party spirit, to improve social conditions, and to uphold, in spite of proud contempt and rancorous opposition, the things that make for peace."

The Boston *Christian Register*, the representative journal of the Unitarians, has the following suggestive comment on Channing, in an extended review of this book:

"Channing's thoughts have so far become our intellectual currency that we meet them with no thrilling surprise, and yet a further word here asks for utterance. In a suggestive passage Mr. Chadwick distinguishes between Channing's beliefs and his principles, the doctrines he occasionally expounded and the gospel he constantly intoned. The distinction is apparent, and the relation of the two to our minds is an obvious contrast. The doctrines exercise little of the spell of their first enunciation. They are not novel; and, in the growth of thought, we have, to some extent, departed from them. But Channing's principles—the dignity of human nature, the rights of reason, the rights of conscience, personal and spiritual freedom—on which his doctrines were ever lifted, how of these? Dare we disown them? Have we advanced beyond them? Certainly, they have not been conspicuous of late; but, meeting them again after the darkness and horror of recent years, they may well bring to us the joy of sunrise after arctic night. Of these principles our author is an apostle, and his book a fervid proclamation."

The revival of interest in Channing, who died more than sixty years ago, has recently found expression in Boston by the erection of a statue to him in a prominent location in the Public Gardens.

RELIGIOUS SIGNIFICANCE OF THE CZAR'S DECREE.

THE religious bearings of the manifesto issued by the Czar of Russia are being pretty thoroughly discussed in the American church papers, and some interesting facts in relation to religious conditions in Russia are elicited. The clause in the new decree which attracts most attention is that in which the Czar declares: "We . . . have deemed it expedient to strengthen and decree the undeviating observance of the principles of tolerance laid down by the fundamental laws of the Russian empire, which, recognizing the Orthodox Church as the ruling one, grant to all of our subjects of other religions, and to all foreign persuasions, freedom of creed and worship, in accordance with their rites." This paragraph, which has all the appearance of inaugurating an important reform, marks in reality merely a continuation of the *status quo*. Says *The Outlook*:

"Mohammedans have had their mosques, Jews their synagogs, and Roman Catholics and Lutherans their churches in Russia for many years, and have worshiped in them, according to their respective creeds and rites, without let or hindrance. The thing that is denied in Russia is the right of an Orthodox Christian to think for himself in religious matters, and, as the result of such thinking, to change the form of his religious faith and leave the Orthodox Church. The denial of that right is not affected in the slightest degree by the Czar's proclamation of religious liberty. The law, as it now stands, is as follows:

"All persons who leave the Orthodox Church for the church of any other Christian denomination shall be turned over to the spiritual authorities for admonition and instruction, and shall then be dealt with in accordance with ecclesiastical rules. Until they shall return to Orthodoxy, their minor children shall be taken in charge by the Government, in order that they may not become perverted, and their lands, if occupied by Orthodox

Christians, shall be put under guardianship and they shall not be permitted to live thereupon. (Penal Code, Revised Edition, Section 188.)

The punishment for inducing or persuading another person to leave the Orthodox Church is much more severe. The code says:

For inducing an Orthodox Christian to become a member of any other Christian church, the guilty one shall be deprived of all special, personal, and acquired rights, and shall be exiled to Siberia, or imprisoned at hard labor, for a period of from one year to a year and a half. (Penal Code, Section 187.)

For persuading or inducing an Orthodox Christian to adopt the Jewish or any other non-Christian faith, the guilty one shall be deprived of all civil right and sent into penal servitude for a period of from eight to ten years. (Penal Code, Section 184.)

"If a man or woman who is a member of the Orthodox Church marries a woman or man who is a Lutheran or a Roman Catholic, the children must be trained up in the Orthodox faith. If parents disobey this law, they are to be punished with imprisonment for a period of from eight to sixteen months. (Penal Code, Section 190.) These laws, and many others which limit freedom of conscience, freedom of teaching, and freedom of speech in religious matters, as well as freedom to criticize and discuss the Bible and the church, remain untouched by the Czar's decree."

The Czar's proclamation has naturally aroused great interest in the Jewish press of this country. An editorial writer in the Philadelphia *Jewish Exponent* observes:

"Despite the fact that no great immediate effect can be expected from the Czar's decree, I am not disposed to consider it lightly. It may be that the evils from which the Jews in Russia suffer are but indirectly touched upon. The actual restrictions to religious liberty from which the Jews in Russia suffer are not as great as might be supposed. Some advantages are offered to those accepting orthodox Christianity; some restrictions upon election of rabbis; a limitation of public prayers to synagogs and houses of prayer, and a limitation of synagogs to places where there are 80 Jewish houses, and 'houses of prayer' to where there are 30 Jewish houses. Such are some of the main purely religious restrictions so far as they are contained upon the statute books. If these were all at once abolished Jewish misery would not be sensibly decreased.

"But the Czar's decree marks a tendenz; it indicates a policy; it declares an irrevocable decision with which all subjects are called upon to cooperate and officials are commanded to carry out. With the grant of religious liberty is coupled the grant of some measure of local self-rule; of some larger degree of individual liberty and freedom from enforced labor; for measures like these the Czar declares the people are now ripe. No man in this country need be told that religious liberty brings civil liberty in its train; every progressive step tells for the Jew. Without indulging in too sanguine anticipations, it may still be maintained that the Czar's decree marks the dawn of a brighter day for the Jews as well as the other inhabitants of Russia. It is not unworthy of the man who gave the initiative to the International Court of Arbitration at The Hague."

A St. Petersburg despatch to the Philadelphia *Press* furnishes the following information in regard to the religions of Russia:

"According to the latest available statistics there are in Russia, in round numbers, 95,850,000 Orthodox Greek Catholics, 12,150,000 Roman Catholics, 12,150,000 Mohammedans, 6,750,000 Protestants, 4,050,000 Jews, 1,350,000 United Church and Armenians, and 2,700,000 followers of other faiths. . . . . .

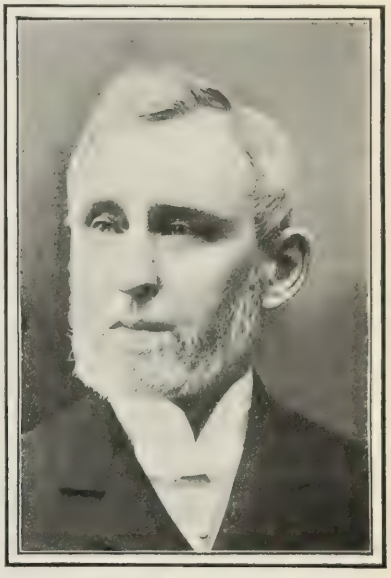
"In the orthodox church the Czar is the supreme head, with power to appoint to every office in the church, and to transfer and remove incumbents, limited only by the right of the bishops and prelates to propose candidates. Practically, however, the Procurator of the Holy Synod, the ecclesiastical bureau of the Government, has usurped many of the Czar's powers in church matters.

"The empire is divided into 5 bishoprics, which, according to the last published report, were under the metropolitans, 14 archbishops, and 48 bishops. At that time there were 65,721 churches, with 58,102 priests, and 497 monasteries and 268 nunneries, with 8,076 monks and 8,942 nuns. The management of church affairs is in the hands of 60 'consistoriæ.' The imperial budget for 1900 included 23,559,685 rubles for the expenses of the holy synod."

A DEFENSE OF THE "OLDER ORTHODOXY."

AN article which, in the opinion of the Cincinnati *Herald and Presbyter*, "voices a positive sentiment and purpose in the Presbyterian and other evangelical churches," and which is attracting some attention in religious circles, appears in a recent issue of *The Congregationalist and Christian World* (Boston). It is entitled "The Old Tradition and the New," and is from the pen of Prof. Willis J. Beecher, of Auburn Seminary. Professor Beecher is a theologian of the old school, and his paper is an attempt to define "the issues at stake between the older orthodoxy and the type of higher criticism now currently denominated the modern view." He writes:

"Higher critics of reputation report that they find the doctrines heretofore held by Christians to be either groundless or positively false in such matters as the incarnation, the birth of Jesus, his miracles, his resurrection, his atonement, his mediatorial character, many of his specific teachings, a large part of his biography, the personal Holy Spirit, the individual interest taken by God in His creatures. If any one thinks that this is too sweeping a statement of the case, let him take a full course of reading in the 'Encyclopedia Biblica,' or in other works of that stripe. After that, let him ask himself: Provided these men are correct, can we be sure that even the peerless humanity of Jesus is anything more than a figment of the imagination? Provided they are correct, is the fatherhood of God anything else than a figure of speech?"



PROF. WILLIS J. BEECHER,
Of Auburn Seminary.

Professor Beecher proceeds to a statement of the attitude adopted by the theological school to which he belongs:

"At the outset of an investigation we do not assume it to be a fact that the Bible is uniquely inspired; but we equally avoid the assumption that it is not so inspired. We do not assume it to be a fact that the statements of the Bible are all thoroughly truthful, but we also avoid assuming that they are untruthful. We are ready to recognize elements of fiction in the Bible to any extent to which the evidence actually shows that they are there. We are aware that fiction, whether in the form of parable, fable, allegory, poem, myth or legend, may be as truthful in its own proper meaning as fact can be, and may teach the same spiritual lessons which it would teach if it were fact. But we insist that questions of this kind shall be decided upon evidence and not according to the exigencies of some preconceived theory. And in dealing with the evidence we insist that the testimony of the Bible on any point shall be examined before it is rejected."

There are many thinking men, continues the writer, who are entirely unwilling to accept the radical conclusions of the higher criticism in such matters as "written revelation and miracle and prayer and the personal Holy Spirit and the person of Jesus," who yet allow themselves to be lined up with agnostics in the attack upon old-fashioned orthodoxy. "This seems to me," he says, "a forced and unnatural state of things. It is a party division which separates men who ought to be together, and brings into alliance men whose views are really antagonistic." We quote further:

"The difference of method, our difference with the higher critics

of this class, is important; but it is insignificant compared with that which separates the higher critics who accept the Jesus of the Gospels as supreme Lord from the other higher critic who regards Jesus as a rather remarkable man, born no one knows where, who somehow became the focus of the imagination of the generations that followed him, thus giving rise to that mass of legendary narrative, half of it incredible and the other half but partly true, now known as the four gospels. Is it too much to ask that the first of these two higher critics shall be outspoken in the matters in which he differs with the second? This matter in which he agrees essentially with the men of the older tradition is far more important than the matters in which he disagrees with them. Is he loyal to his convictions if he without protest simply stands by his agnostic ally? Surely there ought to be here a new alinement of forces."

Professor Beecher says in conclusion:

"Fully conscious that the theories of the past need improvement; acknowledging that the present revolution is in part a revolt against wrong ideas and methods; appreciating the great light from exploration and greater light from linguistic studies which have arisen within the past sixty years; recognizing the good work which literary criticism has done at many points; holding our minds open to every tested discovery of truth from every source; we are yet certain that there will be no final settlement of Biblical questions on the basis of the higher criticism that is now commonly called by that name. Many specific teachings of the system will doubtless abide. But so far forth as it goes upon the assumption that statements of fact in the Scriptures are pretty generally false, so far forth it is incapable of establishing genuinely permanent results."

A CATHOLIC ESTIMATE OF MRS. WARD'S "LATTER-DAY GOSPEL."

THE prominence of the religious motive in almost all the novels of Mrs. Humphry Ward has led many readers to speculate as to her religious philosophy. Miss M. M. Mallock, sister of the well-known English author, Mr. W. H. Mallock, contributes an article on Mrs. Ward's "Latter-Day Gospel" to the March issue of *The Messenger* (Rom. Cath., New York). By a curious coincidence the article immediately preceding hers deals with her brother's latest book, "Religion as a Credible Doctrine," and discusses his "entanglement" in much the same spirit as that in which Miss Mallock, who is a convert to Roman Catholicism, discusses the religious attitude of Mrs. Ward. Miss Mallock writes:

"In the two latest of her works, viz., 'Eleanor,' and also in 'Lady Rose's Daughter,' Mrs. Ward has, to some extent, shifted her earlier ground; but, from 'Robert Elsmere' to 'Helbeck of Bannisdale' inclusive, two main subjects are to be met with, one or the other of which almost continuously engages her attention, and to which all else of plot and character is made subservient—these are:

"(1) The claims of a new philosophic 'Christianity,' as Mrs. Ward persists in calling it, to supersede the Christianity of the church and the Gospels.

"(2) The claims which, in the light of this special modern cult, are possessed by Poverty upon Riches.

"It is upon an examination of the principles underlying Mrs. Ward's treatment of both subjects that I propose here to enter.

"Out of the five novels ending with 'Helbeck of Bannisdale' there are three in which what may be described as religious controversy plays a main part. These so far resemble one another that in all of them the reader's attention is directed, in the first place, to two antipathetic ideals, secular and religious—and in the next to a third, or philosophic ideal, differing from both the others, and supposed to include within itself the truths which both the others symbolize.

"'Robert Elsmere,' 'David Grieve,' and 'Helbeck of Bannisdale,' form in this sense a continuous series; and each of them brings something toward the completion of the new Ark of Refuge, in which Mrs. Ward, like another Noah, invites us to sail safely across the Flood of scientific materialism."

Taking Mrs. Ward's "Gospel" as a whole, two main ideas are prominent, we are told. One, the idea of the Sacred Person of the Christian Trinity as merely a supremely perfect example of our common humanity, is fully elaborated in "Robert Elsmere." The other, and really the more important of the two, is but slightly foreshadowed. It is nothing less than the substitution for the God of Christianity of something very nearly resembling Schelling's conception of the Absolute; and this conception undergoes further development in "David Grieve," whose mental and spiritual starting-point is altogether a contrast to Elsmere's, since he has never occupied anything but an outside attitude toward Christianity. In "Helbeck of Bannisdale," the third in this series of controversial novels and one which Miss Mallock regards as a much more complex piece of work, the same conception is still further developed, and "some final touches are given to the Christianity of the future which place beyond all question its total absence of claim to call kindred with the Christianity of the past."

Miss Mallock contends that Mrs. Ward not only has no right to call her gospel Christianity, but that she ought not even to call it Theism. It is only a phase of pantheism which sees in the soul, conscience, will, not a *creation* of God, entirely separate from Him, but the *emanation* of a supreme Intelligence with which it is essentially one,—conception in one shape or another as old as conscious thought itself. Continuing, she declares:

"In Theism, and in Christianity as Theism, two determining conceptions have place, both of which Mrs. Ward altogether eradicates. These are: (1) The relationship of man to God as that of creature to Creator; and (2) the existence, not of a spiritual order merely, but distinct and apart from this—of a *supernatural order also.*

"In virtue of the first of these conceptions, Theism, and Christianity as Theism, postulates an equality of all men in the sight of God, more absolute than that of the wildest socialist dream; and in virtue of the second it holds out a *supernatural beatitude*, as something which all may equally attain, and as being equally the true end of all."

Miss Mallock pays tribute to the "earnestness of purpose" and "absence of rancor" which Mrs. Ward brings to the very weighty problems she has chosen to grapple with through the medium of fiction, believing her "supreme gift as lying more than anywhere else in her wonderful descriptive faculty." She concludes her article with the following paragraph:

"Returning for a moment in conclusion to what, from a Christian point of view, gives to Mrs. Ward's work its real and serious importance, this may be summed up by saying that not only does it reflect in a striking manner many salient features of the age, but that it gives form and voice to a conception which, while inherently opposed to Christianity, is at the same time strongly attractive to certain minds in which Christianity has lost or is losing its hold. This conception is pictured by Mrs. Ward herself as leading by a short cut straight into the purest and most exalted Theism. That its legitimate goal is not this, but, instead of it, the ancient *cul-de-sac* of pantheism, is the fact which it has been the object of the present article to demonstrate."

RELIGIOUS NOTES.

THE Free Religious Association, of which Emerson was one of the founders, will celebrate the centennial of his birth by devoting the principal session of its annual convention in May to the subject of "Emerson's Religious Influence." It will also hold an "Emerson Conference" in July, with morning sessions in Concord and evening sessions in Boston.

Christendom is the name of a new undenominational religious weekly to be issued in Chicago in April. Its editor will be Shailer Matthews, Dean of the University of Chicago Divinity School, who will have the cooperation of Dr. Frank W. Gunsaulus, Dr. William Douglas Mackenzie, Dr. Charles M. Stuart, Prof. H. L. Willett, the Rev. J. M. Campbell, and Mr. J. R. Slater.

FOREIGN TOPICS.

CRITICAL POSITION OF THE BALFOUR MINISTRY.

IT would be too much to say that recent predictions of the speedy fall of the Balfour ministry—made in certain organs on the continent of Europe—have any foundation in fact. But the tone of English press comment reveals a dissatisfied state of public opinion. This dissatisfaction is further reflected in a series of astounding defeats sustained by the Conservatives at recent parliamentary by-elections in their own strongholds. Three important causes are assigned by the newspapers for the re tion that has begun to set in against the ministry. First is its internal policy as exemplified in the Education act and in the unmilitary style of the mooted army reforms. Secondly, British foreign policy is pronounced amateurish and stupid—witness Venezuela and the poor results achieved in Asia. Finally, there is a vague fear that the imperialist policy in South Africa keeps the word of promise to the ear and breaks it to the hope. Mr. Chamberlain's return from his grand tour proved to be a less triumphant occasion than had been anticipated.

A DREAM OF ST. PATRICK'S DAY.
—*Punch* (London).

Collateral circumstances are not wanting to deepen the ministerial gloom. An education bill for London is impending and there will be a warm contest over it. The Irish Land bill is to be a very serious problem indeed, and the prosecution of Mr. Whitaker Wright seems to involve hints of ministerial reluctance to take up the case of that gentleman at all. *The Daily News* (London), a Liberal organ, remarks:

"The country is tired of giving the Government notices to quit. It has taken to shouting them. The ministry is like a presuming guest who will not take a hint to leave your house, and has to be dropped out of the window. The wall is scribbled over with handwriting. The Government have thought it bravery to go on ignoring every warning. They have passed from one defiance to another. Mounting on the ruins of the great provincial school boards, they are threatening the school board for London. . . . It is not with the consent of the British working classes that the Government has defied the first principles of religious equality. It is not with their consent that it has waged a warfare against all the things that Englishmen hold most dear—the right of combination, the purity of politics, the freedom of trade, the impartiality of justice. The nation has looked on at this debauch with horror and aversion. But it was like a poor animal that is tongue-tied by some hellish drug, and has to suffer without the relief of sound. The automatic majority won at a false election on a spurious issue moved doggedly through the lobbies to register an unwilling decree. The benches were denuded of the voices that should have protested against the murder of English rights. The men in possession determined to do their worst before they were ejected. For three years the Government have been acting like burglars who have got into a house by false pretenses, and proceed with feverish haste to fill their pockets with the plunder before they are disturbed. But their time is nearly up. The hue and cry is afoot. The shout of 'Stop thief!' is ringing through England. The murmur of last year is growing to a clamor that can not be denied."

The Conservative organs are stoutly defending the ministry. They evade, nevertheless, the Liberal allegation that the present Parliament was elected on a "snap judgment" while the Boer war was raging, and is now legislating in defiance of public opinion on subjects which the constituencies have not passed upon. The following, from *The Standard* (London), shows the Conservative point of view:

"No supporter of the cabinet need claim for it more than that it is a body of highly capable men of business, who, under circumstances of peculiar difficulty, have acted with courage, determination, and good sense. It may also be urged for Lord Salisbury and Mr. Balfour, and their colleagues, that if they have at times fallen into error, they have, on the whole, conducted to a successful conclusion all the most important transactions in which they have been engaged. When we hear this glib talk of mismanagement, we may ask where ministers have failed. In all the greater problems that faced them—and some of these were of unprecedented magnitude—they succeeded. They did not fail in China, in the Sudan, in West Africa, or on the Indian frontier. They have so conducted our foreign policy that, in the midst of inveterate suspicions and angry outbursts of popular jealousy abroad, no British interest has been sacrificed, and no friction has arisen with foreign governments. Our relations with Germany and Russia, during the past three years of crisis, are assuredly no worse than they were when Mr. Gladstone and Lord Rosebery were at the helm; our relations with France are considerably better; our relations with the United States have been placed on a footing of cordial amity which would have seemed visionary ten years ago even to Radical idealists. Have the Government failed at home? They have at least placed on the statute-book measures of which their opponents have only talked, they have passed acts which have done much to improve the condition of the people, and while they have successfully vindicated law and order in Ireland, they have the satisfaction of knowing that the general feeling in that country is more cordial toward the Government and people of England than it has been at any time since Mr. Gladstone inaugurated the era of revolution."

There is no explanation here of the awkward fact that the ministry is losing elections in its own strongholds, a thing acknowledged by the London *Times* and pronounced by it "surprising and from some points of view disquieting." *The Morning Post* (London) indorses those sentiments, but *The Daily Telegraph* (London) sees in such an occasional defeat "only a very limited victory for the opposition." The Manchester *Guardian* sees "an extraordinary sign of the Government's loss of public confidence," but the London *Globe* says present prospects "need cause no apprehension to the Government or their supporters." Nevertheless the organ of the High-Church party in England, *The Pilot* (London), actually talks of "dissolution prospects," saying:

"Nowadays, nearly everything that happens in public affairs

is attended by the thought that there ought to be a dissolution of Parliament and a new House of Commons. Either as an agreeable or a disagreeable reflection—for we may all know what ought to be without feeling any desire for it—it recurs to every mind from day to day almost, and has, indeed, been a frequent visitor from the date of the last prorogation. To its own consciousness, this has never been a satisfactory Parliament in the representative branch. Returned in peculiar circumstances, it had always an air of illegitimacy; evidently feeling, from the first month of its existence, as the false heir does who is secretly aware of having been smuggled into a cradle not rightfully his own. Had it been really convened at the close of the war, the conclusion of peace, no Parliament could have been called more properly. A new Parliament for new conditions was of course the right thing. But there was a mistake as to the close of the war—a mistake which gave to the House a spurious existence which becomes more embarrassed the longer it endures."

RUSSIA'S CRISIS.

RUSSIA is a country ruled in theory by an absolute despot and in reality by a bureaucracy of a blindly intolerant character. The bureaucracy acts directly upon the masses of the people, who are in a state of ignorance so dense that constitutional government is pronounced out of the question for them. But there is a large and growing educated class to whom bureaucratic despotism is intolerable. The warm differences among the educated regarding the changes that should be made in Russia—some favoring parliamentary rule, others denouncing it—are unfavorable to the evolution of a party of liberation with a definite policy. Only two factors in the problem stand out clearly. One is Nicholas II., Czar of all the Russias, and the other is the huge mass of peasantry. The Czar "has the noblest intentions and a lofty purpose to work for the welfare of his people; but in the face of a situation as grave as that which exists in Russia good intentions are not enough." As regards the feeling among the peasantry, there is not, surprising as it may seem, any trustworthy information available.

This fact has been brought out strikingly by the press comment in Europe on the Czar's recent manifesto hinting at religious toleration of a limited kind, at permission for the peasant to leave his native village without interference from the police, and at local self-government under bureaucratic tutelage. Even the *Kreuz Zeitung* (Berlin), the best-informed paper in Europe on all that relates to Russia, seems unable to lift the veil behind which the empire of the Czar is writhing in the throes of some vast upheaval. The world's ignorance of Russian affairs is the result of a bureaucratic conspiracy working through censorship of the press and a rigid passport system. The *Preussische Jahrbücher* (Berlin) has even denounced as a barefaced misrepresentation those glowing balance-sheets which M. de Witte, Russian Minister of Finance, serves up from time to time for the edification of a bondholding world. And the London *Times* had to confess recently that it was completely misled regarding the circumstances of a formidable peasant uprising characterized by incidents as picturesque as those which in France immediately preceded the great revolution. From all sources come confused accounts of student rebellions, refractory local assemblies, insubordinate peasant bands, regiments indoctrinated with revolutionary ideas, treason in government staffs, the whole mysteriously disposed of by what are termed in official reports "repressive measures." As the Paris *Temps* says:

"Russia is apparently governed by a responsible emperor, but in reality by a usurping and irresponsible bureaucracy. We hear this great machine of a bureaucracy creak and groan at the very moment when it contemplates extending its influence over those portions of the empire in which its action is still limited: Finland or the Baltic provinces, Livonia and Esthonia. The bureaucracy seems without sufficient strength to withstand, not the property-owning class which, altho it desires a voice in the councils of the empire, is nevertheless Conservative, but the genuinely revolutionary element in the provinces—peasants who live under a collectivist system and who do not understand that there is a propertied class above them or beside them, wage-earners who have inherited a collectivist system, religious sects that are revolutionaries in a latent stage, Stundists, Doukhobors who refuse to pay taxes and to perform military service, followers, more or less sincere, of Tolstoy, Liberal students, and, lastly, terrorists outright."

The allusion to collectivism, hereditary or otherwise, in this French comment, requires elucidation, for it bears upon that peculiar Russian institution, the *mir*. *Mir* means literally "world," but the term denotes specifically the particular village community to which the individual peasant belongs. This village community is not an elective body but "a patriarchal council composed of the heads of families." When a peasant, in obedience to the tendency to flock to the cities, wishes to leave his native village, he must have a passport. He gets it from the *mir* and he must renew it annually, and pay a tax for the privilege it confers. Of course, a peasant may remain in the *mir* in which case he needs no passport; but the *mir* is his landlord, and his little area of land may not suffice for his needs, especially as the peasant is simply a tenant for a term of years. This subject is further explained by *The New Liberal Review* (London), from which we borrow our information:

"Now what happens very frequently is this. The peasant finds that his land does not produce enough to pay his taxes; during the long winter months of enforced idleness he has nothing to do. He therefore applies to the *mir* for permission to go to the town to supplement his income. Often—indeed, more frequently than not—he has no *dvor* [home] of his own, but is simply living in his father's house. In that case he must first obtain his father's permission before that of the *mir* will be granted. As early marriages are the rule and not the exception, he leaves his wife behind him to assist his mother and father in the work on the land and in the house. This arrangement is unfortunately a fruitful source of immorality. Having obtained his permission, he goes to the town in search of work. Here he will, more likely than not, become a factory hand. He will also become the member of an *artel*. These *artels* are very curious associations of workmen, in which the workers pool their earnings, which are divided equally among the members, irrespective of the individual earnings of each, after the cost of living has been deducted. Sometimes these peasants form other attachments, sometimes they are out of work, sometimes their annual passports are not renewed, or they are summoned back to the village and do not wish to go. In the latter cases they become 'passportless,' and as such have no recognized legal status; they spend their lives in evading the police, and become vagabonds, the worst kind of proletarians."

It will be seen from this how far-reaching is the reform contemplated in the Czar's manifesto, if only it free the peasant from this passport system. But the discontent of the peasantry, and of the working classes recruited from them, is believed by the most competent authorities to have grown too great for appeasement by any reforms administered through a bureaucracy. This is admitted by the *Grashdanin* (St. Petersburg), organ of the eminent Prince Mestchersky, who, however, bitterly opposes constitutional government for Russia. What Russia needs, according to this observer, is absolute, not nominal, autocracy. The bureaucracy has usurped power and the Czar must firmly put an end to this usurpation. If, on the other hand, a constitutional government were set up in Russia, the inevitable result would be an increase of the bureaucratic centralization now cursing the country. Autocracy saved Russia from the Tatars and it must now save her from the bureaucracy. The Czar's manifesto is a blow at the liberal reformers, according to this organ. And the revolutionary Prince Kropotkin writes in *The Daily News* (London):

"What it promises is a further increase and a further centrali-

zation of the powers of the provincial bureaucracy, and a further reduction in the functions of provincial self-government, in favor of the provincial organs of the central administration. If I am not wrong, and read the rather veiled phrases of the manifesto correctly, it is the old program of Katkóff, who described provincial self-government as 'a state within the state,' and demanded instead of it more officials, 'guided by a strong power and responsible to the St. Petersburg officials.' . . . Historical prediction is always risky. But in the present writer's opinion the postponement of the convocation of some sort of general assembly for the discussion of the many great questions which stand on the order of the day, is a very great political mistake. If such an assembly had been convoked now it would have been admirably well received, even if it did not answer all hopes. But when it comes later on—and it will unavoidably come pretty soon—it will be a victory won by the nation over the imperial power, and it is never wise to court a defeat."

The opinions of other competent critics confirm this view. The apparent determination of the Czar to set his face against the *zemstvos*, or local representative bodies, is thought a bad sign by the *Neue Freie Press* (Vienna), but it says nevertheless that a forward step has been taken. The *Frankfurter Zeitung*, in the course of an elaborate study of the Russian ruler's manifesto, mentions the great change in the popular mind during the past twenty-five years:

"At that time [a quarter of a century ago] the Russian revolutionary parties comprised a few hundred determined men and women ready to risk their lives in the furtherance of their ideas. The so-called 'intellectual' felt a certain sympathy with the efforts of the revolutionaries to overthrow the prevailing government, but the peasants and toilers remained wholly indifferent. To-day, when the students resist police tyranny and official oppression, they find not only sympathetic comprehension among the masses, but active support. Even among the peasants there has been spread by active propaganda a knowledge of the fact that they are entitled to a better existence. . . . There is scarcely any youth that thirsts for knowledge like the Russian youth, scarcely any people that yearns for liberty like the Russian people."—*Translation made for* THE LITERARY DIGEST.

THE DOOM OF PERSIA.

THE independence of Persia, said Sir Edward Grey in the House of Commons lately, "is a phrase," and it is becoming less every year. "When we are told that we and the Russian Government are equally bound, and remain bound year after year, to respect the integrity of Persia, I fear this means that we are bound to respect a vanishing quantity. The time may come when, if we are restricting our policy to respecting the integrity of Persia, we shall find ourselves respecting nothing at all." The laughter with which this final remark was received revealed English appreciation of the humorous side of a serious subject. How serious that subject is may be inferred from the fact that the Persian problem is not a thing apart. It has to be dealt with as a detail in the mighty question of Asia. The powerful empires of Russia and Great Britain confront each other on the frontiers of the Shah, who finds himself invested with the importance of a pawn on an overcrowded chessboard. This has been well brought out by a correspondent of the London *Times*, who has lately closed a valuable series of articles on the Persian question in its relation to the fate of Asia:

"Not many years ago the Persian question could still be regarded as a separate issue to be dealt with on its own merits. To-day it is merely part of a much larger question upon the solution of which the future of Asia must depend. That question is whether Asia is really a field in which there is room for two of the greatest European Powers, which are also the two greatest Asiatic Powers, to fulfil their peaceful mission in friendly competition, or whether their rivalry must ultimately degenerate into a struggle for exclusive mastery. The special interest which attaches to the Persian branch of that question is that, whereas in other regions of Asia new factors are introduced into the problem by the aspirations of other Powers that claim for themselves also a place in the Asiatic sunshine, here Great Britain and Russia still stand alone and almost face to face in the presence of a sick-bed more desperate perhaps than that of any other Asiatic monarchy."

At the present moment the star of Russia is in the ascendent. Great Britain has practically abandoned the northern portion of the realm to her rival. In the south, her position is a strong one. But here again some qualification must be made, for Persia has just concluded a new treaty with Turkey (under pressure from Russia) which amounts practically to the recording of a mortgage against the Shah in St. Petersburg. The eagerness of the Persian potentate to fling his money out of the window is equaled only by the readiness with which he borrows. Great Britain fights shy of this type of creditor, as the Shah discovered a few years ago when he sought a loan in London. The gentlemen in "the city" wanted a class of securities which Muzaffer-ed-Din could only regard as impinging on his sovereignty. Russia was more yielding, and to-day she rules the Shah's finances and even commands his army.

MUZAFFER ED-DIN,
The spendthrift Shah of Persia, whose realm involves the fate of Asia.

The well-informed correspondent of the London *Times* already quoted says in the course of one of his illuminating articles:

"In bygone times English, French, and Austrian officers have in turn taken in hand the task of reorganizing the Persian army, but owing to the lack of adequate support, if for no other reason, their efforts invariably ended in more or less ignominious failure. Russian officers were the last to appear upon the scene, and their success has been due, not only to the powerful backing upon which they could depend, but to the business-like fashion in which they went to work. They never attempted to tackle the Persian army as a whole. Acting upon the French proverb, *Qui trop embrasse, mal étreint*, they confined themselves to the organization of a small force, entirely under their own control, which they could handle and mold to their own satisfaction. The whole brigade of Persian 'Cossacks' consists of four regiments of cavalry, one of them called a guards regiment, and of two battalions of field artillery. These regiments are not kept at their full strength, and the brigade only musters altogether about 2,000 men, chiefly drawn from one large tribe of Persian nomads in Azerbijan. They are armed with Berdan rifles and Russian guns, and tho they do not present on parade the spick-and-span appearance of our native Indian troops, all authorities concur in describing them as smart, alert, well-drilled, and well-disciplined. There are only three Russian officers attached to the brigade, but they have succeeded in training Persian officers and non-commissioned officers, as well as the rank and file."

Thus Russia holds the Government of Persia in "the hollow of her hand," and in the opinion of this authority she is but playing the part of Shylock. The hour of Persia's doom can not be long in sounding, and it behooves Great Britain to realize that her Indian empire must go down should ever Russia get the metaphorical pound of flesh. The situation presents a striking contrast to the period—comparatively recent—when British in-

fluence was supreme in Persia. The London *Times* is prompted, in fact, to indulge in the luxury of editorial regret:

"Far on into the nineteenth century our predominance at the court of Teheran was undisputed. Throughout the dominions of the Shah British influence was supreme. It is only within the last forty years—only since the very time when Persia began to assume a new importance in the world as a weighty factor in the question of Asiatic policy as a whole—that we have suffered that influence to languish, until in wide portions of the Persian empire it has been extinguished forever. What we have forfeited, for want of a little energy and foresight, has been reaped by others, who have had the wisdom to conceive and the courage to adopt and enforce a continuous plan of action framed to accomplish ends clearly seen and deliberately pursued. 'Hasten the decadence of Persia, penetrate to the Persian Gulf, reestablish the ancient commerce of the Levant, and advance to the Indies, which are the treasure-house of the world,' wrote the author of the apocryphal testament of Peter the Great more than a century and a half ago. The scheme has been kept steadily in view, and decade after decade has witnessed the accomplishment of some fresh stage toward the desired goal."

This is depressing enough to Britons, but there is still much to console them in the situation prevailing throughout the southern portion of the empire of the Shah. Great Britain's strength there is due to her peculiar relation to the Persian Gulf. She has swept that body clean of pirates with the thoroughness of Pompey the Great when he addressed himself to a similar task in the Mediterranean. In doing this she has gratified no territorial ambitions. It was enough for her that those waters had been transformed into a highway of peaceful commerce. Now, however, Great Britain is uneasily asking herself to what extent her self-denying ordinance may become the sign-manual of her destruction. Not only is Russia evincing a disposition to come down to the Persian Gulf, but Germany is suspected with reason of planning the acquisition of a port upon its shores. Great Britain's entire Asiatic position is imperiled, and for reasons thus stated by the keen observer of *The Times*:

"It is not our commercial supremacy only that would be challenged if other nations once gained a foothold in the Persian Gulf. The whole balance of naval and military power in this part of Asia would inevitably be affected, and we should have no Japan whom we could call in to redress it in our favor. To any one who is at all intimately acquainted with international politics the idea that we could rely upon the appearance of Germany on the scene to act as a counterpoise to Russia must seem quite as futile as that Russia's policy of expansion in Asia can be arrested by graceful concessions. India would for the first time for upward of a century be exposed to attack from a naval base within close proximity to her shores, and tho that is a danger against which she could be protected so long as we preserve our command of the sea, it would mean an additional task for our navy and involve a substantial increase of the naval force permanently stationed in our Indian waters. . . . In the course of a given number of years the whole line of land defenses behind which India has entrenched herself at such enormous cost of treasure and labor would be turned, and her resources would have to be strained afresh to meet a new military situation far more complicated and threatening than any she has yet had to deal with. And I have suggested so far only the material effects upon our position in India. Might not the moral effect be more serious still if our Indian empire were subjected to the immediate reaction of every international complication in which our world-wide interests must at times involve us?"

Let us now leave the local aspects of the Persian problem and look at it from the point of view of world-politics. We encounter a striking antagonism. Organs of British opinion are divided into two camps, the mutual hostility of which often asserts itself in volcanic expletive. One side insists that Russia should have her own way in Persia, and throughout all Asia for that matter. Russia wants nothing that Great Britain need care to retain, while the mutual harmony of the two Powers will put a curb on Germany—"that great menace to the peace of the world." *The Spectator* (London) and *The National Review* (London) are the leading exponents of this school of world-politics. The following extract, from the last-named publication, shows the point of view:

"We certainly are anxious that better relations should be established between England and Russia, which would necessarily be followed by a corresponding improvement in our relations with France; and we have affirmed from the outset that 'it is clearly recognized by all who pretend to take a serious interest in international affairs that the Dual Alliance with the *nation amie et alliée* is the very corner-stone of Russian policy, and foolhardy would be those persons who put themselves in the ridiculous position of even seeming to intrigue against it.' Indeed there is no reason why Englishmen should resent, or desire to alter, the character which the Franco-Russian Alliance has assumed. What we aim at as regards Anglo-Russian relations is simply that they should be no longer interfered with, disturbed, and even poisoned, by the traditional intrigues of the German Foreign Office. There is nothing malicious in the suggestion that Germany acts as an *agent provocateur* between London and St. Petersburg. Prince Bismarck himself gloried in the rôle of 'the honest broker,' while the most influential and responsible of German organs habitually discuss the relations between England and Russia in the spirit of the *tertius gaudens*."

The party antagonistic to this school would base the foreign policy of the British empire upon opposition to Russia. While *The Spectator* urges that the Czar be given his own way in the Persian Gulf, *The Edinburgh Review*, with a numerous journalistic following, demands "inveterate and unyielding hostility to Russian expansion." *The Nineteenth Century and After* (London) has also begun to give the hospitality of its pages to the anti-Russian party. Its recent issue contained a broadside from the pen of that keen student of world-politics, the distinguished Hungarian Prof. Arminius Vambery, directed against Russian policy in the Persian Gulf. This authority assures us that Russia confronts Great Britain in a hostile spirit all over the world, and that an alliance with Germany must be brought about. As regards the London *Times*, it is upholding the course of the Government, based upon its categorical statement in the House of Commons through Viscount Cranborne that Great Britain desires to maintain the present status in the Persian Gulf and in Persia, and that such maintenance is incompatible with the occupation by any Power of a port on the waters bounding the Shah's dominions to the south.

POINTS OF VIEW.

WAITING FOR PARNELL. "There are Irish people still," says *The Westminster Gazette* (London), "who think that Mr. Parnell is still alive and will appear at the fitting moment to lead them once more."

THE FRENCH. "Servants [in Paris] not merely know all that goes on in the household, which information they exchange with those of adjoining flats, but allow themselves to comment upon it to their masters and mistresses," says a writer in *The Fortnightly Review* (London). "What would an English mistress think, moreover, of being kissed on both cheeks by her maid on returning from a holiday, or of a departing servant not only kissing the mistress but offering to kiss the master?"
